FLEX-SPINNER

FOR UNITARY PORTABLE HAND OPERATED ELECTRICAL SANDERS AND PARTS THEREOF.
Claims use since Nov. 27, 1946.

Ser. No. 517,268. SPRAGUE ELECTRIC COMPANY, North Adams, Mass. Filed Nov. 14, 1947.

SPIRAMEG

FOR ELECTRICAL RESISTORS.
Claims use since Jan. 25, 1947.

Ser. No. 523,365. EDGAR M. BUTLER, doing business as Butler Engineering Co., New Orleans, La. Filed June 2, 1947.

"BECO"

FOR ELECTROLYTIC APPARATUS FOR DISSOLVING BOILER SCALE AND PREVENTING FURTHER FORMATION OF THE SAME WHICH CONSISTS OF A DEVICE COMPRISING A GALVANIC COUPLE FORMED OF METALS OF DISSIMILAR ELECTROMOTIVE FORCE POTENTIAL.
Claims use since April 1945.

Ser. No. 524,858. CHICAGO TELEPHONE SUPPLY CO., Elkhart, Ind. Filed Nov. 15, 1947.

CTS

Applicant claims ownership of registration No. 304,736.
FOR POTENTIOMETERS OF THE VARIABLE RESISTANCE TYPE USED IN RADIOS; RHEOSTATS, TONE CONTROL SWITCHES, SELECTOR SWITCHES, AND SNAP SWITCHES.
Claims use since Apr. 10, 1930.

Ser. No. 544,285. JOHN A. ROEBLING'S SONS COMPANY, Trenton, N. J. Filed Dec. 13, 1947.

ROEPLASTIC

FOR INSULATED ELECTRICAL WIRE AND CABLE.
Claims use since Aug. 22, 1940.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 496,006. THE ALPINE SPORTING GOODS CO., New York, N. Y. Filed Dec. 31, 1947. Under section 2f of the act of 1946.

ALPINE

FOR SKIS, SKI POLES, AND COMPONENT PARTS THEREOF.
Claims use since Jan. 3, 1936.

Ser. No. 530,440. SHAPLEIGH HARDWARE COMPANY, St. Louis, Mo. Filed Aug. 4, 1947. Under section 2f of the act of 1946.

San Luis

FOR FISHLINES.
Claims use since Sept. 3, 1924.

Ser. No. 532,199. THE AUTOMATIC RECORDING SAFE COMPANY, Chicago, Ill. Filed Aug. 23, 1947.

THE BRANCH BANK

No claim is made to the exclusive use of the word "Bank" apart from the mark.
FOR SMALL PORTABLE SAVINGS BANKS.
Claims use since January 1911.

Ser. No. 535,289. WOODMARK INDUSTRIES, INC., Minneapolis, Minn. Filed Sept. 22, 1947.

Mustang

FOR ROLLER SKATES.
Claims use since June 19, 1947.

Ser. No. 536,460. STATLER MFG. CO., Chicago, Ill. Filed Oct. 1, 1947.

JUNIOR

FOR TOY STEERING WHEEL.
Claims use since July 10, 1947.

Ser. No. 538,670. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Oct. 22, 1947.

Trophy

FOR TENNIS RACKETS, BADMINTON RACKETS, SQUASH RACKETS, TABLE TENNIS BATS, AND TABLE TENNIS BALLS.
Claims use since 1923.

Ser. No. 538,671. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Oct. 22, 1947.

AIR-FLITE

Applicant claims ownership of registrations Nos. 384,704 and 253,976.
FOR GOLF BALLS, BADMINTON RACKETS, TENNIS RACKETS, SQUASH RACKETS, GOLF CLUBS, BASKETBALLS, VOLLEY BALLS, FOOTBALLS, SOCCER BALLS, TABLE TENNIS BATS, AND TABLE TENNIS BALLS.
Claims use since 1934.

FLIPP-O

FOR TOY PISTOLS.
Claims use since January 1947.

Ser. No. 541,483. ACME NOVELTY MFG. CO., River Grove, Ill. Filed Nov. 18, 1947.

KEEN SHOT

FOR TOY PISTOLS.
Claims use since January 1947.

Ser. No. 541,635. WILLIAM R. BALES, Tampa, Fla. Filed Nov. 19, 1947.

FOUR TEES

FOR FISH LURES.
Claims use since Aug. 8, 1946.

Ser. No. 541,797. ALADDIN SALES CO., New York, N. Y. Filed Nov. 20, 1947.

FOR TOY PLASTIC BALLOONS AND TOY BUBBLE-FORMING LIQUID AND PASTES.
Claims use since Aug. 1, 1947.

Ser. No. 541,923. EXHIBIT SUPPLY COMPANY, Chicago, Ill. Filed Nov. 21, 1947.

MIMI

FOR COIN-CONTROLLED AMUSEMENT APPARATUS.
Claims use since Oct. 8, 1947.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 512,202. PUNCH-LOK COMPANY, Chicago, Ill. Filed Oct. 16, 1947.

CLAMP-MASTER

The word "Clamp" is disclaimed apart from the mark.
FOR A TOOL FOR APPLYING STEEL BAND CLAMPS.
Claims use since June 14, 1946.

Ser. No. 529,716. SLIP-NOT BELTING CORPORATION, Kingsport, Tenn. Filed July 26, 1947. Under section 2f of the act of 1946.

Nuform

FOR CHECK STRAPS FOR LOOMS.
Claims use since Apr. 1, 1933.

Ser. No. 534,659. THE OLIVER CORPORATION, Chicago, Ill. Filed Sept. 16, 1947.

Hydramatic

FOR HAY BALERS.
Claims use since May 12, 1947.

Ser. No. 534,991. BROWN DEER MANUFACTURING CO., Milwaukee, Wis. Filed Sept. 19, 1947.

BROWN DEER

FOR HYDRAULIC LIFTING JACKS.
Claims use since Feb. 24, 1947.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 535,377. THE AMERICAN LAUNDRY MACHINERY COMPANY, Cincinnati, Ohio. Filed Sept. 23, 1947. Under section 2f of the act of 1946.

TILTOR

Applicant claims ownership of registration No. 397,605.
FOR COMMERCIAL LAUNDRY APPARATUS—NAMELY, SLEEVE PRESSES, CUFF PRESSES, COLLAR PRESSES, BODY PRESSES, SHIRT-FRONT PRESSES, SLEEVE CONDITIONING FORMS, AND SHIRT-FOLDING TABLES.
Claims use since Apr. 4, 1940.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 546,892. WILLIAM TURNER (KISMET) LIMITED, Sheffield, England. Filed Jan. 13, 1948.

KISMET

Applicant claims ownership of British registration No. 546,717/7162S, dated Dec. 1, 1933.
FOR GAUGES FOR TESTING THE AIR PRESSURE OF PNEUMATIC TYRES AND OTHER INFLATED BODIES.

Ser. No. 547,351. THE KONO MANUFACTURING COMPANY, Woodside, N. Y. Filed Jan. 17, 1948.

ESKISPEC

FOR EYEGLASS AND SPECTACLE FRAMES.
Claims use since Jan. 12, 1948.

Ser. No. 547,352. THE KONO MANUFACTURING COMPANY, Woodside, N. Y. Filed Jan. 17, 1948.

MANDARIN

FOR EYEGLASS AND SPECTACLE FRAMES.
Claims use since Jan. 12, 1948.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Ser. No. 518,417. LACTONA INCORPORATED, St. Paul, Minn. Filed Sept. 12, 1947.

Challenger

FOR HAIR BRUSHES AND HAIR BRUSH HANDLES.
Claims use since Feb. 3, 1947.

Ser. No. 538,850. BAKER BRUSH CO., INC., New York, N. Y. Filed Oct. 24, 1947.

BAK-O-PLAST

Applicant claims ownership of registration No. 158,383.
FOR PAINT BRUSHES.
Claims use since Oct. 10, 1947.

CLASS 31

FILTERS AND REFRIGERATORS

Ser. No. 545,619. COPELAND REFRIGERATION CORPORATION, Sidney, Ohio. Filed Dec. 29, 1947.

COPELAMETIC

FOR ELECTRICALLY OPERATED REFRIGERATING CONDENSING UNITS OF THE HERMETIC TYPE FOR USE IN ALL TYPES OF COMPRESSOR OPERATED REFRIGERATING EQUIPMENT AND COMPONENT PARTS FOR SAID CONDENSING UNITS.
Claims use since June 9, 1939.

Ser. No. 548,806. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md. Filed Feb. 5, 1948.

CEM

Applicant claims ownership of registrations Nos. 327,650, 317,299, 379,625, 375,756, and 357,130.
FOR WATER COOLERS.
Claims use since Jan. 21, 1948.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 540,916. SIMMONS COMPANY, New York, N. Y. Filed Nov. 12, 1947.

DEEP NIGHT

FOR MATTRESSES, BOX SPRINGS, COIL SPRINGS, SOFA BEDS, STUDIO COUCHES, AND LOUNGES.

Filed October 31, 1946. Serial No. 511,800. PUBLISHED JULY 13, 1948. Class 12.

441,264. CIGARS, CIGARETTES, SMOKING TOBACCO, CHEWING TOBACCO, AND SNUFF. IMPERIAL TOBACCO COMPANY OF CANADA, LIMITED, Montreal, Quebec, Canada.
Filed November 2, 1946. Serial No. 511,948. PUBLISHED AUGUST 10, 1948. Class 17.

441,265. INSECT REPELLENT AND PREPARATION TO BE APPLIED TO SKIN TO SECURE AN EVEN SUN TAN WITHOUT BURNING THE SKIN. CHEMICAL RESEARCH PRODUCTS, INC., East Rutherford, N. J.
Filed November 15, 1946. Serial No. 512,640. PUBLISHED AUGUST 10, 1948. Class 6.

441,266. CHEMICAL COMPOUNDS, BEING BENZENE DERIVATIVES OF THE GLYCOLS, FOR USE AS PRESERVATIVES IN PHARMACEUTICAL AND MEDICAL PREPARATIONS, IN OILS AND FATS (ANIMAL AND VEGETABLE), IN OINTMENTS, IN EMULSIONS, IN ESSENTIAL OILS, IN PERFUMES, AND IN COSMETIC PREPARATIONS. NIPA LABORATORIES, LTD., London, England.
Filed November 26, 1946. Serial No. 513,269. PUBLISHED AUGUST 10, 1948. Class 6.

441,267. COOKING UTENSILS—NAMELY, PRESSURE COOKERS, METAL POTS AND PANS. TRAUBEE PRODUCTS, INC., Brooklyn, N. Y.
Filed January 31, 1947. Serial No. 516,742. PUBLISHED AUGUST 3, 1948. Class 13.

441,268. CAST IRON SOIL PIPE AND FITTINGS. THE G. W. VANDERVORT COMPANY, Portsmouth, Ohio.
Filed January 31, 1947. Serial No. 516,745. PUBLISHED JULY 27, 1948. Class 13.

441,269. SOAP—NAMELY, HAND SOAP AND SHAVING SOAP. LIONEL G. ROTHCHILD, doing business as Lenel Company, Dallas, Tex.
Filed February 7, 1947. Serial No. 517,165. PUBLISHED NOVEMBER 4, 1947. Class 4.

441,270. SHUTTERS FOR PHOTOGRAPHIC CAMERAS. FEDERAL MANUFACTURING AND ENGINEERING CORP., Brooklyn, N. Y.
Filed February 15, 1947. Serial No. 517,568. PUBLISHED AUGUST 3, 1948. Class 26.

441,271. CANNED VEGETABLES, CHILI SAUCE RELISH, ETC. P. J. RITTER COMPANY, Bridgeton, N. J.
Filed February 19, 1947. Serial No. 517,796. PUBLISHED AUGUST 10, 1948. Class 46.

441,272. INDUSTRIAL PRESSURE CLAMPS AND PARTS THEREOF, SUCH CLAMPS BEING ADAPTED FOR USE ON PIPES, TANKS, HOSES AND THE LIKE. BAND-IT COMPANY, Denver, Colo.
Filed March 7, 1947. Serial No. 518,650. PUBLISHED JULY 27, 1948. Class 13.

441,273. TROUSER HANGERS. SNOOK INDUSTRIES, Kansas City, Mo.
Filed March 10, 1947. Serial No. 518,785. PUBLISHED JULY 27, 1948. Class 50.

441,274. EYEGLASS AND SPECTACLE FRAMES AND PARTS THEREFOR. THE KONO MANUFACTURING COMPANY, Woodside, N. Y.
Filed March 14, 1947. Serial No. 519,020. PUBLISHED SEPTEMBER 30, 1947. Class 26.

441,275. INDICATING GAUGES USED FOR MEASURING THE LEVEL OF LIQUIDS. ROCHESTER MANUFACTURING CO., INC., Rochester, N. Y.
Filed March 18, 1947. Serial No. 519,221. PUBLISHED JULY 13, 1948. Class 26.

441,276. RODS, TUBES, AND PARTLY PREPARED ARTICLES CONSISTING OF BENDABLE NON-METALLIC MATERIALS — NAMELY, RUBBER, SYNTHETIC RUBBER OR PLASTICS AND FOR USE IN THE MANUFACTURE OF HANDBAGS, ETC. INDUSTRIAL SYNTHETICS CORPORATION, Irvington, N. J.
Filed April 14, 1947. Serial No. 520,625. PUBLISHED AUGUST 3, 1948. Class 1.

441,277. PLASTIC ASPHALTIC COMPOUNDS PREPARED IN LIQUID AND PASTE FORM FOR PATCHING, ETC. PERMAFLEX PRODUCTS CO., Philadelphia, Pa.
Filed April 28, 1947. Serial No. 521,463. PUBLISHED JULY 27, 1948. Class 12.

441,278. FOLDING WIRE AND METAL LAUNDRY, CLOTHES, AND SHOPPING BASKETS; AND COLLAPSIBLE WIRE AND METAL LAUNDRY, CLOTHES, AND SHOPPING BASKETS. LEIPZIG & LIPPE, INC., New York, N. Y.
Filed April 28, 1947. Serial No. 521,492. PUBLISHED NOVEMBER 18, 1947. Class 2.

441,279. CELLULOSE MATERIAL IN SHEET FORM CARRYING GRASS SEED AND FERTILIZER. TAILOR MADE LAWN, INC., New York, N. Y.
Filed April 29, 1947. Serial No. 521,542. PUBLISHED AUGUST 10, 1948. Class 1.

441,280. VEGETABLE AND FLOWER SEEDS, BULBS, AND PLANTS; AND SOIL. WM. HENRY MAULE CO., Philadelphia, Pa., assignor to W. Atlee Burpee Company, Philadelphia, Pa., a corporation of Pennsylvania.
Filed May 5, 1947. Serial No. 521,885. PUBLISHED AUGUST 10, 1948. Class 1.

Filed May 5, 1947. Serial No. 521,886. PUBLISHED AUGUST 10, 1948. Class 1.

441,282. VEGETABLE AND FLOWER SEEDS, BULBS, AND PLANTS; AND SOIL. WM. HENRY MAULE CO., Philadelphia, Pa., assignor to W. Atlee Burpee Company, Philadelphia, Pa., a corporation of Pennsylvania.
Filed May 5, 1947. Serial No. 521,887. PUBLISHED AUGUST 10, 1948. Class 1.

441,283. COAL AND COKE. MYRON B. WEIL, LTD., New York, N. Y.
Filed May 21, 1947. Serial No. 522,778. PUBLISHED AUGUST 10, 1948. Class 1.

441,284. SEEDS FOR AGRICULTURAL USE—NAMELY, HYBRID CORN, WHEAT, OATS, CLOVER, SOY BEANS, ALFALFA, TIMOTHY AND ALSACK. ERNEST S. SPOTTS, Wooster, Ohio.
Filed May 27, 1947. Serial No. 523,132. PUBLISHED AUGUST 3, 1948. Class 1.

441,285. VALVES—NAMELY, AIR VALVES, ANGLE VALVES, ANTI-FREEZING VALVES, ETC. THE WM. POWELL COMPANY, Cincinnati, Ohio.
Filed June 4, 1947. Serial No. 523,536. PUBLISHED JULY 27, 1948. Class 13.

441,286. LIQUID LANOLIN. ROBINSON, WAGNER CO., INC., New York, N. Y.
Filed June 21, 1947. Serial No. 524,624. PUBLISHED JULY 27, 1948. Class 6.

441,287. CUT FLOWERS, FOLIAGE, DECORATIVE FLORAL PIECES, BOUQUETS, BOUTONNIERES, ROSETTES, AND FOUNDATION BACKGROUNDS THEREFOR. CLARENCE H. WALKER, JR., doing business as Floral Service, San Mateo, Calif.
Filed July 1, 1947. Serial No. 525,463. PUBLISHED AUGUST 10, 1948. Class 1.

441,288. UNFITTED TOOL BOXES. D. J. ANDERSON, INC., Madison, Conn.
Filed July 2, 1947. Serial No. 525,528. PUBLISHED AUGUST 3, 1948. Class 2.

ACT OF 1920

These registrations are not subject to opposition.

441,289. (CLASS 39. CLOTHING.) GLENBY SPORTSWEAR COMPANY, New York, N. Y. Filed Oct. 9, 1946. Serial No. 510,501.

GLENBY

FOR MEN'S AND WOMEN'S KNITTED SWEATERS.
Claims use since 1940.

441,290. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ANTHONY CASTELLO, doing business as Castello Packing Company, New York, N. Y. Filed Feb. 18, 1947. Serial No. 517,701.

CASTELLO

FOR OLIVE OIL AND A BLEND OF PEANUT OIL AND OLIVE OIL USED FOR SALAD AND COOKING PURPOSES.
Claims use since Feb. 9, 1940.

441,291. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STANDARD LABORATORIES, INC., New York, N. Y. Filed July 1, 1947. Serial No. 525,416.

FOR TEETHING LOTION.
Claims use since Mar. 13, 1920.

ACT OF 1946, PRINCIPAL REGISTER

503,709. TAPE DISPENSERS. MINNESOTA MINING & MANUFACTURING COMPANY, St. Paul, Minn.
Filed November 10, 1947. Serial No. 489,594. PUBLISHED AUGUST 17, 1948. Class 2.

503,710. HYBRID SEED FOR WAXY-MAIZE. BEAR HYBRIDS CORN CO., Decatur, Ill.
Filed October 1, 1947. Serial No. 493,424. PUBLISHED AUGUST 10, 1948. Class 1.

503,711. FAUCETS AND PARTS THEREOF—NAMELY, METAL VALVES, STEMS, AND HANDLES. THE CHICAGO FAUCET COMPANY, Chicago, Ill.
Filed July 22, 1947. Serial No. 494,027. PUBLISHED JULY 27, 1948. Class 13.

503,712. INORGANIC PHOSPHATES FOR GENERAL USE IN THE PETROLEUM INDUSTRY INCLUDING THE TREATMENT OF PETROLEUM OILS. MONSANTO CHEMICAL COMPANY, St. Louis, Mo.
Filed July 12, 1947. Serial No. 497,954. PUBLISHED AUGUST 10, 1948. Class 1.

503,713. SHELLED AND UNSHELLED NUTS, AND SALTED, TOASTED, AND CANDIED NUTS. MONROE PECAN PRODUCTS, INCORPORATED, Waycross, Ga.
Filed September 19, 1947. Serial No. 500,892. PUBLISHED AUGUST 10, 1948. Class 46.

503,714. CIGARS. A. SENSENBRENNER SONS, Los Angeles, Calif.
Filed September 23, 1947. Serial No. 503,225. PUBLISHED AUGUST 10, 1948. Class 17.

503,715. BELLOWS OF METAL. COOK ELECTRIC COMPANY, Chicago, Ill.
Filed November 14, 1947. Serial No. 508,894. PUBLISHED JULY 27, 1948. Class 13.

503,716. CIGARETTE CASES, MADE OF MATERIAL OTHER THAN PRECIOUS METAL. PIONEER SUSPENDER COMPANY, Philadelphia, Pa.
Filed August 8, 1947. Serial No. 511,288. PUBLISHED AUGUST 10, 1948. Class 8.

503,717. LIQUID CHEMICAL WATERPROOFING COMPOUND FOR STEEL, LINOLEUM, RUBBER, CORK, WOOD, TEXTILES, PAPER, LEATHER, CANVAS, CEMENT, ETC. THE EMPIRE VARNISH COMPANY, Cleveland, Ohio.
Filed September 15, 1947. Serial No. 512,901. PUBLISHED AUGUST 3, 1948. Class 6.

503,718. SYNTHETIC RESIN COMPOSITIONS FOR USE IN SETTING BENDS, TWISTS OR KINKS IN FIBERS AND YARNS OF ANIMAL ORIGIN. MONSANTO CHEMICAL COMPANY, St. Louis, Mo.
Filed July 12, 1947. Serial No. 513,671. PUBLISHED JULY 27, 1948. Class 6.

503,719. FLUID FLOW AND RECORDING INSTRUMENTS, ETC. FISCHER & PORTER COMPANY, Hatboro, Pa.
Filed October 11, 1947. Serial No. 513,817. PUBLISHED JULY 27, 1948. Class 26.

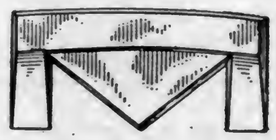
101

FOR LINOLEUM LACQUER.
Claims use since 1925.

CLASS 19



VEHICLES

Reg. No. 204,106. Registered Oct. 6, 1925. THE AMERICAN BRAKE SHOE & FOUNDRY COMPANY, Wilmington, Del., and New York, N. Y. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

FOR BRAKE SHOES.
Claims use since Apr. 17, 1925.

Reg. No. 315,350. Registered July 24, 1934. THE AMERICAN BRAKE SHOE AND FOUNDRY COMPANY, Wilmington, Del., and New York, N. Y. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

FOR BRAKE SHOES.
Claims use since on or about Feb. 7, 1934.

Reg. No. 343,135. Registered Feb. 9, 1937. SOUTHERN WHEEL COMPANY, New York, N. Y., assignor to The American Brake Shoe and Foundry Company. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

SOUTHERN

FOR CAR WHEELS.
Claims use since on or about Feb. 1, 1913.

Reg. No. 402,586. Registered Aug. 3, 1943. THE AMERICAN BRAKE SHOE AND FOUNDRY COMPANY, New York, N. Y., now by change of name American Brake Shoe Company. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

SAMSON

FOR REENFORCING BACKS FOR BRAKE SHOES.
Claims use since on or about Mar. 31, 1933.

Reg. No. 402,587. Registered Aug. 3, 1943. THE AMERICAN BRAKE SHOE AND FOUNDRY COMPANY, New York, N. Y., now by change of name American Brake Shoe Company. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

DUPLANE

FOR REENFORCING BACKS FOR BRAKE SHOES.
Claims use since on or about Nov. 29, 1929.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 93,267. Registered Sept. 2, 1913. DIAMOND STATE FIBRE COMPANY, Elsmere, Del. Republished by Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware.

DISFICO

FOR GOODS MADE OF VULCANIZED FIBER FOR ELECTRICAL PURPOSES—VIZ: WIRE CLEATS, SWITCH-BARS, CANOPY-INSULATORS, MAGNET-HEADS, HANDLES, CORD-ADJUSTERS, END POSTS FOR ELECTRIC RAILWAY-SIGNALS, ANGLES FOR ELECTRIC RAILWAY-SIGNALS, BUSHINGS FOR ELECTRIC RAILWAY-SIGNALS, PLATES FOR ELECTRIC RAILWAY-SIGNALS, FLASH-LIGHT SHELLS, TIMER-RINGS, FEET FOR ELECTRIC CORKERS, SOCKET-LININGS, AND SWITCH-PLUGS.
Claims use since June 18, 1912.

Reg. No. 148,649. Registered Nov. 22, 1921. FIBROC INSULATION COMPANY, Valparaiso, Ind. Republished by Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware.

The words "Valparaiso, Indiana," are disclaimed apart from the mark as shown.

The drawing is shaded to indicate the colors red and yellow.

FOR INSULATING COMPOUNDS, BEING OIL AND WATER PROOF AND HAVING HEAT-RESISTING QUALITIES, USED IN CONNECTION WITH ELECTRICAL APPARATUS.

Claims use since Jan. 21, 1921.

Reg. No. 219,739. Registered Oct. 26, 1926. WILLIAM KRUG, New York, N. Y. Republished by Krug Electric Company, Inc., New York, N. Y., a corporation of New York.

FOR ELECTRICAL MOTORS, DYNAMOS, AND BATTERIES AND ELECTRIC FANS.

Claims use since Oct. 1, 1924.

Reg. No. 338,779. Registered Sept. 15, 1936. WALGREEN CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR RADIO RECEIVING SETS AND ANTENNAE.

Claims use since July 28, 1931.

Reg. No. 364,182. Registered Jan. 24, 1939. THE BOLSER CORPORATION, Cedar Falls, Iowa, a corporation of Iowa. Republished by registrant.

The representation of the goods and the words "Genuine Multi-Ray" are disclaimed apart from the mark as shown.

FOR ELECTRIC CLEARANCE LIGHTS, MARKER LIGHTS, DIRECTION LIGHTS, CLUSTER LIGHTS, IDENTIFICATION LIGHTS, AND SIGNAL LIGHTS FOR USE ON VEHICLES.

Claims use since Aug. 14, 1937.

Reg. No. 384,576. Registered Jan. 21, 1941. UNITED CO-OPERATIVES, INC., Indianapolis, Ind., a corporation of Indiana. Republished by registrant, present address Alliance, Ohio.

The words "Quality Products" are disclaimed apart from the mark as shown.

FOR SPARK PLUGS.

Claims use since July 1, 1940.

Reg. No. 387,810. Registered June 3, 1941. THE OHIO CRANKSHAFT COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

TOCCO

FOR ELECTRICAL INDUCTION HEAT TREATING EQUIPMENT FOR INDUCTIVELY HEATING THE SURFACE ZONES OF ARTICLES TO HARDENING TEMPERATURE AND THEREAFTER COOLING THESE ZONES.

Claims use since on or about May 1, 1936.

Reg. No. 405,194. Registered Jan. 11, 1944. VIRGINIA ELECTRIC MANUFACTURING CORPORATION, Charlottesville, Va., a corporation of Virginia. Republished by registrant.

VEMCO

FOR ELECTRIC FUSES, NON-RENEWABLE.

Claims use since June 30, 1943.

Reg. No. 419,215. Registered Feb. 5, 1946. SUN VACUUM STORES, Los Angeles, Calif., a firm. Republished by registrant.

SUPER

CHIEF

FOR ELECTRIC VACUUM CLEANERS.

Claims use since February 1941.

Reg. No. 422,702. Registered Aug. 6, 1946. READING BATTERIES, INC., Reading and Temple, Pa., a corporation of Pennsylvania. Republished by registrant.

Rĕbat

FOR STORAGE BATTERIES.

Claims use since Oct. 27, 1945.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 344,161. Registered Mar. 16, 1937. PRATT CORPORATION, Coldwater, Mich. Republished by Pratt Manufacturing Company, Coldwater, Mich., a limited co-partnership.

FOR COASTING SLEDS.

Claims use since July 1932.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 72,060. Registered Dec. 29, 1908. CATTARAUGUS CUTLERY CO., Little Valley, N. Y., a corporation of New York. Republished by registrant.

FOR POCKET-KNIVES, TABLE KNIVES AND FORKS, SHEARS, SCISSORS, RAZORS, BUTCHER-KNIVES, CARVING-KNIVES, AND PRUNING-KNIVES.

Claims use since Mar. 15, 1908.

Reg. No. 121,320. Registered Apr. 23, 1918. THE NATIONAL SUPPLY COMPANY, Toledo, Ohio. Republished by The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania.

N.S.CO

FOR WELL-DRILLING RIGS AND PARTS THEREOF, WELL-DERRICKS, BULL-WHEELS, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.

Claims use since 1900.

Reg. No. 134,200. Registered Aug. 17, 1920. WARDWELL BRAIDING MACHINE COMPANY, Central Falls, R. I., a corporation of Maine. Republished by registrant.

WARDWELLIAN

FOR BRAIDING-MACHINES AND PARTS THEREOF.

Claims use since Mar. 17, 1920.

Reg. No. 137,344. Registered Nov. 23, 1920. THE NATIONAL SUPPLY COMPANY, Toledo, Ohio. Republished by The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania.

FOR WELL-DRILLING RIGS AND PARTS THEREOF, WELL-DERRICKS, BULL-WHEELS AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.

Claims use since 1900.

Reg. No. 173,737. Registered Oct. 2, 1923. RAMAPO AJAX CORPORATION, New York, N. Y. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

RACOR

FOR TRACK SWITCHES, SWITCH STANDS, SWITCH PLATES, AND PARTS THEREOF.

Claims use since about Sept. 28, 1922.

Reg. No. 179,354. Registered Feb. 5, 1924. MORE-JONES BRASS & METAL CO., St. Louis, Mo. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

ARCTIC

FOR BRONZE BEARINGS.

Claims use since about the year 1900.

Reg. No. 196,680. Registered Mar. 24, 1925. NORTH BRO'S M'F'G COMPANY, Philadelphia, Pa. Republished by North Brothers Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania.

YANKEE

FOR RATCHET-HAND-TOOL HANDLES, HAND DRILLS, RATCHET HAND TOOLS, TOOLS FOR DRILLING BY HAND, SCREW DRIVERS, DRILL CHUCKS, DRILL BITS, BREAST DRILLS, CHAIN DRILLS, BENCH DRILLS, VISES, TAP WRENCHES, SCREW-HOLDER ATTACHMENTS FOR SCREW DRIVERS, PUSH BRACES, BRAKE-LINING CUTTERS, BELTING CUTTERS, RADIO TOOL SETS, AND BIT BRACES.
Claims use since 1898.

Reg. No. 205,305. Registered Nov. 3, 1925. CURVFIT RAZOR COMPANY, INC., New York, N. Y. Republished by Curvfit Sales Corporation, Stamford, Conn., a corporation of Delaware.

CURVFIT

FOR RAZORS.
Claims use since Feb. 1, 1924.

Reg. No. 223,786. Registered Feb. 8, 1927. THE DALTON FOUNDRIES, INC., Warsaw, Ind., a corporation of Indiana. Republished by registrant.

BIG BOY

FOR AUTOMOBILE ACCESSORIES—NAMELY, TIRE PUMPS, FOOT ACCELERATORS, AND WHEEL PULLERS.
Claims use since February 1922.

Reg. No. 267,875. Registered Mar. 4, 1930. NORTH BRO'S M'F'G CO., Philadelphia, Pa. Republished by North Brothers Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania.

"YANKEE"

FOR AUTOMATIC DRILLS, RATCHET SCREW DRIVERS, SPIRAL RATCHET SCREW DRIVERS, RECIPROCATING DRILLS, COUNTERSINKS, TOOL SETS COMPRISING SPIRAL RATCHET SCREW DRIVERS, RATCHET SCREW DRIVERS, CHUCK AND DRILL ATTACHMENTS AND COUNTERSINKS.
Claims use since 1898.

Reg. No. 286,792. Registered Sept. 1, 1931. CLEVELAND CITY FORGE COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

CF

FOR HAND TOOLS, PARTICULARLY BLACKSMITH'S SLEDGES, WOOD CHOPPER'S WEDGES, MAULS, DRILLING HAMMERS, HAMMER HEADS, TURNBUCKLES, AND CLEVISES.
Claims use since 1915.

Reg. No. 292,433. Registered Mar. 15, 1932. BLACKHAWK MFG. CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FREE WHEELING

FOR WRENCHES.
Claims use since Oct. 1, 1931.

Reg. No. 300,373. Registered Jan. 17, 1933. RAMAPO AJAX CORPORATION New York, N. Y. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

THREE IN ONE

FOR SWITCH STANDS USED FOR OPERATING RAILROAD TRACK SWITCHES AND USUALLY COMPRISING A COMPLETE UNIT OF HOUSING AND MECHANICAL LEVERAGE FOR OPERATING THE SWITCH.
Claims use since June 3, 1930.

Reg. No. 318,776. Registered Nov. 6, 1934. HERCULES MOTORS CORPORATION, Canton, Ohio., a corporation of Ohio. Republished by registrant.

HERCULES

FOR INTERNAL COMBUSTION ENGINES INCLUDING SPARK IGNITION ENGINES AND COMPRESSION IGNITION OR DIESEL ENGINES, POWER UNITS INCLUDING SUCH ENGINES, AND ACCESSORIES, INCLUDING, REDUCTION GEARS AND CLUTCHES FOR SUCH ENGINES AND POWER UNITS.
Claims use since Feb. 10, 1914.

Reg. No. 329,601. Registered Nov. 5, 1935. THE NATIONAL SUPPLY COMPANY OF CALIFORNIA, of Torrance, Calif. Republished by The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania.

IDEAL

FOR GAS AND OIL ENGINES, GOVERNOR CONTROL SAFETY ATTACHMENTS FOR ENGINES, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since Apr. 25, 1906.

Reg. No. 340,756. Registered Nov. 17, 1936. TAUCO MANUFACTURING COMPANY, Milwaukee, Wis. Republished by Rockwell Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania.

Tauco

FOR MOTOR-DRIVEN WOODWORKING AND METALWORKING MACHINES, CONSISTING OF LATHES, SHAPERS, CIRCULAR SAWS, BAND SAWS, SCROLL SAWS, JOINTERS, DRILL PRESSES, SANDERS, AND TOOL GRINDERS, AND PARTS THEREOF.
Claims use since May 22, 1936.

Reg. No. 346,939. Registered June 15, 1937. THE OHIO CRANKSHAFT COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

TOCCO

FOR CRANKSHAFTS FOR ENGINES.
Claims use since about August 1934.

Reg. No. 380,100. Registered Aug. 6, 1940. CLUB RAZOR & BLADE MFG. CORP., Newark, N. J., a corporation of New Jersey. Republished by registrant.

The TOP HAT

FOR RAZOR BLADES.
Claims use since on or about Sept. 1, 1936.

Reg. No. 381,416. Registered Sept. 24, 1940. GLOBE HOIST COMPANY, Des Moines, Iowa, a corporation of Iowa. Republished by registrant.

ACTIONIZED

FOR HYDRAULIC LIFTS OF THE TYPE USED IN THE RAISING OF AUTOMOBILES FOR LUBRICATION AND SERVICING PURPOSES.
Claims use since Jan. 21, 1939.

Reg. No. 387,099. Registered May 27, 1941. STATIONERS' GUILD OF AMERICA, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Guild

FOR ADDING MACHINE PAPER, ADDRESS BOOKS, ARCH FILES, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since Feb. 17, 1922.

Reg. No. 390,952. Registered Oct. 14, 1941. WILLIAM S. PINE, Los Angeles, Calif. Republished by registrant.

JENNY

FOR TOOL USEFUL IN INSTALLING AND REMOVING PUMP LINERS, VALVE SEATS, BUSHINGS, KEYS, ETC.
Claims use since Apr. 1, 1940.

Reg. No. 396,131. Registered June 30, 1942. ELECTROGRAPHIC CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

ORIGITONE

FOR MACHINERY FOR SECURING THIN METALLIC PRINTING PLATES TO RIGID CURVED BACKING MEMBERS.
Claims use since Nov. 19, 1941.

Reg. No. 418,084. Registered Dec. 4, 1945. FISHER GOVERNOR COMPANY, Marshalltown, Iowa, a corporation of Iowa. Republished by registrant.

FISHER

FOR CONSTANT PRESSURE PUMP GOVERNORS; EXCESS OR DIFFERENTIAL PUMP GOVERNORS; BOILER GAS FUEL GOVERNORS; PRESSURE REDUCING VALVES; DIAPHRAGM CONTROL VALVES; FLOAT VALVES; PRESSURE RELIEF VALVES; BACK PRESSURE VALVES; ALTITUDE VALVES; PRESSURE PILOT VALVES, LEVER VALVES, ATMOSPHERIC RELIEF VALVES; VACUUM REGULATORS; GAS REGULATORS; TIME TEMPERATURE GAS PRESSURE BOOSTER REGULATORS; PRESSURE BALANCED REGULATORS; PRESSURE REGULATORS; SAFETY SHUT-OFF REGULATORS; DIFFERENTIAL GAS PRESSURE BOOSTER REGULATORS; FLOAT UNITS, INCLUDING A HOLLOW FLOAT, A FLOAT ARM, A SHAFT, USUALLY A STUFFING BOX, AND SOME TIMES OTHER PARTS FOR INSTALLATION IN LIQUID LEVEL CONTROLLERS OR FOR CONTROLLING VALVES, SIGNAL SWITCHES AND OTHER DEVICES BY CHANGE IN LIQUID LEVEL; STEAM TRAPS; GASOLINE AND OIL TRAPS; AIR TRAPS; STEAM AND OIL SEPARATORS; PIPE LINE STRAINERS; CONTINUOUS DRAINERS, LIQUID LEVEL CONTROLLERS; EXHAUST HEADS AND AIR LINE FILTERS AND AIR AND GAS FILTERS FOR OTHER THAN ENGINE FUEL CONTROL AND AIR CONDITIONING; AND LIQUEFIED PETROLEUM GAS REGULATORS FOR CONTROL OF SUPPLY FROM DRUMS AND TANKS TO SERVICE POINTS AND ACCESSORY EQUIPMENT.
Claims use since 1890.

Reg. No. 422,657. Registered Aug. 6, 1946. WILLIAM T. ANDERSON, Indianapolis, Ind. Republished by registrant.

CASTMASTER

FOR CENTRIFUGAL CASTING MACHINES FOR MAKING SMALL INTRICATE CASTING, SUCH AS JEWELRY AND NOVELTIES.
Claims use since on or about Feb. 1, 1941.

Reg. No. 423,465. Registered Sept. 3, 1946. OAKITE PRODUCTS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

OAKITE

FOR INDUSTRIAL CLEANING EQUIPMENT—NAMELY, PORTABLE AND STATIONARY STEAM CLEANING UNITS FOR USE IN CLEANING HEAVY MACHINERY IN STEEL MILLS, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since August 1931.

Reg. No. 431,567. Registered July 29, 1947. SMITH-JOHNSON CORPORATION, Los Angeles, Calif., a corporation of California. Republished by registrant.

SENACON

FOR MACHINE TOOL EQUIPMENT—NAMELY, CYLINDER, AND PISTON TYPE AIR MOTORS, VISES, FEEDS FOR DRILL PRESSES, AND OPERATIONAL CONTROLS FOR PNEUMATIC CYLINDER AND PISTON MECHANISMS.
Claims use since Oct. 20, 1941.

Reg. No. 431,611. Registered July 29, 1947. SPOTNAILS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

SPOTNAILS

FOR MACHINES FOR DRIVING SECURING ELEMENTS IN THE NATURE OF NAILS.
Claims use since Aug. 29, 1941.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 262,786. Registered Oct. 22, 1929. THE CINDERELLA WASHING MACHINE COMPANY, Cleveland, Ohio. Republished by Lake State Products, Inc., Jackson, Mich., a corporation of Michigan.

CINDERELLA

FOR CLOTHES-WASHING MACHINES.
Claims use since about Aug. 1, 1927.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 384,224. Registered Jan. 7, 1941. LOEW'S INCORPORATED, Dover, Del., and New York, N. Y., a corporation of Delaware. Republished by registrant.

FOR FILMS FOR USE IN CONNECTION WITH SYNCHRONIZED APPARATUS FOR SIMULTANEOUSLY REPRODUCING COORDINATED LIGHT AND SOUND EFFECTS; FILMS WITH SOUND, WORDS, AND/OR MUSIC RECORDED THEREON; FILMS WITHOUT SOUND RECORDED THEREON ADAPTED FOR SYNCHRONIZATION WITH SEPARATE SOUND, WORDS, AND/OR MUSIC FILMS AND RECORDS; FILMS AND RECORDS WITH SOUND, WORDS, AND/OR MUSIC RECORDED THEREON, ADAPTED FOR SYNCHRONIZATION WITH SEPARATE PICTURE FILMS; MOTION PICTURES.
Claims use since on or about July 25, 1924.

Reg. No. 384,225. Registered Jan. 7, 1941. LOEW'S, INCORPORATED, Dover, Del., and New York, N. Y., a corporation of Delaware. Republished by registrant.

FOR FILMS FOR USE IN CONNECTION WITH SYNCHRONIZED APPARATUS FOR SIMULTANEOUSLY REPRODUCING COORDINATED LIGHT AND SOUND EFFECTS; FILMS WITH SOUND, WORDS, AND/OR MUSIC RECORDED THEREON; FILMS WITHOUT SOUND RECORDED THEREON ADAPTED FOR SYNCHRONIZATION WITH SEPARATE SOUND, WORDS, AND/OR MUSIC FILMS AND RECORDS; FILMS AND RECORDS WITH SOUND, WORDS, AND/OR MUSIC RECORDED THEREON, ADAPTED FOR SYNCHRONIZATION WITH SEPARATE PICTURE FILMS; MOTION PICTURES.
Claims use since Dec. 9, 1938.

Reg. No. 388,435. Registered June 24, 1941. EYE IN THE SKY, Jacksonville, Fla., a firm. Republished by registrant.

EYE-IN-THE-SKY

FOR CAMERAS.
Claims use since on or about May 1936.

Reg. No. 399,972. Registered Feb. 9, 1943. MARINE OPTICAL MFG. CO., Roslindale, Boston, Mass. Republished by Marine Optical Mfg. Co., Roslindale, Boston, Mass., a firm.

FANTASIE

FOR SUNGLASSES AND OPTICAL FRAMES.
Claims use since Apr. 24, 1942.

Reg. No. 405,698. Registered Feb. 15, 1944. OMEGA MACHINE COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant, present address Providence, R. I.

CHLOROWEIGH

FOR APPARATUS FOR CONTINUOUSLY SUPPLYING CHLORINE TO A PROCESS BY WEIGHT.
Claims use since on or about Dec. 15, 1942.

Reg. No.409,919. Registered Oct. 31, 1944. AMERICAN BRAKE SHOE COMPANY, New York, N. Y., a corporation of Delaware. Republished by registrant.

Brake Shoe

FOR APPARATUS FOR COMPARING THE SPEEDS OF WHEELS, SHAFTS, AND OTHER ROTATING MEMBERS AND FOR BRINGING THE SAME INTO TIMED RELATION.
Claims use since on or about Apr. 22, 1943.

Reg. No. 423,561. Registered Sept. 3, 1946. BUILDERS IRON FOUNDRY, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

PROPELOFLO

FOR FLUID METERS AND INSTRUMENTS USED THEREWITH FOR INTEGRATING, RECORDING AND INDICATING THE RATE OF FLOW AND FOR CONTROLLING AUXILIARY APPARATUS IN PROPORTION TO THE RATE OF FLOW
Claims use since Feb. 12, 1944.

Reg. No. 430,626. Registered June 17, 1947. WILLIAM O. FROHRING, doing business as Bio-Medical Instrument Co., Chagrin Falls, Ohio. Republished by registrant.

BIO-THESIOMETER

FOR INSTRUMENTS FOR QUANTITATIVELY DETERMINING THE SENSITIVITY OF ANY PORTION OF THE HUMAN BODY TO THE EFFECT OF AN APPLIED VIBRATION.
Claims use since May 11, 1946.

Reg. No. 430,892. Registered July 1, 1947. OMEGA MACHINE CO., Providence, R. I., a corporation of Missouri. Republished by registrant.

Vitamiser

FOR FEEDERS FOR CONTINUOUSLY AND AUTOMATICALLY PROPROTIONATELY FEEDING POWDERED OR GRANULAR MATERIAL SUCH AS VITAMIN CONCENTRATES, DRY BLEACH, MALT, BROMATE, AND THE LIKE, INTO A MASS OF MATERIAL TO BECOME A PART THEREOF.
Claims use since April 1945.

CLASS 27

HOROLOGICAL INSTRUMENTS

Reg. No. 431,402. Registered July 22, 1947. BULOVA WATCH COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

LADY
EXCELLENCY

FOR WATCHES—NAMELY, WRIST OR STRAP WATCHES.
Claims use since Feb. 8, 1938.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 55,907. Registered Aug. 21, 1906. PLAINVILLE STOCK COMPANY, Plainville, Mass. Republished by Plainville Stock Company, Plainville, Mass., a corporation of Massachusetts.

PSCO

FOR SCARF-PINS, STICK-PINS, BROOCHES, BRACELETS, CHAINS, CHARMS, SLEEVE AND SHIRT BUTTONS.
Claims use since about 1884.

Reg. No. 363,336. Registered Dec. 20, 1938. A AND Z CHAIN COMPANY, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

Synchroslide

FOR WRIST-WATCH BRACELETS, CLASPS, AND BUCKLES IN THE NATURE OF JEWELRY MADE IN WHOLE OR IN PART OF PRECIOUS METAL OR PLATED WITH THE SAME.
Claims use since Sept. 30, 1932.

CLASS 31

FILTERS AND REFRIGERATORS

Reg. No. 401,719. Registered June 1, 1943. ICELESS COOLER CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

FOR ELECTRICALLY OPERATED WATER COOLERS.
Claims use since about October 1930.

Reg. No. 418,084. Registered Dec. 4, 1945. FISHER GOVERNOR COMPANY, Marshalltown, Iowa, a corporation of Iowa. Republished by registrant.

FISHER

FOR CONSTANT PRESSURE PUMP GOVERNORS; EXCESS OR DIFFERENTIAL PUMP GOVERNORS; BOILER GAS FUEL GOVERNORS; PRESSURE REDUCING VALVES; DIAPHRAGM CONTROL VALVES; FLOAT VALVES; PRESSURE RELIEF VALVES; BACK PRESSURE VALVES; ALTITUDE VALVES; PRESSURE PILOT VALVES, LEVER VALVES, ATMOSPHERIC RELIEF VALVES; VACUUM REGULATORS; GAS REGULATORS; TIME TEMPERATURE GAS PRESSURE BOOSTER REGULATORS; PRESSURE BALANCED REGULATORS; PRESSURE REGULATORS; SAFETY SHUT-OFF REGULATORS; DIFFERENTIAL GAS PRESSURE BOOSTER REGULATORS; FLOAT UNITS, INCLUDING A HOLLOW FLOAT, A FLOAT ARM, A SHAFT, USUALLY A STUFFING BOX, AND SOMETIMES OTHER PARTS FOR INSTALLATION IN LIQUID LEVEL CONTROLLERS OR FOR CONTROLLING VALVES, SIGNAL SWITCHES AND OTHER DEVICES BY CHANGE IN LIQUID LEVEL; STEAM TRAPS; GASOLINE AND OIL TRAPS; AIR TRAPS; STEAM AND OIL SEPARATORS; PIPE LINE STRAINERS; CONTINUOUS DRAINERS, LIQUID LEVEL CONTROLLERS; EXHAUST HEADS AND AIR LINE FILTERS AND AIR AND GAS FILTERS FOR OTHER THAN ENGINE FUEL CONTROL AND AIR CONDITIONING; AND LIQUEFIED PETROLEUM GAS REGULATORS FOR CONTROL OF SUPPLY FROM DRUMS AND TANKS TO SERVICE POINTS AND ACCESSORY EQUIPMENT.
Claims use since 1890.

Reg. No. 420,825. Registered May 7, 1946. FARR COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

FAR-AIR

The word "Air" is disclaimed apart from the mark as shown.
FOR AIR FILTER PANELS.
Claims use since Oct. 15, 1944.

Reg. No. 431,693. Registered July 29, 1947. THE WHITE MOUNTAIN FREEZER COMPANY, INC., Nashua, N. H., a corporation of New Hampshire. Republished by registrant.

GEM

FOR ICE CREAM FREEZERS, HAND OPERATED AND MADE FOR HOUSEHOLD USE.
Claims use since 1883.

CLASS 32

FURNITURE AND UPHOLSTERY

Reg. No. 381,627. Registered Oct. 1, 1940. GEORGE KOCH SONS, INC., Evansville, Ind., a corporation of Indiana. Republished by registrant.

SUNTONE

FOR METAL FURNITURE — NAMELY, CHAIRS, TABLES, COCKTAIL TABLES, OCCASIONAL TABLES, BENCHES, BUFFETS, FERNERIES, PLANT STANDS, SERVING STANDS, HOSTESS STANDS, MAGAZINE RACKS, TEA WAGONS, SHELVES, METAL STANDS FOR POTS OR THE LIKE, AND METAL STANDS FOR BOWLS OR SIMILAR ARTICLES.
Claims use since January 1940.

Reg. No. 398,521. Registered Nov. 3, 1942. FOOD DISPLAY COVER COMPANY, INC., Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

"OXYTENT"

FOR CANOPIES FOR BASSINETTES.
Claims use since Mar. 1, 1939.

Reg. No. 433,319. Registered Oct. 7, 1947. CAVALIER CORPORATION, Chattanooga, Tenn., a corporation of Tennessee. Republished by registrant.

Write-away CAVALIER

FOR COMBINATION DESK AND CHEST.
Claims use since July 25, 1946.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Reg. No. 211,404. Registered Apr. 13, 1926. PITTSBURG WATER HEATER COMPANY, Pittsburgh, Pa. Republished by The Pittsburgh Water Heater Corporation, Pittsburgh, Pa., a corporation of Pennsylvania.

MONARCH

FOR GAS HOT-WATER HEATERS AND GAS HOT-WATER STORAGE SYSTEMS.
Claims use since Aug. 2, 1898.

Reg. No. 257,704. Registered June 18, 1929. PITTSBURG WATER HEATER COMPANY, INC., Pittsburgh, Pa. Republished by The Pittsburgh Water Heater Corporation, Pittsburgh, Pa., a corporation of Pennsylvania.

Pittsburgher

FOR GAS WATER HEATERS AND HOUSE-HEATING BOILERS FIRED WITH WOOD, VAPOR, COAL, GAS, AND OIL.
Claims use since Dec. 10, 1928.

Reg. No. 269,260. Registered Apr. 1, 1930. LAKESIDE COMPANY, Hermansville, Mich. Republished by Furblo Company, Hermansville, Mich., a corporation of Michigan.

Furblo

FOR BLOWERS FOR USE WITH WARM-AIR FURNACES AND FOR VENTILATING PURPOSES.
Claims use since on or about Oct. 1, 1929.

Reg. No. 355,865. Registered Apr. 5, 1938. NATIONAL DUST CONTROL COMPANY, New Orleans, La. Republished by National Blow Pipe & Mfg. Co., Ltd., New Orleans, La., a corporation of Louisiana.

NADUSTCO

FOR AIR DUCTS, VENTILATING, EXHAUST AND DRAFT FANS, FLUES, CONDENSERS, AND SHEET METAL PRODUCTS—NAMELY, PIPES, HOODS, AND VALVES.
Claims use since May 1, 1937.

Reg. No. 362,906. Registered Dec. 6, 1938. THE AMERICAN BRAKE SHOE AND FOUNDRY COMPANY, New York, N. Y. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

CHARCO-GRILL

The word "Grill" is disclaimed apart from the mark as shown.
FOR GRIDIRONS FOR OUTDOOR USE.
Claims use since on or about May 31, 1938.

Reg. No. 404,754. Registered Dec. 21, 1943. AMERICAN BRAKE SHOE COMPANY, New York, N. Y., a corporation of Delaware. Republished by registrant.

Brake Shoe

FOR BOXES, MUFFLES, POTS, RETORTS, SUPPORTS, AND TRAYS USED IN CARBURIZING AND HEAT TREATING OF METALS, GLASS, AND CERAMICS.
Claims use since on or about Apr. 22, 1943.

Reg. No. 418,084. Registered Dec. 4, 1945. FISHER GOVERNOR COMPANY, Marshalltown, Iowa, a corporation of Iowa. Republished by registrant.

FISHER

FOR WHISKY.
Claims use since 1897.

Reg. No. 304,971. Registered July 25, 1933. SCOTIA DISTILLERS LIMITED, Glasgow, Scotland. Republished by Scotia Distillers Limited (1937), Dumbarton, Scotland, a corporation of Great Britain.

FOR WHISKY.
Claims use since Dec. 5, 1928.

Reg. No. 316,670. Registered Sept. 4, 1934. CONTINENTAL DISTILLING CORPORATION, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

ROYAL PLUME

FOR WHISKEY.
Claims use since May 3, 1934.

Reg. No. 316,805. Registered Sept. 4, 1934. THE NEW TOMATIN DISTILLERS COMPANY LIMITED, Tomatin, Scotland, and London, England. Republished by Tomatin Distillers Co., Ltd., Tomatin, Scotland, and London, England, a corporation organized under the laws of Great Britain.

The words "Fine Old," "Highland Whisky," "Tomatin Distillery, Inverness-Shire," are disclaimed apart from the mark as shown.

FOR WHISKY.
Claims use since Oct. 4, 1933.

Reg. No. 321,136. Registered Jan. 22, 1935. CONTINENTAL DISTILLING CORPORATION, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

PARK SPRING

FOR WHISKEY.
Claims use since Sept. 7, 1934.

Reg. No. 321,214. Registered Jan. 22, 1935. CONTINENTAL DISTILLING CORPORATION, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

COBBS CREEK

FOR WHISKEY.
Claims use since Sept. 7, 1934.

Reg. No. 332,808. Registered Feb. 25, 1936. WM. SANDERSON & SON, Leith, Scotland. Republished by William Sanderson & Son Limited, Leith, Edinburgh, Scotland, a limited liability company of Great Britain.

VAT 69

FOR SCOTCH WHISKY.
Claims use since about 1912.

Reg. No. 359,367. Registered Aug. 16, 1938. HAIG & HAIG LIMITED, Glasgow, Scotland, a limited liability company of Great Britain. Republished by registrant.

HAIG & HAIG

FOR SCOTCH WHISKY.
Claims use since on or about Feb. 20, 1895.

Reg. No. 363,034. Registered Dec. 13, 1938. HENRY KELLY & SONS, INCORPORATED, New York, N. Y., assignor to Continental Distilling Corporation. Republished by Continental Distilling Corporation, Philadelphia, Pa., a corporation of Delaware.

BALTIMORE BELLE

FOR WHISKEY.
Claims use since Dec. 9, 1935.

Reg. No. 376,064. Registered Mar. 12, 1940. HAIG & HAIG LIMITED, Glasgow, Scotland, a limited liability company of Great Britain. Republished by registrant.

HAIG & HAIG
FIVE STAR

FOR SCOTCH WHISKY.
Claims use since Jan. 20, 1925.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 380,606. Registered Aug. 27, 1940. UNITED CO-OPERATIVES, INC., Indianapolis, Ind., a corporation of Indiana. Republished by registrant, present address Alliance, Ohio.

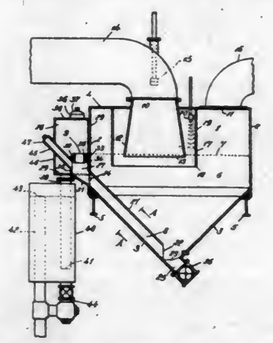
QUALITY UNICO PRODUCTS

The words "Quality Products" are disclaimed apart from the mark as shown.

FOR FEED BOXES, WATER CUPS, METAL HOG FEEDERS, AND METAL HOG FOUNTS, WATERING TANKS AND TROUGHS, AND BROODERS.
Claims use since Nov. 15, 1939.

Reg. No. 397,333. Registered Sept. 1, 1942. ELECTROGRAPHIC CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

ORIGITONE



FOR THIN METALLIC PRINTING PLATES SECURED TO CURVED RIGID BASES.
Claims use since Nov. 19, 1941.

REISSUES

NOVEMBER 9, 1948

23,048
WASH BOX
Olav M. Tweit, Mountain Lakes, N. J., assignor to Allied Chemical & Dye Corporation, a corporation of New York
Original No. 2,373,519, dated April 10, 1945, Serial No. 339,300, June 7, 1940. Application for reissue June 29, 1948, Serial No. 35,909
10 Claims. (Cl. 261—8)

1. A washbox for gas generators comprising a receptacle having a gas inlet, a gas outlet and a conical bottom, sealing means in the receptacle to prevent passage of gas from the gas outlet to the gas inlet, means for supplying liquid to said washbox to wash gas flowing therethrough and remove tar and suspended material from said gas, the wash liquid and tar thus removed collecting in said receptacle, means for maintaining the level of liquid in said receptacle comprising a pressure-equalizing chamber communicating with said receptacle above the level of liquid therein and a discharge conduit with its inlet adjacent the apex of the conical bottom of the receptacle to receive said wash liquid and tarry matter and with its outlet opening in said pressure-equalizing chamber at a level corresponding to the liquid level in the receptacle, and a pipe communicating with the conduit below the level of liquid therein and having its upper end above the level of the liquid, the pipe and conduit being

constructed and arranged so that a tool may be introduced through the pipe to clean the conduit and the apex of the conical bottom of the receptacle.

PATENTS

GRANTED NOVEMBER 9, 1948

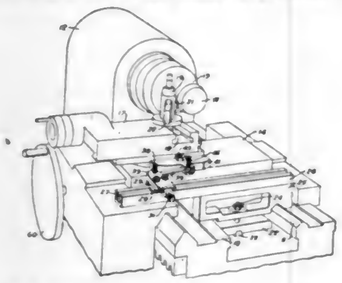
2,453,108
CARBOHYDRATE-BORIC ACID SALTS OF AMINO AROMATIC BASES
David Curtis, New York, N. Y.
No Drawing. Application July 13, 1945, Serial No. 604,975
9 Claims. (Cl. 260—209)

1. A salt formed of an amino-aromatic base from the group consisting of alkyl and alkamine esters of an amino-aromatic acid with boric acid, in the presence of an aliphatic polyhydroxy compound selected from the group consisting of erythritol, arabinose, arabitol, glucose, mannose, gulose, galactose, fructose, sorbitol, mannitol, dulcitol, glucoheptose, fructo-heptose, iso-mannide, sorbide, mannide, mannitan, sorbitan and pentaerythritol.

2,453,109
METHOD OF PREPARING FULL-FLAVORED FRUIT JUICE CONCENTRATES
Louis G. MacDowell, Lakeland, and Edwin L. Moore and Cedric D. Atkins, Winter Haven, Fla., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application August 7, 1945, Serial No. 609,473
5 Claims. (Cl. 99—205)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process of producing a citrus fruit juice concentrate capable of speedy reconstitution by addition of water to make a cold drink having a substantial portion of the original aroma, flavor and palatability of the citrus fruit, comprising concentrating whole juice of citrus fruit under vacuum to about five- to eight-fold, then diluting the concentrated juice with fresh, unconcentrated, deaerated whole juice of the same citrus fruit to lower the concentration to about three- to four-fold, sealing, and freezing.

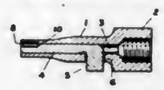
2,453,110
ISOMERIZATION OF BICYCLIC SUBSTANCES AND PRODUCTS RESULTING THEREFROM
Joseph P. Bain and Albert H. Best, Jacksonville, Fla., assignors, by mesne assignments, to The Glidden Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application March 9, 1944, Serial No. 525,762
3 Claims. (Cl. 260—632)



1. An unsaturated acyclic primary alcohol of the empirical formula $C_{11}H_{18}O$ and having the conjugated triene structure of allo-ocimene, approximately the same exaltation, and the following approximate physical characteristics:

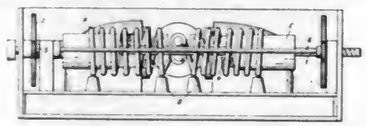
B. P. (10 mm.)	°C. 132–134
D^{25}	.9066
N_D^{25}	1.5571

2. The process which comprises subjecting the dicyclic primary alcohol of empirical formula $C_{11}H_{18}O$ formed by the condensation of nopinene with anhydrous formaldehyde to pyrolysis in the vapor phase at temperatures between about 350° C. and 450° C., thereby to produce an unsaturated acyclic primary alcohol fraction having the conjugated triene structure of allo-ocimene and having the following approximate physical properties:



B. P. (10 mm.)	°C. 132–134
D^{25}	.9066
N_D^{25}	1.5571

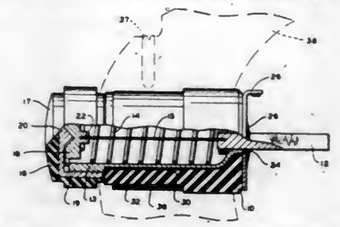
2,453,111
RADIUS ATTACHMENT FOR LATHES
Allen M. Bell, Jr., Philadelphia County, Pa.
Application November 22, 1946, Serial No. 711,766
2 Claims. (Cl. 82—11)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



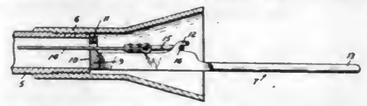
1. In a lathe having the conventional bed provided with elongated ways and the conventional headstock adapted to receive and rotate the workpiece to be turned and the conventional tool-holding post movable manually or mechanically both transversely and longitudinally of said lathe bed, an attachment for cutting a curved surface having a large radius on a workpiece having a small diameter, including, an anchor base having a surface arranged to interfit with the ways of the lathe, an anchor clamp having a surface arranged to fit beneath the ways of the lathe, an anchor clamp bolt arranged for connection with said anchor base and said anchor clamp and adapted to secure said anchor base in a selected fixed position, an anchor bed having a perforation in it and firmly but detachably secured to said anchor base and having an elongated groove therein extending transversely of the bed of the lathe, a clamp bracket having a ridge extending from a surface thereof into the groove in said anchor bed, a bracket securing screw having engagement with said anchor bed and with said clamp bracket so as to secure said clamp bracket in a selected fixed position along said anchor bed, a compound clamp having two perforations in it and a slot in one face thereof so that said compound clamp is adapted to engage with the tool holder of the lathe and to be secured to said tool holder by means of a bolt passing through one of the perforations in said compound clamp, a link having a pair of perforations in it, and a pair of pins passing through the perforations in said link and securing said link to said clamp bracket and to said compound clamp so that said compound clamp turns at the end of said link about the pin in said clamp bracket as a center and thereby moves the tool holder of the lathe in an arc whose radius is the distance between the centers of the pins.

2,453,112
CLAMP
George Bennett, Vallejo, Calif.
Application February 14, 1946, Serial No. 647,644
7 Claims. (Cl. 279—97)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A stud chuck comprising a generally cylindrical body member, said body member having a concentric bore therein to receive a stud, said chuck having a second cylindrical bore substantially smaller in diameter than said first bore extending longitudinally through the wall of said body member and intersecting said first bore to interrupt a relatively small portion of the circumferential surface thereof, a generally cylindrical pin journalled in said second bore, said pin having a concavity of the same curvature as said first bore and of such size as to bridge the interrupted surface of the first bore, an intersection of the surface of the concavity with the cylindrical surface of said pin forming a detent edge on said pin, an arm fixed to one end of said body member and extending outwardly from a diametral plane thereof, a second arm fixed to said pin and extending outwardly therefrom, a spring interposed between said arms and tending to force them apart and stop means limiting the motion of said second arm.



2,453,113
HIGH-FREQUENCY VARIABLE INDUCTANCE
Jack L. Bowers, Dayton, Ohio, assignor to the United States of America as represented by the Secretary of War
Application December 6, 1944, Serial No. 566,935
6 Claims. (Cl. 171—242)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

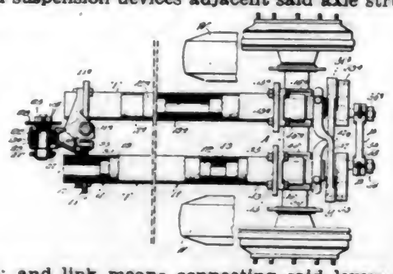


1. A variable inductance for high frequency radio circuits comprising a coil, means for supporting said coil in a fixed position, an electrically conductive slug element movable longitudinally relatively to said coil, means for moving said slug element, a plurality of blocks carried by and extending radially from said slug and provided with yoke receiving sockets, coil engaging and following yokes reciprocable in said sockets and means within said sockets engaging said yokes and yieldingly maintaining the same in operative engagement with the aforesaid coil.

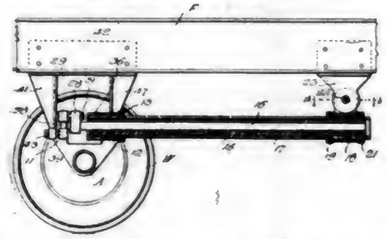
2,453,114
FILTER CONDENSER AND BRUSH HOLDER
Kristian H. Brandt, Red Bank, N. J., assignor to the United States of America as represented by the Secretary of War
Application May 16, 1945, Serial No. 594,148
10 Claims. (Cl. 171—324)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A combination of a brush holder and a filter condenser including a metallic casing, a brush slidably mounted within and protruding through and fitting said casing, said brush being electrically connected to said casing, a dielectric sleeve surrounding the outer surface of said casing, and a metallic layer deposited on the outer surface of said dielectric sleeve and capacitatively adjacent to said casing, whereby said metallic casing and said metallic layer form said filter condenser, said layer being adaptable for electrical connection.

2,453,115
STEEL TAPE HOLDER
Carl A. Brown, Aberdeen, Md.
Application February 13, 1945, Serial No. 577,717
3 Claims. (Cl. 33—137)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



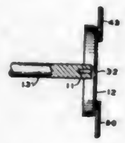
2. A tape holder for use in measuring weapon barrels, comprising a head having an elongated opening therein for receiving an end of a measuring tape, a shank formed integral with and projecting from one side of the head and away from the other end of the tape, the headed end of the holder being adapted to be positioned within a flash holder and with the opposite side of the head bearing against the muzzle end of a barrel to which the flash holder is connected, and means comprising a hook to which one end of the tape is detachably connected formed on said shank and opening away from the head for engaging a loop on the first mentioned end of the tape, for positioning the zero graduation of the tape flush with the last mentioned side of the head and with the muzzle end of the barrel.



2,453,116
VEHICLE SUSPENSION
Lawrence R. Buckendale, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio
Application October 28, 1943, Serial No. 508,020
6 Claims. (Cl. 267—21)

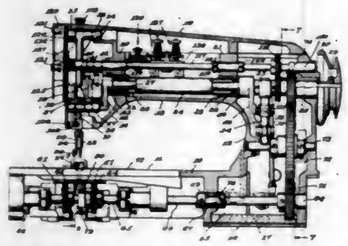
1. In a vehicle suspension, a vehicle chassis, an axle assembly adjacent one end of said chassis comprising a transverse axle structure carrying at least one wheel at each end thereof; a pair of torsion suspension devices located in side-by-side relationship and extending substantially longitudinally of said chassis; said suspension devices each comprising a rod member and an enclosing sleeve member resiliently connected together by a sleeve of resilient material; means for connecting one end of one member of each of said suspension devices to said chassis for limited rocking movement about vertical and horizontal axes; means for connecting the opposite end of one member of each of said suspension

devices to said axle structure in such manner as to restrain the latter against rocking or longitudinal translational movements with respect thereto; lever means on one member of each of said suspension devices adjacent said axle structure; and link means connecting said levers to said chassis in such manner that said last-named members are rocked in opposite directions relative to each other in response to the load imposed thereupon by said chassis.



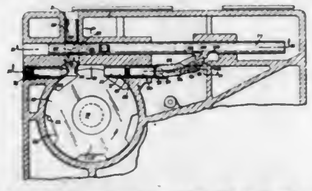
2,453,117
VEHICLE SUSPENSION
Lawrence R. Buckendale, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio
Application January 4, 1944, Serial No. 516,964
18 Claims. (Cl. 267—21)

1. In a vehicle suspension, a vehicle chassis, an axle assembly beneath said chassis comprising a transverse axle structure carrying at least one wheel at each end thereof; a torsion suspension device extending substantially longitudinally of said chassis; said suspension device comprising a rod member and an enclosing sleeve member resiliently connected together by a sleeve of resilient material; means for connecting one end of said suspension device to said chassis for limited rocking movement about vertical and horizontal axes; means for connecting the other end of said suspension device to said axle structure in such manner as to restrain the latter against longitudinal translational movements with respect thereto; lever means on said members adjacent said axle structure; and link means connecting said lever means to said chassis in such manner that said members tend to rock in opposite directions in response to the load imposed thereupon by said chassis.



2,453,118
CONCENTRATED ARC DISCHARGE DEVICE
William D. Buckingham and Clarence R. Delbert, Southampton, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application May 8, 1946, Serial No. 668,092
25 Claims. (Cl. 250—27.5)

1. A cathode structure for use in an arc discharge device, comprising means for causing the device to operate with an arc of high current density concentrated in a spot adjacent to a restricted active surface area of the cathode and to prevent wander of the arc over the cathode surface, said means comprising a cathode body substantially composed of a material having good electrical conductivity and high melting and volatilization point temperatures, said cathode body having a large mass and high thermal conductivity to prevent it from becoming heated to the stage where it is thermionically emissive to a substantial extent when the discharge device

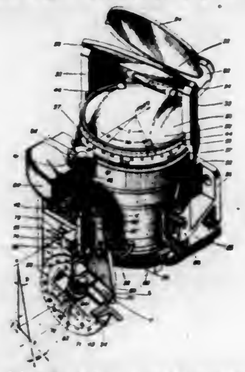


is in operation, and a core embedded in the cathode body, said core having an exposed portion integrally bonded to the cathode body and defining said restricted active surface area, said core at the active surface area being substantially composed of a coalescent mass of a high melting point material having an electronic emissivity at the operating temperature of the arc discharge device to provide a copious supply of electrons due to thermionic emission and field emission mechanism when the device is in operation to support the arc discharge.

2,453,119
SEWING MACHINE
Norman V. Christensen, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application March 15, 1945, Serial No. 582,876
8 Claims. (Cl. 112—248)

1. In a sewing machine having a work support, a vertical standard and an overhanging arm projecting from said standard and extending over said work support, the combination of stitch forming means including a reciprocable and swingable thread carrying needle and cooperating vertical axis hook, means for driving said switch forming means including a shaft in said work support, a shaft in said overhanging arm and gear connections between said shafts within said standard, rotary take-up means mounted adjacent said reciprocable needle and including a rotary member and a slotted thread engaging element extending laterally from said member and carried through an orbital path upon rotation thereof, a single shaft within said overhanging arm for rotating said take-up means, and gear connections in said vertical standard for driving said single shaft from one of said first mentioned shafts, said take-up means imparting the sole take-up action to said needle thread.

2,453,120
LOCATING AND LOCKING MECHANISM FOR MACHINE-TOOL TURRETS
Myron S. Curtis, Cleveland, Ohio, assignor to The Warner & Swasey Company, Cleveland, Ohio, a corporation of Ohio
Application June 27, 1944, Serial No. 542,290
9 Claims. (Cl. 29—50)

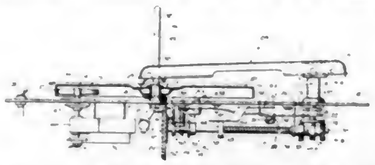


1. In a machine tool or the like, the combination of a frame, an indexible turret member rotatably supported by said frame and having a plurality of circularly spaced abutments each corresponding with an indexed position of the turret member, means for indexing said turret member, a locking member movably supported by said frame and adapted to engage one of said abutments for each indexed position of said turret member, a stationary stop member in alignment with said locking member, a locating member supported by said frame for movement transversely of the path of movement of said locking member and adapted to be interposed between said stop member and said one abutment for each indexed position of said turret member, means for clamping said turret member to said frame, power means for actuating said indexing means, locking member, locating member and clamping means in timed relation to each other whereby said turret member is successively unclamped, unlocked, indexed, located and locked in indexed position and then reclamped.

2,453,121
GAS PORTING DEVICE FOR SHOTGUNS
Richard M. Cutts, The Plains, Va., assignor of one-half to Dorothea Lane Cutts, The Plains, Va.
Application April 20, 1945, Serial No. 589,315
4 Claims. (Cl. 89—14)

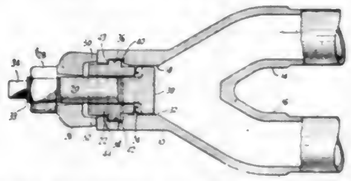
1. In combination with a shotgun barrel through which shot as well as powder and shot wads are projected by the gases of explosion of a powder charge, a chamber mounted on the muzzle of the barrel for receiving the gases of explosion as well as the projected shot, said chamber comprising a hollow cylindrical casing having its axis concentric with the axis of the barrel, the inner diameter of said casing being greater than the bore of the barrel, said casing thereby forming a chamber space to permit expansion of the gases therein, the wall of said casing having longitudinally spaced apertures to release a portion of the expanded gases of explosion laterally of the casing, said wall also provided with a plurality of separated substantially similar annular, radially inwardly extending ribs providing a projectile opening in each rib, said ribs forming separate subdivisions of the expansion chamber, at least one rib disposed between two of said longitudinally spaced wall apertures, and the projectile opening through each rib formed of a diameter such as to provide a substantial gas seal with the projected powder and shot wads as the wads pass the ribs, the rear face of each rib so sloped forwardly and inwardly to said projectile opening as to turn such stray shot, as may impinge thereagainst, inwardly toward the axis of the shot column.

2,453,122
REFLECTOR COLLIMATOR SIGHT FOR TORPEDO EJECTORS
Willis B. Ensinger, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of the Navy
Application July 6, 1944, Serial No. 543,739
3 Claims. (Cl. 88—2.3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A combined sighting and angle solving device for use in aircraft for directing a projectile upon a collision course with respect to a moving target comprising, a sighting device mounted for bodily rotation and having an index thereon, said sighting device having an inclined light reflecting and transmitting plate and means for projecting an illuminated reticle image onto said plate, an angle on the bow ring having a scale graduated to correspond to the angle on the target bow, the graduations being disposed adjacent an index and the ring being rotatable about the axis of the sighting device to bring the graduations adjacent the index, an angle solving mechanism linked to the sighting device and the angle on the bow ring so as relatively to move those parts said angle solver including three extensible links pivoted together at their ends to form a triangle, means for varying the length of the first link in proportion to average torpedo speed, means for varying the length of a second link in proportion to target speed, and means for adjusting the angle opposite the average torpedo speed link to correspond to the angle on the target bow, means for bodily rotating the sight in proportion to the angle between the first and third sides of the triangle, and means for rotating the angle on the bow ring in proportion to the angle between the second and third side of the triangle so as to indicate the required sight angle in order to intercept the target.

2,453,123
INTERMITTENT OPERATING MECHANISM
Joseph Erwood, Crystal Lake, Ill., assignor to The Erwood Co., Crystal Lake, Ill., a corporation of Illinois
Application September 13, 1947, Serial No. 773,829
14 Claims. (Cl. 274—10)

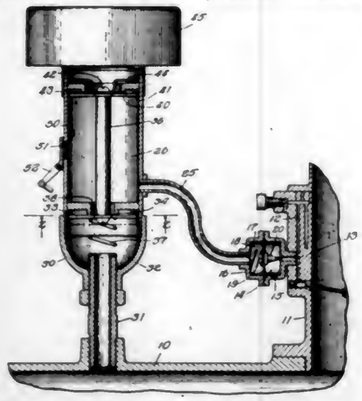


1. Phonographic apparatus comprising a record turntable adapted to be driven, a tone arm,

driving means operatively associated with the turntable and driven thereby, driven means connected on a turnable and axially shiftable shaft in coactive relation with said driving means, means operatively associated with said shaft and said tone arm to raise and lower the same, means operatively associated with said shaft and said

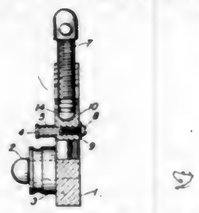
tone arm to move the tone arm laterally away from the turntable and to move the tone arm toward the turntable after it has been moved away from the turntable, and means operatively associated with said shaft for retracting said shaft to disengage said driven means for coactive relation with said driving means.

2,453,124
PRESSURE SEALING DEVICE
James Fletcher, Akron, and Ernest Carl Huge, Barberton, Ohio, assignors to The Babcock & Wilcox Company, Rockleigh, N. J., a corporation of New Jersey
Application March 21, 1944, Serial No. 527,499
10 Claims. (Cl. 138—95)



1. In an economizer access fitting, a metallic body normally containing a fluid at high temperature and pressure and presenting an access bore or opening at one side, an easily detachable gland structure normally fixed within said opening, a retainer easily slidable into a bore in the gland structure and having at its inner end an enlarged head disposed within said access bore or opening so as to present a narrow annular sealing opening between the periphery of the head and the wall of the access opening, and a metallic gasket of conoidal shape and having a rim portion normally axially forced into said sealing opening and into pressuretight contact with the peripheral portion of said head and the wall of said access opening.

8. A gasket of thin sheet steel consisting of an elastic resilient ring in the form of a frustum of a conoidal funnel with its larger diameter or portion having a completely circular edge or rim of tapering wall thickness to enter and seal a thin pressure crevice with a wedging sealing action.

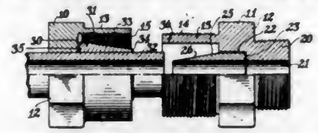


2,453,125
VACUUM BREAKER
Charles R. Flint, La Porte, Ind., assignor to The Deluxe Products Corporation, a corporation of Indiana
Application December 1, 1945, Serial No. 632,158
7 Claims. (Cl. 123—97)

3. Actuating mechanism for the relief of vacuum in the carburetor of an internal combustion engine having an intake manifold comprising a primary vacuum chamber in open communication with the manifold, an opening in said chamber, a closure for said opening, resilient means normally urging said closure against said opening, a secondary vacuum chamber in communication with said primary vacuum chamber through said

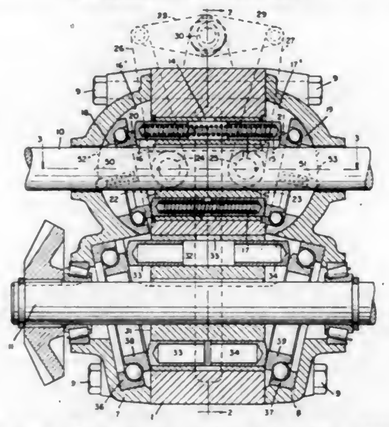
opening, a secondary closure providing restricted communication between said secondary vacuum chamber and the atmosphere, said secondary closure being mounted in spaced relationship to the first closure, and a diaphragm valve communicating with said secondary vacuum chamber and said carburetor.

2,453,126
HAND BEADING TOOL
Eudore A. Forcier, United States Navy
Application April 12, 1946, Serial No. 661,637
2 Claims. (Cl. 153—9)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



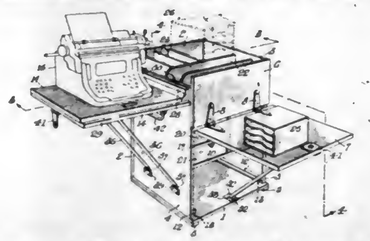
1. A beading tool comprising a housing plate provided with an opening therein, a block slidably mounted in said opening, a pair of grooved anvil rollers mounted on said housing in contiguous relationship and symmetrically disposed with respect to said opening, said rollers extending laterally and unobstructedly from the face of the housing for the reception of work to be beaded, a bead member mounted on said block, and means for urging said bead member into operative relationship with respect to said anvil rollers.

2,453,127
PIPE COUPLING
Stephen Guarnaschelli, New Rochelle, N. Y., assignor to Packless Metal Products Corporation, New Rochelle, N. Y., a corporation of New York
Application November 16, 1945, Serial No. 629,003
4 Claims. (Cl. 285—86)



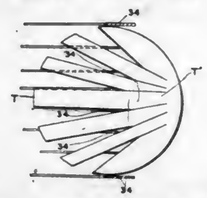
1. A pipe coupling comprising a pair of coupling members, means for connecting said members

and for drawing them toward each other, and oppositely facing wedge-shaped collars carried by said members, one collar having a smaller outside diameter than the inside diameter of the other collar so that the smaller collar can enter the end of a pipe disposed within the larger collar,



said larger collar being formed of deformable material and said smaller collar being formed of relatively hard material, the member having the smaller collar having a portion extending beyond and encircling said collar for engagement with the outer surface of said other collar when said collars are moved into engagement with said pipe.

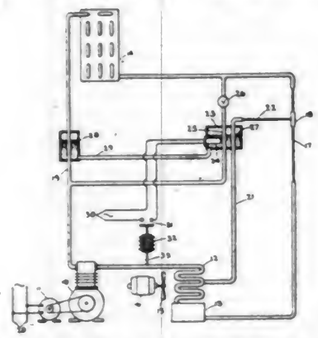
2,453,128
TRANSMISSION
Richard W. Hautzenroeder, Mansfield, Ohio
Application February 10, 1945, Serial No. 577,231
4 Claims. (Cl. 103—162)



1. In a fluid displacement apparatus having a stator provided with inlet and outlet ports and a rotor in said stator, said rotor provided with a plurality of cylindrical openings extending axially therethrough and arranged in equally spaced relation in an annular area coaxial with said rotor, cylindrical pistons extending into each of said openings from each end thereof, said rotor provided with radially extending passages respectively leading outwardly from each of said openings intermediately of said pistons, and arranged to register with said inlet and outlet ports, an annulus at each end of said rotor arranged to be engaged by the pistons and being tiltable about an axis perpendicular to the rotor axis, said pistons projecting from the adjacent end of said rotor, the piston ends which engage with the annulus being of a convex contour generated by a radius of curvature greater than the piston diameter, and means including bearings in the stator for supporting said annulus for rotation about its axis, with its axis of rotation tiltable at an angle to the axis of the rotor and always intersecting the axis of the rotor rotation in the same plane which joins the center ends of the said radii of the contacting convex ends of the pistons.

2,453,129
OFFICE CABINET HAVING SHELF-FORMING CLOSURES
Ray D. Hinton, Oak Park, Ill.
Application September 5, 1944, Serial No. 552,786
1 Claim. (Cl. 312—161)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

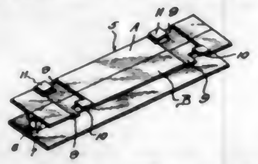
A cabinet adapted to enclose office equipment and to be extended to support said office equipment in position for use, said cabinet being substantially rectangular and having four vertical walls, all of said walls of said cabinet being substantially coextensive in height when said cabinet is closed, one of said walls being horizontally divided into a stationary lower portion and an upper portion hinged thereto and adapted to swing outwardly and downwardly to occupy a substantially vertical position, the cabinet having a top wall fixed to the outer end of the hinged upper portion of said horizontally divided wall whereby it may assume a horizontal position to form an outwardly extending shelf, the next adjacent right angularly extending wall being horizontally divided into a stationary upper portion and a lower portion hinged thereto and adapted for upward swinging movement into a horizontal position to form a second outwardly extending shelf, the bottom of said cabinet being connected to the lower edges of all but said second-named wall, and means for supporting both of said shelves in their outwardly extending positions, the horizontal position occupied by said first-named outwardly extending shelf being substantially lower than the top of the cabinet and the horizontal position occupied by said second-named outwardly extending shelf being substantially lower than that of said first-named outwardly extending shelf.



2,453,130
FREEZING HIGH LIQUID CONTENT FRUITS AND VEGETABLES
Albert F. Hoffman, East Orange, N. J.
Application April 28, 1945, Serial No. 590,936
9 Claims. (Cl. 99—193)

1. A method of quick-freezing an edible article of the class of vegetables and fruits, which comprises cutting the article into a plurality of slices connected at one edge, spreading said slices apart to expose their cut surfaces, and subjecting the cut surfaces of said slices to a refrigerating means maintained at quick-freezing temperature.

4. An apparatus for quick-freezing an edible article of the class of vegetables and fruits comprising a refrigerating tunnel, a conveyor extending through said tunnel, a plurality of means on said conveyor each adapted to receive an article, a plurality of cutting elements spaced apart transversely, and extending lengthwise of said tunnel adapted to engage each article and cut it into a plurality of slices, means in said tunnel for spreading said slices apart fanwise to expose their cut faces, refrigerating means for chilling a portion of said tunnel to quick-freezing temperature to quick-freeze said slices, and means for pressing said frozen slices together to restore said article substantially to its original shape.

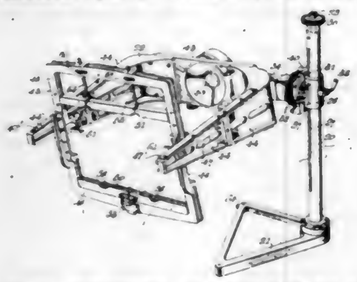


2,453,131
REFRIGERATING SYSTEM
Albert B. Hubbard, Caldwell, N. J., assignor to General Electric Company, a corporation of New York
Application June 28, 1947, Serial No. 757,888
9 Claims. (Cl. 62—8)

1. A refrigerating system including a compressor and a condenser and an evaporator connected in a closed refrigerant circuit, a flow restricting tube connected in said circuit between said condenser and said evaporator to control the flow of liquid refrigerant to said evaporator, a by-pass conduit connected between said condenser and said tube intermediate the ends of said tube, means providing a closed chamber having a first portion in heat exchange relationship with said by-pass and containing a body of volatile liquid, means for heating said portion of said chamber to vaporize liquid and force liquid out of said portion of said chamber into a second portion thereof, means utilizing refrigerant withdrawn from said evaporator for cooling said second portion of said chamber to condense vapor therein, and means responsive to a condition of operation of said system for energizing said heating means to control the flow of refrigerant through said by-pass for varying the rate of flow of refrigerant to said evaporator.

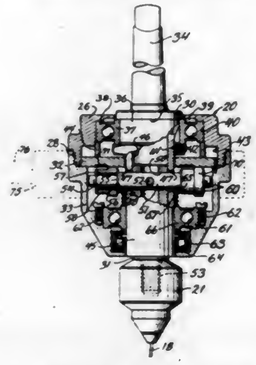
2,453,132
RAILROAD TIE
Charles C. Jones, Miami, Fla.
Application July 27, 1944, Serial No. 546,795
1 Claim. (Cl. 238—38)

In a metallic railroad tie assembly the combination of rails having a flat base, a pair of channelled rail supporting sections, mounted with their webs back to back, with their rail supporting flanges arranged in the same plane and in a substantially horizontal position, the said rail supporting flanges being provided with a pair of depressions running transversely across them, the depressions of adjacent channelled sections being aligned, and each depression being of the width of the rail base, rail base engaging lugs, cut out of the material of the seat, raised and projecting over the same for holding the rail on its seat, the lugs on each channelled section being raised for engagement of the same side of the



rail bases and the lugs on different sections being raised for engagement of different sides of the rail bases, the webs of the channelled sections being provided with connecting means for preventing the separation of the said sections in the longitudinal direction of the rail, said channel sections, after assembly on the rails, being locked in the transverse direction of the rail by the rail bases seated in the depressions and the rail base engaging lugs.

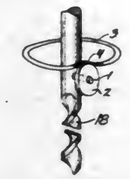
2,453,133
PAPER BOTTLE TAP
John Paul Jones, Omaha, Nebr., assignor to Dairy Specialties, Inc., a corporation of Nebraska
Application June 11, 1945, Serial No. 598,881
2 Claims. (Cl. 222—81)



1. A draw-off tap having a gradually pointed extremity with an opposite discharge spout and a passage leading from one side of the extremity to the upper end of the discharge spout, a projection intermediate the ends of the tap for determining the extent of insertion of the pointed extremity and having a diameter equal to the largest diameter of the pointed extremity.

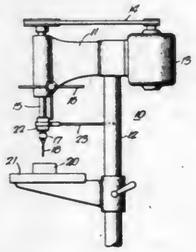
2,453,134
PROJECTION INSTRUMENT FOR RECTIFYING OBLIQUE PHOTOGRAPHS
Nathan H. Juran, Manhattan Beach, Calif.
Application December 27, 1945, Serial No. 637,473
5 Claims. (Cl. 88—24)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an instrument for rectifying an oblique photograph, a projector, a film holder associated with the projector, said film holder being provided with slidable stretcher bars having screw operated adjusting means and adapted to retain various sizes of photographs within said film holder and said projector having an optical system having a pin point aperture located at its focal point, the focal point being located at a distance from the film holder in accordance with the focal length of a camera with which the oblique photograph was taken, means for rotating the projector about a horizontal axis and means for rotating the projector about a second axis perpendicular to the first mentioned axis, the intersection of the two axes coinciding with the focal point of the projector.



2,453,135
CHIP BREAKING DRILL DEVICE
John W. Karweit, Skokie, Ill., assignor, by mesne assignments, to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application November 20, 1942, Serial No. 466,273
11 Claims. (Cl. 77—5)

1. A combination driller and chip breaker including a non-rotary member, a drive shaft and a driven shaft rotatably mounted with respect to said member and reciprocally mounted with respect to one another, a cam means supported upon said member and having concentric tracks each provided with a single relief therein, a follower means cooperating with said cam means and including a rotor for each cam track, said rotors having raised treads thereon for engaging the cam tracks, said cam means and follower means carrying the axial thrust load between the shafts incurred during the feed traverse thereof, means urging said cam means and follower means in continuous contact with each other, said cam means, follower means and urging means imparting a reciprocation to the driven shaft once each rotation of the driven shaft which reciprocation is accomplished within approximately 60° of rotation, and means upon said driven shaft for supporting a metal cutting drill in work engaging position, said reciprocation comminuting the chips formed by the drill.

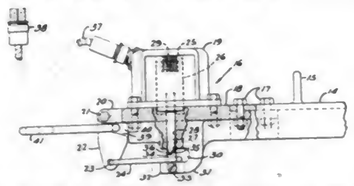


2,453,136
CHIP BREAKING DRILL CHUCK
John W. Karweit, Skokie, Ill., assignor, by mesne assignments, to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application April 26, 1943, Serial No. 484,612
28 Claims. (Cl. 77—5)

1. A device of the class described comprising a rotary drive member, a supporting member, a rotary driven member supported in axially sliding driven relation to the drive member, an oscillator for said driven member including a cam element and a follower element, one of said elements being carried by the driven member, and the other of said elements being carried by the supporting member, and means for holding said supporting

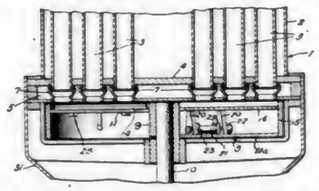
member against rotation, said cam and follower elements cooperating to hold the driven member in relative fixed axial position during the major portion of a revolution and to impart to the driven member an axial oscillation less than .04 of an inch within 90° of a revolution.

2,453,137
METHOD OF DRILLING METAL AND THE LIKE
John W. Karweit, River Grove, Ill., assignor, by mesne assignments, to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application August 20, 1942, Serial No. 455,417
14 Claims. (Cl. 77—5)



1. The method of comminuting chips formed by a rotary drill that is feed traversed into a work piece which includes the step of retracting the drill from its cutting position far enough to terminate the chip being formed and returning the drill to its cutting position to start another chip at least once every three revolutions of the drill and each time within a minor portion of a revolution of the drill.

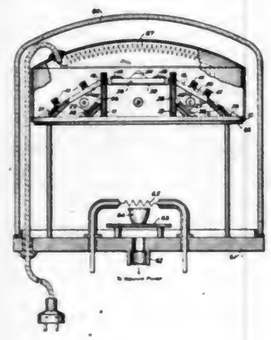
2,453,138
PROCESS OF DELEADING GASOLINE
Morris S. Kharasch, Chicago, Ill., assignor to the United States of America as represented by the Secretary of War
No Drawing. Application May 2, 1946, Serial No. 666,805
7 Claims. (Cl. 196—44)



1. The process of deleading gasoline containing tetraethyl lead which comprises adding stannic chloride to the gasoline and then treating the mixture with a tertiary-amine-treated charcoal to adsorb the reaction products and settle out the same.

2,453,139
TOW RELEASE MECHANISM
Henry P. Kleinkort, New Washington, Ohio, assignor to Agatha K. Bremer, New Washington, Ohio
Application June 14, 1946, Serial No. 676,836
4 Claims. (Cl. 280—33.15)

2. In a tow cable releasing mechanism, in combination, a frame, a force reducing lever pivoted at one end on said frame and extending transversely to the line of pull of the tow, a link pivotally attached to the other end of said lever and extending parallel to the line of pull, a freely movable member mounted on said frame for holding that end of said link not attached to said lever and releasable means for holding said member immovable, said frame, said lever and said link defining a space in which a tow cable fitting can be held, such space being located longitudinally along said lever whereby such fitting engages said lever between the points of connection of said lever and said frame and of said lever and said link.



2,453,140
ADJUSTABLE CUTTER FOR TUBE-ICE MACHINES
Benjamin F. Kubaugh, Louisville, Ky., assignor to Henry Vogt Machine Co. Inc., Louisville, Ky., a corporation of Kentucky
Application December 28, 1943, Serial No. 515,955
5 Claims. (Cl. 241—92)

1. Rotary ice cutter for severing the lower end portions of a plurality of freely descendable laterally immovable parallel ice cylinders, comprising a partition having a radial slot and having ice cylinder supporting portions at two levels, terminating in the respective edges of said slot, a knife secured to the higher edge comprising a reversible blade having its opposite edges respectively sharp and blunt, and a handle secured to said blade extending downwardly through an aperture in the portion of said disk at higher level for rotating said blade to bring either of its edges into active position.

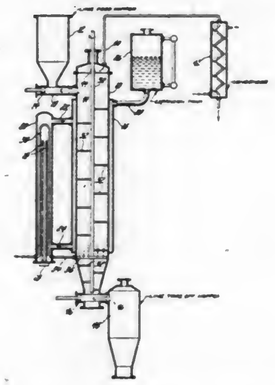
2,453,141
HOLDING FIXTURE FOR COATING OPTICAL ELEMENTS
Werner Lange, Forest Hills, N. Y.
Application August 7, 1945, Serial No. 609,471
4 Claims. (Cl. 91—60)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a fixture for holding lenses, prisms or other optical elements during surface coating thereof, the combination of a latticework structure made up of spaced substantially straight support members joined together in the form of a truncated pyramid having an equal number of sides all of similar slope and all joined at their bases by a common circular support member, removable shelving members spanning the spaces between said supports and serving clampably to

hold said lenses and prisms in said latticework structure with the lower surfaces thereof substantially fully exposed from the underside of the latticework, and releasable fastening means for adjustably attaching said shelving members at desired points on said supports whereby to provide the wide variety of spacings needed to hold different sizes and shapes of prisms or lenses in the latticework.

2,453,142
SUGAR-BEARING PRODUCT AND PROCESS OF MAKING
Royal Lee, Milwaukee, Wis., assignor to Lee Foundation for Nutritional Research, Milwaukee, Wis., a corporation of Wisconsin
No Drawing. Application May 12, 1944, Serial No. 535,381
4 Claims. (Cl. 99—206)

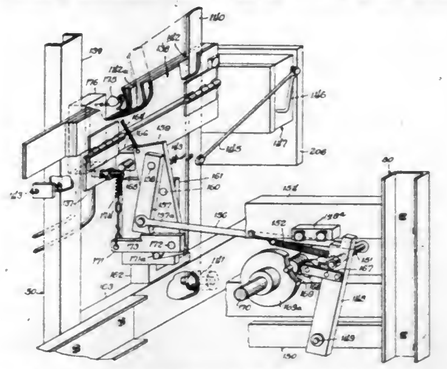
1. A dry product comprising the solids of an acid sugar-bearing juice combined with added hemicellulose material and a calcium-bearing phytate.



2,453,143
TENNIS BALL
Léon Sylvain Max Lejeune, Paris, France; vested in the Attorney General of the United States
Application November 24, 1941, Serial No. 420,292
In France August 9, 1938
3 Claims. (Cl. 273—61)

1. A tennis ball comprising a hollow body confining air at substantially atmospheric pressure, said body being composed of a pair of hemispherical calottes joined together, each calotte being

shaped out of fabric of uniform linear tensile strength in substantitally all directions and impregnated with rubber, the rubber and the fabric of the calottes being together moulded and vulcanized to define the shape and substance of said hollow body, said hollow body being formed with a perforation closed by a plug, said plug comprising a rubber thread secured in the perforation and a rubber lozenge applied on the outer end of the thread.



2,453,144
SYNTHESIS OF ORGANIC COMPOUNDS
Wheeler G. Lovell, Maurice J. Mulligan, and Hart K. Lichtenwalner, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 3, 1946, Serial No. 667,018
5 Claims. (Cl. 260—683)

1. A process of producing an olefin which comprises passing a mixture of 2,3-dimethyl-2-butene and an alkyl halide over fresh lime heated to a temperature within the range of approximately 200° C. to 250° C. in an elongated reaction tube at substantially atmospheric pressure until reaction of 2,3-dimethyl-2-butene, alkyl halide and calcium oxide is initiated as indicated by a rise in temperature of the lime mass adjacent the entrance of the mixture of 2,3-dimethyl-2-butene and the alkyl halide, then introducing fresh lime continuously at one end of the reaction tube and continuously feeding the lime through the reaction tube, continuously passing a mixture of 2,3-dimethyl-2-butene and alkyl halide through the reaction tube in a direction opposite to the direction of flow of lime therethrough, and maintaining the reactants at a temperature within the range of about 200° C. to 300° C. as they pass through the reaction zone, said reactants being at substantially atmospheric pressure as they pass through said reaction tube.

2,453,145
WHIP ROLL STOP MOTION
Paul Matweeff, Uncasville, Conn.
Original application September 11, 1946, Serial No. 696,089. Divided and this application July 22, 1947, Serial No. 762,739
8 Claims. (Cl. 139—352)

1. In a whip roll stop motion for a loom, a warp beam, a driving motor, and means responsive to the tension of a sheet of warp passing from said beam effective for disabling the drive of the loom

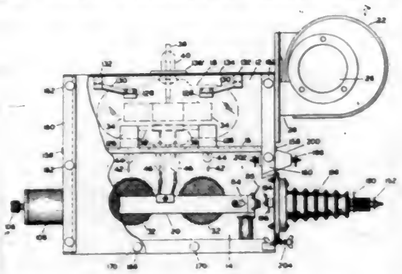
by said motor responsive to abnormal tension and to subnormal tension of the warp sheet.

2,453,146
PERFLUOROADIPIC ACID
Earl T. McBee, La Fayette, and Park A. Wiseman, West Lafayette, Ind., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application October 27, 1945, Serial No. 625,108
1 Claim. (Cl. 260—537)

Perfluoroadipic acid, $HOOC-(CF_2)_4-COOH$.

2,453,147
ESTERS OF PERFLUOROADIPIC ACID
Earl T. McBee, La Fayette, and Park A. Wiseman, Muncie, Ind., assignors to Purdue Research Foundation, La Fayette, Ind., a corporation of Indiana
No Drawing. Application July 30, 1946, Serial No. 687,226
4 Claims. (Cl. 260—485)

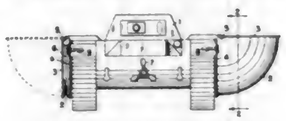
1. An ester of perfluoroadipic acid, having the general formula



$$ROCO-(CF_2)_4-COOR$$

wherein R is selected from lower-alkyl and lower-alkenyl radicals containing from 1 to 8 carbon atoms, inclusive.

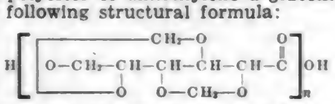
2,453,148
SHIELD BOX AND TUNING MECHANISM FOR ELECTRON TUBES
Fred H. McCall, Neptune, and Peter Devreotes, Eatontown, N. J.
Application July 29, 1943, Serial No. 496,653
16 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A metal shield box for an ultra high frequency oscillator tube, said box being divided into two compartments by a horizontal partition, the top and sides of said box being made of sheet metal into a unitary structure, the ends, bottom and partition of said box being made of sheet metal into a second unitary structure, the top and sides being upwardly slidable to completely open the shield box and thereby expose the tube for replacement, the said sides of said box having horizontally disposed spring strips so positioned as to bear against the side edges of the aforesaid

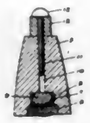
partition in order to effectively complete the shielding action of the partition, said box having spaced blocks to support the bottom portion of

the tube, the removable top of said box having yieldable means to bear against the top portion of the tube when the box is closed.



2,453,149
BUOYANT ATTACHMENT FOR STANDARD TANKS
Alan J. McCutchen, Washington, D. C.
Application April 6, 1945, Serial No. 587,001
2 Claims. (Cl. 115—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An amphibious tank vehicle comprising, in combination, an armored tank with operating power means therefor, a vertical side plate fixed on each side of said tank, a corresponding exterior protective armor plate hinged at the top thereof to the top of each said side plate, an inflatable member disposed between each said side plate and the respective said exterior protective plate, said inflatable member being attached to said plates, a source of inflating air pressure in said tank, and means connecting said source in fluid communication through said side plate with the interior of said inflatable member for inflating the latter, said exterior protective plate being automatically movable hingedly toward a substantially horizontal position by inflating said inflatable member.

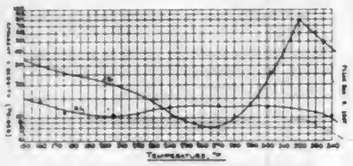


2,453,150
POLYESTERS OF DIMETHYLENE D-GLUCONIC ACID
Charles L. Mehltretter, Peoria, Ill., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application August 12, 1947, Serial No. 768,256
2 Claims. (Cl. 260—338)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A polyester of dimethylene d-gluconic acid of the following structural formula:

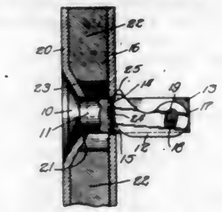
in which n is an integer of at least 5.

2,453,151
PROJECTILE
George A. Miller, Jr., Weirsdale, Fla., assignor to the United States of America as represented by the Secretary of War
Application August 18, 1939, Serial No. 290,780
6 Claims. (Cl. 102—76)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



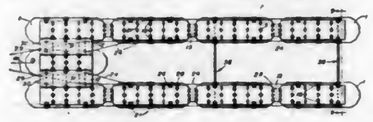
1. In combination with a rotatable projectile including a body and an ignition train having a firing element disposed partially externally of the body, a barrier disposed externally of the body for maintaining said element of the ignition train inoperative, said barrier comprising an alloy fused by heat on discharge of the projectile from a gun to permit the operation of the firing element.

2,453,152
CATALYTIC CONVERSION OF HYDROCARBONS
George Alexander Mills, Ridley Park, Pa., assignor to Houdry Process Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 19, 1944, Serial No. 559,483
6 Claims. (Cl. 196—52)



5. The process which comprises cracking normally liquid hydrocarbon material comprising hydrocarbons boiling above gasoline to form substantial amounts of high octane gasoline from said hydrocarbons boiling above gasoline by contacting said hydrocarbon material under cracking conditions with a surface active mass consisting essentially of silica and urania, said mass having been prepared by coprecipitation of colloidal silica and urania in an acid menstruum.

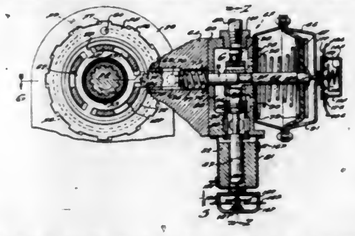
2,453,153
LUBRICATING GREASE
Arnold J. Morway, Clark Township, Union County, and John C. Zimmer, Union, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application December 6, 1947, Serial No. 790,219
14 Claims. (Cl. 252—29)



1. A semi-solid to solid lubricating grease comprising lubricating oil with 5 to 20% by weight, based upon the finished composition, of acetylene black incorporated therein, the quantity of acetylene black being sufficient to impart a grease-like consistency and body to said oil.

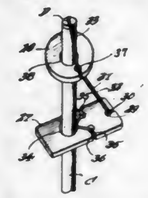
2,453,154
LOCKING DEVICE
Frederick D. Moyer, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a corporation of Illinois
Application July 3, 1946, Serial No. 681,261
3 Claims. (Cl. 85—3)

1. A locking device for locking together at least two pieces of material having substantially aligned holes, said device comprising a head portion, a shank, and a locking wedge rotatably mounted at one end on the end of the shank opposite the head, said locking wedge having its free end of arcuate shape and having an outer surface at its free end longer than the diameter of the corresponding hole in one piece of said material with said free end extending across the hole when the wedge is turned back toward the hole, the wedge being insertable through said holes, and the effective length of the shank between the head and the free end of the wedge when the wedge is in said turned-back position being slightly smaller than the distance between the outer surfaces of the material adjacent the holes with which said wedge is to be used.



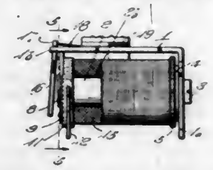
2,453,155
FLOATING DOCK AND WHARF
Homer B. Nelson and Frank J. Walters, United States Navy
Application June 30, 1945, Serial No. 602,646
4 Claims. (Cl. 114—43.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A floating dock comprising pontoons arranged in a substantially U-shaped assembly, connectors on said pontoons, and adjustable tie members between said connectors to connect said pontoons in the desired relationship, a cross tie assembly between pontoons which constitute the legs of the U-shaped assembly and connected to selected connectors, a deck unit on each pontoon, adjustable tie members securing said decks to said connectors, and bridging panels between certain of said pontoon decks.



2,453,156
SERVOMOTOR
Carl A. Neracher and William T. Dunn, Detroit, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application November 13, 1939, Serial No. 304,060
8 Claims. (Cl. 200—83)

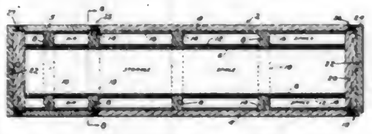
1. A prime mover unit adapted for operating a transmission shift member comprising, a vacuum cylinder having a pressure responsive member therein adapted for connection to said shift member; a control valve operably associated with said cylinder; a source of vacuum connected with said valve; a shiftable valve element in said valve; a solenoid having a plunger connected to said shiftable valve element; said solenoid plunger being



adapted to shift said valve element in response to energization of said solenoid thereby to admit vacuum to said cylinder for shifting said shift member and to have a further range of movement for engaging said shift member thereby to hold it against reverse shift.

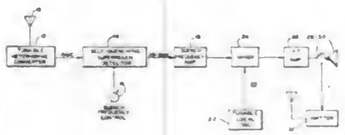
2,453,157
CUE TIP CLAMP
Barney R. Nyhagen, New York, N. Y.
Application March 30, 1946, Serial No. 658,537
5 Claims. (Cl. 273—71)

1. In a clamp of the character described, upper and lower members having apertures adapted to receive one end of a cue therethrough for disposing the same thereon in spaced apart relation, an elastic element secured to said lower member and having side leads extending upwardly at one end thereof, and said upper member having guides for receiving said side leads with the upper end of said elastic element trained across the aperture therein for engagement over the tip of the cue and said lower member being adapted to be secured on the cue by the tension of the elastic element functioning to position said member at an angle to the cue with the opposite edge portions of the aperture therein impinged against the cue.



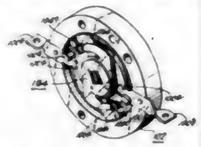
2,453,158
ELECTROMAGNET
Osborne I. Price, Frederick, Md.
Application May 11, 1945, Serial No. 593,116
8 Claims. (Cl. 175—21)

1. A terminal structure for electromagnets comprising in combination a core structure, an



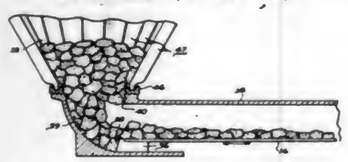
end plate of plastic material on said core structure, arcuate shaped terminal members embedded in said end plate, projections formed on said arcuate shaped terminal members, a winding carried by said core structure, connections from the opposite ends of said winding to an individual one of the projections on said terminal members and terminal lugs formed on the other projections on said terminal members and constituting binding posts for connection through an external electrical circuit.

2,453,159
CONTAINER
Lewis E. Richter, Shumway, Ill.
Application May 10, 1945, Serial No. 592,951
2 Claims. (Cl. 229—14)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A hollow cylindrical container comprising concentric outer and inner side walls with an air space therebetween; a plurality of spaced annular partition and support members arranged in said air space and dividing same into compartments; a cupped end cap secured to each end of said container; seal rings joining said cupped end caps to the ends of said outer side walls, said seal rings having a pair of concentric cylindrical portions connected by a radial web portion and forming a pair of open annular recesses separated by said radial web, for the reception of abutting cylindrical ends of said side walls and cupped end caps; and a plurality of support disks each disposed with its periphery in contact with the innermost of said concentric cylindrical portions.

2,453,160
FIELD INTENSITY METER
Abraham Ringer, Eatontown, N. J., assignor to the United States of America as represented by the Secretary of War
Application October 24, 1945, Serial No. 624,281
6 Claims. (Cl. 250—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

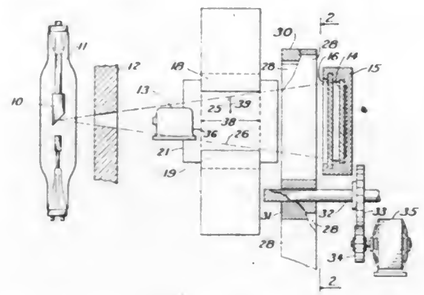


1. A field-intensity indicator for high frequency radio waves comprising a superregenerative detector upon the input circuit of which said waves are impressed, the quenching frequency of said detector varying with variation in amplitude of said radio waves, and frequency indicator means controlled by the output of said detector.

2,453,161
BUTT CONTACT MOUNTING FOR ROTARY SWITCHES
Harold E. Schleicher, West Hartford, Conn., assignor to The Arrow-Hart & Hegeman Electric Co., Hartford, Conn., a corporation of Connecticut
Original application November 26, 1943, Serial No. 511,855. Divided and this application July 28, 1945, Serial No. 607,555
16 Claims. (Cl. 200—6)

1. In a rotary switch, a rotary shaft, a contact unit mounted thereon comprising a rigid contact member having a centrally apertured portion and a contact carrying arm extending radially, said shaft extending freely through said central aperture and having limited rotary motion relative to said rigid member, an anchor member slidably mounted on said shaft but always turning therewith, spring means acting on said rigid contact member and on said anchor member and biasing said contact member but permitting it limited movement relative to said anchor member, and fixed contact means engageable by said movable contact member.

2,453,162
STOKER
Chester E. Shaffer, Arlington, N. J., assignor, by mesne assignments, to Koppers Company, Incorporated, Pittsburgh, Pa., a corporation of Delaware
Application August 25, 1944, Serial No. 551,084
5 Claims. (Cl. 110—46)



5. In a fuel combustion chamber, the combination of: a grate having an upwardly increasing cross-sectional area determined by spaced bar-like members arranged about a central fuel opening at the base of the said grate; a protruding ledge cutting off, at the inlet end of the fuel opening, a portion of the area of the said central fuel opening; a feed plunger and means to reciprocate the plunger to force fuel above the said ledge and to raise and sharply to drop a fuel bed in said grate, thereby causing combustion residues to travel downwardly through fuel interspaces of said fuel bed and also through the spaces between said bar-like members.

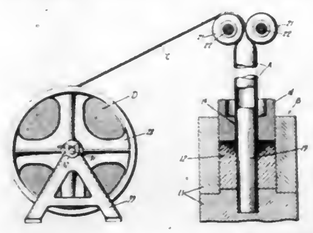
2,453,163
X-RAY APPARATUS AND PROCEDURE
William A. Shurcliff, Washington, D. C.
Application December 30, 1944, Serial No. 570,723
16 Claims. (Cl. 250—99)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. In X-ray apparatus, in combination, a source of X-rays of energy greater than 1.0 m. e. v.,

means for registering an image of a subject, produced by X-rays from said source traversing the subject, means for producing a magnetic field across the path of X-rays between said subject and said image-registering means, and a plu-

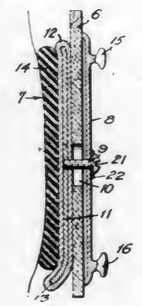
rality of vanes of X-ray absorbing material disposed substantially parallel with the direction of said X-rays and in spaced relation to each other transversely of said path intermediate the center of said magnetic field and the image-registering means.

2,453,164
PLURAL GRATING SPECTROGRAPH
Polydore F. Swings, Pasadena, Calif., assignor to Lane-Wells Company, Los Angeles, Calif., a corporation of Delaware
Application May 19, 1945, Serial No. 594,656
13 Claims. (Cl. 88—14)



1. A device of the character described, comprising: a source of a beam of radiant energy having divergent rays; means to receive and to transform said beam into a plurality of like parallel beams; a plurality of concave diffraction gratings, all having the same focal length and positioned with a common focal plane, and adapted to receive said parallel beams of radiant energy; and means in said focal plane to receive simultaneously spectra from said gratings.

2,453,165
METHOD OF PREPARING TUBING FOR TRANSPORTATION
Ivan D. Thornburgh, Leonia, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application December 3, 1943, Serial No. 512,828
1 Claim. (Cl. 29—156)



A method of preparing metallic tubing to facilitate transportation and handling prior to the manufacture of tubular metal containers therefrom, comprising first forming by extrusion of metal a continuous cylindrical tube of relatively thin gauge metal and of uniform thickness throughout, compressing the tube into a substantially flat double wall ribbon by the application of exterior pressure on opposite sides of the mov-

ing tube immediately subsequent to the forming operation while maintaining the original uniform thickness of the tube metal and while leaving hollow loop portions at the opposite side edges of the ribbon so that such edges will be free from sharp creases, and thereafter reeling the flat-

tened ribbon into a substantially loose coil of uniform thickness throughout with adjacent loop portions of the flattened ribbon disposed in engagement with one another to provide a loosely compacted unitary coil for shipment and storage capable of being subsequently manufactured into individual tubular sheet metal container bodies.

2,453,166
HOLDER FOR RUPTURE BUTTONS AND THE LIKE
Joshua G. Towns, Grand Junction, Colo.
Application December 27, 1946, Serial No. 718,845
1 Claim. (Cl. 128—95)

A truss comprising an elongated belt section, body encircling straps, plates on the ends of the belt section, securing means between the plates and the adjacent ends of the straps, a pad and securing means between the pad and the corresponding plate, said pad being of sponge rubber, a rigid backing for the sponge rubber pad, a resilient cover for the backing, said pad being adhered to the said covering.

2,453,167
COPOLYMERS OF DIALKENYL ARYLPHOSPHONATES WITH VINYL ACETATE
Arthur Dock Fon Toy, Chicago, Ill., assignor to Victor Chemical Works, a corporation of Illinois
No Drawing. Application December 29, 1945, Serial No. 638,456
18 Claims. (Cl. 154—43)

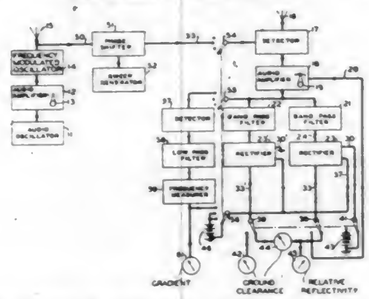
1. A copolymer of 10 to 99% by volume of vinyl acetate and 90 to 1% of a member of the class consisting of diallyl and dimethallyl arylphosphonates.

2,453,168

COPOLYMERS OF ALKENYL ARYLPHOSPHONATES WITH METHYL METHACRYLATE

Arthur Dock Fon Toy, Chicago, Ill., assignor to Victor Chemical Works, a corporation of Illinois

No Drawing. Application December 29, 1945, Serial No. 638,455
19 Claims. (Cl. 154—43)



1. A copolymer of 30 to 90% by volume of methyl methacrylate and from 70 to 10% of a member of the class consisting of diallyl and dimethallyl arylphosphonates.

2,453,169

RADIO GROUND CLEARANCE INDICATOR

Russell H. Varian, Garden City, N. Y., assignor to The Sperry Corporation, a corporation of Delaware

Application April 10, 1943, Serial No. 482,648
20 Claims. (Cl. 343—14)

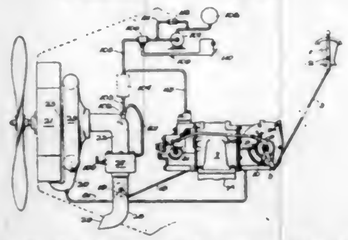
14. Distance measuring apparatus comprising means for generating a radio frequency wave, means for frequency modulating said wave at a lower frequency, means for radiating said wave, means for receiving said wave directly and after reflection from an object whose distance is to be measured, means for combining said direct and reflected waves to produce signals having frequencies substantially harmonically related to said lower frequency, and means for indicating said distance as a function of the amplitude ratio of two of said signals.

2,453,170

CONTROL DEVICE AND SYSTEM

Harold Arthur Wheeler, Grand Rapids, Mich., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware

Application June 11, 1945, Serial No. 598,767
28 Claims. (Cl. 123—119)



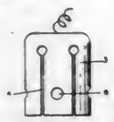
1. A device of the character described, comprising, in combination, condition responsive means for automatically adjusting a control device, a first control member for adjusting the datum of said automatic means in accordance with a first predetermined program, a second control member for adjusting the datum of said automatic means in accordance with a different second predetermined program, and another condition responsive means for selectively placing said first and second control members in and out of operative relation with said automatic means.

2,453,171

CONTROL DEVICE

Harold Arthur Wheeler, Grand Rapids, Mich., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware

Application September 26, 1945, Serial No. 618,742
8 Claims. (Cl. 123—25)



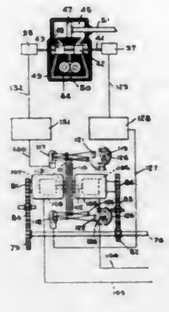
6. In an aircraft internal combustion engine, the combination comprising operable means for injecting a supplemental fluid for suppressing predetonation of said engine, a throttle valve for controlling engine induction pressure, an induction pressure responsive means for automatically adjusting said throttle valve so as to maintain a selected induction pressure, a pilot's control member for adjusting the selected pressure of said automatic means, means operably connecting said control member to said automatic means, a fluid pressure sensitive membrane connected to said connecting means so as to shift the pressure setting range of said first mentioned automatic means from a first to a second predetermined program, and means operably connecting said membrane to the supplemental fluid injecting means so as to cause an increase in said pressure setting in response to operation of the supplemental fluid injecting means.

2,453,172

GRID CAP

Harry Wilkie, Dayton, Ohio

Application July 12, 1944, Serial No. 544,623
1 Claim. (Cl. 173—269)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



An electrical connecter comprising a pair of cooperating elements of electrically conductive material, one of said elements being a hollow cap having a continuous outer surface open at one end and closed at the other end, the closed end having an externally rounded peripheral edge, and the other element being a hollow clip fitting tightly over said cap, the clip being open at one end and closed at the other end and being formed with a plurality of slits which extend longitudinally from the open end of the clip to adjacent the closed end to form a plurality of separate resilient fingers gripping the cap, said cap having external semi-spherical projections formed adjacent its open end and said clip having apertures in said resilient fingers adjacent the open end of the clip into which the mentioned projections extend to form a releasable interlock of the cap and the clip.

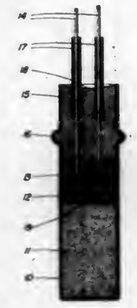
2,453,173

REMOTE CONTROL SYSTEM

Carleton H. Wright, United States Navy, and George A. Chadwick and Paul W. Burk, Washington, D. C.

Application August 25, 1937, Serial No. 160,936
2 Claims. (Cl. 250—41.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. A remote control system, comprising two discs mounted to rotate about a common axial line, the periphery of each of said discs being cut away over an angular extent somewhat less than a semicircle, the radii of said cut away portions being equal, the remaining portion of the periphery of one disc being of greater radius than the remaining portion of the periphery of the other disc and having a notch cut in the radial face at each end thereof, the discs being so disposed in their neutral positions that said other disc covers said notches, a source of light disposed adjacent the neutral position of each notch, a respective photoelectric cell disposed adjacent each source but on the opposite side of said discs from the source, rotation of said one disc in either direction exposing a said cell to light from the source adjacent thereto over the periphery of the other disc, and rotation of said other disc in either direction from the neutral position exposing a photoelectric cell to light from the source cooperating therewith through a said notch, and means controlled for operation in opposite directions by the currents from said photoelectric cells.



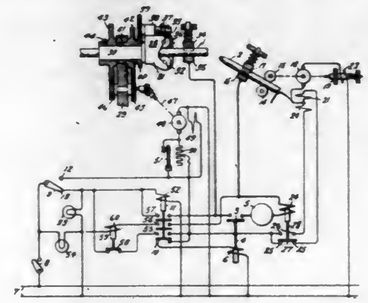
2,453,174

SEALING AND POTTING COMPOSITION CONSISTING OF TRI(P-TERTIARY BUTYL PHENYL) PHOSPHATE AND COUMARONE-INDENE RESIN

Howard Edwards Wright, Jr., Silver Spring, Md.

Application November 15, 1945, Serial No. 628,955
2 Claims. (Cl. 260—30.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A composition for sealing and potting electrical devices which consists of 75 to 99 per cent of tri(p-tertiary-butyl phenyl) phosphate and



1 to 25 per cent by weight of coumarone-indene resin.

2,453,175

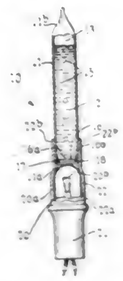
SEARCHLIGHT CONTROL SYSTEM

Donald A. Youngson and Robert E. Matthews, Devon, Conn., assignors to General Electric Company, a corporation of New York

Application September 25, 1946, Serial No. 699,250
7 Claims. (Cl. 314—40)

5. In a light projector including a pair of arcing electrodes, means for connecting said electrodes to a source of high voltage electric current supply, electrode feed control means including an electric motor connected to drive one of said electrodes toward engagement with the other, means for connecting said motor to a source of low voltage electric current supply to energize said motor, and means responsive to engagement of said electrodes for rendering said low voltage connecting means ineffective, thereby to deenergize said motor with said electrodes in engagement.

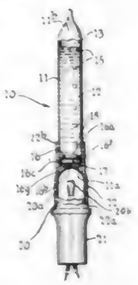
2,453,176



DEVICE PRODUCING ORNAMENTAL BUBBLE EFFECTS AND METHOD

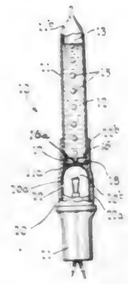
Abraham Abramson, New York, N. Y., assignor to Raylite Electric Corp., Bronx, N. Y., a corporation of New York

Application February 21, 1946, Serial No. 649,157
11 Claims. (Cl. 240—10)



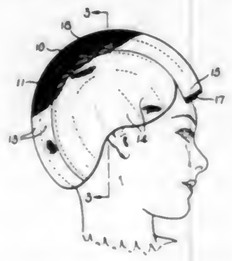
1. In a device of the character described producing ornamental bubble effects, a vertically disposed sealed transparent tube body, a translucent low-temperature boiling liquid column filling a mid-portion of said tube body, a thin sheet material diaphragm immovably positioned in the lower end of said tube body just short of the bottom

thereof to provide a limited space thereat, heated vapors of said liquid column occupying said space at a pressure to retain the liquid column above the diaphragm, and means carried by the dia-



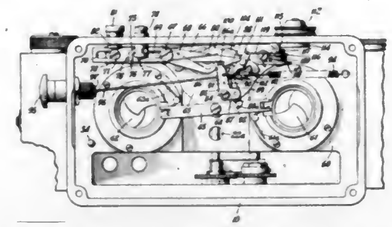
phragm communicating said vapors with the liquid column to permit "flash" expulsion of expanding portions of said vapors as bubbles into the liquid column and to permit seepage from the liquid column into said space.

2,453,177
DEVICE PRODUCING ORNAMENTAL BUBBLE EFFECTS AND METHOD
Abraham Abramson, New York, N. Y., assignor to Raylite Electric Corp., Bronx, N. Y., a corporation of New York
Application February 21, 1946, Serial No. 649,158
14 Claims. (Cl. 240—10)



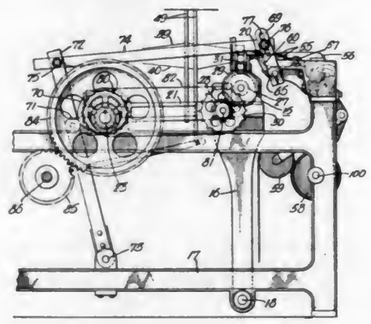
1. In a device of the character described producing ornamental bubble effects, a vertically disposed sealed transparent tube body, a translucent low-temperature boiling liquid column filling a mid-portion of said tube body, thin sheet material spaced apart upper and lower diaphragm layers positioned in the lower end of said tube body with said lower diaphragm layers short of the bottom thereof to provide space for a relatively small quantity of liquid from said column, heated bubble-free vapors of said liquid column substantially filling the tube body between said diaphragm layers for retaining the liquid column above the upper layers diaphragm and said quantity of liquid below the lower diaphragm, and means carried by said diaphragm layers communicating said vapors with the liquid column and said quantity of liquid, above and below said diaphragm layers respectively, to permit "flash" expulsion of expanding portions of said vapors as bubbles into the liquid column through the upper diaphragm layers and to permit seepage from the liquid column through said vapors and into said space to replenish the quantity of liquid therein.

2,453,178
BUBBLE ORNAMENTAL DEVICE AND METHOD
Abraham Abramson, New York, N. Y., assignor to Raylite Electric Corp., Bronx, N. Y., a corporation of New York
Application February 21, 1946, Serial No. 649,159
11 Claims. (Cl. 240—10)



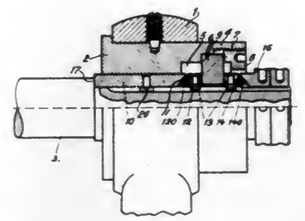
1. In a device of the character described for producing ornamental bubble effects, a column of volatile liquid under reduced atmospheric pressure, means for applying heat externally adjacent the end of said liquid column to a degree just above the normal temperature of said liquid column, a bubble-free vapor pocket of predetermined capacity generated at the heated end of the column, and diaphragm means for separating said pocket from the liquid column end including a nozzle extending into the pocket, said nozzle having a restricted end opening communicating the pocket with said liquid column wherethrough "flash" expulsion and expansion of portions of the vapor pocket as bubbles into the liquid column takes place.

2,453,179
HAIR DRIER
Robert R. Austin, Inglewood, Calif.
Application January 31, 1946, Serial No. 644,551
1 Claim. (Cl. 34—95)



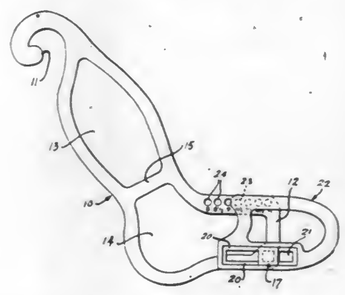
In a hair drier, the combination of a reversible hood shaped to substantially cover the head and confine the hair of the user, said hood comprising two pliant hygroscopic and vapor permeable cover sheets selectively forming the interior and exterior walls of said hood respectively, means to fasten said pliant sheets to each other by rows of stitching which divide the interspace into a number of compartments and an entrance opening communicating with said compartments to afford access to said interspace for the introduction of a vapor adsorbent material between said sheets, and closure means for said opening.

2,453,180
SHUTTER MECHANISM
Albert J. Bachelder, Lexington, and Otto E. Wolff, Cambridge, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application November 9, 1945, Serial No. 627,745
5 Claims. (Cl. 95—18)



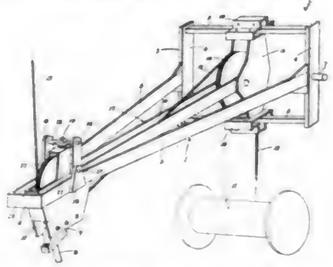
1. In a binocular camera, a pair of spaced shutters normally urged by elastic means to a closed position, a pivoted lever connected to said shutters and capable of rocking movement to open both said shutters simultaneously, actuator means movable in a predetermined path and adapted in said movement first to engage a part arranged to rock said lever and thereby open said shutters and then to release said part permitting said elastic means to close said shutters.

2,453,181
TAPE LOOM
Robert J. Bartholomew, Philadelphia, Pa., assignor to Fletcher Works, Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application November 7, 1947, Serial No. 784,748
8 Claims. (Cl. 139—136)



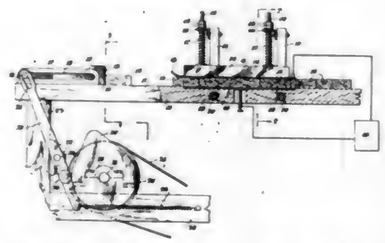
1. In a narrow fabric loom of the type having a frame, a crankshaft journaled on said frame, warp shed forming means on said frame, a batten, means for oscillating said batten, a shuttle operable lengthwise of said batten to place weft threads in open warp sheds formed of threads extending transversely across said batten; the combination of a rack for actuating said shuttle, a cam follower secured to one extremity of the rack, a cam having cam faces engaging the cam follower, a cam actuating sprocket adapted to rotate the cam, an eccentric on the crankshaft, a connecting rod connected to said eccentric for oscillating said batten, an eccentric sprocket on the crankshaft in alignment with the cam actuating sprocket, and a chain for driving the cam actuating sprocket from the crankshaft sprocket.

2,453,182
SPINDLE BEARING FOR MACHINE TOOLS
André Bechler, Moutier, Canton of Berne, Switzerland
Application November 11, 1943, Serial No. 509,908
In Switzerland February 25, 1942
3 Claims. (Cl. 308—161)



1. In a bearing, a bearing body, a spindle, members fixed to said spindle to rotate with the latter, a stationary bearing ring fixed between said members to said bearing body, washers between said stationary bearing ring and said members, keys for slidably and non-rotatably connecting said washers to said spindle, one end face of each of said washers making contact with said stationary bearing ring, loose rings between and in contact with said washers and said members, at least one of the surfaces of contact between each of said loose rings and said members being spherical.

2,453,183
ADJUSTABLE SOCK STRETCHER
Sidney Bersudsky, Sydney, Nova Scotia, Canada
Application June 16, 1947, Serial No. 754,842
2 Claims. (Cl. 223—77)

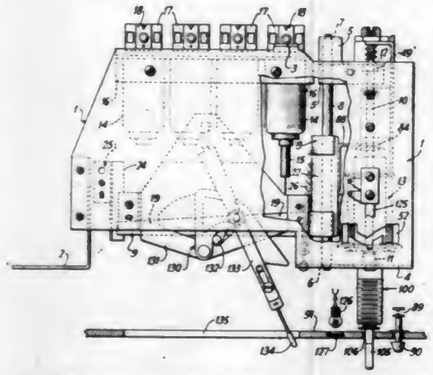


1. A sock stretcher comprising a body having marginal contours simulating the shape of the heel portion and ankle portion of a sock, hook means extending from the body for hanging the same on a line or the like, an adjustable toe portion mountable on the body in slidable relation thereto and locking means designed to lock the toe portion relative to the body in a position of predetermined adjustment, means on the body for indicating the size of sock corresponding to said adjustment, said toe element being slotted, and a mounting lug extending from the body designed for slidable engagement in said slot, a locking stud extending from said toe portion, said body having a plurality of holes designed to receive said locking stud for fixture of said toe portion relative to said body.

2,453,184
CABLE SPOOLING DEVICE FOR WELL DRILLING RIGS
Thomas H. Berry, Modesto, Calif., assignor to Green & Berry, Inc., Modesto, Calif., a corporation of California
Application December 29, 1947, Serial No. 794,390
10 Claims. (Cl. 254—190)

1. A cable spooling device for a well drilling rig having a vertically oscillating walking beam, and a transverse axis winch drum vertically spaced from the walking beam with a cable leading from the drum to and lengthwise of the walking beam, said spooling device comprising a cable guide beam extending lengthwise of the walking beam, elements guiding the cable along the guide beam, and a structure mounting the cable guide beam for shifting motion laterally of the walking beam and in a direction lengthwise of the axis of the winch beam.

2,453,185
APPARATUS FOR EDGE-GLUING STRIP ELEMENTS
Paul H. Bilhuber, Douglas Manor, N. Y., assignor to Steinway & Sons, New York, N. Y., a corporation of New York
Application September 10, 1943, Serial No. 501,792
3 Claims. (Cl. 144—279)

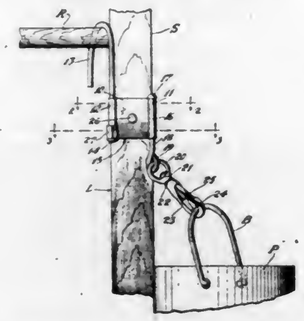


1. Apparatus for continuous-feed, edge-gluing of strip elements comprising in combination a feed-table; a metal electrode in the table top; a flexible metal electrode overlying said table electrode; a framework carried by said table in vertically adjustable relation thereto; a plurality of members individually, independently supporting said flexible electrode from said framework in vertically adjustable relation thereto; spring members for yieldably opposing upward movement of said supporting members; means for advancing said strip elements along said table slidably between and along said electrodes in firm engagement with a preceding element; and, means for establishing a high-frequency electrostatic field between said electrodes.

2,453,186
HOT-WATER TREATMENT OF VINYL RESIN LIGHT-POLARIZING SHEET
Frederick J. Binda, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
No Drawing. Application May 15, 1947, Serial No. 748,337
2 Claims. (Cl. 18—48)

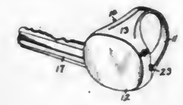
1. In the process of forming a light polarizer comprising a light-transmitting sheet of organic plastic material from the class consisting of polyvinyl alcohols, polyvinyl acetals and polyvinyl ketals, which sheet has been extended to substantially orient the molecules thereof and heated in the presence of an acid accelerator to form therein substantially oriented long straight-chain molecules having extended systems of conjugated double bonds, the further steps of thereafter subjecting said sheet to hot water of a temperature of at least 125° F. while maintaining the sheet in extended condition under tension, whereby the light-polarizing properties of said sheet are improved, drying and cooling said sheet.

2,453,187
RADIO RECEIVER SEQUENCE TUNER
Albert Blain, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application April 24, 1946, Serial No. 664,475
14 Claims. (Cl. 74—10)



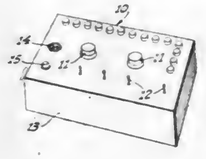
1. The combination, in radio apparatus, of an adjustable tuning element, a rectilinearly movable carrier for said tuning element, a cylindrical turret provided with a plurality of circumferentially arranged stops, individually adjustable in an axial direction each to a position which determines a particular setting to which the tuning element is actuable, said turret being capable of both axial and rotary movements, means operable to move the tuning element carrier to a limiting position and simultaneously to move the turret in an axial direction, means including a cam slot coacting with the turret to convert the axial movement thereof to rotary movement whereupon in response to actuations of the carrier-moving means the turret is rotated step-by-step to successive positions at each of which a stop corresponding to the turret position is made effective, and means operable to move the tuning element carrier from its limiting position to one whereat it coacts with the then effective stop as determined by the turret position whereby the tuning element is adjusted to the setting corresponding to said stop.

2,453,188
METHOD OF MAKING FRICTION ELEMENTS AND BOND THEREFOR
William A. Blume, Farmington, and Ray E. Spokes, Ann Arbor, Mich., assignors to American Brake Shoe Company, New York, N. Y., a corporation of Delaware
Application June 28, 1943, Serial No. 492,562
3 Claims. (Cl. 106—36)



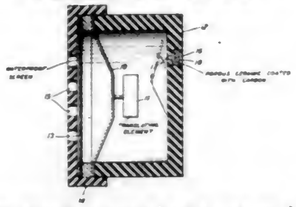
2. A bonding agent for friction elements which is comprised of a solution formed by intimately mixing finely divided sulphur and partially bodied purely heat-polymerized linseed oil, that is, heat-polymerized linseed oil which is substantially free of oxidized oil and which has been heat-polymerized, prior to being mixed with the sulphur, until it is highly viscous and tacky but is substantially free of gel formation and is completely soluable in petroleum thinner, and heating the sulphur-oil mixture thus formed at a temperature of not substantially less than 120° C. nor substantially more than 140° C., for a period of time sufficient to completely dissolve the sulphur in the oil but insufficient to cause any substantial reaction therewith.

2,453,189
POT SUSPENSION DEVICE
Ignatius Bogut, South Orange, N. J.
Application June 21, 1945, Serial No. 600,766
1 Claim. (Cl. 248—211)



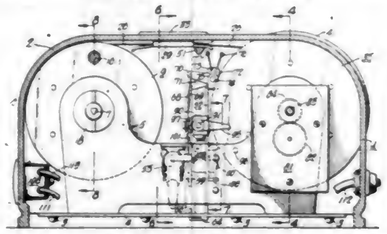
A pot suspension device comprising a plate, parallel spaced bearings formed integral with said plate, a pin rotatably journalled in one of said bearings and adapted to engage and support pot holding means, a hook member rotatably journalled in the other bearing and adapted to engage the rung of a ladder to suspend the pot therefrom, and complementary non-circular keying means in the lower portions of said hook member and last mentioned bearing to key the plate at different positions relative to the hook, to accordingly suspend the pot at different positions relative to the hook.

2,453,190
FINGER RING WITH KEY
Herbert H. Boscowitz, New York, N. Y.
Application March 6, 1946, Serial No. 652,277
11 Claims. (Cl. 63—1)



1. In a finger ring, in combination, a ring band having an elongated channel forming a slideway opening at the inner side of said band, a key supported in said slideway and slidable therein for extension into operative position and for retraction into inoperative position, and a holding member movably connected to said key and engageable in one position thereof with the ring to hold the key in retracted inoperative position and engageable in another position thereof with the ring to hold the key in extended operative position.

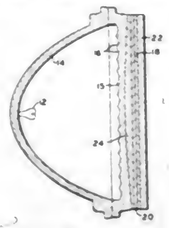
2,453,191
METER TESTING DEVICE
Arthur E. Booth, Los Angeles, Calif.
Application October 14, 1946, Serial No. 703,119
2 Claims. (Cl. 175—183)



1. A testing device of the type described which includes: a variable transformer adapted to be connected to a source of alternating current; a multiple secondary transformer connected to the output of said variable transformer, said multiple secondary transformer having a relatively high-voltage low-current secondary winding, and a relatively low-voltage high-current secondary winding, the outputs of said secondary windings being controlled by the adjustment of said variable transformer; means connecting said secondary windings to terminals to which electrical apparatus may be connected for testing; a second variable transformer having an input connection, a common input and output connection, and an output connection, adapted to be connected to a source of alternating current so that its output may be controlled independently of the output of said first variable transformer; and means connecting said input, common, and output connections to separate terminals, whereby a power factor meter may be tested by connecting it to said last mentioned terminals and said terminals connected to said low-voltage, high-current secondary winding and varying the controller of said second variable transformer, and whereby a wattmeter may be tested by connecting it to said common and said output connection and to said terminals connected to said low-voltage, high-current secondary winding, and varying the controller of one of said variable transformers.

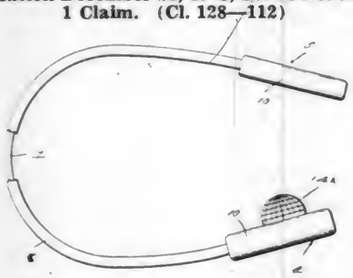
2,453,192
MOISTURE IMPERVIOUS VENT
Herbert W. Bryant, Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 8, 1944, Serial No. 553,174
4 Claims. (Cl. 179—179)

1. In a device comprising a casing having a wall, means in said wall defining a vent pervious to air and substantially impervious to water, said means comprising a porous ceramic body having thereon a firmly adherent, penetrating coating of a material having a contact angle with water of the order of that for pure carbon.



2,453,193
TIME SWITCH
Andrew K. Burns, Narberth, Pa., assignor to Chrontroller Corporation, Newport, N. H.
Application February 15, 1946, Serial No. 647,892
15 Claims. (Cl. 200—38)

1. In a time switch of the character described, a pair of coiled tapes each having time indications marked longitudinally thereon, means to unwind said tapes to preselected positions with reference to the time indications thereon, means opposing unwinding of said tapes and tending continuously to rewind the same, means to control rewind of said tapes from said preselected positions thereof at a predetermined constant speed timed to correspond with the time indications marked thereon, means operable to prevent rewind of one of said tapes until termination of rewind travel of the other of said tapes, a switch arranged to be selectively actuated to on and off positions, means carried by said other tape operable at the termination of rewind travel thereof to actuate said switch to on position thereof and initiate rewind travel of said one tape, and means carried by said one tape operable at the end of rewind travel thereof to actuate said switch to off position thereof.

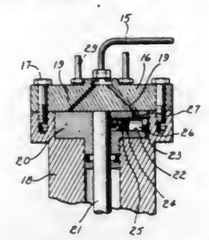


2,453,194
LIGHT POLARIZING HEADLIGHT LAMINATION
Harold O. Buzzell, Wollaston, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application March 7, 1946, Serial No. 652,654
3 Claims. (Cl. 240—9.5)

1. In a light-polarizing automobile headlight wherein a substantially flat, planar lamination of a light-polarizing sheet to an abrasive-resistant cover plate is bonded to the outer surface of a substantially flat lens element so positioned with respect to a filament light source as to subject the adhesive comprising said bond to relatively intense heat when the filament is energized, an

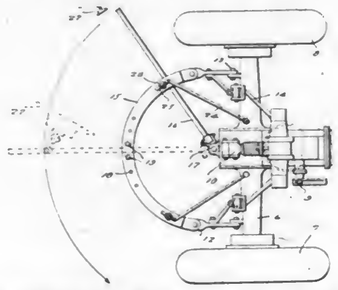
adhesive layer bonding the inner surface of said lamination to the outer surface of said lens, at least one of said surfaces being continuously concave, said adhesive layer being appreciably thicker throughout that portion thereof which overlies the central portion of the lens element than portions adjacent the periphery thereof.

2,453,195
HERNIA TRUSS
Carson R. Carpenter, Charlotte, N. C.
Application December 21, 1943, Serial No. 515,151
1 Claim. (Cl. 128—112)



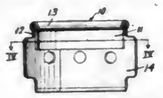
In a hernia truss, a resilient yoke including a substantially T-shaped end portion, a pad mounted on said end portion of the yoke, said pad including a pair of plates secured together with the end portion of the yoke therebetween, said plates having opposed substantially T-shaped grooves extending thereinto from one edge thereof for reception of said end portion of the yoke, screws detachably securing the plates together to positively retain the end portion of the yoke therebetween, and a resilient cover inclosing the pair of plates, said cover having openings therein affording access to the heads of the screws for removal of the latter and disconnection of the plates so as to facilitate forcible separation of the latter and removal of the pad from the end portion of the yoke.

2,453,196
FUEL CONTROL SYSTEM FOR DIESEL ENGINES
Jess H. Clark, Miami, Ariz.
Application August 2, 1946, Serial No. 688,087
3 Claims. (Cl. 123—138)



1. A fuel control system for Diesel engines comprising a fuel pipe; means for pumping fuel under pressure through said pipe; a distributing and metering means communicating with said pipe for forming charges of fuel and feeding said

charges to the Diesel engine cylinders in synchronism with engine speed; and means controllable from the engine accelerator for varying the fuel pressure in said pipe; said distributing and metering means comprising an indexing disc, a cylindrical chamber in said disc, a piston reciprocable in said chamber to vary the size of



said chamber, a coil spring normally urging said piston outwardly to decrease the size of said chamber, and a passageway leading from said pipe to said chamber whereby when the fuel pressure is varied the pressure on said piston against said spring will vary to vary the size of said chamber.

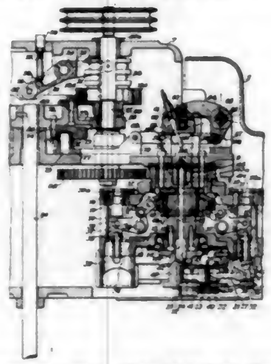
2,453,197
DISK PLOW ATTACHMENT FOR TRACTORS
Paul H. Clay, Asheville, N. C., assignor of one-third to Charles H. Landers and one-third to Eugene Sluder, Weaverville, N. C.
Application November 9, 1944, Serial No. 562,681
1 Claim. (Cl. 97—47)

The combination with a tractor having a rear axle housing, a power lift mechanism, and a hitch, of a substantially semi-circular frame pivoted at the ends thereof on said housing for vertical swinging movement and connected to said lift mechanism for vertical swinging thereby, an arcuate guard plate fixed on top of said frame and extending along the same in spaced relation therefrom, a plow beam pivoted on said hitch for vertical and lateral swinging movement and extending between the frame and plate to be swung vertically upon vertical swinging of the frame, said beam being freely movable laterally in the space between the frame and plate to be swung laterally under the influence of gravity toward either side of the tractor when said tractor is tilted laterally by inclined ground, and spring-pressed bolts extending downwardly through said guard plate at opposite ends thereof with beveled ends against which said plow beam may move to cam said bolts upwardly, whereby said plow beam may move past the bolts and said bolts snap behind said plow beam to lock the same at either side of the tractor.

2,453,198
BLADE HOLDER
Mitchell S. Corbett, Oak Park, Ill.
Application January 18, 1945, Serial No. 573,440
5 Claims. (Cl. 30—336)

3. A cutting device comprising a longitudinally curved channel member and a resilient blade having one edge held in said member and a parallel cutting edge protruding therefrom, said blade being held in longitudinally curved condition by said member.

2,453,199
ANTIPARAFFIN SUCKER ROD
William R. Crall, Pampa, Tex.; Irma Crall administratrix of said William R. Crall, deceased
Application December 31, 1946, Serial No. 719,442
1 Claim. (Cl. 166—18)

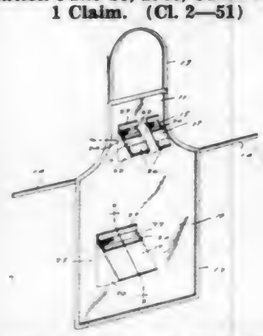


For use in a well tubing, a jointed pump sucker rod reciprocating axially of the well tubing and extending substantially throughout the entire length thereof, a paraffin remover for preventing the deposit of paraffin on the well tubing substantially throughout its length comprising a plurality of spiral strip metal scraper blades each having a width sufficient to bridge the space between the outer periphery of the rod and the inner periphery of the tubing and encircling each length of sucker rod between the joints thereof and being spaced from each other a distance less than the reciprocating stroke of the rod, each blade having a spiral about the rod of substantially 360° only, the spirals of every other blade extending in opposite directions, each blade contacting the well tubing throughout substantially its entire length, each blade adjacent its opposite ends being rigidly secured to the sucker rod length and the intermediate portions of the blades spaced from and being free from attachment to the rod for longitudinal flexing movement with relation to their respective sucker rod lengths.

2,453,200
DOUBLE SEAMER
Edward V. Crane and Karl Kuhn, Brooklyn, N. Y., assignors to E. W. Bliss Company, Brooklyn, N. Y., a corporation of Delaware
Application December 10, 1943, Serial No. 513,710
2 Claims. (Cl. 113—24)

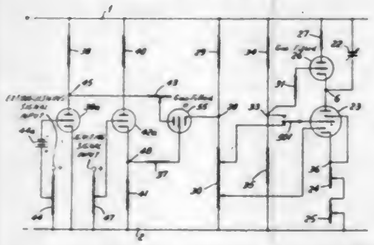
2. A machine of the character described, a revolvable seaming head; an arm having a tubular

hub portion at one end thereof and being attached to said head at the hub portion; a seaming roll carrying mechanism mounted on said arm; and means for actuating said mechanism comprising, a bell crank lever pivotally mounted on said arm adjacent to the hub portion thereof, a second bell crank lever pivotally mounted on said head and having an arm thereof extending



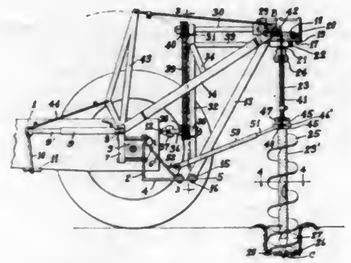
into alignment with the opening through said hub portion, an operative connection between said arm of said second bell crank lever and the first mentioned bell crank lever comprising a compression spring located within said hub, whereby movement of said second bell crank is transmitted to the first mentioned bell crank through said spring and means for rocking said second bell crank lever.

2,453,201
MARKING DEVICE
James S. Cushman, New York, N. Y., assignor to Cushman & Denison Manufacturing Company, Inc., New York, N. Y., a corporation of New York
Application July 14, 1944, Serial No. 544,941
6 Claims. (Cl. 15—134)



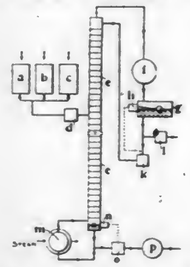
1. A marking device, comprising: a reservoir for receiving a quantity of marking fluid and provided with an elongated cylindrical duct through which said fluid may be withdrawn, a nib element of hard felt through which the marking fluid suffuses by capillarity, said nib element having a terminal marking portion for movement in contact with the surface of an article to be marked and having a rectangular shank disposed in said duct and along which air passes to the reservoir as fluid is withdrawn therefrom, at least a portion of the length of the shank being a duct-engaging portion which has its corners in frictional, slightly-impacted relationship with said duct, thereby providing between the corners of the shank longitudinal lines of superficial contact between the shank and the duct and along which the air passes toward the reservoir.

2,453,202
APRON
Nicholas B. Densmore, Lawrence, Mich.
Application June 28, 1946, Serial No. 680,033
1 Claim. (Cl. 2—51)



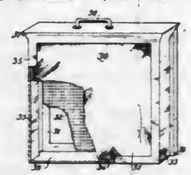
In an apron including a body portion and a bib portion secured thereto, the improvement consisting of providing at least one pocket in the body portion and at least two pockets in the bib portion, the respective pockets being of different sizes, each of said pockets comprising a pair of triangular-shaped spaced side walls arranged at right angles with respect to a face of the apron and secured thereto, the bottom wall extending between the edges of said side walls and secured to the latter, a rectangular-shaped front wall extending across said side walls and secured to said bottom wall and side walls, the top edge of said top wall being spaced from the face of said apron to define a slot for the insertion and withdrawal of articles therethrough, and a pair of spaced parallel rectangular-shaped reinforcing strips arranged on opposed sides of said slot.

2,453,203
VARIABLE FREQUENCY RELAXATION OSCILLATOR
Arthur H. Dickinson, Scarsdale, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application June 19, 1943, Serial No. 491,439
10 Claims. (Cl. 250—36)



1. In combination, an electrical oscillator circuit including an automatically variable impedance element adjustable in impedance value to determine one or another frequency of the oscillator circuit, and a control circuit including signal responsive means responsive to an electrical signal for automatically adjusting the impedance value of said variable impedance element so as to produce a change in frequency of the oscillator circuit, said control circuit further including electronic discharge means for sustaining the impedance constantly at the adjusted value after the signal has disappeared, and said control circuit being responsive to a later signal to restore the impedance value to its original value so as to return the oscillator circuit to its original frequency but at a phase differing from its previous phase to an extent determined by the interval between the signals.

2,453,204
EARTH BORING MACHINE
Richard H. Dobbs, Atlanta, Kans.
Application October 24, 1946, Serial No. 705,355
1 Claim. (Cl. 255—19)



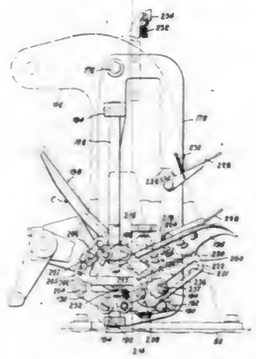
In an auger boring machine comprising a frame consisting of a centrally disposed tube and a pair of braces, said tube and braces extending upwardly and rearwardly of a tractor and having their lower ends secured to the tractor, a U-shaped plate secured to the upper end of the tube, a gear casing mounted upon the U-shaped plate, said casing having spindles extending from its sides to receive the respective upper ends of the braces to stationarily retain the gear casing, bevel gears positioned in said gear casing, a shaft extending downwardly from one bevel gear, an auger driving shaft depending downwardly and universally connected to the lower end of the first said shaft, an auger having a tube to telescopically engage on the driving shaft, said driving shaft being rectangular in cross section to fit in a rectangular opening longitudinally through the tube, a horizontal shaft extending forwardly from the other bevel gear, an upright frame to serve as a bearing for the forward end of the shaft, sprocket and chain means connecting the forward end of last said shaft with a power take-off of said tractor, pulleys mounted on the spindles of the casing, cables engaging over the pulleys and extending downwardly and terminating adjacent the upper end of the auger tube, a plate to which the lower ends of the cables are attached and in which the upper end of the auger tube is rotatably mounted, a pair of telescopically engaging members to retain the last said plate from rotating with the auger tube, and power means on the tractor connected to the other ends of the said cables to raise and lower the auger.

2,453,205
CONTROLLED FRACTIONAL DISTILLATION OF PETROLEUM
Patrick Docksey, Sunbury-on-Thames, England, assignor to Anglo-Iranian Oil Company Limited, London, England, a British joint-stock corporation
Application January 26, 1943, Serial No. 473,608
In Great Britain January 28, 1942
1 Claim. (Cl. 196—71)

A process of distillation for the production of closely cut high grade fractions of a petroleum distillate in a fractionating column to yield an overhead product and a bottoms product comprising admitting a stream of the distillate to the column at a determined substantially constant rate by volume, withdrawing a stream of the overhead product from the column, condensing said overhead stream and introduicng the condensate into a reflux drum, withdrawing part of said condensate from the system as product at a substantially constant rate which is a determined substantially constant proportion of the distillate feed rate fixed by the cut point of the distillate as determined by analysis of the distillate from time to time, withdrawing a stream of the bottoms product from the column at such a rate as to maintain a substantially constant liquid level in the column base, maintaining a substantially constant determined vapour loading in the column by control of the heat applied to the column base, and returning another part of the condensate from the reflux drum to the column as reflux at such a rate as to maintain a substantially constant liquid level in the reflux drum.

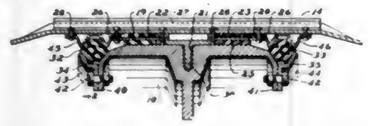
2,453,206
AIR FILTER
John F. Donat, Euclid, Ohio
Application May 1, 1946, Serial No. 666,345
3 Claims. (Cl. 183—50)

1. In a conduit, an air cleaner, comprising in combination, a sheet metal receptacle member interposed in the conduit, the said receptacle member having spaced wall portions extending crosswise of the aforesaid conduit, an opening in one end thereof and an offset groove in the side wall thereof, and a sheet metal filter member removably mounted in the receptacle member having a coarse screen and a fine mesh mounted on spaced frame portions thereof and a closure portion for the aforesaid opening, the said frame



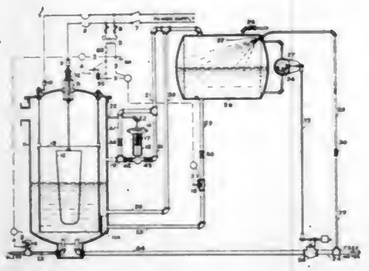
portion being between the said wall portions and the screen and mesh thereon being interposed in the column of air in the aforesaid conduit, the said frame portions including side walls having an offset tongue thereon engageable with the aforesaid offset groove, whereby the filter member can be inserted into the receptacle member in only one position wherein the said screen faces the conduit port and the said mesh faces the conduit vent.

2,453,207
HOLDER FOR WHETSTONES
William D. Dunn, Linden, N. J.
Application January 12, 1948, Serial No. 1,839
9 Claims. (Cl. 51—211)



1. A whet stone holder comprising a base; a pair of stone-holding members movably mounted on said base; and at least one convexly curved member carried by said base and underlying a whet stone held in said members and affording a rolling support for said stone.

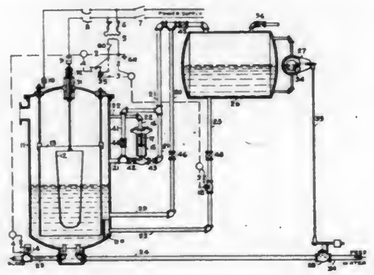
2,453,208
ADJUSTABLE CHAIR FOR GUNNERS
René E. Duplessis, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application April 13, 1945, Serial No. 588,176. Divided and this application May 20, 1946, Serial No. 670,927
3 Claims. (Cl. 155—5)



2. The combination with mounting members, of opposite guide-rods thereon, carriers having guide-rolls running upon the rods, a tie-rod connecting the carriers, a chair supported upon the tie-rod, a retaining member movable upon one of the carriers and provided with upper and lower surfaces, and lower and upper latches movable upon one of the mounting members for respective engagement with the surfaces of the retaining member.

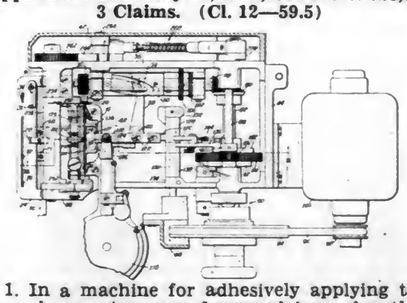
2,453,209
DRIVE FOR TRACK-LAYING VEHICLES
Herbert V. Dwight, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application November 1, 1945, Serial No. 626,010
9 Claims. (Cl. 305—9)

8. A track assembly for a self-laying track type vehicle, said assembly comprising a track, a wheel, said track and wheel comprising opposed V-grooves, and a belt between and unattached to said track and wheel and comprising a pair of outwardly converging and a pair of inwardly converging side faces engageable respectively in the V-groove of said track and the V-groove of said wheel.



2,453,210
AUTOMATIC MEANS FOR REGULATING ELECTRIC STEAM GENERATORS
Milton Eaton, Shawinigan Falls, Quebec, Canada, assignor to The Shawinigan Water & Power Co., Montreal, Quebec, Canada, a corporation of Quebec
Application May 25, 1945, Serial No. 595,755
In Canada March 24, 1945
8 Claims. (Cl. 219—40)

1. An apparatus for regulating electric boilers of the electrode type to maintain a selected condition constant, comprising the combination of, an electric boiler having at least one electrode therein, a main steam outlet therefrom and a feed water communication thereto, an elevated control pressure-vessel separate from said steam outlet and from said water communication, a water communication between the boiler and the control vessel from locations at least as low as the lowest operating water level in the boiler and in the control vessel respectively and separate from said feed water communication, a control steam bleed communication from the boiler to the control vessel from and to locations at least as high as the highest operating water level in the boiler and in the control vessel respectively, steam dissipating means for dissipating control-vessel-steam, control means for regulating the flow of steam through said control steam bleed communication, control means for regulating said steam-dissipating means, means for measuring the selected condition, one of said control means being responsive to said measuring means, the other control means being adapted to remain in



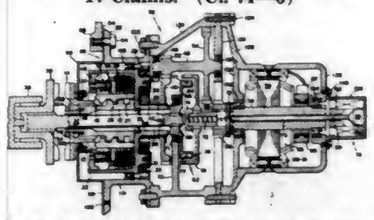
fixed adjustment, an electric power supply for the boiler, a transformer connected with the power supply, an electrode in the water communication between the control tank and the boiler, a current responsive relay connected in series with the electrode in the water communication between the control tank and the boiler and across the secondary leads of the transformer, and a bleed valve connected with the current responsive relay in such a manner that it opens when the relay contacts close and recloses when the relay contacts open.

2,453,211
ELECTRIC STEAM GENERATOR CONTROL
Milton Eaton, Shawinigan Falls, Quebec, Canada, assignor to Shawinigan Water & Power Co., Montreal, Quebec, Canada, a corporation of Quebec
Application April 19, 1947, Serial No. 742,723
14 Claims. (Cl. 219—40)

1. An apparatus for regulating electric boilers of the electrode type to maintain a selected condition constant, comprising the combination of, an electric boiler having at least one electrode therein, a main steam outlet therefrom and a feed water communication thereto, an elevated control pressure-vessel separate from said steam outlet and from said feed water communication, a water communication between the boiler and the control vessel from locations at least as low as the lowest operating water level in the boiler and in the control vessel respectively and separate from said feed water communication, a control steam bleed communication from the boiler to the control vessel from and to locations at least as high as the highest operating water level in the boiler and in the control vessel respectively, steam dissipating means for dissipating control-vessel-steam whereby the pressure in the control vessel is normally maintained lower than that in the boiler, control means for regulating the flow of steam through said control steam bleed communication, means to prevent the steam pressure in the boiler and control vessel respectively being equalized by reverse flow of steam through the steam communication, control means for regulating said steam-dissipating means, means for measuring the selected condition, one of said control means being responsive to said measuring means, the other control means being adapted to remain in fixed adjustment, means for measuring the water level in the control vessel, and controlling means responsive to said water level measuring means for regulating the flow of water through said feed water communication, said water level measuring means and controlling means constituting a liquid level controller.

2,453,212
TAPE APPLYING MACHINE FOR USE IN THE MANUFACTURE OF SHOES
Harry D. Elliott, Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application February 12, 1947, Serial No. 728,039
3 Claims. (Cl. 12—59.5)

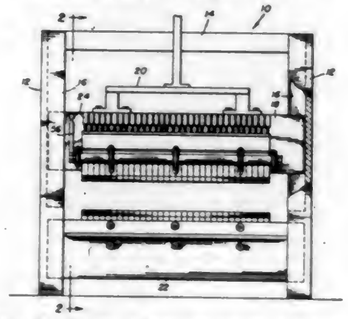
1. In a machine for adhesively applying tape to a shoe part, means for supplying a length of tape to a position in a predetermined plane, a work table in a plane inclined to that of the supplied tape, a device for grasping the length of supplied tape, a pivotally mounted carrier upon which said grasping device is pivotally mounted, said carrier being constructed and arranged to swing the grasping device through an arcuate path from a postiion in which it can grasp the length of supplied tape to a position in which it can deliver the length of tape upon a work piece on said work table, and gearing for rotating the grasping device to cause the length of tape to be delivered at an inclination corresponding to that of the work table.



2,453,213
PROCESS OF TREATING LIGNIN RESIDUES
Eduard Farber, Washington, D. C., assignor to Timber Engineering Company, Washington, D. C., a corporation of Delaware
No Drawing. Application May 10, 1945, Serial No. 593,101
15 Claims. (Cl. 260—124)

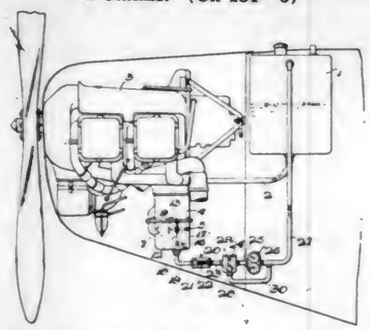
1. The process of treating the ligninic residue of the hydrolyzation of the carbohydrates of wood, which comprises mixing the residue with alkali in the proportions, by weight, of one hundred (100) parts of the residue to between about twenty (20) and about two hundred (200) parts of the alkali, and heating the mass and maintaining it at a temperature between about 150° C. and not substantially above 250° C., until the residue has substantially resinified.

2,453,214
ETHYL CELLULOSE COMPOSITION
Hans G. Figdor, Philadelphia, Pa., assignor to E. F. Houghton & Co., Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application September 14, 1945, Serial No. 616,472
13 Claims. (Cl. 106—173)



1. A thermoplastic composition comprising ethyl cellulose, mineral oil, and a resin hard and solid at room temperature and compatible with the ethyl cellulose but relatively insoluble in the mineral oil, the relative amounts by weight of the three said ingredients based on the total weight thereof being as follows: ethyl cellulose between about 15% and about 45%, mineral oil in an amount at least equal to the ethyl cellulose but not greater than about 75%, and the hard resin in an amount less than the ethyl cellulose but not less than about 2%.

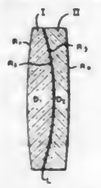
2,453,215
ENGINE STARTER AND GENERATOR MEANS
Samuel Gilbert, Cedar Grove, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application August 28, 1946, Serial No. 693,591
17 Claims. (Cl. 74—6)



1. In an engine starter, the combination of an assembly comprising an axially stationary rotatable nut, a screw shaft in said nut, a starter jaw member adapted for rotation with and axial movement relative to the screw shaft, a rotatable drum, a disc clutch pack having discs connected to said drum and said nut, respectively, and a non-rotative orbital gear, said assembly forming a single axial opening through its aforesaid elements, planet gears carried by said drum and engaging said orbital gear, a driving shaft extending through said opening and adapted for operation by the engine, a rotatable gear member carrying a sun gear portion around said driving shaft engaging said planet gears, rotatable means carrying a pinion engaging said rotatable gear and having a speed-reducing gear, a dynamo operative as a motor and as a generator and including a hollow armature shaft aligned with said driving shaft and having a transverse slot, centrifugal clutch means having elements carried by said driving shaft and said hollow armature shaft, respectively, a starting pinion rotatable with and axially movable relative to said hollow shaft, means including a meshing rod in said hollow shaft connected through said slot to said starting pinion, means normally biasing said starting pinion away from said reducing gear, and a solenoid in series with said dynamo when operative as a motor and adapted to actuate said meshing rod to engage said starting pinion to said reducing gear.

2,453,216
SHEARING MACHINE
Von B. Graham, Austin, Tex., and Kenneth E. Graham, Bedford, Ind.
Application April 8, 1947, Serial No. 740,106
13 Claims. (Cl. 125—23)

1. In a device for shearing stone, a frame, slide members secured to said frame, blades slidably secured to said slide members, means for resiliently biasing each of said blades, means for locking said blades in predetermined fixed positions, means for actuating said locking means, means for lifting said blades, said lifting means and said locking means including a common cam shaft engageable with said blades.



2,453,217
SCAVENGING OIL SYSTEM FOR ENGINES
David Gregg, Caldwell, and Henry Troeger, Ramsey, N. J., assignors to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application April 13, 1944, Serial No. 530,880
4 Claims. (Cl. 184—6)

4. A system for returning engine oil to an oil supply tank, whereby foaming of the oil may be eliminated, comprising, in combination, means for collecting oil from the engine, a pump for returning the oil from the collecting means to the supply tank, means for recirculating a portion of said return oil through said pump, a float means responsive to the quantity of oil in said collecting means, a first valve member operated by said float means and arranged to control flow of oil to said pump so as to affect said recirculating means, a second valve member arranged to control flow of oil to said pump, said second valve member opening in response to a suction force exerted by said pump in excess of a predetermined value, means biasing said second valve member in a sense opposing the suction force exerted by said pump, and said biasing means arranged to close said second valve member upon the suction force applied by said pump to said second valve member decreasing below a predetermined value, and one of said valve members directly controlling the flow of oil through said recirculating means to said pump and the other of said valve members directly controlling the flow of oil from said collecting means to said pump so as to prevent said pump from drawing air through said oil collecting means.

2,453,218
IMAGE FORMING OPTICAL LENS SYSTEM ATHERMALIZED FOR FOCAL POINT
David S. Grey, Lexington, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application March 5, 1946, Serial No. 652,063
4 Claims. (Cl. 88—57)

1. An optical system substantially athermalized for focal point, comprising a plurality of optical elements K from K equals 1 to K equals N, at least one of said elements being formed of material relatively highly subject to thermal effects and at least one of said elements being formed of material considerably less subject to thermal effects, said elements having predetermined indices of refraction, dispersion values, radii, thicknesses and focal lengths and being axially aligned at spacings which provide the

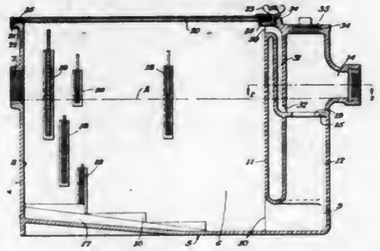
F/5 FOCAL LENGTH = 100 MM

LENS	RADIUS	Thickness & Separation	n_D	V
I	R_1 = +88.40	D_1 = .377	1.50825	55.3
	R_2 = -36.06	L_1 = .05		
II	R_3 = -32.08	D_2 = .195	1.59	31
	R_4 = -111.04			

system as a whole with a predetermined power, a correction at least in part of the optical aberrations thereof, and satisfy the condition that each element K has a value for the expression

$$\left[\frac{\theta_1 h_1^2+\theta_2 h_2^2}{V_T}+\left(\frac{h_1}{S_1'}\right)^2 n^2 D_T\left(\frac{t}{n}\right)\right]_K$$

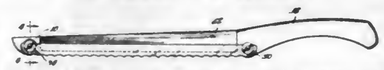
such that the sum of said values approximately equals zero, where R_1 is the radius of the first surface of an element K, that is the surface on the object side of such element; R_2 is the radius of the second surface of an element K, that is the surface on the image side of such element; n and V_T are respectively the index of refraction and the thermal nu value of the material which forms an element K;



$$D_T\left(\frac{t}{n}\right)$$

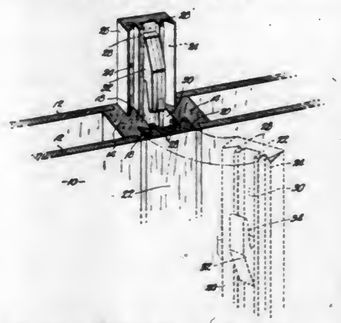
is the rate of change with temperature of the ratio of the thickness t of an element K to the index of refraction of the material of such element; S_1' is the image distance from the first surface of an element K; h_1^2 and h_2^2 are the position factors for the first and second surfaces respectively of an element K; and θ_1 and θ_2 are respectively the values

$$\frac{n-1}{R_1} \text{ and } \frac{1-n}{R_2}$$



for an element K.

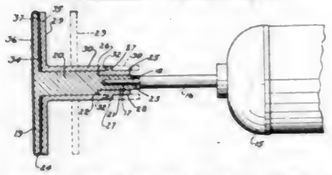
2,453,219
GREASE INTERCEPTOR
Stanley J. Grum, Michigan City, Ind., assignor to Josam Manufacturing Company, Cleveland, Ohio, a corporation of Delaware
Application July 19, 1945, Serial No. 605,945
1 Claim. (Cl. 182—9)



In a grease interceptor, a closed chamber adapted to receive grease-ladened water, said chamber having an outlet comprising a conduit, circular in cross section, leading from adjacent the bottom of the chamber to an opening disposed below the top of the chamber whereby a body of liquid is maintained in the chamber; a ring like formation projecting inwardly from the walls of the conduit below said opening and forming a constriction in said conduit; and means forming an air relief passage interconnecting said chamber and conduit, said passage having its inlet disposed in said chamber above the liquid level therein and its outlet disposed immediately above said ring like member and below said opening.

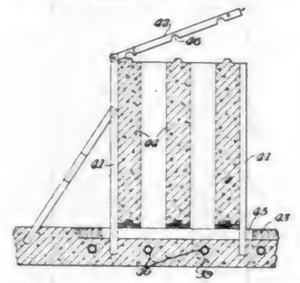
2,453,220
SLICING KNIFE
Harry M. Gustafson, Chicago, Ill., assignor to Simmons Slicing Knife Company, Chicago, Ill., a corporation of Illinois
Application November 16, 1945, Serial No. 629,116
5 Claims. (Cl. 30—283)

1. A slicing knife comprising an elongated body member, a handle for said body member, a pair of supporting studs carried by said body member at longitudinally spaced points thereon, a sleeve mounted on one of said studs, a plurality of spacing washers, certain of said washers being slidably mounted on said sleeve and others of said washers being slidably mounted on the other stud, a removable knife blade mounted on said studs in spaced relation to said body member and disposed between selected pairs of said spacing washers, said sleeve having an enlarged gripping portion and an eccentric knife-tensioning portion, said knife blade having a recess therein to receive said eccentric portion, and thumb nuts respectively threaded on said studs for squeezing together all said parts mounted on each of said studs thereby to secure said blade under tension.



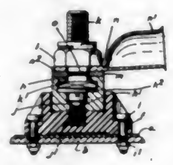
2,453,221
INTERLOCKING BUILDING UNITS
Raymond L. Haden, Kansas City, Mo., assignor, by direct and mesne assignments, of one-half to Emile S. Guignon, Jr., Kansas City, Mo., and one-half to Albert R. Jones, Mission Hills, Kans.
Application July 21, 1944, Serial No. 545,947
1 Claim. (Cl. 20—4)

In a building structure, a plurality of units arranged in edge-to-edge relation to form a wall; longitudinal beads on the abutting edges of the units, said beads being dove-tail in transverse cross section; a pair of spaced-apart studs at the adjacent edges of the units, said studs each being contoured along their inner faces to be complementary in form to the beads; and inter-



locking elements confined between the said studs and the beads of the adjacent units for drawing the said studs together and into clamping relation with the said beads comprising overlapping fingers integral with each of said studs and arranged in pairs on the inner faces thereof, said fingers having inclined, engageable surfaces the engageable surfaces of the fingers on one stud being inclined downwardly and away from the stud and the engageable surfaces of the fingers on the other stud being inclined upwardly and away from the other stud and being movable to and from each other and to and from the interlocked position upon relative longitudinal shifting of the said studs, said contour of the inner faces of the studs including a pair of spaced longitudinal ribs, said fingers extending from the studs between said ribs, said ribs being interposed between the fingers and proximal faces of the beads for holding the fingers in alignment when the studs are shifted the ribs engaging the fingers and beads.

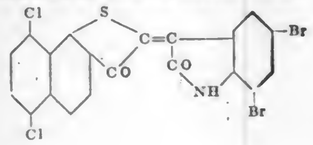
2,453,222
ROTARY HEAD FOR SANDING MACHINES
Jack C. Hammontree, Rifle, Colo.
Application December 5, 1947, Serial No. 789,921
4 Claims. (Cl. 51—197)



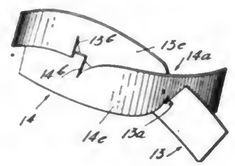
1. A rotary head for sanding machines including a motor having an armature shaft, such head comprising a sanding disc mounted upon the armature shaft for rotation therewith, the sanding disc including a spindle having a screw-threaded extension, a clamping disc slidably mounted upon the spindle and adapted to engage the sanding disc and including a sleeve having an end recess and spiral slot, and a locking sleeve mounted upon the screw-threaded extension and including a part to alternately engage in the end recess and spiral slot.

2,453,223
METHOD FOR MAKING CONCRETE BUILDING UNITS
Albert Henderson, Pittsburgh, Pa., assignor, by mesne assignments, to The Cemenstone Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application October 1, 1946, Serial No. 700,501
1 Claim. (Cl. 25—154)

In the art of making precast concrete building units, the steps including positioning on a mold an open faced box with a flexible wrapper disposed across an open face of the box, casting a plastic cementitious mix within the box and against said wrapper to form a building unit and when the mix has hardened removing from the mold the assembly of building unit, box and wrapper so that the building unit as cast is already boxed and wrapped adapting it to be transported while protecting against soiling or discoloration the face thereof disposed against the wrapper without necessitating wrapping after casting.



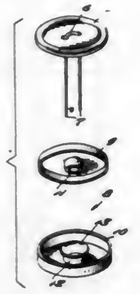
2,453,224
BUS BAR AND CONNECTING LINK FOR USE IN ELECTRICAL WIRING SYSTEMS
Walter Edward Hill, Streetly, and Thomas Daniel Guy Wintle, Walsall, England, assignors to J. A. Crabtree & Co. Ltd., Walsall, England, a company of Great Britain
Application December 12, 1944, Serial No. 567,800
In Great Britain December 16, 1943
1 Claim. (Cl. 174—59)



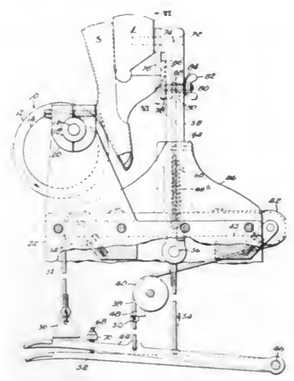
A junction box including an elongated bus bar of conducting material and substantially rectangular transverse cross-section having a longitudinally-extending channel formed along a face thereof and having an undercut longitudinally-extending channel of greater width than said first-mentioned channel and underlying and communicating therewith, a connecting stud of conducting material and having a stem extending through the first-mentioned channel and a head of a width greater than the width of said first-mentioned channel and disposed within and slidable along said last-mentioned channel, said head having a flat side portion engaging a wall defining one side of said last-mentioned channel, whereby said stud is held against axial displacement and is also held against rotation with respect to the bus bar, a conductor surrounding the projecting end of said stud, and means for clamping said conductor on said stud and for maintaining said stud in position on said bus bar.

2,453,225
INDIGOID VAT DYESTUFF
Kurt Hoelzle and Eduard Kambli, Basel, Switzerland, assignors to Ciba Limited, Basel, Switzerland, a Swiss firm
No Drawing. Application September 20, 1945, Serial No. 617,696. In Switzerland October 13, 1944
1 Claim. (Cl. 260—322)

The indigoid dyestuff of the formula

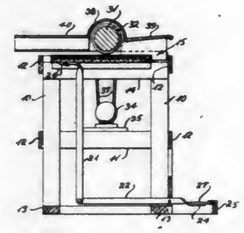


2,453,226
GROUND SUPPORT ANCHOR
John B. Hyde, Great Neck, N. Y.
Application November 19, 1945, Serial No. 629,459
5 Claims. (Cl. 189—29)



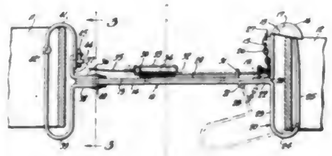
1. An anchoring device to be driven into the ground for the support of a post, comprising the combination of complementary elongated members, each member having a recess extending from each of its longitudinal edges, each recess being disposed at a spacing from the respective opposite lateral ends and with respect to the central portion of the member, said complementary members being locked relative to one another by engagement of the body portions of the members within their respective recesses, there being a loop formed centrally of the body portions of the assembled members and their respective end portions extending in substantially cruciform relationship.

2,453,227
BUTTON STAPLE ANCHOR AND SHIELD
Irene M. Janes, North Arlington, N. J., assignor of one-half to George Martin, East Orange, N. J.
Application September 21, 1946, Serial No. 698,530
5 Claims. (Cl. 24—95)



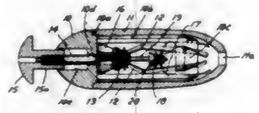
5. As a new article of manufacture a staple-end bending, enclosing, shielding and anchoring device of the class described, comprising a disk-like member provided with an endless marginal flange and provided at its center with a rigidly attached anvil forming cup, said cup including a rim and the lip of said rim being flared outwardly, an inner complemental disk-like member having an annular marginal flange fitting frictionally and telescopically within the confines of the first named flange, the central portion of said second disk-like member having an aperture for passage of staple-ends and a tapering neck in alinement with said aperture, said neck being adapted to be fitted telescopically into the cup, whereby to adapt the neck and cup as means for bending and clinching the staple-ends for secure assembling and anchorage purposes.

2,453,228
RELASTING MACHINE
Charles E. Johnson, Belmont, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application October 11, 1947, Serial No. 779,329
10 Claims. (Cl. 12—15)



1. In a machine for effecting relative movement between shoe units and lasts, a support for a last, and a friction tool engageable with a shoe unit on the last to move the shoe unit relatively to the last, said tool comprising a driven eccentric roll.

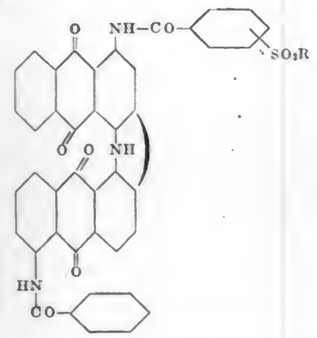
2,453,229
UNHAIRING MACHINE
John T. Kagel, Sr., Jamaica, N. Y.
Application August 16, 1946, Serial No. 691,157
4 Claims. (Cl. 69—26)



1. A fur refining machine having a main frame including a scraper roller rotatably mounted on top of the main frame and a table top hingedly supported by the main frame underneath the scraper roller, the scraper roller being equipped with a plurality of scraper fins, and means for pivoting the table top upwardly into contact with the scraper fins, said means consisting of a lifting bar fastened to the underside of the table top, and a pedal lever pivotally connected with the lower free end of the lifting bar and pivotally supported intermediate its ends by the main frame, the forward end of the pedal lever having the shape of a pedal, a platform formed on and extending forwardly from the bottom of the main frame, a platform frame surrounding the pedal and a cover hingedly connected with the platform frame and adapted to be arranged over the pedal and cover the same.

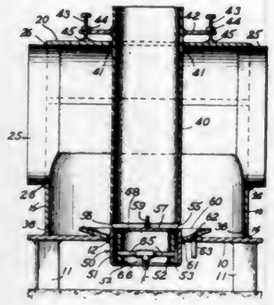
2,453,230
TOW BAR CLAMP
Heyman Katz, Asbury Park, N. J.
Application March 26, 1947, Serial No. 737,292
5 Claims. (Cl. 280—33.14)

1. A tow line clamp comprising a rigid member having a swivelly mounted clamping member at one end and a pivoted hook member at the other end thereof, locking means secured to said hook member, a locking member slidably mounted on said rigid member for cooperating with said locking means to hold the hook member in an upright locked position, spring means on said locking member to urge the member outwardly into locking engagement, and a remotely controlled pull member connected to said locking member for retracting same against the action of the spring.



2,453,231
ELECTRICAL SWITCH
Joseph A. Kavanagh, New York, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application August 9, 1945, Serial No. 609,814
3 Claims. (Cl. 200—16)

2. An electric switch comprising a contact member shaped like a cone and having a locking ridge disposed peripherally of one base of said cone, said contact member being movable along the axis of symmetry of said cone from an open circuit position to a first closed circuit position past an intermediate closed circuit position; a plurality of primary contact elements disposed symmetrically about said axis and engageable by said contact member in said intermedaite position, said ridge engaging said elements in the intermediate position to hold said contact member in the intermediate position; a second conical contact member having a lost motion movement with said first contact member, and secondary contact elements symmetrically disposed to be engaged by said second member when said first member is in the first closed circuit position.

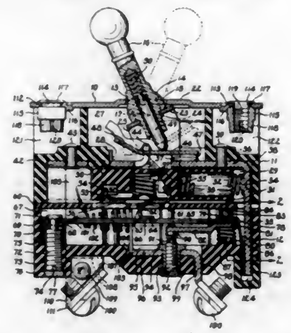


2,453,232
ANTHRIMIDE CARBAZOLE VAT DYESTUFFS
Walter Kern, Sissach, Paul Sutter, Basel, Eduard Moergeli, Neuewelt, near Basel, and Theodor Holbro, Basel, Switzerland, assignors to the Swiss firm of Ciba Limited
No Drawing. Application May 11, 1943, Serial No. 486,582. In Switzerland May 19, 1942
7 Claims. (Cl. 260—316)

3. The anthrimide carbazoles of the general formula

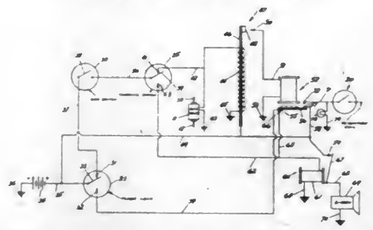
wherein R stands for a hydrocarbon radical containing up to ten carbon atoms.

2,453,233
OIL BURNING TOBACCO CURING STOVE
Ottis Kay Kittrell, Lumberton, N. C.
Application March 4, 1946, Serial No. 651,851
3 Claims. (Cl. 126—93)



1. In a heating device comprising an oil burner having a central baffle plate and a guide element projecting above said baffle plate, a heater body housing said burner comprising a horizontally disposed hollow drum having flue openings at its ends and an opening in the upper surface thereof for receiving a downdraft pipe, a downdraft pipe extending vertically through said opening in the upper surface of the drum and having its lower end held in operative position by said guide element and overlying the burner but spaced therefrom to permit the outward flow of air from the downdraft pipe to the burner, and means associated with the upper end of the downdraft pipe for adjusting the downdraft pipe axially to vary the spacing of the lower end thereof from said oil burner.

2,453,234
PROCESS FOR THE PREPARATION OF AMINO - CARBOXYLIC - ACIDS FROM LACTAMS
Theodoor Koch, Oosterbeek, Netherlands, assignor, by mesne assignments, to American Enka Corporation, Enka, N. C., a corporation of Delaware
No Drawing. Application July 7, 1947, Serial No. 759,476. In the Netherlands August 14, 1946
8 Claims. (Cl. 260—534)

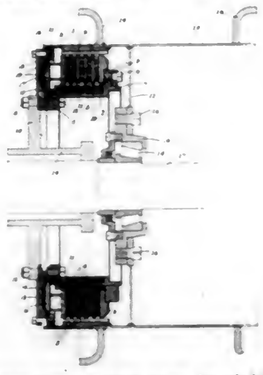


1. A process for the preparation of an amino carboxylic acid from a lactam, comprising hydrolyzing the lactam at a temperature between 150° and 300° C. by means of a hydrolyzing agent consisting essentially of more than 10 mols of water per mol of lactam, and separating the amino carboxylic acid from the hydrolysis products.

2,453,235
NONFREE-TRIPPING OVERLOAD CIRCUIT BREAKER
Alvin W. Krieger, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application May 10, 1944, Serial No. 534,907
7 Claims. (Cl. 200—116)

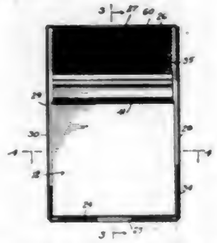
1. In a non-free-tripping electro-thermally responsive overload circuit breaker, in combination, a switch included in the circuit to be controlled, said switch having a single pivoted lever normally operable manually to effect completion or interruption of the controlled circuit at will in the absence of overload conditions, a reciprocable plunger spring-biased to effect circuit interrupting operation of said switch, a bimetallic strip normally included in circuit with said switch, said strip and said plunger having cooperating latch members to restrain said plunger against its bias upon initial closure of said switch, said bimetallic strip being supported at each end against substantial outward longitudinal movement whereby the same is adapted to buckle or bow between said ends as an incident to overload conditions in the controlled circuit, whereby upon attainment of an overload condition of given value said latch members are automatically disengaged to thereby tend to effect interruption of the controlled circuit, said lever being manually operable at will to insure completion of said circuit regardless of said overload conditions, an auxiliary switch associated with said strip and operable automatically thereby during manual maintenance of said circuit under overload conditions, said auxiliary switch comprising a fixed contact, and a substantially rigid sheet metal contactor attached to one end of said strip and adapted upon a given degree of bowing of the latter under overload conditions to engage said contact to thereby effect temporary short-circuiting of said strip whereby the possibility of fusion of the latter is substantially eliminated.

2,453,236
THEFT-PREVENTING LOCKING DEVICE FOR AUTOMOBILES AND THE LIKE
Alexander Lazarus, Rosedale, N. Y.
Application May 23, 1946, Serial No. 671,868
5 Claims. (Cl. 177—314)



1. In an automotive vehicle having an engine, a liquid fuel supply therefor, and an ignition switch; the combination therewith of an anti theft device, said device comprising an electric circuit including a source of current supply, a two contact foot operated switch normally closed through one of said contacts, a manually operated switch, the said switches being connected in series in said circuit, a fuel valve electrically controlled by said switches, a single pole, single throw, normally open bi-metal strip connected to the source of current supply, a heating coil surrounding the said bi-metal strip and connected in series with said switches, a double pole, single throw, normally open electromagnet adapted to be energized when the bi-metal strip becomes heated in the normal operation of the vehicle to complete a circuit through one set of said poles to the ignition switch, an audible signal device and a single pole, single throw relay connected to the source of current supply normally in open circuit with the audible signal device and adapted to be energized by said double pole, single throw, normally open relay to complete the circuit through the audible signal device when the circuit is broken through the first mentioned foot operated switch contact and completed through the second contact.

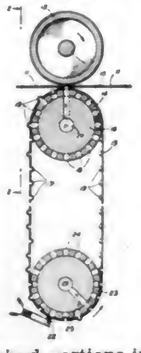
2,453,237
MULTIPLE-DISK FRICTION COUPLER
Robert G. Le Tourneau, Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation of California
Application August 6, 1946, Serial No. 688,672
4 Claims. (Cl. 188—152)



1. A friction coupler comprising an outer drum surrounding an inner drum in spaced concentric relation, the drums being mounted for relative rotation, a series of annular friction discs disposed in face to face relation between the drums, means axially shiftably but relatively non-rotatably connecting alternate discs to the inner and outer drums respectively, a stop at one end of the series of discs, and fluid pressure actuated means disposed to act on said series of discs from the other end whereby to clamp the discs into close frictional contact; said last named means comprising an end ring disposed beyond said other end of the series of discs and fixed in connection with one drum, an annular diaphragm sealed in cooperative pressure chamber forming relation with the face of the end ring adjacent

said series of discs, means adapted to feed fluid pressure into the chamber, an axially movable control ring bearing against the diaphragm on the side adjacent said series of discs, and means

connecting the control ring in rigid relation to the adjacent disc, there being a plurality of sockets formed in said one drum and opening toward the end ring, and compression springs in the sockets bearing against the control ring.

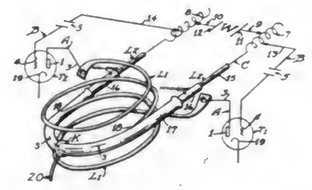


2,453,238
BLADE CONTAINER
Edwin A. Locke, Jr., Quincy, Mass., assignor, by mesne assignments, to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware
Application January 8, 1945, Serial No. 571,761
4 Claims. (Cl. 206—16)

2. A container for razor blades and the like, comprising an outer enclosure having sides, ends, and a cover, each of said ends being apertured, a compartment slidably contained within the enclosure, the cover of the enclosure having a slot communicating with said compartment in all positions thereof and a delivery slot at one end, a plurality of blades positioned beneath the slotted end of said cover adjacent to the end of the enclosure, spring means for so positioning said blades, the said compartment being shorter than the said enclosure and slidable therein and having an extension limiting said sliding movement.

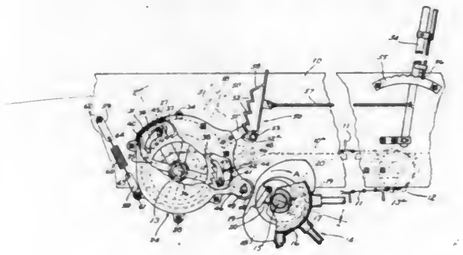
2,453,239
RECORD CONTROLLED DATA STORING DEVICE
Hans P. Luhn, Armonk, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application December 21, 1945, Serial No. 636,529
7 Claims. (Cl. 200—46)

5. In a machine of the class described, a record card having a column of perforating positions in any of which a perforation may be present, a storage sheet having a column of index positions spaced correspondingly to the perforating position in the card, each index position of the sheet being configured to extend to one side of the plane of the sheet and flexible to spring to the opposite side, means for superimposing the card and sheet with the columns of both coinciding



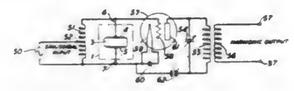
and with the raised portions in the sheet facing away from the card, and means for applying pressure to all the raised portions, said card resisting said pressure at the imperforate portions thereof, said pressure causing the portions of the sheet coinciding with perforations in the card to spring to the opposite side of the sheet and extend into said perforations.

2,453,240
ACOUSTICAL WAVE FILTER FOR PNEUMATIC HAND TOOLS
Gustav V. A. Malmros, Binghamton, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application October 8, 1946, Serial No. 702,010
1 Claim. (Cl. 181—48)



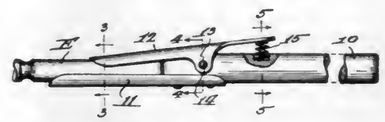
The combination with a pneumatic tool having a substantially cylindrical rotor casing provided with a series of circumferentially spaced exhaust ports therein in the form of elongated helical slots arranged in parallelism, the circumferential component of extent of said helical slots being such that the slots overlap each other, of a wave filter therefor comprising an apron, means for attaching said apron to said casing in fixed relationship thereto, there being a circumferential groove formed internally of said apron in register with all of said exhaust ports and providing in combination with the external surface of the casing an annular expansion chamber, the internal diameter of said apron exclusive of said groove being slightly in excess of the external diameter of the casing and affording a clearance not substantially greater than .001 inch, there being a series of parallel grooves formed internally of the apron and extending in a direction substantially parallel to the axis of said rotor casing and serving to establish communication between said expansion chamber and the atmosphere.

2,453,241
COMPOSITE RADIO FREQUENCY INDUCTANCE
Julius W. Mann and George F. Russell, Tacoma, Wash.
Application July 31, 1944, Serial No. 547,440
4 Claims. (Cl. 175—359)



2. In a composite radio frequency inductance, a conduit formed in a coil for carrying radio frequency waves, an insulating sleeve enclosing at least the central portion of the conduit, a second conduit for carrying radio frequency waves and enclosing at least the central portion of the insulating sleeve, and a second coil having its central portion physically connected to the central portion of the second conduit, the first and second coils extending substantially coaxially with each other to equal distances on both sides of the common center point for both coils, the total distance of the coaxial arrangement of the two conduits being less than a major part of their respective total lengths.

2,453,242
SPREADER APRON DRIVE
John L. Marsh, Des Moines, Iowa, assignor to J. I. Case Company, Racine, Wis., a corporation of Wisconsin
Application October 10, 1946, Serial No. 702,459
9 Claims. (Cl. 74—124)

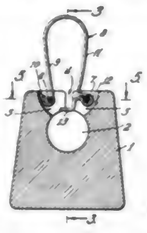


1. In a ratchet drive for a spreader having a body portion, the combination of a driven shaft, a ratchet wheel on the driven shaft, a bearing for said driven shaft supported in stationary relation to said body portion, an arm adjacent said ratchet wheel and supported in stationary relation on said bearing, a stop pawl journaled on said arm and engaged with said ratchet wheel so as to prevent reverse rotation thereof, a housing enclosing said wheel and arm, and journaled concentrically with said driven shaft, a driving pawl journaled within said housing and engaged with said ratchet wheel for driving it upon rocking of said housing in one direction, and means for rocking said housing in first one direction and then the other.

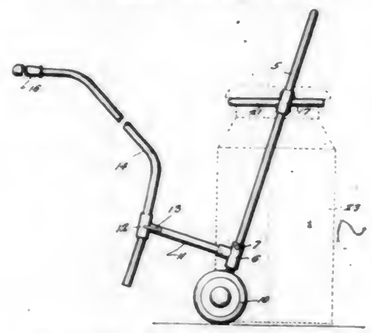
2,453,243
FREQUENCY MODULATING AND HARMONIC PRODUCER APPARATUS
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 21, 1943, Serial No. 507,130
11 Claims. (Cl. 250—36)

1. A harmonic producer system comprising a source of voltage of variable magnitude, a non-linear type voltage variable capacitive reactance condenser device comprising a solid dielectric material having a curvilinear or non-linear voltage-charge hysteresis characteristic, said device being electro-mechanically non-vibratory or non-resonant with respect to the operating frequencies traversing it, means comprising said device for producing harmonic frequency modulation products therein in response to and dependent upon said magnitude of said variable voltage applied to said device from said voltage source and in accordance with the effects of said hysteresis characteristic of said device, said hysteresis characteristic being adapted for and of sufficient value for producing said harmonic frequency products in said device, and means connected with said device for deriving or taking off from said device said harmonic frequency products produced in said device by said effects of said hysteresis characteristic.

2,453,244
ELECTRODE GRIP AND HOLDER
Ivan M. Matson, Los Angeles, Calif.
Application May 15, 1946, Serial No. 669,852
1 Claim. (Cl. 219—8)



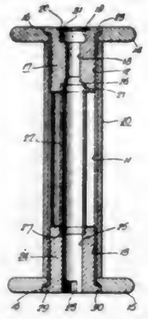
An electrode grip and holder comprising a handle, a channel-shaped jaw secured to and projecting forwardly from said handle, an inverted channel-shaped jaw pivotally mounted on said handle, a short distance rearwardly from its forward end, the forward end of which pivoted jaw terminates between the forward end of said handle and the forward end of said fixed jaw, an expansion spring between said handle and the rear end of said pivoted jaw and the upper portion of the forward end of said handle being bevelled for accommodation of the pivoted jaw when in electrode gripping position.



2,453,245
DEVICE FOR RELEASING SNAGGED FISHING LURES OR BAITS
Eugene F. McDonald, Jr., Chicago, Ill.
Application March 4, 1946, Serial No. 651,674
3 Claims. (Cl. 43—30)

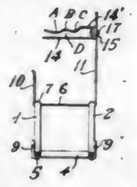
1. A device for releasing snagged fishing lures or baits comprising a weighted body having a transverse opening therethrough and a passage extending from an outer surface of said body to said opening, a supporting member attached to

said body upon opposite sides of said passage, and gate means operable by the movement of said supporting member with respect to said body to bar and unbar said passage.



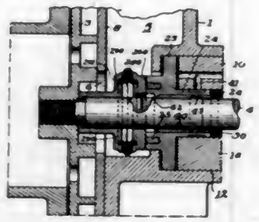
2,453,246
MILK CAN TRUCK
Karl E. Moksnes, Whitewater, Wis., assignor to Dairy Equipment Company, Madison, Wis.
Application May 14, 1946, Serial No. 669,722
1 Claim. (Cl. 214—65.4)

A hand truck for lifting and conveying milk cans comprising an inverted U-shaped frame, wheels on the lower ends of the frame, a yoke secured to the lower end of the frame, a handle connected to the yoke, and a U-shaped lifting yoke in the upper part of said frame for straddling a milk can neck to lift the can by the neck and suspend the same, said lifting yoke being pivoted in said frame and overbalanced on its pivots to normally assume an angular position relative to the frame, said frame being tiltable forwardly by said handle about the axis of the wheels to lower said lifting yoke in the normal position of the same and dispose the lifting yoke in horizontal position for straddling the neck of the milk can and whereby, upon tilting of said frame rearwardly, said can will be lifted and suspended by said lifting yoke, the yoke at the lower end of said frame straddling the lower end of the can and preventing undue swinging of the can when the frame is tilted rearwardly.



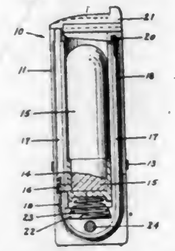
2,453,247
REINFORCED PLASTIC BOBBIN CONSTRUCTION
Jesse R. Moss, Greenville, S. C., assignor to Plasticbilt Corporation, Greenville, S. C., a corporation of South Carolina
Application February 6, 1948, Serial No. 6,598
10 Claims. (Cl. 242—119)

1. In bobbin construction, a barrel comprising a thin outer sleeve of synthetic plastic material, a metallic reinforcing sleeve on which said barrel is mounted, the reinforcing sleeve being longer than the outer sleeve and having internal threads at each end thereof, a pair of externally threaded



plugs adapted to engage the threads in the sleeve, a flange on each plug, and a pair of counterbored bobbin heads adapted to fit over the sleeve.

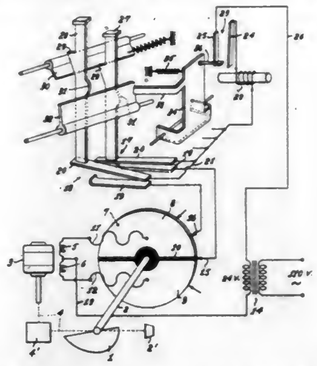
2,453,248
COMBINATION LAWN HOSE AND WATER NOZZLE SUPPORT
Edward J. Much, Wichita, Kans.
Application February 9, 1948, Serial No. 7,152
1 Claim. (Cl. 248—75)



In a combination lawn hose and water nozzle support, a pair of arcuate ribs spaced apart, transverse bars secured to the ribs for supporting a lawn hose, extensions extending upwardly from the ends of said bars to retain said hose upon said bars, a centrally disposed bar of the transverse bars having one of its extensions greater in length, and a U-shaped element adjustably carried by last said extension, said U-shaped element having legs adapted to spring apart for insertion of a water hose nozzle therebetween.

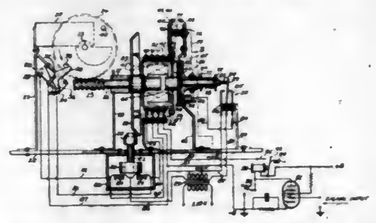
2,453,249
SEAL FOR CENTRIFUGAL PUMPS
Daniel Murphy, New Castle, Pa.
Application February 10, 1944, Serial No. 521,771
3 Claims. (Cl. 286—11)

3. A sealing device for a shaft comprising two collar portions arranged to be secured upon the shaft for rotation therewith and for movement relative to one another axially of the shaft, said collar portions having substantially flat opposed surfaces adjacent their peripheries, a shaft-encompassing tubular sealing element arranged between said collar portions and in fluid-tight engagement therewith, means securing the ends of said tubular element in fluid-tight engagement with said collar portions radially inwardly of said substantially flat surfaces, and means for securing the two collar portions in juxtaposition, with the medial body portion of said sealing element bulged radially outward beyond said securing means between said substantially flat surfaces with the sealing element in engagement with the complete extent of both of said substantially flat surfaces and extending beyond the outer radial edges of the collars.



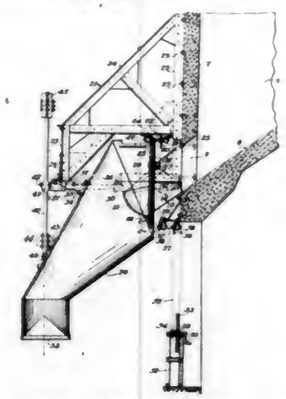
2,453,250
LIPSTICK CONTAINER
Charles Nehrke, New York, N. Y.
Application August 14, 1945, Serial No. 610,725
2 Claims. (Cl. 206—56)

2. A lipstick container comprising a housing open at its top, a movable cup arranged in said housing, a resilient means in the base of said housing for exerting an upward pressure upon said cup, a lipstick mass within the cup, a movable cap for the open top of the housing, a sliding flexible strip connecting the movable cap to the movable cup for moving the latter upwardly in the housing to project the lipstick mass above the open top of the housing for use, said flexible strip and resilient means coacting to snap the cap shut when the cap is in a predetermined position at the open upper end of the housing, said housing being provided with longitudinal guide means for the flexible strip and for the movable cap, said open top of the housing having a seat substantially at right angles to the guide means, the lower portion of one end of the cap being pivotally connected to one end of the flexible strip, said connection being substantially in line with the guide means when the cap is in a closed position on said seat, said resilient means causing the cup to rebound when the cup is moved to its lowered position within the housing.



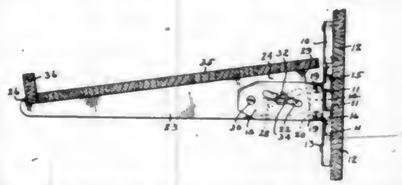
2,453,251
MOTOR-OPERATED PUSH-BUTTON TUNER
William E. Newman, Moorestown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 17, 1944, Serial No. 522,753
14 Claims. (Cl. 318—466)

1. The combination with a tuning element, of manually-operable means for actuating the element to desired tuning position, automatic, motor-operated means of the type including a single split commutator and a plurality of angularly adjustable brushes disposed in permanent contacting relation on the periphery of said commutator, for moving the tuning element to any one of a number of different pre-selected positions, said latter position being determined by the angular positions of the contact brushes, and of the improvement which consists in a second switching means



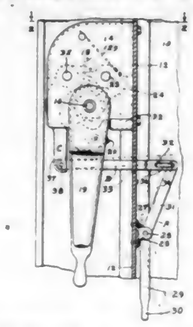
connected in circuit with the motor and with the contact brushes for preventing the automatic tuning means from being thrown into operation upon actuation of the tuning element by said manually-operable means.

2,453,252
TUNING CONTROL MECHANISM FOR RADIO RECEIVERS
William Edward Newman, Chicago, Ill., assignor to Radio Corporation of America, a corporation of Delaware
Application December 5, 1944, Serial No. 566,666
8 Claims. (Cl. 250—40)



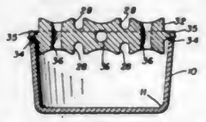
1. The combination in a radio receiver, of an adjustable tuning device tunable through a certain frequency range, a reversible electric motor for actuating the tuning device, first control means including a solenoid and a two-position switch which is under the control of the armature of said solenoid, said control means being operable in response to manual control for energizing the solenoid and, through said switch in one of its positions, also the motor to actuate the tuning device in a manner such that it scans said frequency range in search for a carrier wave of a signal strength above a predetermined minimum, and second control means operable upon reception of such signal carrier wave adapted to deenergize said solenoid thereby to move the switch to its other position for deenergizing the motor and discontinuing the scanning operation, and circuit means closed through the switch in said other position for effecting operation of the motor in a manner such that the tuning device hunts for said received carrier wave prior to final adjustment thereof to said carrier wave.

2,453,253
COALING CHUTE
James E. O'Brien, Cleveland, Ohio
Application December 2, 1944, Serial No. 566,289
5 Claims. (Cl. 193—18)



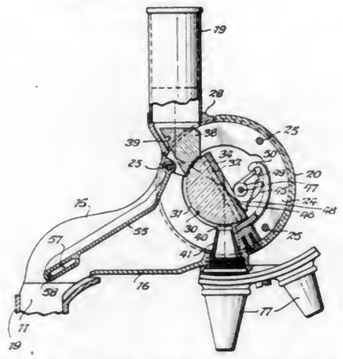
1. In a coaling device for railroad locomotives and the like including a structure having an elevated coal discharging device arranged to discharge coal transversely relative to the railway track; a frame adapted to be secured on the outside of said structure adjacent the coal discharge device; a coal chute member having a coal inlet opening and a coal discharge opening arranged at substantially right angles to the plane of the coal inlet opening and a wall interconnecting said openings, said wall being disposed opposite said coal discharging device; an axle member secured to the wall of said chute member concentric with said coal inlet opening; bearing means supported by said frame for supporting said axle member; a brace member extending laterally from said axle member to said wall of said chute and attached to said wall for bracing the chute against movement in a direction longitudinally of said axle; and means for swinging said chute about the axis of said axle.

2,453,254
ROCKABLE SHELF BRACKET
Frank W. Odin, Chicago, Ill., assignor to Syndicate Glass, Inc., Indianapolis, Ind., a corporation of Indiana
Application June 7, 1946, Serial No. 675,093
6 Claims. (Cl. 248—243)



6. In a rockable arm adjustable supporting means, a base member; a plate extending from said member; an arm having a portion overlapping said plate; a pivot pin carried by an outer portion of said plate, and about which said arm may be rocked to have said arm portion rock over said plate between said pivot and said base member; said arm portion being provided with a linear slot therethrough inclined to slope downwardly and forwardly between the rear end of said arm portion and said pivot; said plate having a like linear slot therethrough but inclined to slope upwardly and forwardly of the plate; said two slots crossing one another in the general nature of the lines of a letter X; and a clamp pin extending through the intersection of said slots; whereby tendency of the pin to slide along one slot under load on said arm is slidingly resisted by reason of the reverse inclination of the other slot, and travel of the arm forces said clamp pin to travel longitudinally, relatively of both slots, thereby variably spacing the clamp pin from said pivot.

2,453,255
HAND BRAKE
Roland J. Olander, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application October 29, 1945, Serial No. 625,353
4 Claims. (Cl. 74—491)



1. In a mechanism for controlling the operation of the pivoted locking dog of a ratchet brake mounted entirely on the inner side of the wall of a car, the combination with a pivoted lever for actuating said dog mounted at said inner side of said wall, said lever having a hand grip portion; of a rod connected to the hand grip portion of said lever and extending through said wall; and an actuating lever swingingly supported on the outer side of said wall and pivotally connected to the rod for reciprocating the same.

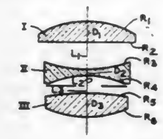
2,453,256
ASH TRAY
Michael P. Omelina, Cudahy, Wis.
Application February 27, 1947, Serial No. 731,359
1 Claim. (Cl. 131—235)

An ash tray comprising a receptacle having walls and diametrically opposed detents integrally formed in said walls, a transverse head member having a central axis, relatively short tapered shafts on said axis at the ends of said head member and rotatively positioned in said detents, the central axis of said head member being positioned adjacent the top of said receptacle placing an appreciable portion of said head member above the top of said receptacle, a pair of cigarette receiving and extinguishing apertures in said head member and a third cigarette receiving and extinguishing aperture in said head member substantially normal to said pair of apertures, and spaced substantially circular cigarette receiving grooves formed circumferentially in said head member, said grooves being disposed between said pair of apertures.

2,453,257
ROTATABLE MICROSCOPE EYEPIECE MOUNTING AND GUARD MEANS THEREFOR
Harvey N. Ott, Buffalo, N. Y.
Application March 5, 1945, Serial No. 581,000
20 Claims. (Cl. 88—39)

1. An optical instrument having an arm, the upper end portion of said arm having a circular aperture therein and having a concave portion open on its upper side and connecting said apertured end with an upright portion, a pair of refracting elements, one constituting an eyepiece and the other constituting an objective, one of said elements being mounted on said arm with its optical axis intersecting the axis of said circular aperture, a drum mounted in said circular aperture, the other of said elements being secured to said drum, said drum and said other element being formed to swing through an arc of approximately 90 degrees, a reflector pivotally mounted in said hollow drum with its pivotal axis intersecting the optical axis of said element mounted on said arm, means for controlling the swinging of said reflector to reflect light from one of said elements to the other, said drum having a peripheral opening therein through which light may pass from one of said elements to the other, and a guard pivotally connected with said drum and arranged in said concave portion of said arm for excluding light and foreign material from the interior of said drum.

2,453,258
PRESSURE-SENSITIVE ADHESIVE SHEET
John William Pearson, St. Paul, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
Application April 6, 1946, Serial No. 660,204
9 Claims. (Cl. 154—136)



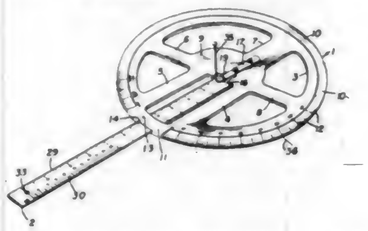
1. A pressure-sensitive adhesive sheet having a composite film backing and a pressure-sensitive eucohesive adhesive coating on one surface thereof, said composite backing comprising a preformed hydrophobic film, a preformed hydrophilic moisture-permeable film, and an interposed thin film of pressure-sensitive adhesive cement which bonds the two films together and which has been deposited in situ from an aqueous dispersion thereof dried between and in contact with both films, said adhesive sheet being unwindable from rolls thereof without delamination and without offsetting of adhesive.

9. The method of making a clear, transparent, pressure-sensitive adhesive tape which is easily unwound from roll form without offsetting of adhesive to the outer surface of the tape backing even after long aging, which includes the steps of applying a thin uniform layer of a water dispersion of a pressure-sensitive adhesive cement between and in contact with a film of cellulose acetate and a film of regenerated cellulose, passing the combination over a smooth heated drum or roller with the cellulose acetate surface in contact therewith, and under a tension sufficient to maintain the combination web in an essentially smooth unwrinkled condition and also to exert pressure on the cement, maintaining the web in contact with the heated drum until essentially all free water is driven from the web, cooling the web, and applying a coating of a pressure-sensitive eucohesive adhesive to the outer regenerated cellulose surface of the composite web.

2,453,259
SULFA PREPARATION FOR ANIMAL MASTITIS
Donald G. Perkins, Chestertown, Md., assignor to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Original application April 8, 1941, Serial No. 387,485. Divided and this application April 23, 1948, Serial No. 22,941
3 Claims. (Cl. 167—51.5)

2. A preparation for the treatment of animal mastitis by direct injection essentially comprising a colloidized suspension of a chemotherapeutic agent of the sulfanilamide type in mineral oil.

2,453,260
THREE ELEMENT OBJECTIVE LENS
Konstantin Pestrecov, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application March 27, 1947, Serial No. 737,543
3 Claims. (Cl. 88—57)

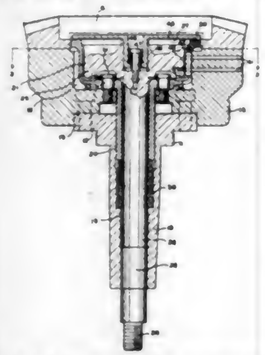


F/2.7 FOCAL LENGTH 100

LENS			
I	R_1=40.94	D_1=8.74	N_D=1.6170
	R_2=∞	L_1=11.05	V_1=55.0
II	R_3=55.65	D_2=2.78	N_D=1.6490
	R_4=39.75	L_2=7.63	V_2=33.8
		L_3=7.63	
III	R_5=107.56	D_3=9.54	N_D=1.6170
	R_6=43.33		V_3=55.0

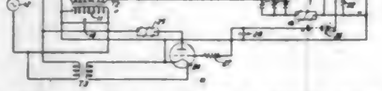
1. An objective lens of relatively high aperture corrected for spherical, chromatic, astigmatic, and comatic aberrations, flatness of field, and distortion, comprising aligned front and rear collective lenses, and a dispersive element aligned intermediate of said collective elements and having air spaces therebetween, the foremost of said

spaces nearest to the longer conjugate of the objective lens being between 1.25 and 1.8 times the rearmost of said spaces and the refractive index of said dispersive element exceeding the refractive index of the collective elements by a difference between 0.02 and 0.045, the dispersive power of the dispersive element being numerically between 2.74 and 3.1 times the power of the objective lens, and the ratio between the radius of curvature of the front surface of the front collective element to the radius of curvature of the rear surface of the rear collective element lies between 0.90 and 1.01.



2,453,261
TOPOGRAPHY PLOTTING DEVICE
Burnis C. Peters, Giddings, Tex.
Application April 11, 1947, Serial No. 740,787
3 Claims. (Cl. 33—75)

1. In a device of the class described, a transparent circular protractor head having a marginal scale in degrees of a circle and an axial hole therein for receiving a center pin whereby said head is adapted to be revolved into different angular positions about said pin, said head having a transparent marginal segment interrupting said scale and provided with an opening and a zero mark for said scale, and a scale bar extending endwise through said opening in a plane parallel to that of said head and having different side edge face scales thereon adapted to be read in part through said segment and for plotting distances in different units of measurement in different angular positions of said head, said scale bar being removable and reversible end for end and face for face for replacement in said head to arrange the scales thereon, selectively, in line with said zero mark and with zero of the selected scale in the axis of said head.

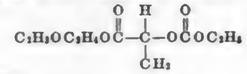


2,453,262
CHUCK
Joseph M. Peters, Irondequoit, N. Y., assignor to Gleason Works, Rochester, N. Y., a corporation of New York
Application April 1, 1946, Serial No. 658,628
13 Claims. (Cl. 279—2)

6. A chuck comprising a generally cup-shaped body against which the work is adapted to be seated, a collet mounted in the recess of the body member and having a plurality of expansible gripping fingers, an expander mounted within the collet for axial reciprocation and having an enlarged head and a rearwardly extending stem which is adapted to be secured to a drawbar to move the expander axially, the head of the expander being of generally cylindrical shape but having a tapering surface adjacent its forward end to engage the insides of the gripping fingers to expand them into the bore of the work on rearward movement of the expander, means engaging the cylindrical portion of the expander head to hold the expander against rotation, and means engaging the cylindrical portion of the

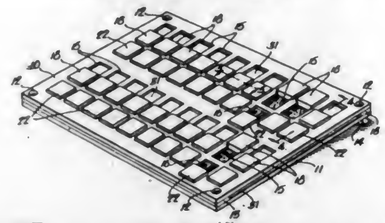
expander head to guide the expander in its axial movement.

2,453,263
VOLTAGE REGULATION
James A. Potter, Long Valley, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 2, 1944, Serial No. 520,761
14 Claims. (Cl. 175—363)



1. The combination with a circuit for connecting an alternating current supply source to a load, of a first means connected between said supply source and the remainder of said circuit for changing said alternating supply current into alternating current having an increased number of phases, said means causing the voltages of said increased phases to vary with respect to each other to minimize load voltage variations due to load changes and voltage changes of said source, a second means the impedance of which may vary connected in said circuit between said first means and said load, a third means responsive to a voltage impressed thereon for controlling said first means, and means connected across said load for deriving and impressing upon said third means a voltage proportional to the load voltage for causing the reduction of load voltage variations due to the impedance variations of said second means.

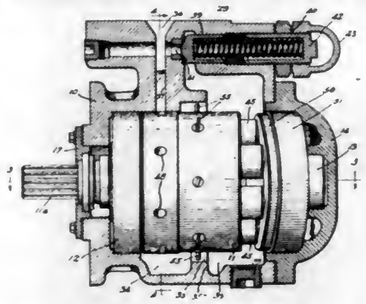
2,453,264
CELLULOSE ESTER OR ETHER PLASTICIZED WITH ETHYL ALPHA-CARBETHOXYETHOXYETHYL CARBONATE
Chessie E. Rehberg, Glenside, Pa., assignor to United States of America as represented by the Secretary of Agriculture
No Drawing. Original application September 28, 1944, Serial No. 556,241. Divided and this application November 7, 1945, Serial No. 627,269
3 Claims. (Cl. 106—182)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



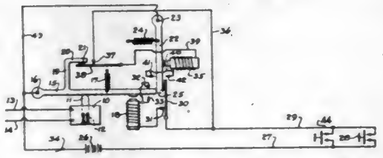
1. A plastic composition substantially consisting of a cellulose plastic of the group consisting of

cellulose esters and ethers and ethyl alpha-carbethoxyethoxy-ethyl carbonate of the formula

as plasticizer.



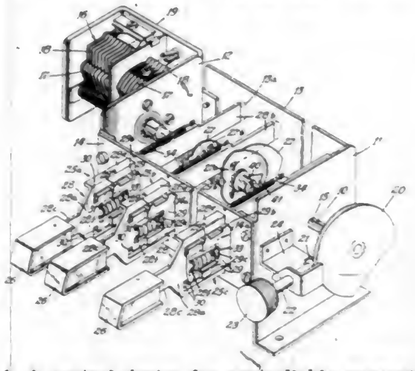
2,453,265
EDUCATIONAL DEVICE
William K. Robinson, Ventnor, N. J.
Application January 29, 1948, Serial No. 5,054
3 Claims. (Cl. 35—9)



1. A problem board assembly comprising a flat member having a plurality of rectangular problem windows and a plurality of rectangular answer windows therein, said answer windows being in alignment with the problem windows, an opaque block slidable in each problem window, the length of the block being substantially half the length of the window, a lip along the lateral edges of each block for engaging the sides of the window, a retaining plate attached to the back of the block, an opaque cover for each answer window, the length of the cover being substantially equal to the length of the answer window, the width of the cover being greater than the width of the answer window, an abutment at one end of the cover adapted to fit within the answer window, a pair of lateral guides attached to the cover for engaging the sides of the answer window, said guides terminating in abutments substantially midway of the cover, a pair of cooperating guides formed at one end of the answer window and in spaced relation to the sides of the window, a spring positioned between the guides in the window and contacting the inside of the abutment on the cover whereby the cover is urged to close the window, a retaining plate attached to the abutment and guides on the cover whereby the cover and the spring are slidably retained in the window, and means for positioning a problem card under the flat member in registry with the windows.

2,453,266
PISTON PUMP
Harvey W. Rockwell, Cedar Rapids, Iowa, assignor to La Plant-Choate Mfg. Co. Inc., Cedar Rapids, Iowa, a corporation of Delaware
Application February 9, 1945, Serial No. 576,941
6 Claims. (Cl. 103—162)

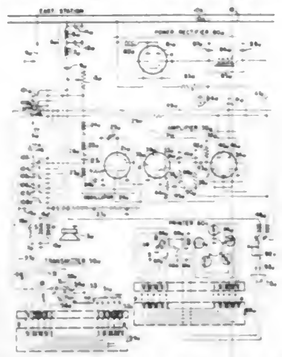
4. In a piston pump, a casing, a substantially cylindrical rotor rotatably supported in said casing, a plurality of pump cylinders and pistons associated with said rotor, wobble plate means for reciprocating said pistons upon rotation of said rotor, said rotor having substantially straight passages therein extending from said cylinders to the cylindrical surface of said rotor to act as fluid inlet passages during one portion of the rotation of said rotor and as fluid outlet passages during another portion of said rotation, means forming a confined fluid chamber surrounding a portion of said cylindrical surface of said rotor and communicating with said passages when the latter function as inlets to said pump cylinders, means cooperating with said rotor to form a restricted entrance to said chamber, and a plurality of impeller blades mounted in circumferentially spaced relation on said rotor and projecting into said entrance for forcing fluid under pressure into said chamber.



2,453,267
ELECTROMAGNETIC SWITCHING DEVICE
Peter F. Rossmann, Morristown, N. J.
Application March 7, 1945, Serial No. 581,482
4 Claims. (Cl. 175—375)

1. In a device of the class described, the combination of means forming a high voltage circuit including a controlling circuit closer normally disposed in an open, circuit-interrupting position, of means including a source of low voltage current forming a relatively low voltage circuit for controlling said high voltage circuit closer, said low voltage circuit forming means including a locking electromagnet and an unlocking electromagnet, the armatures of both of said electromagnets being of conductive material, each pivotally mounted at one end and extending substantially at right angle to each other and with their free ends lapping to provide an interlock, the armature of the locking electromagnet being operatively connected to control the high voltage circuit closer, means forming a locking circuit including in series a manually actuated pushbutton, the locking electromagnet and its armature and said source, means forming an unlocking circuit including in series said pushbutton, the unlocking electromagnet and its armature and said source, a pair of springs, one for each armature and acting thereon in opposition to the pull of its associated electromagnet, the locking electromagnet acting when powered to draw its armature into position to close the circuit closer and to permit the spring acting on the unlocking electromagnet armature to dispose the same in the path of the returned movement of the locking electromagnet armature under the action of the spring and thus to provide for the return of the locking electromagnet to its initial position, and said unlocking electromagnet acting when powered to withdraw its

armature from its position in the path of return movement of the locking armature thereby to permit the spring of the locking electromagnet armature to return it to its initial position and to permit the circuit closer to return to its normal open position.



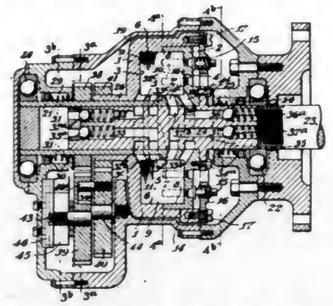
2,453,268
TUNING CONTROL APPARATUS
Leslie L. Royal, Chicago, Ill., assignor to Belmont Radio Corporation, Chicago, Ill., a corporation of Illinois
Application May 16, 1946, Serial No. 670,107
18 Claims. (Cl. 74—10)

1. A control device for controllable apparatus including a rotary shaft, a control unit mounted on said shaft for relative movement therewith and capable of limited axial movement relative to said shaft, means for holding said control unit in a predetermined fixed position on said shaft, a selector unit for causing rotation of said control unit and said shaft as a unit including an actuating means, and means on said actuating means engaging said control unit for causing limited axial movement thereof to release said means for holding said control unit so that relative movement between said control unit and said shaft can be obtained.

2,453,269
PRINTING TELEGRAPH SYSTEM
Harry O. Rugh, Chicago, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application May 21, 1945, Serial No. 594,833
7 Claims. (Cl. 179—2.5)

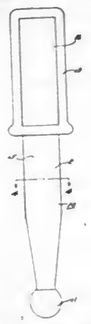
5. In combination with a printing telegraph station having a transmitter for transmitting a message by telegraphic coded signals and a receiver for printing a message transmitted by telegraphic coded signals over another station, a sound translating device, a unit adapted to be operated as a carrier current oscillator or a detector, means at said station for applying a predetermined positive voltage to said unit when said station is to be operated as a transmitting station thereby to control said unit to transmit a superaudio carrier frequency, means at said station for modulating said carrier frequency with an audio frequency in accordance with a telegraphic code to transmit a message, said last-mentioned means also controllable by said sound translating device for modulating said carrier frequency with an audio frequency in accordance with sound waves received by said sound translating device, means at said station for applying a predetermined lesser positive voltage to said unit when said station is to be operated as a receiving station thereby to control said unit to detect the audio portion of a modulated carrier wave received at said station, said amplifier amplifying said detected audio portion

of a modulated carrier wave thereby to control said sound translating device to reproduce sound waves in accordance therewith and to cause said receiver to print a message in accordance with the audio portion of a telegraphically coded modulated carrier wave.



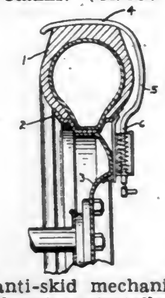
2,453,270
UMBRELLA RIB CLIP AND POCKET
Ray A. Russell, Santa Ana, Calif.
Application April 19, 1948, Serial No. 21,969
15 Claims. (Cl. 135—36)

1. A clip pocket for umbrellas, said clip comprising: a hollow, elongated, split body member curved about a longitudinal axis to provide a longitudinal channel adapted to receive an end of an umbrella rib along said axis; elongated jaws carried in opposed relation by opposite side wall portions of said member at the split thereof and directed toward one another; gripping means provided on said jaws in opposed relation to grip an umbrella canopy from opposite sides along a seam with a depending portion of said seam disposed in said channel and held against inner wall portions thereof by said rib; and opposed wings carried by said opposite side wall portions at one end of said body member and directed laterally inward toward said axis with their inwardly directed edges opposed and providing a slot to receive between them an adjacent part of said depending seam portion, said wings cooperating to form upstanding stop wall means for the respective end of said rib.



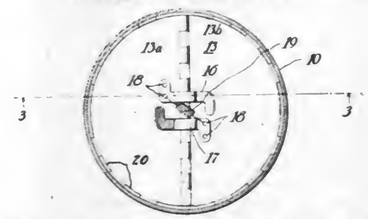
2,453,271
ROTARY ALTERNATING PISTONS PUMP
Frederick James Sales, London, England
Application February 15, 1943, Serial No. 475,956
In Great Britain February 23, 1942
7 Claims. (Cl. 103—129)

1. A rotary pump or compressor comprising two rotor bodies, a driving shaft fixed to one of said rotor bodies, a driven shaft coaxial with the driving shaft and fixed to the other rotor body, means pressing the two rotor bodies into close bearing contact with each other, an annular working chamber formed in the opposed faces of the two rotor bodies concentrically in relation to said shafts, radial pistons located in said working chamber and subdividing the working chamber into a number of working spaces, said radial pistons comprising two sets arranged in diametrically opposed pairs, one set being fixed in relation to one rotor and the other set being fixed in relation to the other rotor, inlet and outlet ports



on opposite sides of each radial piston, inlet passages in said driven shafts communicating with said inlet ports, outlet passages in said driving shaft communicating with said outlet ports, non-return valves controlling the flow of fluid to and from said ports, and means transmitting rotation from the driving to the driven shaft to provide at each complete rotation of the driving shaft alternate acceleration and deceleration of one rotor relatively to the other, whereby the successive opposed faces of the pistons move towards each other and away from each other during each rotation of the driving shaft.

2,453,272
COMBINED MAGNIFIER AND TELEPHONE DIALING IMPLEMENT
Mark E. Savoie, Cleveland, Ohio
Application February 12, 1947, Serial No. 728,095
3 Claims. (Cl. 179—90)

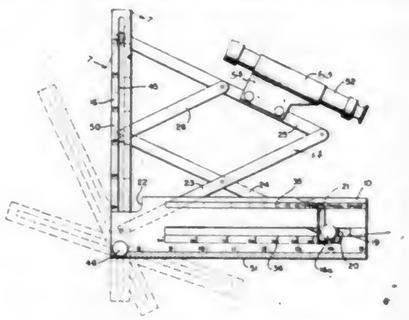


1. A phone dialing implement comprising an elongated magnifier having a first end portion and a second end portion, a luminous ball turnably carried by the first end portion and operably engageable with a phone dial to facilitate dialing, and a handle integral with the second end portion to cooperate with the luminous ball to position the elongated magnifier disposed therebetween at correct focus for reading a telephone directory.

2,453,273
TIRE ANTISKID MECHANISM
Ralph C. Scott, Brighton, N. Y.
Application October 9, 1946, Serial No. 702,193
6 Claims. (Cl. 152—216)

5. A tire anti-skid mechanism comprising a mounting, a housing pivotally arranged on the mounting and having swinging movement in opposite directions from a vertical position, spring means engaging the housing and retaining it yieldably in vertical position, the housing including an end wall with an angular opening therein, an anti-skid bar including a supporting portion having an angular locking portion extending through said opening in the housing and movable endwise of the housing, the supporting portion having an annular groove below said locking portion and registering with said angular opening to permit turning the supporting portion when in its outermost position, the supporting portion being held against turning in all positions except said outermost position, and spring means engaging the supporting portion and acting to move it inwardly of the housing, said anti-skid bar and supporting portion when in operative position lying in the same plane with the pivotal axis on which the housing swings.

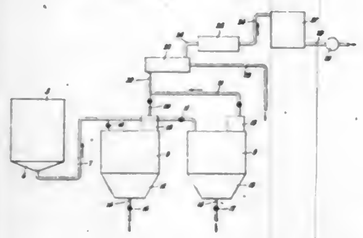
2,453,274
SEALING DEVICE
John J. Serowy, Chicago, Ill.
Application September 18, 1946, Serial No. 697,793
4 Claims. (Cl. 220—24)



1. A device for resealing a container at least partially filled with paint once it has been opened so as to preserve the paint contained therein, comprising a multi-part member shaped so that the peripheral edge thereof corresponds to the shape of the inside wall of said container, said multi-part member being collapsible for ready insertion into said container, spring means on said member and acting on the parts thereof to bias said member into engagement with the inside wall of said container at the level of the paint contained therein, said member having narrow openings spaced around the peripheral edge thereof to permit some of said paint to squeeze therethrough to provide a seal between said peripheral edge and the engaged wall of said container.

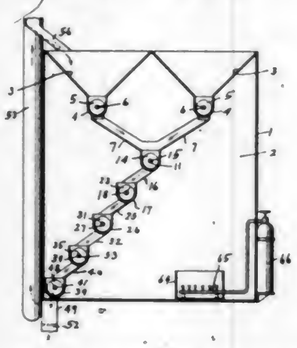
2,453,275
PREPARATION OF MIXED SATURATED-UNSATURATED ESTERS OF CELLULOSE
George W. Seymour, Blanche B. White, and Elisabeth Barabash, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application March 30, 1945, Serial No. 585,794
15 Claims. (Cl. 260—225)

1. Process for the production of mixed organic acid esters of cellulose containing radicals of both saturated and unsaturated aliphatic acids having at least four carbon atoms in the acid radical, which comprises esterifying cellulose with an esterification medium comprising an inorganic acid esterification catalyst, about two mols of the anhydride of a saturated aliphatic acid and one mol of the anhydride of an unsaturated aliphatic acid, each having at least four carbon atoms in the acid radical, allowing the esterification to proceed, adding an additional amount of the saturated aliphatic acid anhydride, and allowing the esterification to proceed to completion.



14. As a new article of manufacture, cellulose butyrate-crotonate containing from 0.2 to 0.3 crotonyl groups per glucose residue.

2,453,276
MANUAL POCKET SQUARE
Fitz Gerald Shelby, Shelby, Miss.
Application February 25, 1946, Serial No. 649,973
4 Claims. (Cl. 33—67)

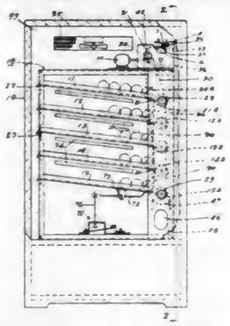


4. An extensible support comprising a plurality of pivotally connected members in the form of a lazy tongs construction, a body, the inner end of one member being pivotally connected to the body, means forming a sliding connection between the inner end of another member and said body, a sighting device attached in parallel relation to a third member which is parallel to the second mentioned member, the body being provided with a scale in degrees representing angles formed by a line on the body and an edge of the second mentioned member, and an indicator carried by the slide connection and cutting the scale for indicating simultaneously the degrees of the angles formed by the second member and the sighting device, the axis of the sighting device being always at an acute angle to a longitudinal edge of the body, an arm disposed at right angles to the body, the arm having a longitudinal slot therein, a marker on an end of said third member of the extensible support, a screw for securing the marker on said support, a head on the screw and a pin slidably mounted in the head and received by the slot in the arm for stabilizing the sighting device in predetermined positions of use.

2,453,277
VACUUM TREATMENT OF MILK POWDER
Helge Shipstead, Syracuse, N. Y., assignor to The Borden Company, New York, N. Y., a corporation of New Jersey
Application January 8, 1942, Serial No. 425,960
3 Claims. (Cl. 99—203)

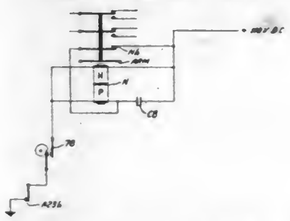
1. In a process for the manufacture of dry products from liquid lacteal materials, the steps comprising spraying the material into a controlled drying chamber to form a pulverulent material of a predetermined moisture content higher than desired in the final product, removing said pulverulent material from said drying chamber while hot and conveying it to the cooling chamber under conditions to minimize loss of heat, and then subjecting a mass of the pulverulent material to sub-atmospheric pressure substantially below the vapor pressure of the moisture contained in the hot pulverulent material whereby a portion of the moisture content is flashed off and the material cooled.

2,453,278
GRAIN DRIER
Robert J. Staples, Sr., and Henrietta Staples, Houston, Tex.
Application November 13, 1945, Serial No. 628,208
4 Claims. (Cl. 34—102)



1. A grain drier comprising, a closed body containing a drying chamber, hoppers forming the top of the body and extending from end to end thereof, a conveyer in each hopper, a series of conveyors extending across said chamber and arranged in diagonal relation from above downwardly with the drying chamber beneath said series, a chute leading from an upper to a lower conveyor, a chute leading from each hopper to the upper conveyor, discharge means leading from the lower conveyor, a conveyor leading from said discharge means and arranged to convey grain from the discharge means into one of the hoppers and means for heating the chamber.

2,453,279
UNIVERSAL JOINT
Ernest A. Starbuck, Peoria, Ill.
Application August 21, 1944, Serial No. 550,420
7 Claims. (Cl. 74—380)

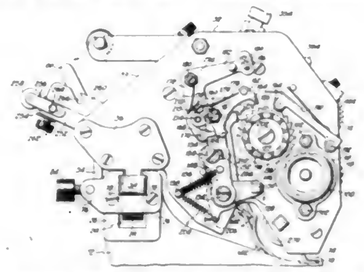


1. A device of the nature described including in its construction a driving shaft and a driven shaft whose axes may lie in alignment or lie at an angle to each other, a ball fixed with respect to an end of one of the shafts and having a groove therein lying in a plane perpendicular to the axis of the shaft carrying said ball, the bottom wall of the groove lying substantially on a circle described from said shaft axis, a series of tapered rollers mounted in said groove in spaced order on said bottom wall and encircling said ball in said groove and radiating therefrom, the axes of the rollers lying in a plane perpendicular to said shaft axis, a socket member fixed with respect to the other shaft adapted to receive said ball, a series of spaced tapered rollers carried in and extending from said socket member and lying between the rollers of said ball, all of said rollers of said socket member lying in a plane perpendicular to the axis of the shaft carrying that member, the said planes cutting the axes of the shafts at the position where the said axes meet, the rollers of the ball and of the socket member all being uniform in size and form, the rollers of one of such members adapted to engage between the rollers of the other member in abutting driving relation.

2,453,280
COIN CONTROLLED VENDING MACHINE
Wilson Marks Stewart, Ottawa, Ontario, Canada
Application September 4, 1944, Serial No. 552,701
In Canada May 6, 1944
9 Claims. (Cl. 312—48)

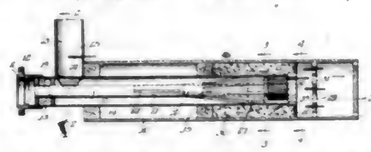
4. In a coin-controlled vending machine, the combination of superposed lower and upper trays forming supports for bottles lying transversely on their sides, said upper tray being movable above said lower tray, semi-cylindrical members associated with said trays, respectively, operable to deliver the bottles, each of said members being adapted when in a certain rotary position and empty, to receive a bottle from its associated tray, said upper tray having means adapted to form a stop for a bottle on said lower tray when said upper tray is loaded thereby preventing the bottle from being received into the member associated with said lower tray, and means for moving said upper tray to cause said stop to clear the bottle on said lower tray when said upper tray is unloaded.

2,453,281
RELAY CONTROL SYSTEM
Joel H. Tedder, Los Angeles, Calif., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application October 3, 1945, Serial No. 620,079
1 Claim. (Cl. 175—320)



A circuit arrangement comprising a relay having a pick-up and a hold winding wound in the same direction about a common core with the hold winding having a considerably greater resistance than the pick-up winding, an armature having a normal unattracted position from which it is moved to an attracted position only upon effective energization of the pick-up winding, said hold winding being effective while energized and after the armature is moved to its attracted position to hold the armature in said attracted position, and normally closed contacts controlled by the armature and opened upon movement of the armature from said unattracted position; a circuit closing switch of the resilient type tending to flutter between closed and open status from the time of its initial closure until its settling down to a steady closed status; said pick-up winding, contacts and switch being connected in series across a source of voltage and said hold winding being connected in parallel with the series-connected pick-up winding and contacts, whereby upon closure of said switch for a sufficiently prolonged interval the pick-up winding is effectively energized to move the armature and open the contacts and the hold winding is energized to hold the armature in its attracted position with the contacts open; and a condenser connected in shunt across said contacts, said condenser having a capacity permitting current flow through the pick-up winding to maintain it effectively energized for a predetermined substantial interval after the contacts are opened, but only for said predetermined interval, and accelerating appreciably the deenergization of the hold winding upon opening of said switch.

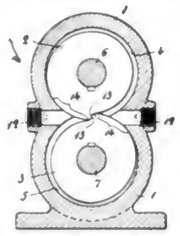
2,453,282
FEEDING MECHANISM FOR ACCOUNTING MACHINE CARRIAGE PLATENS
Otto Thieme, East Orange, N. J., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application December 29, 1944, Serial No. 570,323
6 Claims. (Cl. 197—114)



6. In a typewriter carriage of the character described, a rotary printing platen, manually settable ratchet mechanism selectively operable to index the platen for single or plural spacing of a record medium associated with the platen, means for actuating said ratchet mechanism for either single or plural spacing operations, friction means automatically operable during actuation of said

ratchet mechanism when the latter is preset for plural spacing operations to prevent overthrow of the platen, and latch means operable when

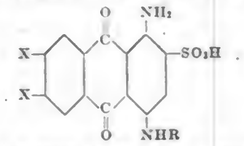
the ratchet mechanism is preset for single spacing operations to prevent operation of said friction means.



2,453,283
MICROWAVE POWER MEASURING APPARATUS
John W. Tiley, Philadelphia, and David E. Sunstein, Elkins Park, Pa., assignors to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 30, 1944, Serial No. 551,947
3 Claims. (Cl. 171—95)

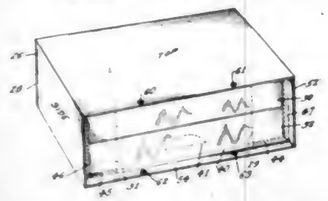
1. A device for measuring ultra high frequency energy by the substitution method comprising a coaxial line provided with a ceramic body having a generally cylindrical portion and a frusto-conical portion, said cylindrical portion having an outer diameter substantially equal to the inner diameter of the outer line conductor and an axial aperture equal to the diameter of the inner line conductor, a substantial portion of said body being provided with longitudinal recesses to permit the passage of fluid medium past said body, means for admitting a fluid medium to the interior of said outer conductor, means for permitting the passage of said fluid medium through the inside of said inner conductor, means for measuring the temperature of said fluid medium before and after passage past said body, and an electrical heating means positioned adjacent said body for producing a temperature change comparable to the temperature produced by ultra high frequency energy dissipated by said body.

2,453,284
ROTARY PUMP OR ROTARY COMPRESSOR
Algot Karl Gustaf Birger Törnborg, Nassjo, Sweden
Application April 6, 1944, Serial No. 529,741
In Sweden May 13, 1943
1 Claim. (Cl. 103—126)



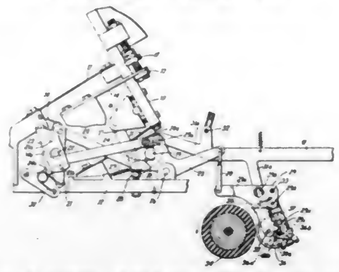
In a rotary pump or rotary compressor the combination of a housing, communicating chambers in said housing, rotors in the shape of discs having portions of their peripheries in the form of spirals located in said chambers and cooperating in pairs with one another and with the cylindrical walls of the chambers, inlet and outlet ports for the fluid operated upon by the pump or compressor, offsets provided on the rotors forming substantially radial transitions between different radial distances determining the spiral

pitch of the rotors' circumferences and circular portions on said circumferences extending direct from said offsets, said circular portions being adapted to operate in contact with the cylindrical walls of the chambers.



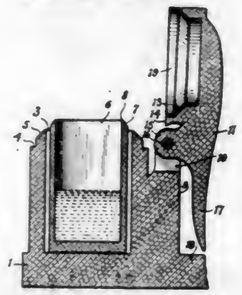
2,453,285
DYESTUFFS OF THE ANTHRAQUINONE SERIES
Samuel von Allmen and Hans Eggenberger, Basel, Switzerland, assignors to Sandoz Limited, Basel, Switzerland, a Swiss firm
No Drawing. Application September 19, 1945, Serial No. 617,455. In Switzerland October 19, 1944
4 Claims. (Cl. 260—371)

1. An anthraquinone dyestuff of the formula



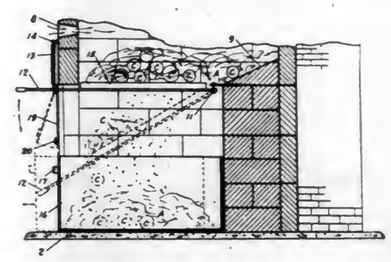
wherein one X stands for a sulfo group and the other X stands for hydrogen, and wherein R stands for a member selected from the group consisting of hexahydrophenyl, hexahydrotolyl, hexahydroxylyl and ac-tetrahydronaphthyl.

2,453,286
BOTTLE CONTAINER
Werner Von Clemm, Syosset, N. Y.
Application December 19, 1944, Serial No. 568,821
2 Claims. (Cl. 229—17)



1. A horizontal carton comprising integrally connected top, bottom and side panels each provided with a flap at its front end, said flaps extending transversely of said panels in face to face contact and constituting an end of said carton, the bottom flap being provided with a line of perforations extending parallel and close to its base end and the side flaps being provided with cutouts in alinement with said line of perforations extending from a point adjacent their bases through their ends, and said top and bottom flaps being of less width than the interior of said carton with their edges located on lines intersecting the ends of said cut-outs adjacent the bases of said side flaps, and said side flaps being further provided with lines of perforations paralleling the side edges of said top and bottom flaps and located laterally of said side edges.

2,453,287
POWER-OPERATING MECHANISM FOR TYPEWRITING MACHINES
Richard von Reppert, Rochester, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application October 7, 1944, Serial No. 557,635
3 Claims. (Cl. 197—17)

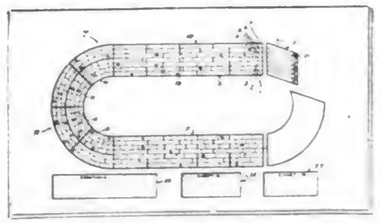


1. In a power operating mechanism for typewriting machines, a power roller, a function controlling key, and a cam unit cooperating with said roller, said cam unit including a cam rotatable by the power roller to perform the function controlled by said key, said cam unit including a first detent normally restraining the cam unit against rotation by the power roller and being releasable by said key to permit rotation of the cam by said roller, said cam unit including a second detent having a portion thereof engaged by a part of said cam at the end of its rotation by the power roller and movable by the cam to arrest the cam in a position beyond the position in which the cam is held by the first detent, said second detent being moved into operative position by said key when the first detent is released and, upon release of the key after a sustained operation thereof, moving out of engagement with said part of said cam to permit a second rotation of the cam by said power roller.

2,453,288
COUNTERBALANCED PIVOTED CLOSURE
Henry W. Walden, New York, N. Y.
Application December 14, 1944, Serial No. 568,129
1 Claim. (Cl. 220—32)

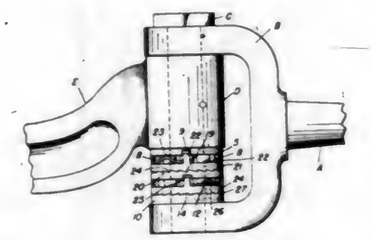
A container of the character described having a body portion provided with a well open at the top, a receptacle of less external diameter than the well fitting within the well and spaced therefrom, said receptacle having an open top projecting above the top of the body portion whereby excess contents removed from the receptacle by an instrument may be wiped off on said projecting part of the receptacle, a hinged cover provided on the body portion and having a seat adapted to rest upon the top of the body portion, and out of contact with the top of the receptacle, said cover including an arm extending rearwardly of its hinge and constituting a counter-balance to cause the cover to be raised and remain in a raised position when said arm is lightly touched by the finger.

2,453,289
REFUSE INCINERATOR WITH DUMPING GRATE
Arthur C. Waterman, Shreveport, La.
Application July 5, 1944, Serial No. 543,542
1 Claim. (Cl. 110—18)



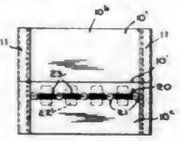
An incinerator comprising a body portion having an upper combustion chamber and an ash pit beneath the combustion chamber and in free communication therewith, a pair of removable drawers mounted within the ash pit and including ends and sides, the drawers being transversely spaced to provide a passage between them, a grate disposed within the body portion at the bottom of the combustion chamber and adapted to be horizontally arranged, the forward end of the grate terminating short of the forward ends of the drawers, the grate being adapted to assume a lowered inclined position with its forward end resting upon the sides of the drawers with such forward end spaced from the forward ends of the drawers so that articles upon the grate may roll into the drawers, means to pivotally support the rear end of the grate so that the grate may swing vertically, a handle secured to the forward end of the grate and extending longitudinally beyond the same and projecting to the exterior of the body portion and movable within the passage, and a retractile coil spring connected with the body portion and with the handle and normally retaining the grate generally horizontal and to vibrate the grate when the handle is depressed and released so that the handle strikes against the end wall of the passage.

2,453,290
RACING GAME AND PUZZLE
Roland M. Wetzel, Philadelphia, Pa.
Application April 19, 1944, Serial No. 531,699
2 Claims. (Cl. 273—134)



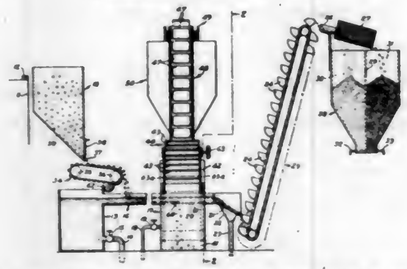
1. A game board comprising, in combination, a representation of a racing track having a plu-

rality of continuous lanes therein, characterized in that each lane is divided into subdivisions and



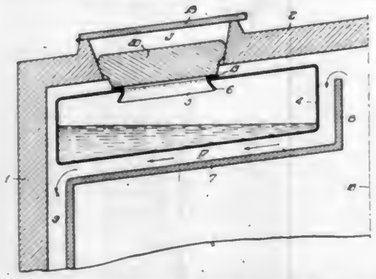
the lengths and numbers of the subdivisions are different in the respective lanes.

2,453,291
SELF-ROTATING KINGPIN THRUST BEARING
John B. Wilford, Glasgow, Mont.
Application September 26, 1947, Serial No. 776,217
3 Claims. (Cl. 308—227)



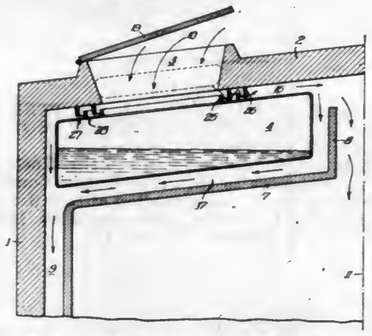
1. In a thrust assembly for use in connection with a steering knuckle and king pin construction of the class described, a ball race, a second ball race, a plurality of anti-friction ball bearings interposed between said races, one race having ratchet teeth, and a ring interposed between said races, said ring having ratchet teeth co-acting with the first named ratchet teeth, said first named ball race having notches, said ring having upstanding lugs projecting slidably into said notches, and spring means between the ring and ball race.

2,453,292
OUTDOOR CARD GAME BOARD
Samuel Zirin, Brooklyn, N. Y., assignor to Marsam Specialties, Inc., a corporation of New York
Application September 23, 1944, Serial No. 555,453
2 Claims. (Cl. 273—150)



1. An outdoor gin rummy board, comprising a board-like member, and means for holding playing cards from blowing off, said means including a coiled spring and studs for holding the ends of said spring to said board and dividing the said coiled spring into four gripping sections for gripping the cards of the players.

2,453,293
HORIZONTAL LIQUID CURRENT SEPARATOR
Joseph M. Aurillo, Fairfield, and Jack H. Schecter, Bridgeport, Conn., assignors to McNeil Bros. Inc., Bridgeport, Conn., a corporation of Connecticut
Application December 6, 1944, Serial No. 566,830
4 Claims. (Cl. 209—156)

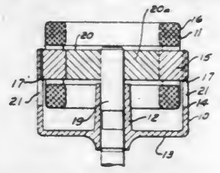


1. In a material separation apparatus, a tank, a trough including spaced side walls and a bottom wall, said trough communicating at one end with the upper portion of said tank to continuously receive liquid therefrom, means for supplying liquid to said tank in a volume sufficient to maintain a given level in the tank and trough with a constant flow through the latter, a settling tank, said trough having its bottom wall and at least the lower portions of its side walls passing through the upper portion of said settling tank below the upper edges of the walls of the latter whereby said settling tank is adapted to contain liquid to a level above the bottom wall of the trough portion passing therethrough, said trough having an opening through its bottom wall within said settling tank, means for feeding material to be separated to the liquid in said trough at a place intermediate said first tank and said opening, and said opening providing means whereby heavy portions of the material to be separated may settle out into said settling tank while the lighter portions of said material are carried across said opening by the liquid flowing through the trough.

2,453,294
HATCH PLUG FOR CLOSING OPENINGS IN ICE CONTAINERS OF REFRIGERATOR CARS
Edwin R. Battley and George E. McCoy, Montreal, Quebec, Canada
Application January 26, 1945, Serial No. 574,790
4 Claims. (Cl. 62—17)

1. In a refrigerator car having a hatch opening with tapering sides in the roof thereof, a refrigerant container spaced below said roof so as to provide a space between said roof and said container which communicates with the hatch opening and the interior of the car for ventilating purposes, said container having a filling opening therein registering with said hatch opening, and a removable hatch plug having portions engageable with the walls of the hatch opening to close the hatch opening to retard heat infiltration and other portions engageable with the container to simultaneously close the filling opening to retard the escape of refrigerant from the container.

2,453,295
ICE CONTAINER FOR REFRIGERATOR CARS
Edwin R. Battley and George E. McCoy, Montreal, Quebec, Canada
Original application January 26, 1945, Serial No. 574,790. Divided and this application March 17, 1947, Serial No. 735,104
6 Claims. (Cl. 62—17)



1. In a refrigerator car having a hatch opening in the roof thereof, a refrigerant container spaced below said roof so as to provide a space between the roof and the container which communicates with the hatch opening and the interior of the car for ventilation, said container having a filling opening registering with the hatch opening, a plurality of spaced vanes depending from said roof in overlapping and spaced relation with a plurality of spaced upstanding vanes on the container around the perimeter of the filling opening, whereby air entering the hatch opening may pass between said vanes into the interior of the car, and drain holes in the container and adjacent said upstanding vane so that liquid surging from the container is baffled by said depending vane and drained into the container.

2,453,296
BRASSIÈRE
Mildred R. Bates, Orange, N. J.
Application January 12, 1946, Serial No. 640,775
1 Claim. (Cl. 2—42)

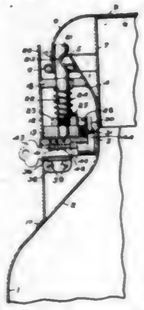
In a brassière having a shoulder strap on each side attached to the back of the waistband and directed over the shoulder of the wearer, terminating just above the breast of the wearer where each strap joins two ribbons disposed oppositely over each breast, the improvement consisting essentially of a skeletal structure exposing substantially the whole body of each breast, comprising a narrow waistband passing directly under the breasts and joining at the back, a ribbon element attached to the waistband at a point under the armpit on each side and directly diagonally upwardly over the outer upper half of the breast, joining the shoulder strap, and a ribbon element from each shoulder strap directed downwardly over the inner upper half of the breast, crossing the front of the body between the breasts and attached to the waistband at a point near the underside of the other breast.

2,453,297
COMPRESSOR MOTOR AND METHOD OF MAKING SAME
Ralph L. Benson, Greenville, Mich., assignor, by mesne assignments, to Gibson Refrigerator Company, Greenville, Mich., a corporation of Michigan
Application April 11, 1942, Serial No. 438,547
3 Claims. (Cl. 172—36)

1. The method of manufacturing motors which comprises providing a frame having a journal bearing with an accurately dimensioned inner surface, providing a stator having a metallic core with an accurately dimensioned annular inner surface, positioning said parts with an external surface of the stator in juxtaposed relation to an external surface of the frame throughout a substantial portion of the perimeters of said parts, arranging and maintaining said parts with the annular inner surface of the core in coaxial relation to the inner surface of the journal bearing solely by accurately dimensioned gauge means engaging said inner surfaces, fixedly connecting said external surface of the stator to said external surface of the frame while holding said parts in said juxtaposed relation and while the said inner surfaces of the journal bearing and the core are maintained in coaxial relation by said gauge means, and thereafter removing at least that portion of the gauge means engaging the inner surface of the core.

2,453,298
SYNTHETIC RESINS AND PREPARATION THEREOF BY REACTING AN ALKYL BENZENE, A PHENOLIC COMPOUND, AND A DIHALOALKANE
Herman S. Bloch, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application August 20, 1945, Serial No. 611,702
15 Claims. (Cl. 260—61)

1. A process for producing a three component resin which comprises reacting in the presence of a Friedel-Crafts metal halide catalyst: (1) an alkylbenzene hydrocarbon having not more than two alkyl groups per molecule and each of said alkyl groups having not more than two carbon atoms per group, (2) a phenolic compound selected from the group consisting of monohydric



phenols, dihydric phenols and the methyl, ethyl and phenyl ethers of said phenols, said phenolic compound containing not more than two nuclearly substituted alkyl groups per molecule as the sole nuclear substitutents and each of said alkyl groups having not more than two carbon atoms per group, and (3) a dihaloalkane having from two to four, inclusive, carbon atoms per molecule and a halogen atom of at least 35 atomic weight bound to each of two adjacent carbon atoms; the amount of catalyst being at least 5 mol percent more than (2), the amount of (1) being at least 10% of the total of (1), (2), and (3), the amount of (2) being being from about 1/10 to about ½ of the total of (1) and (2), and the amount of (3) being from above one to about twenty mols per mol of total (1) and (2); and terminating the reaction when from about 1.1 to about 1.9 mols of hydrogen halide have been evolved per mole of total (1) and (2).

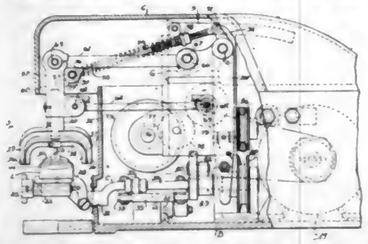
2,453,299

FREE-OPENING, NONCLOSING SNAP LOCK DEVICE

William H. Bloomberg, West Medford, Mass.

Application August 14, 1947, Serial No. 768,578
8 Claims. (Cl. 70—166)

1. In combination with a receptacle having a tubular entrance, a removable cover having a wall complementary to said tubular entrance adapted telescopically to be inserted into it in sealing engagement therewith and provided with a flange spaced from and parallel to said wall, means mounted on the exterior of the receptacle having an abutment member movable out of or into the path of the flange adapted selectively to permit or to prevent sufficient telescopic engagement of the complementary cover wall with said entrance to provide an effective seal, a rotatable key operated lock and means operable thereby for locking said abutment member out of the path of said cover flange whereby the cover can be sealingly applied to the receptacle only by the person having the key.



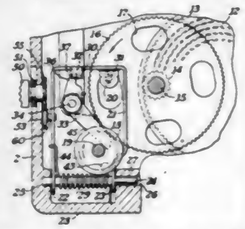
2,453,300

LENS GRINDING MACHINE

George E. Bonin, Southbridge, Mass., assignor to Simonds Machine Co., Inc., Southbridge, Mass., a corporation of Massachusetts

Application September 18, 1946, Serial No. 697,701
5 Claims. (Cl. 51—64)

1. In a lens grinding machine having a work-engaging member and a lap, in combination, a carriage for said lap, a guide-bar, means to reciprocate said carriage along said guide-bar, a depending work-actuating member mounted on upper and lower shiftable pivots, and means to give the work a compound transverse reciprocating movement by moving one of said pivots to rapidly reciprocate said work transversely of the path of movement of the lap and by moving the other pivot to slowly shift the locus of the path



of reciprocating movement of the work during such rapid reciprocation transversely of said path of movement of the lap while maintaining the length of said transverse reciprocating movements substantially constant.

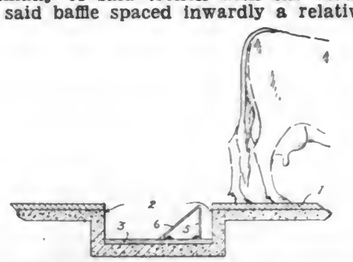
2,453,301

MULTIPLE AND INDIVIDUAL SHUTTER RELEASES FOR POWER-DRIVEN MOTION-PICTURE CAMERAS

Morris E. Brown and Norman F. Lehr, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application January 8, 1948, Serial No. 1,210
6 Claims. (Cl. 88—17)

1. A power-operated motion-picture camera releasing mechanism for cameras of the type including a source of power, a pull-down mechanism driven thereby, and gearing connecting the power drive and pull-down mechanism, said releasing mechanism including a pair of triggers, one of said triggers for individual exposures and the other of said triggers for multiple exposures, a notched disk movable with the gearing, a spring-actuated latch element normally engaging the notched disk for preventing movement of the power drive, one of said triggers directly engaging and moving the latch against spring pressure into an inoperative position so the motor may drive the pull-down; the other of the triggers including a pivoted member normally engageable with the latch element to move the same when the trigger is moved, and means actuated by the gearing for moving the pivoted element to release the latch after predetermined movement of the gearing.



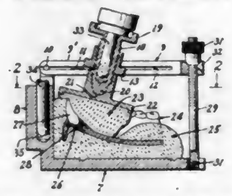
2,453,302

SANITARY COW GUARD

Jesse L. Cleveland, Two Harbors, Minn.

Application November 3, 1944, Serial No. 561,714
4 Claims. (Cl. 119—15)

1. A portable instrumentality for application within the excreta trench at the rear of a cow stall, comprising two spaced parallel base members, said base members being in length substantially the width of said trench and an elongated baffle having a vertical wall and an inclined wall, said baffle being fixed upon said base members longitudinally of said trench with the vertical wall of said baffle spaced inwardly a relatively



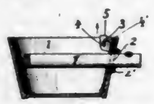
short distance from one end of said base members whereby when installed within said trench in the rear of said stall a vertical open space exists intermediate of the trench wall of said stall and the vertical face of said baffle.

2,453,303

DENTURE REPAIR TOOL

Allen B. Cline, Rosemead, Calif.

Application September 15, 1945, Serial No. 616,577
3 Claims. (Cl. 18—5.7)



1. In a denture repair tool, an elongated base for supporting a denture to be repaired, a mold holder adapted to support contour-restoring mold for application to the repair area of the denture, an arm hingedly connected at one end to one end of said base, a member slidable along said arm, a member for supporting said mold holder, means connecting said mold-holder supporting member to said slide member so that the mold holder may be moved therewith to apply the mold to and remove it from the denture, said arm having a slot in its other end, an eye bolt hinged to the other end of said base and adapted to be swung into and out of said slot, and a nut on said bolt for clamping the arm in position to apply the mold to the denture and being adjustable to vary the pressure of the mold on the denture.

2,453,304

COMBINED CIGARETTE HOLDER AND ASH TRAY

Daniel J. Coffey, Bronx, N. Y.

Application January 17, 1947, Serial No. 722,545
3 Claims. (Cl. 131—175)

2. A combined ash tray and cigarette holder comprising a receptacle having an opening therein adapted to receive the mouth end of a cigarette, said receptacle being adapted to surround the entire lighted end of the cigarette so as to confine the cigarette within the same, a heat conducting ring for retaining the cigarette within the opening, and a latch having a curved engaging edge adapted to partially surround the cigarette and to tilt the same into the receptacle, whereby the hot end of the cigarette will first arrive at the underside of the ring and will be extinguished from the bottom to thereby leave the latch in engagement with the top of the cigarette to retain it in the ring and on the receptacle when the cigarette has burned to the lower edge of the ring, said receptacle being of circular formation and said latch conforming to the shape of the interior wall face of the receptacle.

2,453,305

PROCESS FOR REMOVING FATS FROM RUTIN EXTRACTS

James F. Couch, Glenside, and Charles F. Krewson, Erdenheim, Pa., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application November 25, 1947, Serial No. 788,077
1 Claim. (Cl. 260—210)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A process of removing fat impurities from rutin which has been produced by solvent extraction of rutin-bearing plant materials, comprising filtering an aqueous solution of the rutin and the impurities through a glass fiber filter.

2,453,306

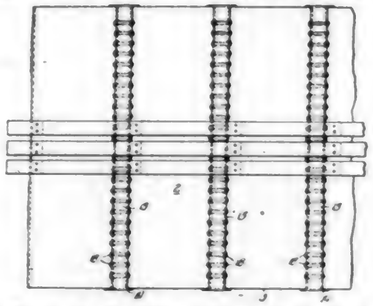
APPARATUS FOR MEASURING WALL THICKNESS OF PROPELLER BLADES

Dwillard J. Davis, Detroit, Mich., assignor to Avco Manufacturing Corporation, a corporation of Delaware

Application May 24, 1945, Serial No. 595,584
27 Claims. (Cl. 33—148)

9. Apparatus for measuring the wall-thickness of hollow propeller blades comprising: means for supporting the blade; a carriage mounted for movement longitudinally of the blade; a pivoted beam on the carriage adapted to extend into the blade and provided with a contact for engaging the inner face of the blade-wall; a second beam on the carriage, movable with said other beam, outside of the blade, and provided with a stop; a gauge; gauge-operating means; a contact for engaging the outer face of the blade-wall; a vertically movable carrier on which the gauge-operating means is operable by said stop and on which the gauge and outer contact are mounted; and screw-means for raising and lowering the carrier for engaging the contact carried thereby with the blade and shifting the operating-means to operate the gauge.

2,453,307



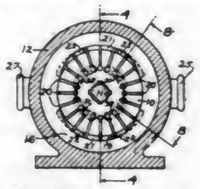
ROOF FOR RAILWAY FREIGHT CARS

Tony Despotakis, Hyde Park, Pa., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill., a corporation of Delaware

Application March 28, 1947, Serial No. 737,819
3 Claims. (Cl. 108—5.4)

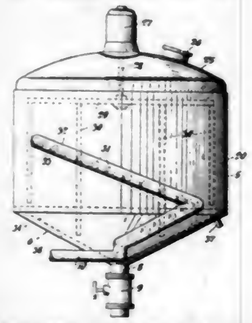
1. A roof for a railway car having spaced side plates each comprising a vertical element and a

substantially horizontal element, said roof comprising metallic roof sheets disposed crosswise of the car and formed with depending end flanges secured to said vertical elements, respectively, each roof sheet formed with upstanding side marginal flanges which are spaced a substantial distance from the corresponding flange of the adjacent roof sheet, said upstanding flanges each formed with a horizontal reflange which overlaps



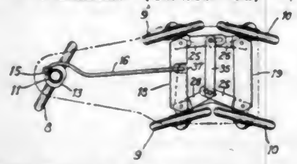
the reflange of the adjacent roof sheet, inverted channel-shaped caps straddling the upstanding flanges of adjacent roof sheets said caps terminating in depending end flanges which close the ends of the space between the flanges of adjacent roof sheets and extend downwardly and are secured to the vertical elements of the side plates, and means to secure the cap and adjacent roof sheet flanges together.

2,453,308
POLYVINYL BUTYRAL COMPOSITION
Richard D. Dunlop, Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 21, 1943, Serial No. 495,603
1 Claim. (Cl. 260—45.2)



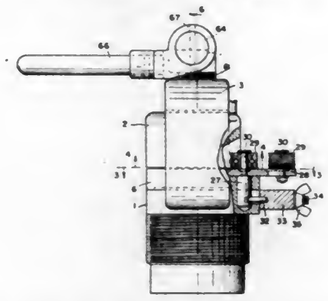
A composition of matter comprising 100 parts of a polyvinyl butyraldehyde acetal resin containing, on a weight basis, from 5–25% hydroxy groups calculated as polyvinyl alcohol, 37 parts of dibutyl sebacate, 10 parts of the ethyl ether of trimethylol melamine and 1.3 parts of monoethyl phosphoric acid, said ether being incorporated while in the fusible state.

2,453,309
VANE TYPE HYDRAULIC MOTOR
James K. Douglas, Shorewood, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a corporation of Wisconsin
Original application December 29, 1939, Serial No. 311,479, now Patent No. 2,345,920, April 4, 1944. Divided and this application March 15, 1943, Serial No. 479,229
10 Claims. (Cl. 121—87)



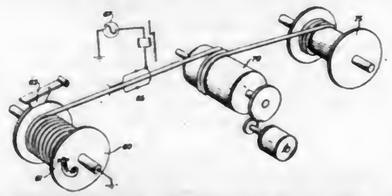
1. The combination, with a hydraulic motor having a vane track and a rotor arranged within said track and provided with a plurality of vanes for engaging said track, of means for directing motive liquid between said track and said rotor, means for causing each of said vanes to engage said track during at least a part of each revolution of said rotor to thereby enable said liquid to act upon said vanes and rotate said rotor, and means for causing all of said vanes to move inward out of engagement with said track and thereby prevent liquid directed between said track and said rotor from rotating said rotor.

2,453,310
APPARATUS FOR SEPARATING STARCH FROM GLUTEN
Lou Buck Edsall, Wyandotte, and Acton Keith Kilander, Gibralter, Mich., assignors, by mesne assignments, of 9,448/10,570 to Chemprotin Products, Trenton, Mich., a limited partnership, 561/10,570 to Laszlo Kormendi, New York, N. Y., and 561/10,570 to B. Clark Boeckeler, Gross Ile, Mich.
Application December 20, 1943, Serial No. 515,060
11 Claims. (Cl. 127—24)



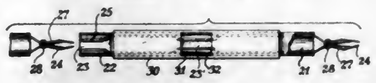
1. In a device for separating starch and gluten, the combination of a receptacle adapted to receive ground grain and water, a valved bottom pipe for drawing off gluten at the bottom, side perforated pipes for drawing off starch, a plurality of tubes on the bottom of said receptacle, air outlets in the said tubes for directing air circumferentially of the receptacle, and means for supplying air to said tubes.

2,453,311
STEERABLE VEHICLE UNDERCARRIAGE
Joseph J. Fedevich, Dover, Ohio
Application November 5, 1947, Serial No. 784,269
7 Claims. (Cl. 280—91)



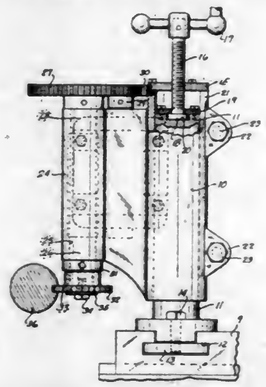
7. Vehicle undercarriage construction including front and rear axles arranged in tandem under the rear portion of the vehicle, a pair of wheels pivoted for individual steering on each of said axles, lever arms extending forwardly and rearwardly from said pivots and overlapping each other between said axles, a front wheel for steering said vehicle, means for steering said front wheel, means operatively connecting said front wheel steering means to said front tandem wheels for steering said front tandem wheels in the same direction as said front wheel, and a transverse link pivotally connected at its ends to both pairs of overlapping lever arms for simultaneously steering the rear tandem wheels in the opposite direction.

2,453,312
EXTRUSION APPARATUS
Larry C. Frazier, Lakewood, Ohio, assignor to National-Standard Company, Niles, Mich., a corporation of Michigan
Application September 7, 1946, Serial No. 695,447
14 Claims. (Cl. 18—13)



1. A nozzle for the extrusion of a plastic mass into an elongated body, comprising complementary body and cap members, whose opposed faces when in engagement define a forming cavity, a gauging insert carried by one of said members, forming a portion of the wall of said cavity and provided with a slot therethrough of a cross-section equal to the desired cross-section of the elongated body to be formed, said cavity including openings adapted to admit separate streams of material to said cavity on opposite sides of the slot in said insert, and means for clamping said members in assembled relation.

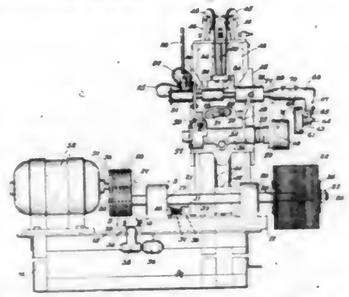
2,453,313
METHOD OF MANUFACTURING COMMUNICATION CABLES
Chester S. Gordon, Boonton, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 29, 1943, Serial No. 484,970
2 Claims. (Cl. 154—2.26)



2. A method of manufacturing a long communication cable comprising applying directly about a pair of conductors encased in a common insulating body a conducting layer of high conductivity metal for stabilization of the electrical properties of the insulated conductors, sectionalizing said conducting layer to increase its overall resistance for localization in the lengthwise direction of the effect of an applied test voltage, applying said test voltage between the conductors and the successive portions of said conducting layer for breakdown of a fault in the insulation of said insulated conductors within the localized lengths of the cable, and then applying an outer protecting layer about said conducting layer.

2,453,314
POWER DISTRIBUTION SYSTEM OF THE BUS BAR DUCT TYPE
Herman John Hammerly, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a corporation of Connecticut
Application October 16, 1947, Serial No. 780,212
3 Claims. (Cl. 174—72)

1. A bus bar duct section comprising a one-piece bus bar of channel-shaped cross section having a socket integral therewith at one end and a wedge-shaped stab integral with the other end and an insulating tube surrounding said bus bar but removable therefrom.

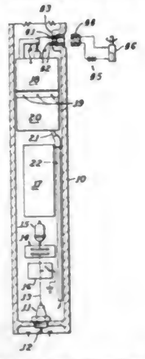


2,453,315
MILLING ATTACHMENT FOR LATHES
Joseph C. Harbison, Eldorado, Ill., assignor of forty-three and one-third per cent to Obe Roberts, Eldorado, Ill.
Application January 17, 1946, Serial No. 641,783
1 Claim. (Cl. 90—16)

In a lathe having a headstock and a tailstock and a carriage slidable therebetween, the combination with a milling attachment comprising an upright cylindrical tool post sustained by said carriage, a hollow cylinder sleeved on said tool post over the upper end thereof for rotary and axial sliding movement thereon and having a closed upper end, means for raising and lowering said cylinder on said post including a screw threaded downwardly through the closed upper end of said cylinder axially thereof and having a rotary but non-axially slidable connection with the upper end of said tool post, means for locking said cylinder to said post in all positions of rotary and axial adjustment thereon, said cylinder having a laterally projecting portion on one side thereof, an upright cutter shaft journaled in said laterally projecting portion of said cylinder, a cutter fixed to the lower end of said cutter shaft and adapted to engage work supported by said head and tailstock, an electric motor

mounted on said laterally projecting portion of said cylinder and having a vertically disposed armature shaft, and gearing connecting the upper end of said armature shaft to the upper end of said cutter shaft.

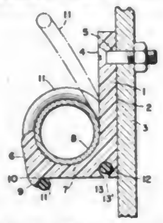
2,453,316
BUFFING MACHINE
Robert D. Harris, Massillon, Ohio, assignor to The Enterprise Aluminum Company, Massillon, Ohio, a corporation of Ohio
Application October 2, 1946, Serial No. 700,726
14 Claims. (Cl. 51—50)



1. A buffing machine for buffing hollow ware, including a buffing wheel, means for rotating the buffing wheel, means for axially reciprocating the buffing wheel while it is being rotated, a ware chuck adapted to receive hollow ware to be buffed, means for rotating said chuck, means for normally holding the chuck spaced from the buffing wheel, a pressure pad, means for normally holding the pressure pad spaced longitudinally and laterally from the chuck, and fluid pressure and cam means for simultaneously moving the pressure pad into contact with the bottom of hollow ware upon the chuck and moving the chuck toward the buffing wheel to bring the surface of the hollow ware upon the chuck into contact with the buffing wheel.

2,453,317
COPOLYMER OF ISOPROPENYL ACETATE AND VINYL CHLORIDE
Rudolph Leonard Hasche and Edward M. McMahon, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application September 3, 1947, Serial No. 772,020
17 Claims. (Cl. 260—86)

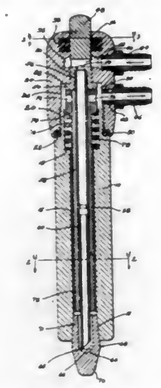
14. A process for preparing a resinous copolymer comprising subjecting to polymerization in the presence of a peroxide polymerization catalyst a mixture consisting of from 80 to 95 parts by weight of vinyl chloride and from 5 to 20 parts by weight of isopropenyl acetate.



2,453,318
RADIOACTIVITY LOGGING DEVICE
Ralph E. Hartline, Tulsa, Okla., assignor to Stanolind Oil and Gas Company, Tulsa, Okla., a corporation of Delaware
Application December 17, 1945, Serial No. 635,595
5 Claims. (Cl. 250—83.6)

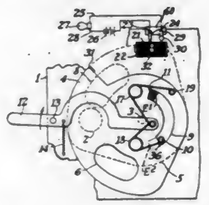
1. In well-logging apparatus sealed against the entrance of external moisture, including means in an elongated chamber for measuring minute electrical currents, said means including at least one high resistance insulator and at least one internal source of moisture, the combination of a conduit extending through a substantial length of said chamber, a drying chemical wholly enclosed within said chamber and confined by dust-filtering

materials, and means for forcing the atmosphere in said chamber through said chemical and said conduit in series, said atmosphere being withdrawn from near said moisture source and being released near said high resistance insulator.



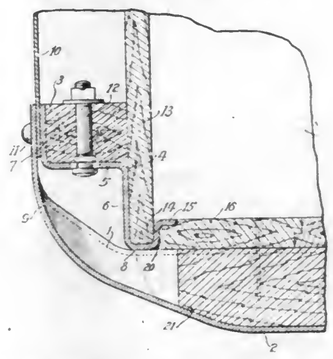
2,453,319
TUBE HOLDING DEVICE
Charles E. Holiyday, Jr., Baltimore, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application February 21, 1945, Serial No. 578,963
6 Claims. (Cl. 248—74)

1. A tube holding device comprising a base adapted for mounting on a supporting structure and having an integrally formed ledge portion, said ledge having a channeled top surface adapted to support a tube, the free end of said ledge having grooved sides and bottom, a restricted entrant ring holding groove formed in said holder remote from the channeled top surface of the ledge and a ring having rubber-like physical characteristics arranged in said grooves about the supported tube and in the grooves at the free end of the ledge.



2,453,320
WELDING ELECTRODE HOLDER
Ernest W. Huebner, Detroit, Mich., assignor to Weiger Weed & Company, Detroit, Mich.
Application July 26, 1946, Serial No. 686,263
9 Claims. (Cl. 219—4)

1. A holder for welding electrode tips, comprising a tubular holder having a socket at one end for frictionally retaining a tip, a head member detachably connected to the opposite end of said tubular holder, said head being tubular and having fluid inlet and outlet ports, a rod projecting through the end of said head movable axially therein and separating the inlet port from the outlet port, an outwardly extending flange on said rod within said head for engagement therewith to limit outward movement of said rod, a tubular member within said tubular holder having one end in contact with the inner end of said rod, said tube being in fluid communication with the outlet port and open at its opposite end, a second tubular



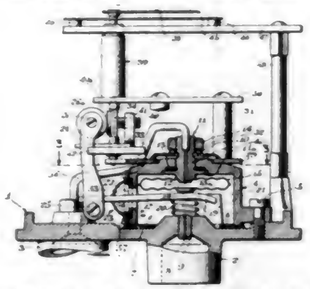
member within said first named tube and spaced from the inner wall thereof, said second named tube being carried by said rod and having a fluid communication through said rod to the fluid inlet passage, resilient means for urging said first named tube into contact with said rod for urging the latter outwardly, and fluid sealing means between said rod and head.

2,453,321
BUILT-IN FLASH SYNCHRONIZER FOR SHUTTER BLADE AND COVER BLIND TYPE SHUTTERS
Miller R. Hutchison, Jr., Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application October 12, 1945, Serial No. 622,027
5 Claims. (Cl. 95—11.5)

3. In a flash synchronizing shutter, the combination with a shutter mechanism comprising an apertured support, a pair of pivotally mounted plates each adapted to move to uncover and cover the aperture in the support, the first constituting a cover blind and the second a shutter plate, a movably mounted trigger, two springs, one attached to the cover blind and the other attached to the shutter plate, both springs being attached to and movable by the trigger, and a lost motion connection between the cover blind and the shutter plate, of a flash synchronizing switch carried by the support, said switch being normally open and including relatively fixed and movable elements, means carried by the cover blind for engaging and closing the switch, and means for connecting the switch to a flash light circuit including a battery and a lamp to be flashed thereby upon closing of the switch.

2,453,322
RAILWAY FREIGHT CAR CONSTRUCTION
Albert E. Jaeckle, Laural Park, N. Y.
Application September 20, 1947, Serial No. 775,162
4 Claims. (Cl. 105—410)

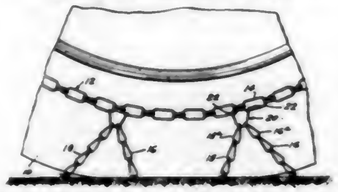
1. In a railway car having side wall and end wall linings, a corner structure comprising a corner post having a portion provided with a flange extending parallel with the plane of said end wall lining and a reflange overlapping a vertical edge of said side wall lining, said reflange provided with a flange extending parallel with said end wall lining, said reflange and last mentioned flange overlapping a vertical edge of said end wall lining, thereby providing a tight corner between said linings.



2,453,323
PHOTOGRAPHIC DEVELOPMENT BY FERROUS ALKALINE SOLUTIONS
Thomas H. James, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application October 26, 1946, Serial No. 706,073
5 Claims. (Cl. 95—88)

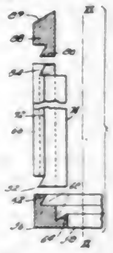
1. The method of forming a ferric oxide image in a silver halide emulsion layer, which comprises exposing said layer and developing it with an alkaline solution of a soluble ferrous salt and a soluble oxalate in an oxygen free atmosphere, said solution having a pH of at least approximately 8.

2,453,324
MOTION SEAL
Harry S. Jones, East Orange, and Winslow B. M. Clark, West Orange, N. J., assignors to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application January 22, 1945, Serial No. 574,004
12 Claims. (Cl. 286—29)



1. A motion seal for transmitting uniplanar pivotal movement comprising a flexible diaphragm, a relatively rigid lever means secured in fluid-tight relation to said diaphragm and having extending portions at opposite sides thereof, said lever means being pivotally supported at its junction with said diaphragm, and said diaphragm being so shaped that the cross section

thereof in the plane of said pivotal movement has a curvature of finite radius and the cross

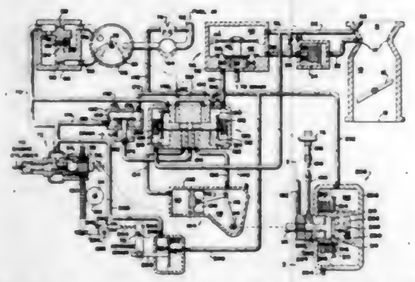


section thereof in a plane at right angles to said movement plane is substantially rectilinear.

2,453,325
NONSKID TIRE CHAIN
Walter F. Karstens, Arlington Heights, Ill.
Application February 28, 1947, Serial No. 731,680
6 Claims. (Cl. 152—239)

5. A pivot link for a non-skid tire chain for automobiles, said chain being of the type having a pair of circumferential rim chains, generally U-shaped pivot links connected at spaced intervals to said circumferential chains and traction chains connected to said pivot links in a diagonal manner, each pivot link having the end links of two traction chains connected thereto, the pivot link having its end formed into two oppositely disposed arcuately shaped portions to meet the direct strain of each of the cross-chains connected thereto.

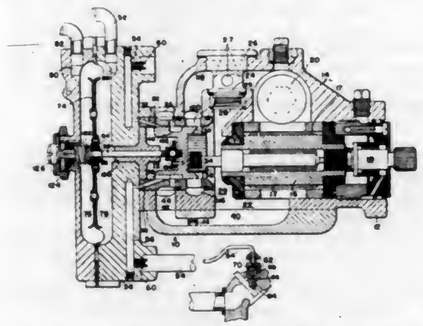
2,453,326
PORTABLE BUILDING STRUCTURE
Sanders R. Lambert, Kansas City, Mo.
Application April 23, 1945, Serial No. 589,914
7 Claims. (Cl. 20—2)



1. In a building structure of the character described; a base frame having tongues formed along the upper edges thereof; a header rail having tongues formed along the lower edge thereof; a corner post having an inside longitudinal tongue, an outside longitudinal tongue and a transverse tongue at each of its ends; and rectangular wall members having tongues along each of its sides and adapted to extend from said base to said header rail, whereby said corner post may be positioned with its transverse tongues engaging respectively, said base tongue and said header rail tongue and its longitudinal tongues respectively engaging tongues of wall members disposed at right angles to each other.

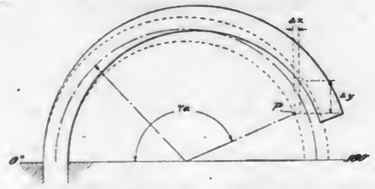
2,453,327
HYDROCARBON CONVERSION
Edwin T. Layng, Jersey City, N. J., and Frank T. Suman, Jr., Nyack, N. Y., assignors to The M. W. Kellogg Company, Jersey City, N. J., a corporation of Delaware
No Drawing. Application June 18, 1942, Serial No. 447,588
9 Claims. (Cl. 260—668)

7. In a process for treating hydrocarbons in which a hydrocarbon is contacted at elevated temperature with a catalyst essentially consisting of a major proportion of an alumina carrier and a minor proportion of an activating oxide of a metal of the left-hand columns of groups V and VI of the periodic table, which treatment is accompanied by the formation of carbonaceous deposits on the catalyst surface for deactivating the catalyst, the improvement which comprises reducing the rate of formation of said carbonaceous deposits on said catalyst surface by incorporating in said catalyst a minor proportion of titanium oxide.



2,453,328
CONTROL APPARATUS FOR INTERNAL-COMBUSTION ENGINES
Leighton Lee, II, West Hartford, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application August 22, 1945, Serial No. 612,082
13 Claims. (Cl. 123—119)

1. A fuel supply system for an internal combustion engine, comprising injection pump mechanism for supplying fuel to the cylinders of said engine, means for varying the delivery of said pump mechanism, motor means for operating said delivery varying means, a conduit for combustion air flowing to said engine, means associated with said conduit for producing two unequal pressures whose difference is a measure of the rate of flow of combustion air to said engine, a conduit for fuel flowing to said pump mechanism, a metering restriction in said conduit, an expansible chamber, a restricted inlet passage for conveying fuel from said conduit to said chamber, a restricted outlet passage for said chamber, means for varying the restriction in one of said passages in response to the difference of said unequal pressures so as to vary the pressure in said chamber as a function of the rate of air



flow, and means responsive to the pressure in said chamber and to the fuel pressure differential across said metering restriction for controlling said motor means.

2,453,329
CONTROL APPARATUS FOR INTERNAL-COMBUSTION ENGINES
Leighton Lee, II, West Hartford, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application January 16, 1946, Serial No. 641,577
15 Claims. (Cl. 123—139)

2. A fuel control system for an internal combustion engine, comprising a chamber having ports for the discharge of fuel to the respective cylinders of said engine, rotary means in said chamber for placing said ports successively in communication with a fuel supply, a fuel pump having a fuel inlet and a fuel discharge outlet, a portion of said rotary means being exposed to the pressure of fuel emerging from said outlet, restricted-passage means for conducting fuel from said outlet to another portion of said rotary means whereby the latter receives fuel for distribution to said cylinders and is subjected to the differential pressure of fluid flowing through said restricted passage means, means connected to said rotary means for subjecting the latter to the differential pressure of air flowing to the engine, said rotary means being movable longitudinally in said chamber in response to variations in said air and fuel differential pressures, and other passage means controlled by longitudinal movement of said rotary means for providing a path for the flow of fuel from said pump discharge outlet to said pump inlet.

2,453,330
METHOD OF MAKING SPLIT PISTON RINGS
Lewis C. Marshall, East Walpole, Mass.
Application December 14, 1945, Serial No. 635,004
3 Claims. (Cl. 29—156.6)

1. Method of making a split piston ring operative to exert substantially uniform radial pressure against the cylinder wall when installed in the cylinder and which, when so installed, has an outside radius r_a and a mean radius r_m, and wherein an embryo ring is first formed by bending a length of steel wire to form an annular turn, cutting off said turn from said length at such a point as to produce an approximately circular ring having a gap therein, placing the ring upon a mandrel and compressing and heat treating the ring to conform it to the mandrel, characterized in that the peripheral surface of the mandrel to which the ring is conformed differs from a true circle—the horizontal deviation Δx and the vertical deviation Δy from a true circle at any point at an angle $180° - \psi_a$ from the mid-radius of the location of the ring-gap on the mandrel being in accordance with the equations

$$\Delta x = \frac{12 p_a r_a r_m^3}{E h^3} \times A_x$$

and

$$\Delta y = \frac{12 p_a r_a r_m^3}{E h^3} \times A_y$$

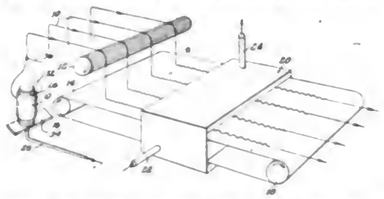
where E is the modulus of elasticity of the ring material, h is the radial thickness of the ring, and where p_a is the desired uniform pressure in pounds per square inch at the outside circumference of the ring, and

$$A_x = 1 - \psi a \sin \psi a - \frac{\sin^2 \psi a}{2} - \cos \psi a$$

and

$$A_y = \frac{\psi a}{2} + \sin \psi a - \psi a \cos \psi a - \frac{\sin \psi a \cos \psi a}{2}$$

2,453,331
CONNECTION FOR ENAMELED TANKS
William H. Martin, Lakewood, Ohio, assignor, by mesne assignments, to Republic Industries, Inc., New York, N. Y., a corporation of Delaware
Application September 2, 1943, Serial No. 500,953
5 Claims. (Cl. 285—49)

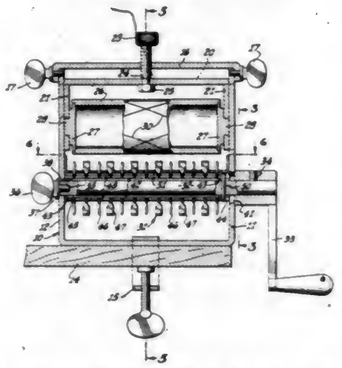


1. In a tank having a corrosion resistant lining, a pipe connection formed by providing an opening in a wall of the tank, an annulus having an axially extending skirt engaging said wall about said opening and providing an annular keying recess having a cross-sectional dimension greater than the width of its inlet and opening to the inner face of the wall, an external fillet weld joining said annulus and wall, a corrosion resistant coating over the inner surface of the assembly, and a body of thermo-plastic corrosion-resistant material filling said recess.

2,453,332
PROCESS OF TREATING YARN
Frederick R. Millhiser, Richmond, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application September 22, 1944, Serial No. 555,210
5 Claims. (Cl. 8—149.3)

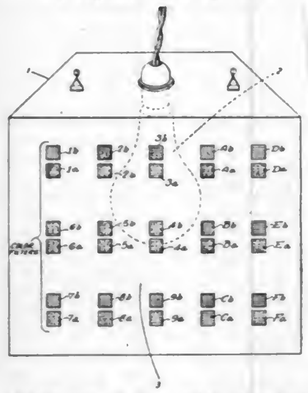
1. A process for substantially improving the physical properties of hot dip multifilament viscose rayon yarn wound up at the spinning machine on a bobbin whereby the yarn can be con-

verted to a tire cord having high resistance to fatigue, which comprises washing said yarn while on the bobbin, whereby said yarn is washed acid-free at constant length, unwinding the yarn, and



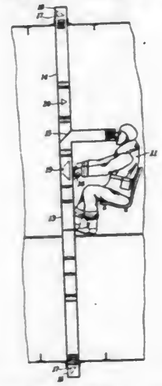
treating the unwound gel yarn with an aqueous fluid at a temperature above 90° C. while said gel yarn is under a tension not greater than 0.02 gram per denier.

2,453,333
REACTION OF BIGUANIDE AND ETHYLENE SULFIDE
Leonard P. Moore, New York, N. Y., and Walter P. Ericks, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 19, 1942, Serial No. 459,001
1 Claim. (Cl. 260—564)



The method of preparing ethylene sulfide-biguanide complexes which comprises refluxing biguanide and ethylene sulfide in substantially the ratio of 0.05 mol of the former to 0.1 mol of the latter.

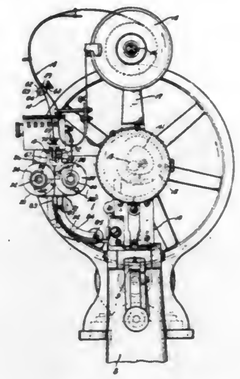
2,453,334
MEAT TENDERIZER
Frank H. Morgan, Glendale, Calif.
Application June 14, 1946, Serial No. 676,661
2 Claims. (Cl. 17—26)



1. A meat tenderizer which includes: a frame; a shaft rotatably and removably mounted in said frame; a pin extending through said shaft; a tube carried by said shaft and having a slot therein adapted to receive said pin whereby the rotation of said shaft is transmitted to said tube; a series of knives mounted on said tube, said knives being formed of relatively thin material, and having a series of radially extending blades around their peripheries, said blades being narrower at their tips than at their roots and having cutting edges parallel to the planes of the knives and substantially perpendicular to the axis of said shaft; a second series of knives mounted on said tube, said second series of knives being formed of relatively thin material and having a series of radially extending blades around their peripheries, said blades being twisted so that their cutting edges are substantially perpendicular to the planes of the knives and substantially parallel to the axis of said shaft; spacers mounted on said tube between adjacent knives, said knives being mounted so that adjacent knives have blades which are perpendicular to each other; a cap mounted on one end of said tube; a cap mounted on the other end of said tube, said caps clamping said knives and spacers together to cause them and said tube to rotate and operate as a unitary knife assembly, a roller having its axis parallel to the axis of rotation of said knife assembly; means mounting said roller in said frame, said means being adjustable to move said roller toward or away from said knife assembly; a pan attached to said frame having slots therein through which the blades of said knife assembly extend; and a manually rotatable handle attached to said shaft for rotating the latter.

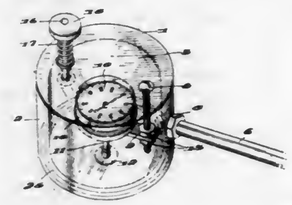
2,453,335
COLOR BLINDNESS CHART FOR DETECTING ANOMALOUS VISION, DEUTERANOPES, PROTANOPES, TRITANOPES, AND MONOCHROMATS
Reginald Burford Morris, Wealdstone, England, assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application October 27, 1944, Serial No. 560,628
In Great Britain November 9, 1943
4 Claims. (Cl. 88—20)

1. A device for testing color discrimination of the human eye, said device having a plurality of pairs of closely adjacent patches of color filter materials and including at least three such pairs capable of being transilluminated by white light, one patch of each pair when so illuminated transmitting substantially only a yellow wavelength band of light of wavelength between 570 and 600 mμ and appearing yellow to the normal human eye, and the other three patches of said three pairs transmitting both a red wavelength band of light of wavelength about 600 mμ and a green wavelength band of light of wavelength between 520 and 550 mμ, but not appreciably transmitting said yellow light, or any other visible wavelength band except the said red and green wavelength bands, one of said three other patches, namely the other patch in one of the three pairs, transmitting said red and green bands in a proportion such that it appears to the majority of people as about the same color as the adjacent yellow patch of that pair, another of said three other patches, namely, the other patch in a second one of the three pairs, transmitting a higher proportion of red than in said one of the three pairs so that it matches its yellow patch only for people with anomalous vision with a degree of red deficiency and the third one of said three other patches, namely, the other patch in the third one of the three pairs, transmitting a higher proportion of green than in said one of the three pairs so that it matches its yellow patch only for people with anomalous vision with a degree of green deficiency.



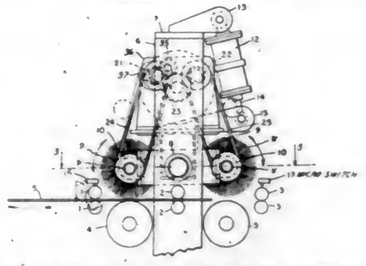
2,453,336
PERISCOPE LENS SYSTEM
William Donald Orser, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application March 31, 1945, Serial No. 585,861
5 Claims. (Cl. 88—57)

1. A periscope lens system comprising an objective, a positive field lens, two relay lenses, and an eyepiece, in which the two relay lenses are optically symmetrical with respect to the field lens whereby the lateral aberrations of this part of the system are corrected, each relay lens consisting of two halves separated by an airspace, and each half having a convergent effect, characterized by each relay lens in itself being unsymmetrical and having easily perceptible transverse aberrations, and by the system being convertible in that the inner halves of the two relay lenses are removable along with the field lens therebetween and the remaining two sections of the system are conjoinable to form a corrected periscope system of shorter length, and further characterized in that the outer halves of the two relay lenses each consists of an inner biconcave component and an outer biconvex component spaced apart by between $0.02f$ and $0.5f$ where f is the focal length of the half, the radius of curvature of that surface of each biconcave component which faces the biconvex component being between 0.08 and 0.50 times that of the other surface of the biconcave component.



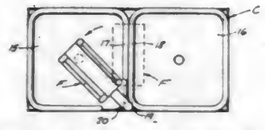
2,453,337
WIRE STITCHING FEED
Joseph N. Pagliarul, Milwaukee, Wis.; Enez Pagliarul Kowalsky (Enez Kowalsky), executrix of Joseph N. Pagliarul, deceased, assignor to Inland Wire Products Company, Chicago, Ill., a corporation of Illinois
Application September 4, 1944, Serial No. 552,645
6 Claims. (Cl. 140—131)

1. An apparatus for intermittently feeding wire embodying a pair of positively driven feed rollers, a feed segment pivotally mounted adjacent the periphery of one roller, said feed segment having an outwardly projecting gripping portion and an inwardly offset portion which limits the length of feed of the wire, a rotatively adjustable gage disc mounted on the other roller, a feed segment integral with said disc and extending adjacent a



peripheral portion of its roller, means for resiliently urging the gripping portion of the first-mentioned feed segment toward the other feed segment, and adjustable means carried by the first-mentioned roller and contacting the pivotally mounted feed segment for limiting the yielding pivotal movement of said feed segment.

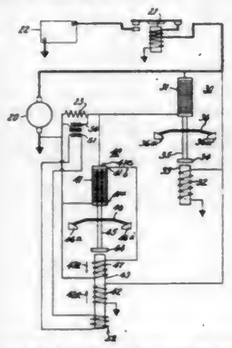
2,453,338
APPARATUS FOR INSPECTING SHEET MATERIAL
Theodore P. Pajak, Baltimore, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application November 9, 1945, Serial No. 627,564
3 Claims. (Cl. 73—37)



1. An inspection instrument for laminated materials comprising a cup-like member to be placed with its open side against a sheet of laminar material, said cup-like member having a transparent wall opposite said open side, a dial indicator mounted on said member so that the dial may be viewed through said transparent wall, the measuring foot of said indicator being located in the plane of the open side of said cup-shaped member, a vacuum line in communication with said member to continuously exhaust the interior of said member and a vacuum control valve mounted in the wall of said member to control the pressure within said member.

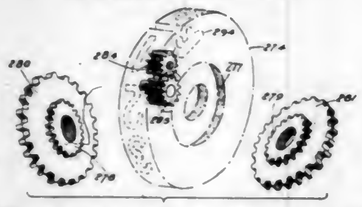
2,453,339
SHEET BRUSHING APPARATUS
Ruben O. Peterson, University Heights, Ohio, assignor to The Osborn Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application September 27, 1944, Serial No. 555,919
7 Claims. (Cl. 15—77)

1. In sheet cleaning and polishing mechanism, the combination of means for supporting and feeding individual sheets edgewise, two rotary cylindrical brushes adapted to contact the surface of a sheet thus supported and fed, means adapted to bring said brushes alternately into contact with the sheet, means adapted to rotate the brush, wherewith the sheet first engages, in the direction of sheet travel, means adapted to rotate the other brush in the opposite direction, and means actuated by movement of the advancing sheet operative to time the operation of said means adapted to bring said brushes alternately into contact with the sheet.



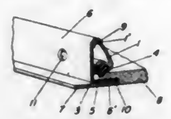
2,453,340
WRINGER AND WASH TUBS UNIT
Donato J. Porreca, Philadelphia, Pa.
Application November 9, 1943, Serial No. 509,534
4 Claims. (Cl. 68—22)

1. In combination, a pair of abutting tub structures, a wringer mounting receiving recess at one end of the line of abutment of said tub structures and extending on each side thereof a wringer mounting column arranged in said recess with its vertical axis substantially intersecting said line of abutment, a wringer structure mounted on said mounting structure, a notch in the wall of one of said tub structures adjacent said recess, said mounting being adapted to carry said wringer into alignment with said line of abutment and the wall of one of said tub structures transverse to said line of abutment and into an intermediate position where a portion of said mounting structure may be received in said notch to confine said wringer within the marginal and vertical dimensions of one of said tub structures.



2,453,341
SYSTEM OF GENERATOR REGULATION
William J. Rady, Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 26, 1944, Serial No. 555,882
6 Claims. (Cl. 322—19)

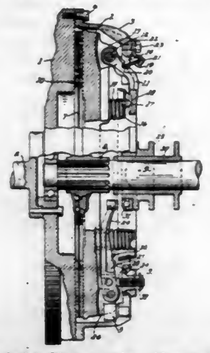
1. A system of regulation for a variable speed generator having an armature and comprising a generator shunt field winding and a variable resistance unit connected in parallel, one end of the parallel circuit being connected with one terminal of the armature, a carbon pile connected with the other terminal of the armature and with the other end of the parallel circuit, a spring normally biasing the carbon pile into low resistance status, an electromagnet opposing said spring and having a magnet coil responsive to generator voltage and tending to increase the resistance of



the carbon pile as generator voltage tends to increase whereby, as speed increases, the voltage drop across the carbon pile increases and the voltage drop across the ends of the parallel circuit tends to decrease, and means responsive to the decrease in voltage drop across the ends of the parallel circuit for causing decrease in the resistance of the variable resistance unit whereby, as speed increases, current in the variable resistance increases and current in the shunt field winding decreases.

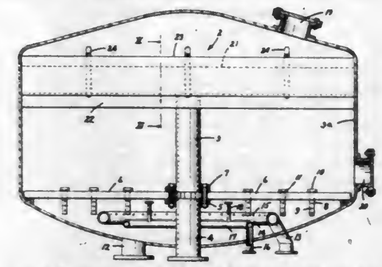
2,453,342
TOTALIZING MECHANISM
Frederick Q. Rast, Chicago, Ill., assignor to Commercial Controls Corporation, a corporation of Delaware
Original application April 15, 1944, Serial No. 531,232. Divided and this application February 24, 1945, Serial No. 579,549
2 Claims. (Cl. 235—91)

1. In totalizing mechanism, in combination, an indicator wheel rotatably mounted on a shaft, said indicator wheel having digits from 0 to 9 on its periphery, a pair of differential pinions rotatably mounted on said wheel in meshing relation with respect to each other, a pair of sun gears of the same size rotatably mounted on said shaft, each of said sun gears meshing with one of said differential pinions, separate gear means of the same size for driving each of said sun gears in the same direction, each of said gear means being adapted to feed units into its sun gear, all units fed into said sun gears being equivalent in the amount of movement produced in a sun gear, whereby said sun gears acting through said differential pinions cause said indicator wheel to rotate an amount equal to the sum of all units fed into it from both sun gears, and tens transfer means actuated by said indicator wheel for registering accumulated tens.



2,453,343
RETAINER STRIP
Mason J. Reilly, Baltimore, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application July 19, 1944, Serial No. 545,563
2 Claims. (Cl. 189—78)

1. In combination in a window structure, a wall member having an aperture formed therein, a closure panel positioned over said aperture, a channel extending around said aperture having a continuous recess formed with an upstanding free edge and a back wall disposed outwardly of said free edge, an inner flange placed at right angles to said back wall and extending inwardly of the edge of said panel to form a seat therefor with a sealing gasket spaced between the panel and said inner flange, a resilient gasket circular in cross section in engagement with the surface and edge of said panel, a thermoplastic retainer strip in engagement under compression between said free edge of the channel and said resilient gasket, said retainer strip being formed with one edge curved to conform with the curvature of the said upstanding free edge of the channel and the opposite edge positioned inwardly of the channel to engage the channel back wall with the strip area disposed inwardly of said last mentioned edge shaped to provide a semi-circular groove embracing the resilient gasket whereby said resilient gasket is worked around the panel edge co-incident with pivotal movement of the strip as the curved edge thereof is latched under said upstanding edge of the channel to secure the panel in place.



2,453,344
FRICTION CLUTCH OPERATING MECHANISM
Robert S. Root, Syracuse, N. Y., assignor to Lipe-Rollway Corporation, Syracuse, N. Y., a corporation of New York
Application June 19, 1947, Serial No. 755,701
4 Claims. (Cl. 192—99)

1. An engaging and release mechanism for clutches of the type including driving and driven members in which the driving member includes a body, an axially movable pressure ring and a back plate, and the driven member includes a plate extending between the body and the pressure ring, said mechanism including a lever pivoted to the pressure ring on the outer rear side thereof and extending radially inward therefrom, loaded spring means thrusting in opposite directions against the pressure ring and the inner end portion of the lever, and a fulcrum member for the lever, the lever being formed with an open socket between its ends on the rear side thereof for one end of the fulcrum member, and the back plate being provided with means formed with an open socket for receiving the other end of the fulcrum member, the fulcrum member and the lever forming a normally folded toggle movable

toward a straight line under the influence of the spring means to engage the clutch.

2,453,345
FILTERING APPARATUS
Stuart B. Row, Roanoke, Va., and Edward L. Woolley, Morton, Pa., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application June 28, 1945, Serial No. 602,054
11 Claims. (Cl. 210—144)

1. In a filter comprising a vessel having an inlet conduit and an outlet conduit, means for supporting a filter bed in the vessel, and means below the filter bed for introducing a fluid for backwashing upwardly through the bed, a launder construction comprising a walled receptacle in the vessel, means for supporting the receptacle above the filter bed, said receptacle being open for communication with the region therearound adjacent an upper level in the receptacle and an upper level in the vessel, said receptacle having an outlet conduit for discharge of backwashed material, sloped baffle means extending downwardly and outwardly from the receptacle, additional baffle means outside the receptacle and spaced therefrom having an upper rim above the level of communication of the receptacle with its surrounding region and a lower edge spaced above, and inwardly from the outer edge of, the sloped baffle means and below the level of communication between the receptacle and its surrounding region.

2. In a filter comprising a vessel having an inlet conduit and an outlet conduit means for supporting a filter bed in the vessel, and means below the filter bed for introducing a fluid for backwashing upwardly through the bed, a launder construction comprising a walled receptacle in the vessel, means for supporting the receptacle above the filter bed, said receptacle being open for communication with the region therearound adjacent

an upper level in the receptacle and an upper level in the vessel, said receptacle having an outlet conduit for discharge of backwashed material, sloped baffle means extending downwardly and outwardly from the receptacle, additional baffle means outside the receptacle and spaced therefrom having an upper rim above the level of communication of the receptacle with its surrounding region and a lower edge spaced above, and inwardly from the outer edge of, the sloped baffle means and below the level of communication between the receptacle and its surrounding region, and pressure relief means communicating with a region below the sloped baffle means and with a more elevated region outside the additional baffle means.

2,453,346

STABILIZATION OF PROCESSED PHOTOGRAPHIC EMULSIONS TO HIGH TEMPERATURES AND HUMIDITIES

Harold D. Russell, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application October 25, 1945, Serial No. 624,571

8 Claims. (Cl. 95—88)

1. A rapid process for the formation of an image in a hardened silver halide photographic layer which comprises exposing said layer, developing it with a silver halide developing agent and stabilizing it in the presence of a metal below silver and above osmium in the electromotive series, with a compound selected from the class consisting of compounds containing sulfur doubly bonded to a single carbon atom and SH linkages bonded to a carbon atom which does not react readily with metallic silver and which forms a light-inert silver complex by reaction with undeveloped silver halide, only until the silver halide has been substantially completely converted to a complex by reaction with said compound, leaving said complex in said layer and drying said stabilized image without any further treatment.

2,453,347

STABILIZATION OF PHOTOGRAPHIC PRINTS WITH THIOPHENOLS

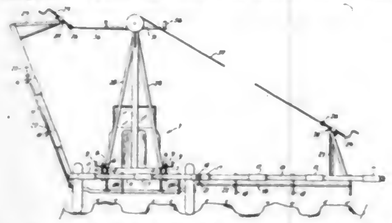
Harold D. Russell, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application November 30, 1946, Serial No. 713,383

5 Claims. (Cl. 95—88)

1. A rapid process for the formation of an image in a hardened silver halide photographic layer which comprises exposing said layer, developing it with a silver halide developing agent to form a silver image and immediately thereafter stabilizing it by treatment with a solution of a thiophenol only until the silver halide has been substantially completely converted to a complex with said thiophenol, leaving said complex in said layer and drying said stabilized image without any further treatment.

2,453,348



ROW-CROP CARRYALL

Ellis H. Spiegl and Ralph A. Spiegl, Salinas, Calif.

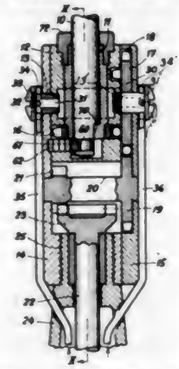
Application May 14, 1945, Serial No. 593,740

9 Claims. (Cl. 296—65)

1. A carry all of the character described comprising: a chassis; front and rear seat racks transversely mounted on said chassis, each of said racks including a main section arranged to assume a horizontal position and a lateral section arranged to assume either a horizontal position

or a substantially vertical position; and transversely spaced seats mounted on said front and rear racks, the seats of said front rack being staggered with respect to the seats of said rear rack.

2,453,349



DRILLING APPLIANCE

Oskar Stalder, Thun, Hunibach, Switzerland, assignor to Fried. Schenk's Wwe. Stadtmuhle Bern, Bern, Switzerland, a firm

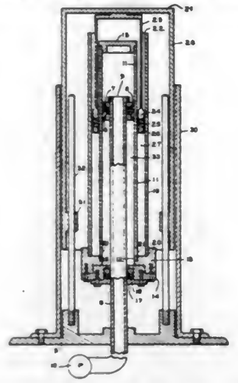
Application October 16, 1946, Serial No. 703,608

In Switzerland October 19, 1945

5 Claims. (Cl. 32—58)

1. In a drilling appliance, in particular for dental work, a case, a swivel drill-stock rotatably mounted on said case, a rotatable collet contained in said swivel drill-stock, a drill held in said rotatable collet, a first toothed wheel mounted on said rotatable collet on that side of the swivelling axis of said swivel drill-stock which lies opposite to the cutting end of said drill, a second toothed wheel mounted on said case to revolve about the swivelling axis of said swivel drill-stock, in driving connection with said first toothed wheel, a live spindle, and an intermediate gear mounted on said case and provided with two toothed rims, the one rim meshing with said second toothed wheel, and the other rim being in driving connection with said live spindle.

2,453,350



HYDRAULIC TELESCOPING LIFTING JACK

Raymond F. E. Stegeman, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York

Application August 11, 1945, Serial No. 610,324

6 Claims. (Cl. 121—46)

1. A lifting jack comprising a base, telescoping inner and outer cylinders, means movably supporting said cylinders on said base, said outer cylinder having a connection with said inner cylinder for movement thereby, means movable in said outer cylinder in response to pressure therein, fluid pressure responsive means for moving said

inner cylinder, and fluid pressure generating means actuated by said inner cylinder and having a fluid medium communicating with said outer cylinder for moving said pressure responsive means.

2,453,351

COMPOSITION FOR INHIBITING FOAM

Henry E. Tremain and Leslie R. Bacon, Wyandotte, Mich., assignors to Wyandotte Chemicals Corporation, Wyandotte, Mich., a corporation of Michigan

No Drawing. Application July 26, 1945, Serial No. 607,275

3 Claims. (Cl. 252—321)

3. A composition for suppressing the formation of foam in aqueous systems, consisting essentially of a compound selected from the group consisting of di-tertiary amyl phenoxyethanol, p-tertiary amyl phenoxyethanol, di-tertiary amyl phenoxypropanol, and di-tertiary amyl phenoxy isopropanol; and 50 to 90% by weight anhydrous sodium carbonate, the resultant composition retaining essentially the dry, solid form physical appearance of the sodium carbonate itself.

2,453,352

COMPOSITION FOR INHIBITING FOAM

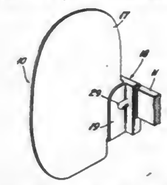
Henry E. Tremain and Leslie R. Bacon, Wyandotte, Mich., assignors to Wyandotte Chemicals Corporation, Wyandotte, Mich., a corporation of Michigan

No Drawing. Application July 26, 1945, Serial No. 607,276

2 Claims. (Cl. 252—321)

1. A composition for suppressing the formation of foam in aqueous systems consisting of, by weight, 20 to 40% di-tertiary amyl phenoxyethanol, 35 to 50% 2-methyl-2, 4-pentanediol, 10 to 40% water and 4 to 10% of a sodium petroleum sulfonate.

2,453,353



SEPARATOR SHIELD

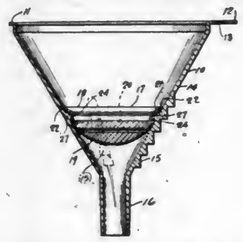
Richard K. Whitehead, Atlanta, Ga.

Application June 3, 1947, Serial No. 752,089

3 Claims. (Cl. 57—108)

1. In a separator shield for spinning frames and the like, a separator plate of sheet material, said plate having an anchoring means, a hub formed integrally and in one piece with said separator plate and embracing said anchoring means and

both sides of said plates adjacent said anchoring means, said hub having a part to be secured to a support.



2,453,354

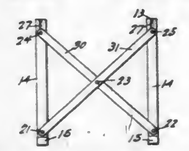
CULINARY UTENSIL

William C. P. Zabel and Richard C. Helfenbein, Chicago, Ill., assignors to Plasmetl Corporation, Chicago, Ill., a corporation of Illinois

Application December 7, 1945, Serial No. 633,454

1 Claim. (Cl. 210—155)

A utensil of the class described comprising a body having at predetermined points upon the interior wall thereof in a horizontal plane with respect to each other a plurality of latching lugs, a strainer having a peripheral flange portion tapered upwardly and outwardly and an intermediate horizontal wall portion providing an outer surface transversely concave, said lugs having convex surfaces adapted to snap into said concave surface of said horizontal wall portion when said strainer is pressed into said body, the bottom wall of said strainer extending from the lower peripheral portion of said strainer.

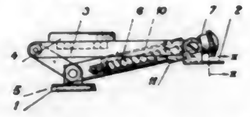


2,453,355

PAINTER'S EASEL ATTACHMENT FOR LADDERS

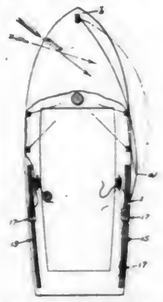
James L. Arnold, Oakland, Calif.

Application July 15, 1947, Serial No. 761,131



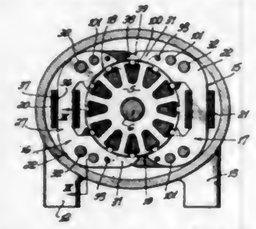
2 Claims. (Cl. 248—210)

1. An easel attachment for ladders having steps, comprising; two members each comprising a flat bar bent into a hook at one end to engage the underside and back of a step, and intermediately bent down to engage the front of the step and with the bent down portion terminating in a supporting hook at a distance equal to the spanning distance across two steps of the ladder for support of the dependent hook against rearward thrust, and bracing for coupling the two members



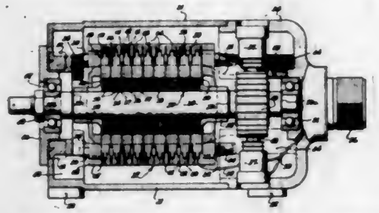
together to provide a unitary structure and comprising cross-bracing collapsible and expandible at will and including two members intermediately pivoted together and forming four legs, with two of said legs pivoted to the lower ends of the respective bent-down portions and the other legs including means releasably engageable with means at the upper ends of said bent-down portions.

2,453,356
HATCHING DEVICE
Georges Baer, Paudex-Lausanne, Switzerland
Application June 27, 1946, Serial No. 679,699
In Switzerland January 30, 1946
1 Claim. (Cl. 33—110)



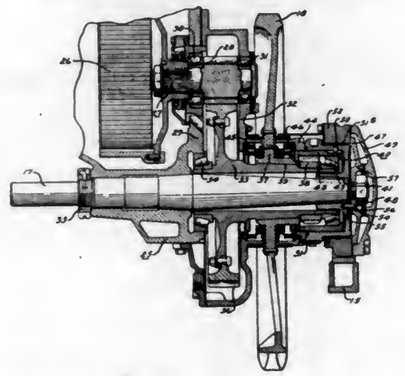
A hatching device for controlling the motion of a rule parallel to itself by equal successive displacements, comprising in combination a movable foot adapted to adhere by friction on the surface of a drawing, a removable support rigidly adaptable on the rule, an extensible arm linking said movable foot with said support, means for shortening said extensible arm by any predetermined amount by pressure thereon, said extensible arm comprising a threaded shaft slidable through said removable support and screwed by its one end in a sleeve hingedly carried by said foot and by its other end in a nut with micrometric scale, said nut acting on the one hand as rest abutment maintaining said arm in its extended position under the action of a spiral spring wound on said shaft, and enabling on the other hand, by suitable rotation, modifying the length of said arm to adjust the run of said movable foot and consequently the rule.

2,453,357
SHEAVE BLOCK WITH SELF-LOCKING TRACK SLIDE
Robert Y. Barkley, Weems, Va.
Application December 26, 1947, Serial No. 793,977
10 Claims. (Cl. 114—111)



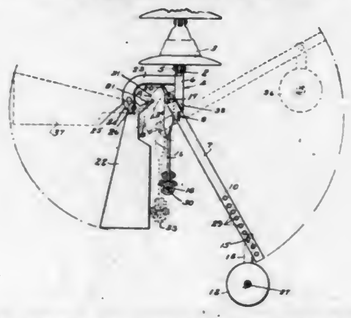
9. Combined sheave block and locking track slide comprising a track slide having a base with side panels adapted to slidably embrace the lateral flanges of a track, an upstanding support on said base, a jam arm intermediately pivoted on said support, the length of the lower portion of said jam arm from its pivotal axis to its lower end being slightly greater than the perpendicular distance from said axis to the upper face of a track embraced by said track slide, whereby said jam arm is inclined forwardly in a downward direction when resting on said track, said base having an opening permitting contact of said jam arm with said track, an eye bolt extending longitudinally of said track slide swivelly secured to the upper part of said jam arm extending forwardly thereof, a sheave block tethered in the eye of said eye bolt, said sheave block comprising an arcuate bight portion slidable through the eye of said eye bolt and stops at the ends of said bight portion limiting the range of sliding movement of said sheave block relative to said eye bolt.

2,453,358
ELECTRIC MOTOR
Alex Bertea, Pasadena, Calif.
Application March 7, 1945, Serial No. 581,420
4 Claims. (Cl. 172—36)



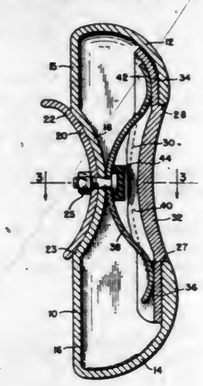
1. In an electric motor, a field structure comprising a first plurality of laminations having an asymmetrical C-shape, the legs of said C-shape terminating in arcuate portions of given lengths all lying on the surface of a circular cylinder, a second plurality of laminations having an asymmetrical C-shape, the legs of said C-shape terminating in arcuate portions of lengths different from the given lengths of the first plurality and all lying on the surface of said circular cylinder, said first and second pluralities of laminations being arranged to define a plurality of circumferentially extending teeth spaced along the axial edges of said arcuate portions.

2,453,359
ELECTRIC MOTOR
Alex Bertea, Altadena, Calif.
Application July 23, 1946, Serial No. 685,588
1 Claim. (Cl. 172—36)



An electric motor comprising, an armature adapted to rotate about an axis and having projecting leaves that are formed in axially extending rows on the circumference thereof and that are axially spaced along the armature, and a field winding of two general C-shaped magnets disposed tip-to-tip and having windings about the central part of the C-shapes and having leaves projecting from the pole faces thereof to fit between the projecting leaves of the armature, characterized by the edges of the field leaves adjacent to the windings being differently contoured to provide pole face edges having a pre-selected flux density pattern.

2,453,360
BEARING MOUNTING FOR DRIVE SPROCKETS OF TRACK TYPE TRACTORS
George E. Burks, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application June 20, 1945, Serial No. 600,530
6 Claims. (Cl. 180—9.1)

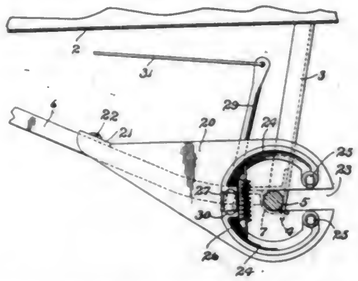


6. In drive mechanism for a tractor having a housing and a truck frame, a shaft positioned between the housing and the truck frame, means providing a pivotal support for the frame about the shaft, a driving unit including a quill surrounding the shaft and a sprocket on the quill, a bearing for one end of the quill between the quill and the housing, and a second bearing for the other end of the quill between the quill and said pivotal support, said pivotal support providing an outer surface for pivotal contact with said truck frame, a recess for receiving said second bearing in substantial radial alignment with said pivotal contact surface, and a central inner portion for receiving the shaft.

2,453,361
ELECTRIC LINE DEICER
Clyde H. Clement, Phoenix, Ariz.
Application March 27, 1946, Serial No. 657,392
3 Claims. (Cl. 174—40)

1. A deicer for electrical lines comprising a frame adapted to attachment to a pole insulator having a vertical member and an outwardly extending member, a beam pivotally mounted on said vertical member, having a counter weight on its outer end and a depending link on its inner end, a line wire clamp attached to the lower end of said link, and a hammer pivotally mounted on said outwardly extending frame member in an outwardly and upwardly extending slot therein, a trip prong extending radially from the axis of said hammer support, a trip loop carried on the inner end of said beam adapted to engage said hammer prong during a portion of its downward arcuate travel whereby said hammer is raised and released at the limit of said travel so that said hammer will fall and strike said line wire clamp; said hammer being supported so as to move out of the way of said trip during its upward arcuate swing.

2,453,362
NONINTERLOCKING BUMPER GUARD
Harvey R. Connor, Seattle, Wash.
Application October 11, 1947, Serial No. 779,389
4 Claims. (Cl. 293—67)

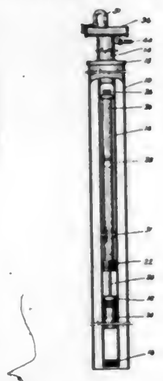


1. A non-interlocking bumper guard designed for attachment to the front or rear bumper of an automobile, consisting of: a housing member having an interior cavity and an outer shell, said outer shell being deformed to engage the surface of a meeting car bumper; means for securing said housing to the car bumper; a curved upper housing portion; a curved lower housing portion; each of said upper and lower housing portions having a horizontal bearing surface on their inwardly directed ends; vertically disposed cuts in said housing adapted to provide bearing surfaces and to form with the surfaces of the upper and lower housing members an opening into the interior of said hollow bumper guard; an insert member adapted for movement within said opening; upper and lower stop portions formed as continuations of said insert; resilient means disposed to urge said insert outwardly of said housing member; and cushioning means disposed to limit the inward displacement of said insert.

2,453,363
BRAKE FOR WAGONS
Thomas I. Duffy, Grand Haven, Mich., assignor to Anderson-Bolling Mfg. Co., Grand Haven, Mich., a corporation of Michigan
Application February 28, 1945, Serial No. 580,139
5 Claims. (Cl. 188—2)

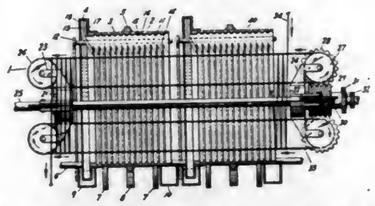
1. In a wagon construction, a body, a horizontal rear axle located below and transversely

of the body, supporting means at the lower end of which said axle is carried and the upper end of which is secured to the bottom of the body, a wheel at each end of the axle rotatably mounted thereon, a brake drum at the inner side of each wheel, a brace connected to the lower end of the support, one at each side thereof, extending forwardly and upwardly to and secured to the under side of said body, a plate connected to each brace and extending



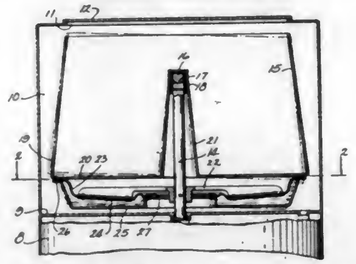
rearwardly across the open inner side of its associated brake drum, said plate being horizontally slotted from its rear end inwardly a distance for the passage of said axle, brake shoes movably mounted one above and one below the slot on each of said plates, said brake shoes on a plate entering an associated brake drum, means normally tending to move said brake shoes toward each other, and means pivotally mounted on each plate and operatively connected with said brake shoes for moving them into friction engagement with their associated drums.

2,453,364
PROTECTING ATTACHMENT FOR HAIR DRIERS
Margo S. Fears, Norfolk, Va., assignor to Alice H. Grabb, Monticello, Ill.
Application October 10, 1946, Serial No. 702,447
1 Claim. (Cl. 34—90)



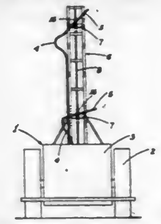
A protecting device of the character described comprising an annulus formed of a single thickness of a thin flexible waterproof material, means about the upper edge of the annulus for binding the material of said annulus about the lower end of a hair drying machine, a band about the lower edge of the annulus dimensioned to engage snugly about the forehead and head of a person whose hair is to be dried, an elastic drawing means in the last named band, the fullness of the flexible waterproof material between the upper and the lower edges of the annulus being such that the material may be bowed outwardly, and a plurality of spaced elongated spouts carried directly by and supported wholly by the single wall of the annulus, which spouts open into and discharge moist air from the space within the annulus and said spouts being of such length and being so directed radially outward and being of such rigidity as to discharge the said hot moist air at a point remote from the face of the user.

2,453,365
RODLESS PUMP
Ralph C. Ferguson, Hollydale, Calif.
Application November 23, 1945, Serial No. 630,164
11 Claims. (Cl. 103—46)



1. A pump including: a length of outer tube closed at its upper and lower ends and adapted to be positioned within a well; a valve arranged in the closed lower end of said tubing for admitting gas under pressure sufficient to balance the static pressure of the liquid in the well and forming a pneumatic cushion; a length of tube positioned within and spaced from said outer tube; means supporting the inner tube within the outer tube, said means being formed to enable fluid to pass from within said outer tube above said inner tube between the inner and outer tubes, and to below said inner tube; a non-return valve at the upper end of said inner tube; a sealing gland at the lower end of said inner tube; a piston rod arranged within and spaced from the wall of said inner tube and extending downwardly through said gland; a piston carried at the upper end of said piston rod and sliding in said inner tube; one-way valve means carried by said piston to permit fluid standing between the piston rod and inner tube to flow therethrough on downward movement of the piston rod; conduits arranged to lead liquid from the well through said outer and inner tubes into the space between said piston rod and the wall of the inner tube; a piston at the lower end of said piston rod sliding in said outer tube; and means for applying pressure to the upper end of the fluid column standing in said outer tube to force said piston rod downwardly against the resistance of the pneumatic cushion and to relieve said pressure to enable the compressed air of said pneumatic cushion to discharge fluid carried above the upper piston head from said outer tube and from the well.

2,453,366
METHOD AND APPARATUS FOR LIQUID TREATMENT OF YARN, THREAD, AND THE LIKE
William H. Furness, Haddonfield, N. J., assignor to American Rayon Company, Inc., Collingswood, N. J., a corporation of New Jersey
Application October 28, 1942, Serial No. 463,654
16 Claims. (Cl. 8—151.1)

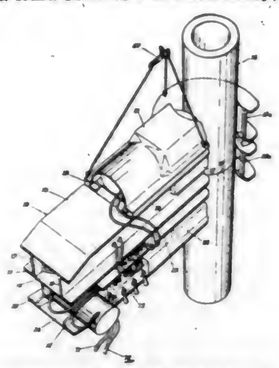


12. Method of treating yarn or the like while it is traveling in a given direction with a body of liquid which is progressively displaced in the opposite direction, which method comprises the steps of wetting a surface with fresh liquid, moving the surface to overlie the yarn, wiping entrained liquid from the surface, and dripping it upon a portion of the traveling yarn in a zone near the end of its travel; receiving the liquid draining from the yarn upon a second surface, moving said second surface to overlie the yarn, wiping entrained liquid from said second surface and dripping it upon another portion of the traveling yarn before such portion reaches the zone in which fresh liquid is applied.

2,453,367
SELF-BALANCING CENTRIFUGE
Mark A. Giblin, West Allis, Wis.
Application February 10, 1941, Serial No. 378,261
18 Claims. (Cl. 210—63)

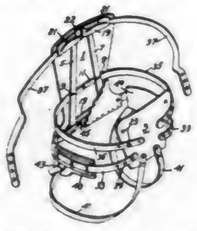
1. In a centrifuge system, the combination with a centrifuge drum, of a shaft provided with a coupling to said drum upon which said drum is universally yieldable respecting said shaft from a predetermined central position in response to unbalance, means for rotating said shaft at a predetermined rate, spring means biasing said drum toward said position and offering progressively increasing resistance to displacement from said position, whereby the displacement of said drum in response to centrifugal force acting on an unbalanced weight thereof will be substantially proportioned to the weight occasioning the unbalance and will occur in a plane including the axis of the drum and the location of said weight, and balancing means in operative connection with said drum and comprising a first element fixed with respect to said shaft, a second element disposed adjacent the first element and connected with the drum to move relative to the first element to an extent proportionate to the displacement of the drum, said second element being mounted for universal movement with the drum respecting the first element, said elements extending about the shaft, whereby the movement of the second element respecting the first element including components of movement axially of the shaft and opposite in direction at opposite sides of the shaft, weight means positioned by said elements and movable transversely of said shaft in a net value proportioned to the approach of the second element to the first on the side of said shaft at which said drum is weighted and the recession of the second element from the first on the opposite side of the shaft whereby the net shift of weight transversely of the shaft is proportioned to the amount of weight responsible for the unbalance of the drum, said first element comprising means for guiding and confining said weight means in the course of its movement transversely of the shaft whereby to balance the system.

2,453,368
SPRAY OPERATING MECHANISM
Alfred D. Goodwin, Manteca, Calif.
Application April 26, 1945, Serial No. 590,439
4 Claims. (Cl. 299—62)



1. A spray machine including an upstanding tower, a vertically adjustable supporting member on the tower, a horizontal rock shaft journaled on the supporting member, a nozzle secured transversely on the rock shaft, and power means operative to rock said shaft irrespective of the position of vertical adjustment of the supporting member; said power means including a driven vertical shaft mounted in connection with the tower, said driven shaft having a vertically slidable but relatively non-rotatable sleeve thereon, and a wobble plate unit connected between said sleeve and the rock shaft.

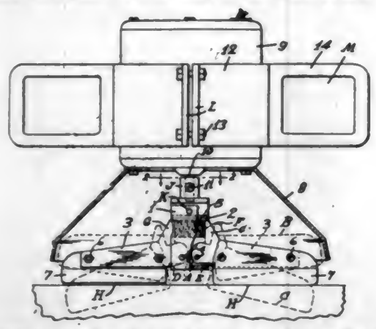
2,453,369
PIPE TONGS
Donovan B. Grable, Long Beach, and John M. Jackson, Santa Monica, Calif.
Application May 15, 1945, Serial No. 593,870
9 Claims. (Cl. 255—35)



9. A unitary pipe tongs assembly comprising upper and lower body sections having alined recesses providing openings through which the pipe may enter said recesses upon bodily movement of the tongs transversely of the pipe, each of said sections including a lever extending outwardly from the recess, interlocking elements on the respective sections maintaining said recesses in axial alinement for reception of the pipe and supporting one section by the other section while permitting relative oscillation of the sections about the pipe axis, pipe gripping means carried by each section, fluid pressure actuated power sources carried by said sections for operating said gripping means, fluid pressure actuated means carried by said assembly and connected to outer

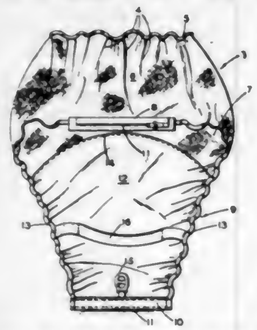
portions of said levers to effect said relative oscillation of the sections, a rotatable element carried by the tongs and engageable with the pipe to rotate same, a fluid motor for rotating said element, a fluid control valve assembly, and fluid

conduits connecting said valve assembly with said power sources, fluid pressure actuated means and fluid motor, said valve assembly being operable to selectively actuate said power sources, fluid pressure actuated means and fluid motor.



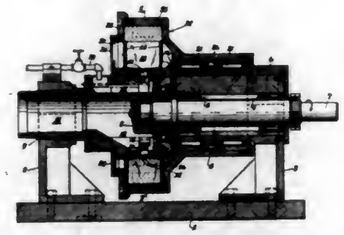
2,453,370
SURGICAL BRACE
Herman G. Hittenberger, Oakland, Calif.
Application September 16, 1946, Serial No. 697,287
12 Claims. (Cl. 128—78)

1. A brace comprising a posterior pad including a pair of vertically disposed strips, means pivotally connecting said strips at an intermediate location thereon to provide a fulcrum for each of said strips whereby to permit an approach of the lower ends of said strips toward each other in response to separation of the upper ends, means secured to the lower ends of said strips and capable of being fastened about the body of a patient, means for applying separation forces to the upper ends of said vertically disposed strips, and means responsive to the resulting pivotal movement of said vertical strips for locking the same against subsequent movement.



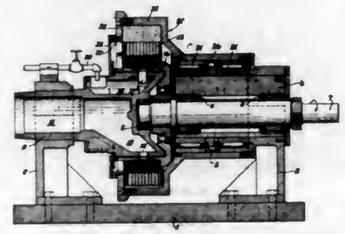
2,453,371
POWER ACTUATED ROTARY SCRAPING TOOL FOR MEAT BLOCKS
Elmer B. Hobson, Wichita, Kans.
Application August 30, 1946, Serial No. 693,864
2 Claims. (Cl. 144—2)

2. In a rotary scraping tool for meat blocks, a vertically positioned body element, said element being slotted transversely and having a transverse circular opening therethrough above and constituting a continuation of the slot, a pair of substantially horizontal blade carrying arms oppositely extending from the body in alignment with each other with their confronting ends engaging in the slot and rockably mounted in the body for separate and simultaneous movement of the arms as required for surfacing of a meat block, scraping blades carried by the arms, said blades obliquely extending from the arms with



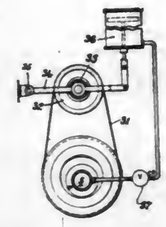
respect to cross section, a coil spring positioned in the circular opening, said arms having upright extensions over the ends of the spring as means to urge the arms downwardly, a portable electric motor and means to secure the motor's drive shaft to the upper end of the body element to rotate the same.

2,453,372
LADY'S UNDERGARMENT
Mary K. Janin, Port Credit, Ontario, Canada
Application July 16, 1947, Serial No. 761,350
5 Claims. (Cl. 2—224)



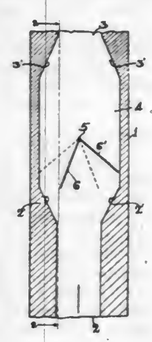
1. A panty or the like, comprising a front portion and a back portion constituting an endless body encircling structure gathered at its upper edge, an elastic band secured to said gathered edge and adapted to snugly embrace the waist of the wearer, one of said portions having a lower edge provided with a length of inelastic tape positioned between and spaced from the sides of the garment, the other portion being provided with a crotch flap extension having at its end a length of inelastic tape, means detachably connecting the lengths of inelastic tape to one another, limb encircling elastic tapes secured to the lower edge of one of said portions and to the side edges of the flap and extending from the end portions of the first-mentioned length of inelastic tape to the end portions of the second-mentioned length of inelastic tape, a liner of impervious sheet material lining the flap and secured to the opposite side edges and end of the flap, and means for detachably securing a sanitary napkin to the lined flap.

2,453,373
COMPRESSOR
Paul Kollsman, New York, N. Y.
Application August 28, 1944, Serial No. 551,509
19 Claims. (Cl. 230—79)



1. In a rotary, liquid piston machine, an exterior rotor having an annular portion for the reception of a compressing liquid, a compressing liquid in said portion, an interior rotor in said portion mounted on an axis eccentric to the axis of said exterior rotor and having a plurality of open pockets about the periphery thereof, the exterior surface of said interior rotor and the interior surface of said exterior rotor being substantially tangent at one point, means for driving said rotors to effect rotation thereof, openings in the bases of said pockets for the passage of gas therethrough, gas inlet and outlet ports for said openings, means providing for the passage of a small amount of compressing liquid through said openings at the end of the compression stroke to insure the complete evacuation of said pockets, and means for leading off any such passed liquid with the delivered gas.

2,453,374
COMPRESSOR
Paul Kollsman, New York, N. Y.
Application August 28, 1944, Serial No. 551,510
17 Claims. (Cl. 230—79)

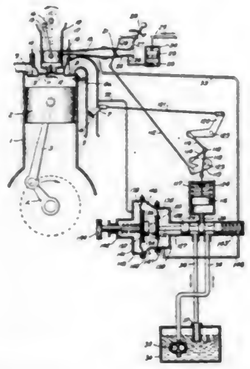


1. In a rotary, liquid piston machine, an exterior rotor having an annular portion for the reception of a compressing liquid, a compressing liquid in said portion, an interior rotor in said portion mounted on an axis eccentric to the axis of said exterior rotor and having a plurality of open chambers about the periphery thereof, gas inlet and outlet ports for said chambers, means for driving said rotors to effect rotation thereof, a discharge opening for each of said chambers in the base thereof adjacent to the trailing wall, and means for impeding the travel of the compressing liquid adjacent to the leading wall only of the chamber to provide for the expelling of all of the gas from the chamber before the compressing liquid seals the discharge opening.

2,453,375
COMPRESSOR
Paul Kollsman, New York, N. Y.
Application August 28, 1944, Serial No. 551,511
10 Claims. (Cl. 230—79)

1. In a rotary, liquid piston machine, an exterior rotor having an annular portion for the reception of a compressing liquid, a compressing liquid in said portion, an interior rotor in said portion mounted on an axis eccentric to the axis of said exterior rotor and having a plurality of open chambers about the periphery thereof, gas inlet and outlet ports for said chambers, means for driving said rotors to effect rotation thereof, and means for mechanically supporting said exterior rotor in its eccentric position and having rolling engagement with the exterior periphery of said rotor.

2,453,376
MEANS FOR MEASURING THE VELOCITY AND VOLUME OF FLUIDS
Francis H. Lagasse, San Francisco, Calif.
Application November 21, 1944, Serial No. 564,508
3 Claims. (Cl. 73—194)



1. In means for measuring the volume and velocity of fluids, a casing having an elongated chamber, a fluid inlet at one end and a fluid outlet at its opposite end, a rotatable shaft extending centrally across the chamber and arranged between the inlet and the outlet, an oscillatory member consisting of two angularly disposed blades arranged in converging relationship and secured at their converging ends to the shaft, the said blades being arranged to be actuated by the fluid passing through the chamber first in a direction where one blade engages with the side of the chamber and then in the opposite direction where the other blade engages the opposite side wall of the chamber.

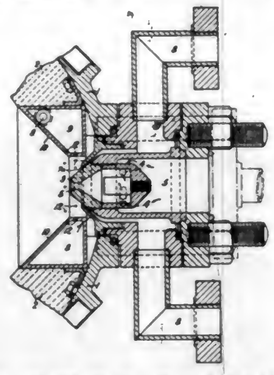
2,453,377

THROTTLE CONTROL FOR THE PRIMARY AND SECONDARY CHARGES OF ENGINES

René Lozivit, Paris, France, assignor to Societe d'Etudes de Carburation pour l'Automobile et l'Aviation "S. E. C. A. A.," Levallois-Perret, France

Application March 13, 1946, Serial No. 654,042
In France January 25, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires January 25, 1964
13 Claims. (Cl. 123—75)

1. In connection with an internal combustion engine, a feed device which comprises, in combination, conduit means for supplying a main air stream to said engine, means for forming a fuel and air mixture, means for injecting said mixture into said main air, valve means in said conduit means for controlling the flow rate of said main air stream therethrough, valve means for controlling the flow rate of said mixture from said mixture forming means to said mixture injecting means, and means differentially operative by the respective pressure drops across said two valve means for controlling at least one of said valve means to keep a constant ratio of said pressure drops.



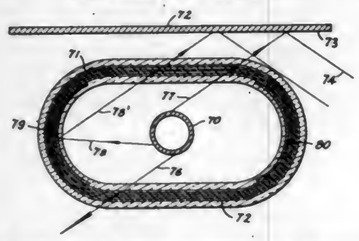
2,453,378

LIQUID-COOLED NOZZLE ARRANGEMENT FOR COMBUSTION CHAMBERS OF JET PROPULSION APPARATUS

Isaac Lubbock, Great St. Helens, London, England, assignor to The Asiatic Petroleum Company Limited, London, England

Application July 7, 1943, Serial No. 493,800
In Great Britain November 7, 1941
3 Claims. (Cl. 60—46)

1. In apparatus of the class described for burning a liquid fuel with a liquid oxidant in a combustion chamber, the combination of a central spraying nozzle for admitting the liquid fuel to said chamber, an outer nozzle for admitting liquid oxidant to said chamber, a jacket mounted within said chamber so as to surround a space in front of the nozzles and being of substantially triangular form in cross section so that the cooling surface is disposed substantially in the form of a cone, means for introducing the cooling medium tangentially at high velocity into an apex of the triangular cross sectional form of the jacket corresponding to the wider part of the cone so that the cooling medium in the jacket will rotate with a high velocity, orifices in the narrow part of the cone being provided for the passage out of the jacket of a predetermined amount of cooling medium to enter the combustion



chamber in the region of the nozzle and to intermingle at that point with the flame products.

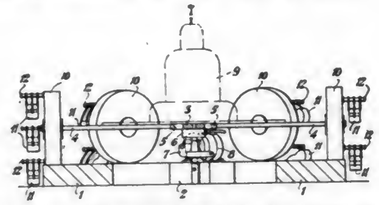
2,453,379

MULTIPLY ANGLE SELECTIVE POLARIZER

Alvin M. Marks, New York, N. Y.

Application September 28, 1943, Serial No. 504,105
3 Claims. (Cl. 88—65)

1. A polarizing device comprising a multiplicity of thin transparent layers separated from one another by areas having abruptly different indices of refraction, said multiplicity of thin transparent layers being shaped substantially in the form of an oval having substantially parallel long sides, at least one light source positioned within said oval, the ends of said oval having internally reflecting surfaces positioned to direct light into said long sides so that polarized light is transmitted only though the long and substantially parallel sides.



2,453,380

VEHICULAR AMUSEMENT APPARATUS

Henry James Newman, Greenford, and Ernest Frederick Johnson, Southend-on-Sea, England

Application November 17, 1944, Serial No. 563,846
In Great Britain December 9, 1943
5 Claims. (Cl. 272—36)

1. Amusement apparatus comprising an annular track, a series of radiating arms mounted for rotation about the center of the track, a wheel mounted to rotate at the end of each arm, said wheel comprising a pair of strong skeleton metal frames having radial members connected to hub plates and also to peripheral connecting bars, cross-members and diagonal bracing members connecting the two side frames, brackets on some of the radial members, shafts for suspending passenger carriages engaging in these brackets and projecting laterally from the side of the wheel, and a relatively narrow rim supported by cross-members of the wheel structure and

adapted to roll on the track, and passenger carriages suspended from said shafts.

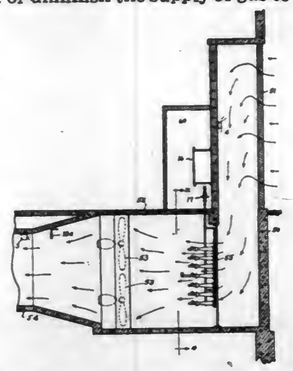
2,453,381

FISH STRINGER RETAINER

Kenneth L. Orton, St. Paul, Minn.

Application April 27, 1945, Serial No. 590,534
4 Claims. (Cl. 224—7)

1. In a fish stringer, an elongated flexible stringer element having a needle on an end thereof, a socketed member for removably receiving said needle on said stringer element, a catch mounted on said socketed member and movable into said socketed member transversely of the latter to engage said needle, and a spring device exerting a force outwardly from said socketed member and so connected to said catch device as to yieldably urge said catch device into said socketed member and into engagement with said needle to suspend and support said stringer element.



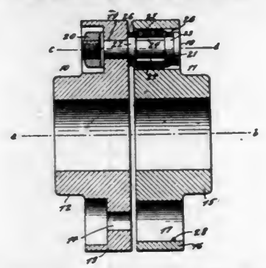
2,453,382

HEATING AND VENTILATING APPARATUS

Herman A. Pietsch, Greentree, Pa., assignor to Dravo Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

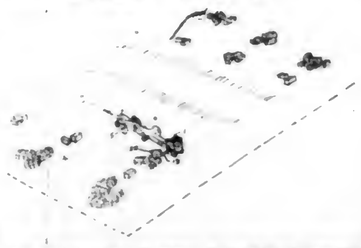
Application May 12, 1942, Serial No. 442,615
1 Claim. (Cl. 236—1)

In a direct-fired heater system where gas fuel is burned in a duct through which air to be heated is circulated, the combination with a duct and means for circulating a current of air through the duct, of a plurality of gas burners in the duct, a common gas supply line and manifold for all of the burners, a modulating valve means in the supply line operable to gradually increase and diminish the supply of gas to the burners, a separate valve between each burner and the manifold for individually controlling each burner, means for progressively opening or closing the last-named valves in predetermined order to selectively vary the number of burners in operation, and means for operating the modulating valve to gradually increase or diminish the supply of gas to the burners then in operation whereby the temperature of the air being heated may be modified through a substantially uniform gradient as burners are progressively rendered operative or inoperative.



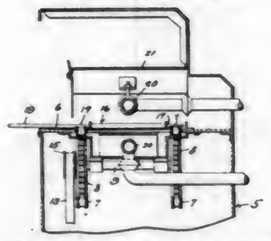
2,453,383

FLEXIBLE COUPLING



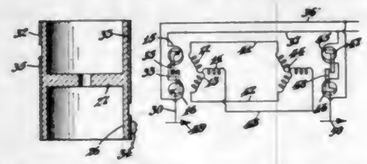
Gilbert Rathman, Union, N. J.

Application September 4, 1943, Serial No. 501,210
11 Claims. (Cl. 64—15)



1. A flexible coupling including two rotors mounted for rotary movement each about its own axis and organized to have relative axial movement to and from an interdriving relation, one of the rotors provided with a driver projecting therefrom and the other provided with a socket for receiving the driver and acting to drive one rotor from the other, said driver including a pin-like support projecting from its associated rotor and provided at its outer end with a stop collar, said support provided adjacent the stop collar and adjacent its associated rotor with a pair of cylindrical bearings and providing therebetween a waist-forming portion having a diameter less than the diameter of the bearings to provide within the axially projected outline of the bearings an annular clearance space, a coiled spring of barrel-like form held in place under axially directed tension, having its opposite ends at all times snugly encircling the bearings, having its midlength portion of maximum diameter distorted from its original configuration radially inward toward said clearance when the driver is intruded into the socket, and the turns of said spring being of different cross sectional area of material considered axially of the spring at the end turns engaging the bearings than at the turns therebetween which encircle the clearance.

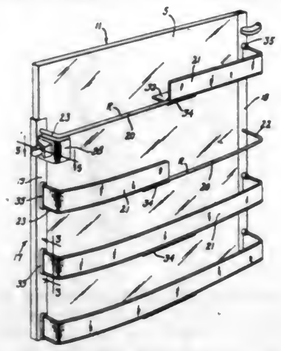
2,453,384
AUTOMATIC WINDROWER FOR BALERS
Harm L. Renken, Pleasant Plains, Ill., assignor of one-fourth to Kenneth Stringfield, Pleasant Plains, Ill.
Application August 17, 1945, Serial No. 610,907
1 Claim. (Cl. 214—65)



An automatic windrower for balers comprising a portably mounted bale receiving hopper; means for detachably securing said hopper to the rear terminal of a "pick up" baler; said hopper being provided with an elevated platform for receiving bales from said baler terminal and having a downwardly and rearwardly sloping bottom wall, side walls and a rear terminal gate, the latter hanging from a hinged support at its top, a locking pin fixed centrally on the bottom free end of said gate and a trigger hook mounted on said hopper frame for automatic engagement and disengagement with said pin, a dumping lever pivoted to the forward bottom portion of said hopper frame and having a short end controllably connected with said trigger hook and a long end extending substantially outward from the side of said hopper, said long end having a terminal portion hinged for rearward swing, spring means for urging said terminal section to a straight position, a pivoted lever hook adjacent the short end of said dumping lever for optionally stopping said dumping lever from functioning to release said trigger hook from holding said rear dumping gate, a remote control connection extending from said trigger hook lever to a position adjacent a tractor drive position when pulling a baler with said automatic windrower behind the baler, and a second remote control means establishing connection between said lever hook and said tractor driver's position for optionally holding said dumping lever from functioning to dump bales from said hopper, when desired.

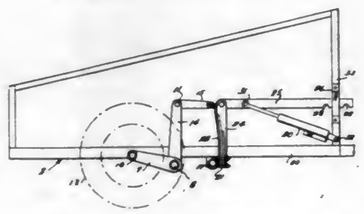
2,453,385
HAMBURGER GRILL
Charles C. Rone, Lakeland, Fla., assignor to Roll-On Grill, Inc., a corporation of Florida
Application May 29, 1946, Serial No. 673,045
1 Claim. (Cl. 99—423)

A grill of the class described, comprising the combination with a conveyor embodying spaced parallel chains including links having inwardly curved edges, the upper run of the conveyor passing between burners, of a plurality of trays, each tray embodying substantially U-shaped members providing spaced arms, a pan connected with the arms, portions of the arms extending beyond the front and rear edges of the pan adapted to rest on the curved edges of the links of the conveyor chain normally holding the trays against movement with respect to the conveyor, and said arms providing a handle extending beyond the front of the grill, by means of which the trays are removed from the conveyor and placed thereon.



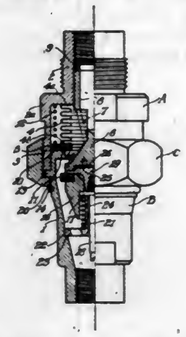
2,453,386
REMOTE CONTROL SYSTEM
John J. Root, New York, N. Y.
Application July 25, 1945, Serial No. 606,893
9 Claims. (Cl. 318—24)

3. A remote indicating system comprising substantially identical transmitter and receiver instruments, each of said instruments including single phase, stationary rotor windings and polyphase, stationary stator windings, said stator windings being interconnected in a normally balanced relationship so as to transmit voltage variations from the transmitter stator to the receiver stator in response to a changed condition at said transmitter stator which unbalances the system, a cylindrical rotor for each transmitter and receiver, a pair of separated elements of magnetic material on each rotor, each element of said pair adapted to be oppositely polarized by alternating current flowing in the respective stator and rotor windings, means to introduce an alternating current to each of said rotor windings whereby the flux characteristics generated at the transmitter will be reproduced at the receiver stator winding so as to act upon the receiver rotor winding, each of said rotors being rotatable in respect to its associated stator winding so as to vary the angular disposition of said magnetic elements, said action of said reproduced flux characteristics serving to rotate said receiver rotor until the angular disposition of its magnetic elements restores the balance of the system, both said elements having one pole or terminal at respectively opposite ends of the rotor and the other pole or terminal extended inwardly in respect to said rotor so as to be at approximately a mid-point on the periphery of said rotor.



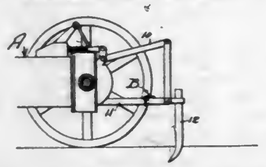
2,453,387
ARTICLE SUPPORTING CLOSURE FOR CABINETS
Theodore W. Rundell, Abington, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application January 4, 1947, Serial No. 720,283
6 Claims. (Cl. 312—186)

4. In a door construction for use in refrigerators and like apparatus: a pair of horizontally spaced vertically extending framing elements, one of said elements being adapted for hinged securement to a cabinet; and a generally U-shaped torque-resistant member interconnecting said framing elements and strengthening the same as against relative movement in the plane of said elements and as against warping movements out of said plane, said member comprising an elongated horizontally extending central section spanning the distance between said elements and



spaced from the plane defined thereby, said central section having at each end thereof a relatively short securing portion each extending toward the said plane defined by said framing elements in substantially right angular relation with respect to said plane and rigidly secured to the adjacent framing elements.

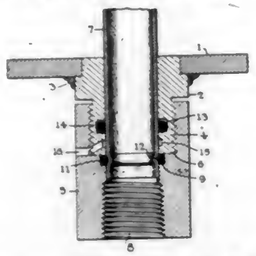
2,453,388
TRAILER CONSTRUCTION
Arthur G. Schramm, Phoenix, Ariz.
Application September 17, 1945, Serial No. 616,722
3 Claims. (Cl. 280—33.4)



1. Trailer construction comprising, in combination, a trailer body having a bed, axle arm shaft bearings supported on said bed, axle arms having stub wheel axles, extending outward from their outer ends and axle arm shafts extending inwardly from their inner ends and journalled in said axle arm shaft bearings, wheels mounted on said axles, cranks attached to said axle arm shafts extending angularly relative to said axle arms, a spring supporting shaft journalled in said bed and extending transversely thereof positioned on said frame forward of said axle arm shafts so as to clear the periphery of said wheels, quarter ellipitcal springs retained in bedding blocks on the ends of said shaft links connecting the outer ends of said springs to said cranks on said axle arm shafts, and mechanism for rotating said spring holding shaft and releasably retaining it at predetermined positions, including a crank arm mounted on said spring supporting shaft, a bar pivoted thereon adapted to retention at predetermined positions on said trailer body, and a jack operative between said trailer body and the end of said arm.

2,453,389
SELF-SEALING PIPE COUPLING
Percival Edward Thomas, Worcester Park, England, assignor to Sterling Industries Limited, London, England, a British company
Application June 3, 1946, Serial No. 673,926
In Great Britain May 14, 1945
4 Claims. (Cl. 284—19)

1. In a self-sealing coupling construction including conduits, means for coupling together the ends of the conduits, a movable valve element and a fixed seat member therefor in one of said conduits, a movable valve seat element and a fixed valve member therefor in the other of said conduits, and resilient means biasing said elements to conduit closing position in engagement with the respective members, the element of one conduit abutting the member of the other to establish a passageway when the conduits are coupled; the improvement wherein the movable valve seat element is a flat annulus having an outer portion coacting with the fixed valve seat member in passageway-establishing position and an inner portion coacting with the fixed valve member in conduit-closing position, wherein the resilient means biasing said movable valve seat element is a coil spring which bears against said outer portion of said annulus and wherein a flexible, resilient, leak-proof, tubular bellows, concentric to but within the coil spring, connects the inner portion of the valve seat element to a portion of the respective conduit.



2,453,390
STABILIZING IRON
Clarence W. Werner, Hansen, Idaho
Application September 11, 1944, Serial No. 553,627
1 Claim. (Cl. 97—47)

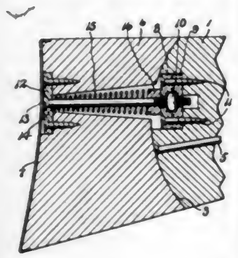
An attachment of the kind described, comprising a sectional bridge member, having inclined leg sections disposed in opposite extending relation to each other, a saddling plate connecting the inner ends of the sections in adjustable relation to each other, by means of elongated slots in said plate, and fastening means in said sections, vertically disposed parallel wings secured to the outer ends of said leg sections in spaced angular relation to each other, and L-shaped

brackets secured to the outer ends of said leg sections above said wings for attaching said legs at their outer ends to a farm implement.

2,453,391
TUBING CONNECTION
David J. Whittingham, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application January 14, 1946, Serial No. 641,073
4 Claims. (Cl. 285—30)

1. A tube connection comprising a body having a bore and two internal spaced grooves encircling said bore and opening thereunto, a tube inserted into said bore substantially filling the bore, extending past both grooves and having an encircling groove opposed to one of the grooves in the body; and two packing rings of resilient rubber-like material confined in respective grooves in the body, one of said rings entering the encircling groove in the tube to retain the tube in said bore, said rings and grooves being relatively so dimensioned that when the parts are assembled, the rings are deformed in radial compression between the tube and body but do not completely fill the grooves.

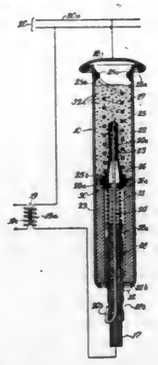
2,453,392
ONE-HAND FRUIT PICKING DEVICE
Irvin J. Williams, Seattle, Wash.
Application October 4, 1946, Serial No. 701,109
4 Claims. (Cl. 224—28)



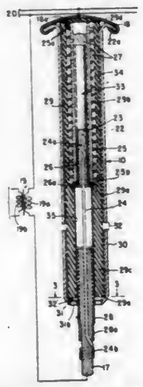
1. A fruit-picking device consisting of a cup-like vessel, an outstanding lip formed as part of said vessel and curved downwardly to partially encircle the finger of a user; a handle for said vessel having a palm receiving bight portion extending upwardly above the rim of the vessel sufficiently to permit the said outstanding lip to be engaged between the extended fingers of a user; a band encircling said vessel; and means for securing said handle in adjusted angular relationship to said band.

2,453,393
COMBINED SPOON AND LID FOR CONTAINERS
Robert C. Wilson, Chula Vista, Calif., assignor of one-fourth to Richard W. Wilson, Chula Vista, Calif.
Application September 17, 1945, Serial No. 616,849
2 Claims. (Cl. 229—1.5)

2. In a combined spoon and lid for containers of the class described, the combination of a flat disc-like member having an arcuate recessed portion concentrically disposed and radially disposed recessed portions extending from the middle of said disc-like member and terminating in said arcuate recessed portion, said disc-like member also provided with radially disposed scored portions extending through the periphery thereof permitting two segments of said disc-shaped member to be folded against each other to induce pyramidal bending of the remainder of said disc-shaped member, said disc-shaped member also provided with a tab portion extending from the periphery thereof and adapted to be folded over said segment portions when folded together securing said disc-shaped member in the form of a spoon.

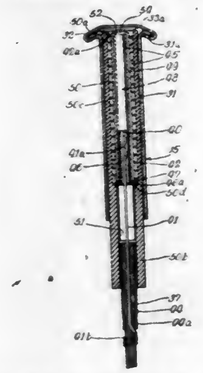


2,453,394
ADJUSTABLE GUNSTOCK
Emil R. Wittman, Grand Rapids, Mich.
Application May 22, 1946, Serial No. 671,647
5 Claims. (Cl. 42—73)



3. In a construction as described, a gun stock of two parts including a front relatively long stock portion and a shorter butt portion in alinement therewith located at its rear end, the adjacent ends of said front and butt stock portions, one having a curved convex form from its upper to its lower edge in the arc of a circle and also curved convexly in the arc of a circle from one side to the other, and the other having complementary surfaces of convex form to seat thereagainst, a member comprising two blocks located one against the other secured at the rear end of the front stock portion, said front stock portion being recessed to receive them, said blocks at adjacent sides having recesses in conjunction with each other forming a chamber, a nut seated in said recesses, a plate secured at the rear end of the butt portion, an elongated headed screw passing through said plate and through said blocks and threading through said nut, the openings in said blocks through which the rod passes being of larger area than the cross section of the rod.

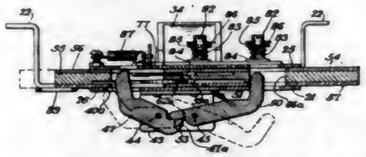
2,453,395
FUSE
Edward H. Yonkers, Chicago, Ill., assignor to Joslyn Mfg. and Supply Co., Chicago, Ill., a corporation of Illinois
Application December 13, 1943, Serial No. 514,030
14 Claims. (Cl. 200—115)



1. A fuse link comprising a metal tube, a terminal element positioned adjacent one end of said tube and spaced therefrom so that a surge gap is provided between the adjacent surfaces of said tube and said element, a combination heating and inductance element comprising a conductive coil disposed within said tube, and a fusible element electrically connected in series with said combination element across said gap and at least partially disposed within the turns of said coil in heat exchange relationship therewith.

2,453,396
FUSE
Edward H. Yonkers, Chicago, Ill., assignor to Joslyn Mfg. and Supply Co., Chicago, Ill., a corporation of Illinois
Application December 28, 1946, Serial No. 637,528
11 Claims. (Cl. 200—115)

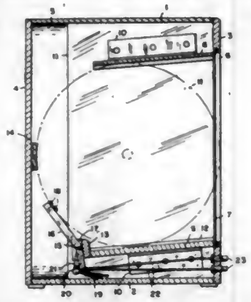
6. A fuse link comprising a tubular metal casing having an open end, a first tube of insulating material fitting within said casing and projecting outwardly from the open end of said casing, said tube being provided with a first portion of large internal diameter, a second portion of smaller internal diameter and an internal step between said two portions, a tubular conductor disposed within said first portion of said tube and provided with a flange seated on said step, a second conductor extending through said second portion of said tube and including a part projecting within said tubular conductor, a fusible body electrically and mechanically connecting said part of said second conductor to said tubular conductor, a coiled conductor surrounding said tubular conductor and disposed within the space between said insulating tube and said tubular conductor, said coiled conductor being connected between said tubular conductor and said casing, a second tube of insulating material telescoped over said tubular conductor within said coiled conductor to insulate the convolutions of said coiled conductor from said tubular conductor and said fusible body, a body of insulating material at least partially embedding the convolutions of said coiled conductor and filling the unoccupied spaces within that portion of said first tube having said largest internal diameter, a conductive sleeve carried by the projecting end of said first tube and spaced from the open end of said casing to define a surge gap, and a resilient conductive element extending across the projecting end of said first tube in engagement with said second conductor and said sleeve, thereby to provide a conductive path therebetween while permitting withdrawal of said second conductor from said first tube upon fusing of said fusible body.



2,453,397
FUSE LINK
Edward H. Yonkers, Glencoe, Ill., assignor to Joslyn Manufacturing and Supply Corporation, Chicago, Ill., a corporation of Illinois
Application April 26, 1947, Serial No. 744,061
3 Claims. (Cl. 200—115)

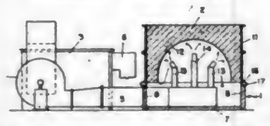
1. A fuse link comprising a tubular metal casing open at one end and having a terminal cap closing the other end, an insulating tube fitting within and extending through said casing, a coiled heating conductor disposed within said tube and having its convolutions spaced axially of said tube, a tubular conductor extending within the convolutions of said coiled conductor to receive heat from said coiled conductor, said heating conductor being connected in series between said tubular conductor and said casing, a fusible body filling at least a portion of said tubular conductor, a circuit conductor having an end embedded in said fusible body and extending out of said insulating tube, an elongated and conductive heat storage element in heat transfer relationship with said fusible body and extending through the convolutions of said heating conductor toward said

terminal cap, means including said heat storage element for defining within said tube a surge gap shunting said heating conductor, and insulating means disposed within said insulating tube to insulate said tubular conductor and said heat storage element from the convolutions of said heating conductor.



2,453,398
COIN-CONTROLLED DEVICE
Maurice J. Auerbach, Cleveland Heights, Ohio, assignor to Standard Vendors, Inc., Cleveland, Ohio, a corporation of Ohio
Application January 17, 1945, Serial No. 573,227
1 Claim. (Cl. 194—58)

In a coin-controlled device of the character described, a housing, coin rests mounted on said housing, a coin-positioning member adapted to receive a plurality of coins of two denominations slidably mounted in said housing, a vertical shaft mounted exteriorly of said housing, a plurality of vertically-spaced latch fingers mounted for pivotal movement about said shaft and having portions adapted to enter said housing rearwardly of said shaft and lock said coin positioning member against substantial forward movement, a second vertical shaft disposed forwardly of said first-named shaft, a plurality of vertically spaced fingers mounted for pivotal movement about said second shaft and having portions adapted to enter said housing forwardly of said second shaft, levers disposed within said coin-positioning member and effective, upon the positioning of a selected combination of coins, to rotate said second-named fingers in the direction of movement of said coin-positioning member, cooperating heel portions provided on said latch-fingers and said second-named fingers whereby partial rotation of said second-named fingers causes said latch fingers to withdraw from locking engagement with said coin-positioning member and further rotation of said second-named fingers causes said latch-fingers to be locked in said withdrawn position, and spring means adapted to normally maintain said latch fingers in locked engagement with said coin-positioning member.

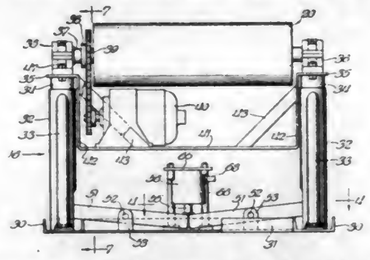


2,453,399
DISK RECORD HOLDER
Earl Joseph Baker, Parma, and Herbert Fredrick Baker, Detroit, Mich.
Application August 30, 1946, Serial No. 693,840
6 Claims. (Cl. 312—15)

1. In a disk record holder, the combination with a pair of spaced substantially parallel boards, of means on the mutually confronting faces of the boards for individually guiding records into and from the holder, a stop strip extended transversely of said grooves and engageable by records in the grooves to establish their stored positions, a fulcrum rod extending parallel and adjacent to said strip, a set of record-ejecting levers fulcrumed between their ends on said rod, spacers for said levers mounted freely on said rod, said strip coacting with the spacers to resist their rotation, spring means urging the levers to retracted positions established by said strip, and means for individually actuating the

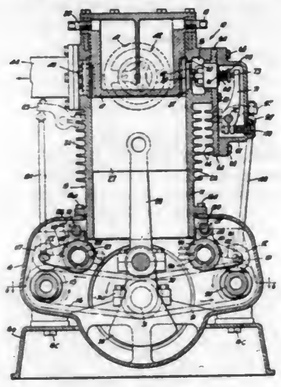
levers in opposition to said spring means to selectively eject records from between the boards.

2,453,400
APPARATUS FOR DRYING FOUNDRY MOLDS
Charles A. Barnett and Joseph M. Beyvl, Cleveland, Ohio, assignors to The Foundry Equipment Company, Cleveland, Ohio, a corporation of Ohio
Application July 13, 1943, Serial No. 494,458
2 Claims. (Cl. 22—87)



1. Apparatus for drying foundry mold bodies of generally concave form, enclosed in a peripheral frame, comprising an open-top housing having an upper marginal edge of substantially the same shape and dimensions as the outer marginal edge of the mold body to be dried and adapted to support the same in inverted position thereon with the mold cavity and parting surface of the mold body exposed in the housing, a heater, an inlet conduit for heated air leading from the heater into the housing, a plurality of nozzles extending upwardly beyond the housing and adapted to direct heated air from the conduit and discharge the air upwardly and outwardly at a plurality of separate locations above the level of the marginal edge of the housing so as to cause such air to impinge in separate spaced streams against the concave surface of the mold body, an exhaust conduit leading from the housing to the heater and opening into the housing below the level of said upper marginal edge, air circulating means to withdraw air from the housing, through said conduit, and force said air through the heater and back into the housing through the inlet conduit and means sealing the joint between the frame of the mold body and the upper marginal edge of the housing.

2,453,401
LIVE JUMP ROLL
Hiram O. Beeching, South Bend, Wash.
Application September 25, 1945, Serial No. 618,488
8 Claims. (Cl. 198—127)

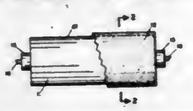


7. A self-contained portable live jump roll comprising a portable frame, a chassis, a roll mounted in bearings on said chassis, a motor mounted on said chassis for driving said roll, posts supporting said chassis for vertical movement in said

frame, an individual lever for raising each of said posts, and a fluid pressure cylinder mounted in said frame and having a piston operable upon said levers for raising said chassis to an upper

position when fluid pressure is admitted to said cylinder and operable to release said chassis for gravity return to a lower position upon release of fluid pressure from said cylinder.

2,453,402
COMPRESSOR OR PUMP
Harvey W. Bell, Yonkers, N. Y.
Application October 19, 1944, Serial No. 559,361
13 Claims. (Cl. 230—21)

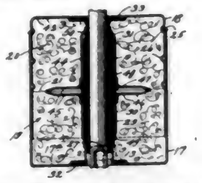


1. A multi-stage compressor comprising at least two cylinder parts, a piston reciprocable in each of said cylinder parts, and means for selectively varying the effective volumetric displacement of each of said cylinder parts, comprising an unloading valve in each of said parts, adapted when open to prevent compression in the corresponding cylinder part, mechanical means free from electric or fluid operation, for positively maintaining said valve open during a selected portion of the compression stroke of the corresponding piston, and means for varying the phase at which each of said valves is opened with respect to the stroke cycle of its corresponding piston, said means for changing the effective volumetric displacements of the cylinder parts comprising a plurality of cams corresponding to the compression cylinders in the compressor, means for rotating said cams at predetermined relative angular rates, each of said cams being in the form of a shaft having a valve opening projection progressively changing lengthwise of said cam, a follower roller in engagement with each of said cams, a mechanical transmission free from mechanical or fluid operation between each of said rollers and a corresponding unloading valve for maintaining said valve open during a selected part of the compression stroke of the corresponding piston, and means for moving all of said followers in unison along their corresponding cams for simultaneously varying the phase relationship between the operating sections of said cams and the stroke cycles of the corresponding pistons.

2,453,403
WINDBREAKER FOR PARKED AIRCRAFT
Charles E. Bogardus, New Rochelle, N. Y.
Application July 3, 1946, Serial No. 681,370
7 Claims. (Cl. 244—40)

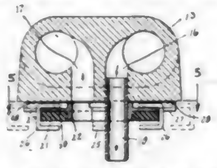
1. A device for eliminating the lifting action of wind upon the wings of a snubbed-down aeroplane comprising a cover adapted to be attached to a wing in overlying relation to its upper surface and a pair of slats inclined towards one another to form an inverted V, the upper edges of the slats being secured together in abutting relation to form the apex, and the lower edges of the slats being secured to the said wing cover in spread apart relation to dispose the slats in upright position at the upper surface of the wing.

2,453,404
APPARATUS FOR MAKING PLASTIC MASSES
Walter S. Bohlman, Wilmington, Del., and David S. Bruce, Lawrence, Kans., assignors, by mesne assignments, to United States of America as represented by the Secretary of War
Application June 1, 1945, Serial No. 597,030
1 Claim. (Cl. 18—2)



A differential speed roll assembly which comprises a pair of rolls adapted to rotate in opposite directions, one of said rolls adapted to rotate with a greater surface linear velocity than the other of said rolls, said one of said rolls being provided with an outside surface of porous chromium electroplate characterized by high resistance to corrosion and erosion and having an improved adherence for a nitrocellulose-nitroglycerin powder composition, and said other of said rolls being provided with a chromium electroplate deposited on an abrasive-blasted metallic surface.

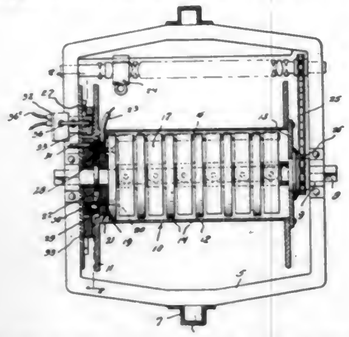
2,453,405
REPACKABLE ADJUSTABLE OIL FILTER CARTRIDGE
Clark M. Bolser, Cedar Falls, Iowa
Original application December 14, 1940, Serial No. 370,096. Divided and this application November 23, 1944, Serial No. 564,819
5 Claims. (Cl. 210—131)



1. In a repackable, adjustable oil filter cartridge having an inlet and an outlet, a pair of filtering material cup-shaped containers each having an open end, at least one of said containers having perforations therein, said containers being adjustably telescoped together, said containers having tubes secured thereto, said tubes being dis-

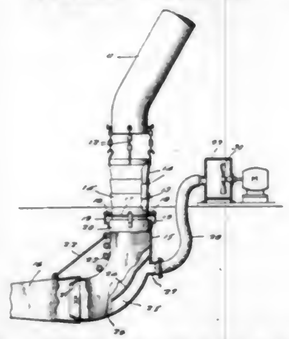
posed at the centers of said containers to adjustably telescope relative to each other and each container being packed with a separate quantity of filtering material surrounding said tubes, an oil distributor including a tube for adjustably telescoping over said first tubes, a hollow perforated distributor member positioned between said two quantities of filtering material and secured to said last tube, and means affording pas-

sage of oil from said inlet through one of said container tubes and through said tube of said oil distributor, said oil then passing through the perforated distributor and through the filtering material to the outlet, all of said tubes being of a size relative to each other as to permit the passage of oil between them and having contracted ends to provide substantially oil-tight connections between the tubes.



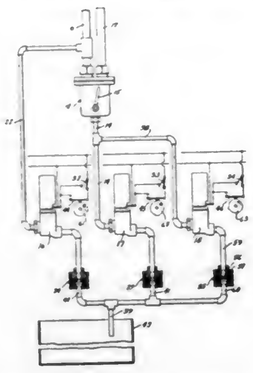
2,453,406
FITTING FOR AUTOMOBILE RADIATORS
Francis E. Brady, Jr., Muncie, Ind.
Application October 4, 1947, Serial No. 777,904
6 Claims. (Cl. 285—168)

1. A fitting for an automobile radiator having a filler spout provided with camming and locking flanges thereon comprising a fitting head, a finger plate secured to said head with its inner adjacent surface formed with radially extended and opposed pockets, and a plurality of gripping fingers slidably mounted in said pockets, respectively, for manual adjustment toward and from each other in position to engage and interlock with said flanges of varying diameter.



2,453,407
WELDING LINE REEL SWITCH
Jake D. Burns, Richmond, Calif.
Application September 11, 1944, Serial No. 553,621
2 Claims. (Cl. 200—153)

1. In a self-winding reel for electric cables and the like, the combination, which comprises a drum with flanges at the ends providing a cable-winding reel, a stationary shaft, means rotatably mounting the reel on the shaft, said shaft mounted in the sides of the frame with the reel positioned in an opening in the frame, a plurality of spring elements positioned in the drum of the reel forming a spring motor with one end of the spring elements attached to the shaft and the opposite ends attached to the reel, a stationary disc on the frame positioned between the reel and a side of the frame, a hub with hook-shaped projections in recesses in the periphery thereof extending from the periphery of the disc, a dog carrying a pawl and having a pin projecting therefrom pivotally mounted on a flange at the end of the reel adjacent said stationary disc of the frame positioned to ride along the periphery of the hub and engage alternately the hook-shaped projections thereof, an arcuate guide strip attached to the surface of the disc positioned to be engaged by the pin of the pawl to hold the

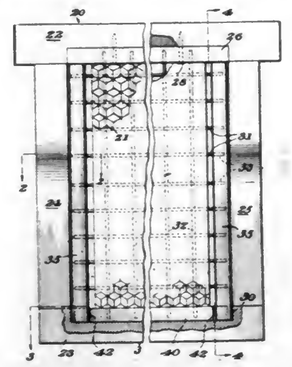


pawl out of engagement with at least one of the projections of the hub upon retraction of the cable-winding reel, a resiliently held plunger slidably mounted in the hub under one of said projections positioned to be engaged by the pawl, a switch positioned to be actuated by said plunger, and contact rings positioned on the ends of the reel and adjacent disc through which a circuit to a cable on the reel may be completed.

2,453,408
GRAIN TRIMMING DEVICE
Alexander L. Carila, Norfolk, Va.
Application November 30, 1945, Serial No. 631,929
2 Claims. (Cl. 302—17)

1. In a device for loading grain from a grain elevator discharge spout into the hold of a ship, a vertically-disposed nozzle structure arranged at the discharge end of said spout and carried by the latter, an elbow of a rectangular cross-sectional area carried by said nozzle structure and mounted for rotation about a vertical axis coinciding with the vertical axis of the nozzle structure, a partition disposed in the lower curved portion of said elbow and spaced from the wall of the latter portion to define a passage for conveying air from a source of supply therethrough, said passage being so arranged in communication with said elbow as to facilitate discharge of the material from the discharge end of the elbow, and a discharge conduit pivotally connected to said elbow.

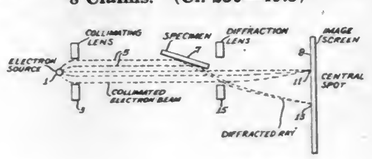
2,453,409
FLUID CONTROL SYSTEM
Thomas B. Chace, Winnetka, Ill., assignor to The Dole Valve Company, Chicago, Ill., a corporation of Illinois
Application July 14, 1944, Serial No. 544,956
4 Claims. (Cl. 236—12)



1. A fluid control system comprising a single automatic temperature controlled mixer valve, said mixer valve having a pair of inlet ducts and a mixed fluid outlet duct, at least three flow control means, each including a shut-off valve and a device for automatically maintaining a predetermined rate of fluid flow therethrough, and a member providing a common delivery passageway to which the downstream side of each flow control means is connected, the upstream side of two of said flow control means being connected to said outlet duct and the upstream side of one of said flow control means being connected to one of said inlet ducts.

2,453,410
ACID TREATMENT OF ANTHRAQUINONE-THIAZOLE VAT DYESTUFFS
John F. Cullinan and Lawrence D. Lytle, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 13, 1944, Serial No. 526,343
5 Claims. (Cl. 260—303)

1. The method of converting a vat dyestuff, characterized by at least one anthraquinone and at least one thiazole nucleus, into very finely divided particles of substantially uniform size which comprises forming a slurry of one part of the dyestuff with 20 to 30 parts of sulfuric acid of such concentration that at the operating temperature at least a part, but not more than ten percent by weight of the total dyestuff is in solution at any one time, agitating this slurry until conversion of the dyestuff to a substantially insoluble sulfate is substantially complete, hydrolyzing the sulfate to the dyestuff and collecting the so-treated dyestuff.

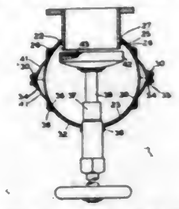


2,453,411
BEE COMB FOUNDATION
Henry C. Dadant, Hamilton, Ill.
Application May 15, 1944, Serial No. 535,714
3 Claims. (Cl. 6—10)

1. The combination with a bee comb foundation sheet having transversely extending reinforcing wires the free ends of which extend beyond the sheet, of an outer carrying frame and an inner sheet reinforcing frame removably supported thereby, said inner frame comprising side bars spaced outwardly from the side edges of the

sheet and being U-shaped in cross section with one edge bent inwardly to form a reentrant U-shaped member in which the free ends of the reinforcing wires are clamped.

2,453,412
ELECTRON DIFFRACTION SYSTEM AND METHOD
Norman R. Davidson, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 28, 1946, Serial No. 679,986
8 Claims. (Cl. 250—49.5)



1. The method of electron diffraction of a specimen comprising producing a beam of electrons of substantial cross-sectional area, said beam comprising a plurality of parallel disposed electron rays, applying a substantial portion of said beam at an obtuse angle to a substantial portion of the surface of said specimen to irradiate said portion of said surface, deriving a plurality of diffracted electron rays from said irradiated surface, and focusing said diffracted rays to provide a focused electron diffraction image characteristic of the composition of said specimen irradiated surface portion.

2,453,413
VALVE STRUCTURE
Joseph H. De Frees, Warren, Pa., assignor to Pennsylvania Furnace and Iron Company, Warren, Pa., a corporation of Pennsylvania
Application April 18, 1946, Serial No. 663,065
4 Claims. (Cl. 251—156)

1. Liquid flow control means comprising a conduit having a tubular wall provided with a pair of diametrically opposed apertures, a pair of opposed saddles carried on said conduit, one respectively on the outer conduit wall surrounding each aperture, each said saddle having an inner surface

complementary to, and conforming in contour to, the said outer conduit wall, one said saddle carrying a valve guide, and the other said saddle carrying an annular valve seat, said valve seat extending within the adjacent aperture in said conduit

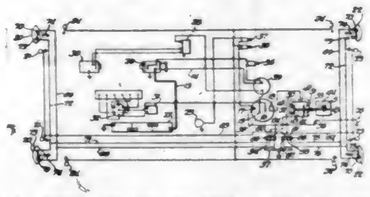
wall, a valve stem carried by said valve guide and extending inwardly through the aperture in said conduit wall adjacent thereto, both said saddles having aligned means for establishing a rigid but removable connection therebetween.

2,453,414

SYSTEM FOR DIRECTING RADIO WAVES

Henry B. De Vore, Cranbury, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application June 9, 1944, Serial No. 539,542
10 Claims. (Cl. 250—33.63)



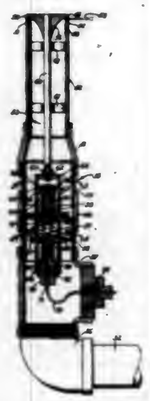
1. A system for propagating a beam of radio waves and for directing said beam through a predetermined angle including a wave guide having a plurality of radiating elements and having an open side, means for applying radio frequency energy to one end of said wave guide; and a rotatable member, including a plurality of grooves, disposed along said wave guide to close its open side and to alter the effective wave length of the energy within said guide as a function of the depth of said grooves.

2,453,415

VEHICLE LIGHTING SYSTEM

Henry N. Dimick, Portland, Oreg., assignor to Hyster Company, Portland, Oreg., a corporation of Oregon

Application July 24, 1945, Serial No. 606,786
1 Claim. (Cl. 315—80)



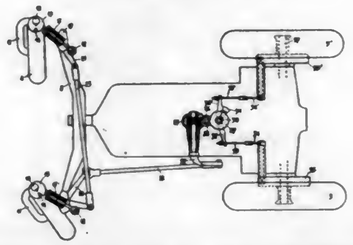
In a reversible lumber yard straddle truck vehicle having a single operator's station but adapted to travel a substantial part of its operating time in reverse gear, a single reversing lever at said operator's station having forward, neutral and reverse positions, a first head and tail light system including a dimmer switch for forward travel, a second head and tail light system including a second dimmer switch for reverse travel, a single manually operable member at said operator's station for operating both of said dimmer switches simultaneously to dim the headlights in operation regardless of the direction of travel, a common switch at said operator's station for energizing one or the other of said lighting systems, a lost motion link connected with said reversing lever to operate said common switch to energize said first lighting system for forward travel when said lever is moved from neutral to a forward position and to maintain said first lighting system energized when said lever is returned to neutral position, said link operating said common switch to deenergize said first lighting system only when said lever is moved from neutral to reverse position and then to energize said second lighting system for reverse travel and maintain said second lighting system energized when said lever is returned to neutral position; said second lighting system being deenergized only by movement of said lever from neutral to a forward position, and an independent switch at said operator's station for connecting both of said lighting systems with a source of electrical supply subject to the control of said common switch, whereby either one of said lighting systems may be left energized while said vehicle is standing with said reversing lever in neutral position for illumination at either end of said truck and as a warning to workmen.

2,453,416

FLUID DISTRIBUTION SYSTEM

John M. Dom, Houston, Tex., assignor to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware

Application December 24, 1941, Serial No. 424,326
14 Claims. (Cl. 299—125)



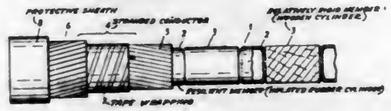
1. In a fluid distribution system for discharging a liquid stream, the combination of: conduit means for conducting a liquid stream, said conduit means including a stationary discharge member; a movable discharge member cooperating with said stationary discharge member in providing a discharge orifice which varies in size as said movable discharge member is moved; a stationary element attached to said conduit means and positioned therein; a movable cage in said conduit means and into which said stationary element extends, said cage providing a movable element which moves with said cage; means for attaching said cage to said movable discharge member to move therewith; a spring in said cage and providing one end bearing against said one of said elements; a fluid-filled bellows in said cage and providing one end bearing against the other of said elements; and means for connecting the other ends of said spring and bellows in pressure-transferring relationship to dispose said spring and bellows serially between said elements in such manner that the reaction force of said spring is transmitted to said bellows and thence to said other of said elements.

2,453,417

STEERING MEANS FOR VEHICLES

Léon Dufour, Geneva, Switzerland

Application January 10, 1945, Serial No. 572,145
In Switzerland January 24, 1944
8 Claims. (Cl. 180—18)



1. Steering and braking means for vehicles of the type including, rear driving wheels, brake means therefor, a front axle, a steering wheel including a steering shaft, front wheels releasably connected through steering linkage with the steering wheel for normal straight ahead movement and wide turns, and automatic means for simultaneously braking one of the rear driving wheels when the front wheels are disconnected from the steering means, said automatic means comprising, a secondary shaft axially parallel with the steering shaft, gearing connecting said shafts, a pair of levers freely pivoted at their inner ends to the secondary shaft and having their outer ends connected to the brake means for each rear driving wheel, and a radial finger on the secondary shaft for engaging the rear edge of one of the said levers at a time between its point of pivotal support and its outer end to apply the brake on one drive wheel.

2,453,418

BUOYANT ELECTRIC CABLE

Percy Dunsheath, Abinger, and William Cyril Barry, Gravesend, England, assignors to W. T. Henley's Telegraph Works Company Limited, Westcott, Dorking, Surrey, England

Application November 30, 1940, Serial No. 367,924
In Great Britain January 4, 1940
25 Claims. (Cl. 174—101.5)

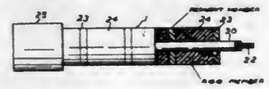
1. In water-buoyant insulated electric power cable, a buoyancy element consisting of a flexible cellular core comprising a series of resilient members with intercalations of relatively rigid members.

2,453,419

BUOYANT ELECTRIC CABLE

Percy Dunsheath, Abinger, and William Cyril Barry, Gravesend, England, assignors to W. T. Henley's Telegraph Works Company Limited, London, England, a British company

Original application November 30, 1940, Serial No. 367,924. Divided and this application November 30, 1946, Serial No. 713,319. In Great Britain January 4, 1940
9 Claims. (Cl. 174—101.5)



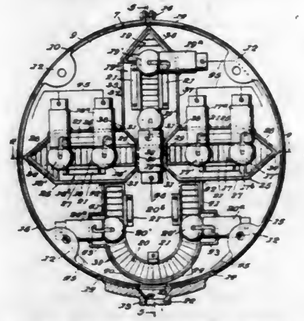
1. In water-buoyant insulated electric power cable, a buoyancy element consisting of a flexible cellular core comprising a series of cylinders of resilient cellular material and a plurality of cylinders of relatively rigid material intercalated in said series of cylinders of resilient cellular material.

2,453,420

BUOYANT ELECTRIC CABLE

Percy Dunsheath, Abinger, and William Cyril Barry, Gravesend, England, assignors to W. T. Henley's Telegraph Works Company Limited, London, England, a British company

Original application November 30, 1940, Serial No. 367,924. Divided and this application November 30, 1946, Serial No. 713,320. In Great Britain January 4, 1940
18 Claims. (Cl. 174—101.5)



1. In water-buoyant insulated electric cable, a flexible core member and a buoyancy element disposed about said core member and comprising a series of resilient members with relatively rigid members intercalated in said series of resilient members.

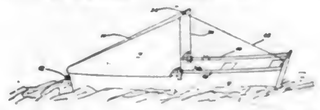
2,453,421

LAMP BOX TYPE DIRECTION SIGNAL

George Dyer, Cheyenne, Wyo.

Application January 28, 1947, Serial No. 724,737
2 Claims. (Cl. 177—329)

1. In an automobile turning signal, a casing having front and back walls and a peripheral wall; two radial horizontal cell-forming members in said casing and each having upper and lower



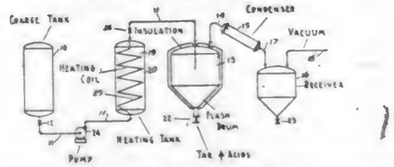
side walls and inner and outer end walls; a vertically disposed bulb socket between said inner end walls of said cell-forming members and secured to these inner end walls to unitarily unite them; a vertical cell-forming member in said casing having an outer end wall and side walls, the latter being secured at their inner ends to aforesaid side walls of said horizontal cell-forming members; a light bulb held in the aforesaid socket and disposed in the cell formed by said vertical cell-forming member; other light bulbs in the cells formed by said horizontal cell-forming members; and sockets for these bulbs secured to aforesaid side walls of said horizontal cell-forming members; said side and end walls of said cell-forming members having front and rear edges abutting said front and back walls of said casing; said end walls of said cell-forming members being disposed at said peripheral wall of said casing; at least one of said front and back walls of said casing having translucent signalling members allotted to the cells formed by said cell-forming members, said signalling members indicating different movements of the vehicle.

2,453,422

DETACHABLE ROWBOAT SHELTER

Wilfred D. Ellsworth, Lynbrook, N. Y.

Application July 3, 1947, Serial No. 758,775
4 Claims. (Cl. 135—6)



1. A collapsible shelter for rowboats including a body member and a support frame; said member comprised of three triangular sections of flexible water-repellent material; said frame comprised of two L shaped members pivotally connected to each other; means to secure said member to said frame and means to detachably secure said frame to the sides of said rowboat.

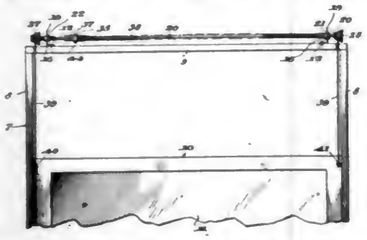
2,453,423

FLASH DISTILLATION OF ACETOPHENONE FROM BENZOIC ACID

William S. Emerson and Victor E. Lucas, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

Application March 3, 1945, Serial No. 580,928
4 Claims. (Cl. 202—39)

1. The process which comprises heating a mixture of acetophenone and benzoic acid dissolved in a solvent to a temperature above 60° C. but below 225° C. and flash vaporizing without rectification the acetophenone from said mixture.



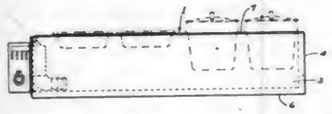
2,453,424

COUNTERBALANCE MECHANISM

Edwin E. Foster, Austin, Tex.

Application January 6, 1947, Serial No. 720,352
10 Claims. (Cl. 16—198)

8. In a counterbalance mechanism for windows and the like having a coil spring mounted on a rotatable shaft with a pulley at each end connected to a window sash, positive means for



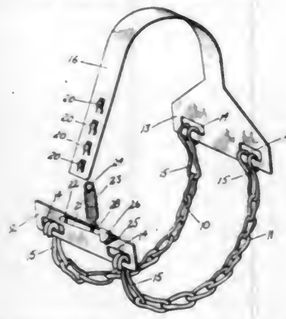
shifting the shaft and pulleys axially as the window sash is raised and lowered.

2,453,425

HOT FOOD TABLE HEATING APPARATUS

Ben J. Freed, Washington, D. C.

Application December 27, 1944, Serial No. 570,014
3 Claims. (Cl. 219—19)



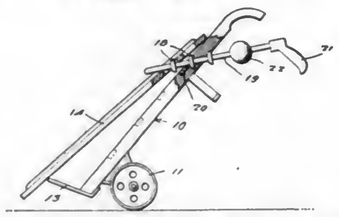
1. In a hot food table, in combination, means for presenting a plurality of members to be heated in substantially horizontally disposed relation, means for confining a substantial volume of air in contact with said presenting means, unitary means for electrically and continuously heating a substantial portion of said air, and means for substantially horizontally propagating and recirculating said heated air from a border of said confining means past said presenting means whereby rapid and continuous heating of the members presented by said presenting means is accomplished.

2,453,426

WHEEL TRACTION DEVICE

Samuel Freed, Danbury, Conn.

Application May 10, 1946, Serial No. 668,787
4 Claims. (Cl. 152—237)



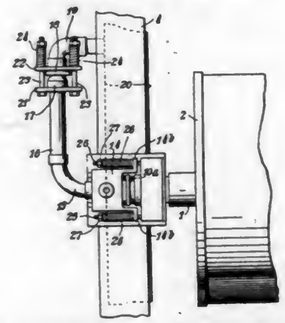
1. An emergency traction device for an automobile wheel, comprising a plurality of road-engaging elements located side by side; a pair of tie bars secured to the ends of the said elements, one of the said tie bars having secured thereto and extending therefrom a relatively stiff, hook-like strap shaped to pass through an aperture in the automobile wheel and extend across and partially encompass the rim of the wheel; and cooperable fastening means on the other of the said tie bars and on the said strap, including resilient means extending between the end of the strap and the said other tie bar yieldably drawing said device about the rim of the wheel.

2,453,427

LOAD RETAINER FOR HAND TRUCKS

John T. Frederick, Huntington, W. Va., assignor of one-half to Charles E. Green, Huntington, W. Va.

Application November 29, 1946, Serial No. 713,187
1 Claim. (Cl. 294—1)



In a handling tool adapted for securing a heavy bridge to a hand truck, and comprising an elongated member having a plurality of projections thereon spaced apart to form a series, the features which include a rod forming the elongated member having a series of spaced symmetrical flanges fixed thereon to form the spaced projections, an offset open hand grip rigid upon one end of the rod for manipulating said rod and thrusting it with at least one flange through an opening in the bridge to engage the flange with the far side of said bridge and simultaneously engage another flange with a crossbar on the truck to prevent said bridge from sliding on the forward end of the latter, and a large heavy ball symmetrically fixed upon said rod intermediate the hand grip and the first or innermost flange on said rod.

2,453,428

PIPE JOINT

Ernest Gordon, Prestwich, England, assignor of one-half to Arthur Ernest Roberts, Prestwich, England

Application June 18, 1945, Serial No. 600,095
In Great Britain March 28, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 28, 1964
4 Claims. (Cl. 285—10)

1. The combination with a hollow cylinder journalled in bearings for rotative movement and arranged to receive a fluid heating medium from a source, of a fluid-tight conduit for supplying such medium from the source to the cylinder which allowing for axial expansion of such cylinder, such means comprising a multi-part branch pipe connecting the cylinder with the source, one such part being generally axially aligned with the cylinder axis, a second part being disposed at an angle to such first part and being provided at one end thereof with ball-and-socket means connecting it with said fluid source, and ball-and-socket means at each end of the first part connecting it, respectively, with the cylinder and with the second part.

2,453,429

SURFACE TREATMENT OF METALS

Daniel A. Gorman, Sr., Glenside, Ithaca, N. Y.

No Drawing. Application November 30, 1944, Serial No. 566,014
4 Claims. (Cl. 41—42)

1. A method of treating sheet steel in a rolling mill to remove microscopic compacted surface particles resulting from the rolling mill treatment, which consists in running the sheet quickly thru an aqueous acid washing bath containing chromic acid and scrubbing it vigorously with rotating brushes while immersed therein for a sufficient time to loosen compacted surface particles but insufficient to remove any substantial amount of the base metal, the scrubbing removing any oxide that may be formed by the acid so that the sheet remains uncoated, the time of immersion being from five seconds to five minutes, immediately thereafter passing it thru a rinsing bath, and then promptly drying it, whereby the surface is conditioned to more freely release occluded hydrogen.

2,453,430

MORPHOLINE SALTS OF SULFONATED AZO DYE COMPONENTS AND THEIR PREPARATION

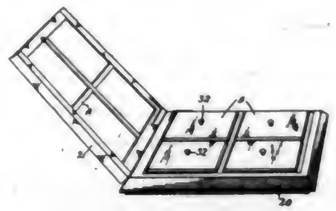
Harold G. Greig, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

No Drawing. Application December 21, 1944, Serial No. 569,264
14 Claims. (Cl. 260—247)

1. The process of producing a morpholinium salt of a sulfonated cyclic organic compound having a sulfonic acid group directly linked to a ring carbon atom, which comprises reacting at least one mol of the sulfonated cyclic organic compound with at least one mol of morpholine at a temperature sufficient to volatilize any excess morpholine.

7. The process of producing a morpholinium salt of a naphthol sulfonic acid which comprises reacting 1 mol of the acid with at least 1 mol of morpholine at a temperature sufficient to volatilize any excess morpholine.

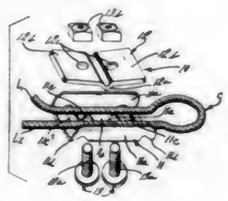
2,453,431



EASEL FOR COLORED PHOTOGRAPHIC PRINTING

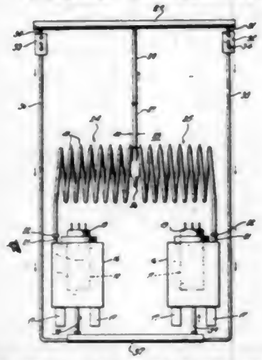
Lyndon V. Grover, Los Angeles, Calif.

Application March 11, 1946, Serial No. 653,644
3 Claims. (Cl. 88—24)



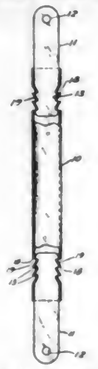
1. A photographic easel comprising a body portion including a base having a flat surface for supporting a printing sheet, a frame hinged to said base to be moved against and away from said surface, a spider removably supported by said frame and co-operating therewith to divide said printing sheet into areas of less extent than the area of the entire sheet, border blocks within said

areas and against said sheet for excluding light from said sheet areas and having beveled sides so that the frame and spider may be removed



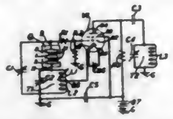
while the blocks remain in place whereby the borders about said blocks may be exposed to light to thereby provide white borders for said areas when subsequently printed.

2,453,432
CABLE CLAMP
Robert A. Hackathorn, Grosse Pointe Woods, Mich., assignor to Crawford Door Company, Detroit, Mich., a corporation of Michigan
Application March 6, 1947, Serial No. 732,747
1 Claim. (Cl. 24—135)



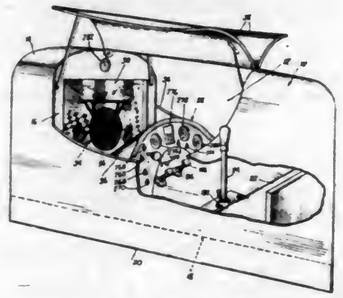
A clamp adapted for anchoring the legs of a looped cable or rope without damaging the same which comprises a female member having longitudinally extending side flanges on one side of a back web portion and coacting with the web portion to provide an open-ended channel, said web portion having hollow ribs extending transversely across the channel near the ends thereof, said ribs having rounded blunt contours, inclined lips on said web portion at the ends of the channel, a male plate member sized for fitting in said channel between said flanges of the female member, said male plate member having a hollow transverse rounded blunt rib across the midportion thereof together with inclined wings on opposite sides of the rib for coacting with said lips to form flaring mouths at the ends of the channel, said web portion of the female member having a pair of holes therethrough on the longitudinal axis thereof and between said ribs thereon, said male plate member having holes on opposite sides of the rib thereof and arranged for registration with the holes in the web, and nut and bolt assemblies adapted to cooperate with said male and female parts through said holes to draw the parts together to exert a corrugated or wave-like gripping action on a cable or rope in the channel while springing the wings of the male part against the nuts with lock washer effect.

2,453,433
HEAT DISSIPATION FOR ELECTRONIC TUBE APPARATUS
Edward Hansen, Queens Village, and Gerhold O. Davis, Kew Gardens, N. Y., assignors, by mesne assignments, to Jefferson Standard Broadcasting Company, a corporation of North Carolina
Application June 11, 1946, Serial No. 675,853
6 Claims. (Cl. 250—27.5)



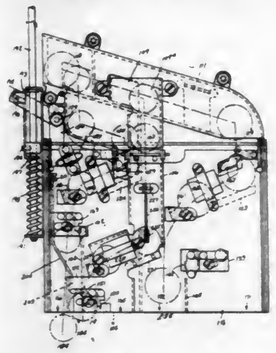
1. Electronic tube apparatus comprising, an electron tube, a closed refrigerating system having a cooling coil in heat exchange relation with a power output electrode of said tube, a refrigerating liquid reservoir mounted beneath said tube, a gas manifold mounted above said tube, said reservoir and manifold being connected to said cooling coil.

2,453,434
TIE FOR CONCRETE WALL FORMS
William D. Harder, Chicago, Ill.
Application June 25, 1947, Serial No. 756,961
3 Claims. (Cl. 287—109)



1. A tie of the class described comprising a hollow member, an extensible member receivable within the end of said hollow member in a longitudinal coaxial relation therewith, said extensible member being provided with a transverse notch, and a crimp made in said hollow member, said crimp entering said notch for rigidly retaining said extensible member within said hollow member, on application of force for shifting said extensible member within said hollow member said crimp being adapted for deflection from said notch for severing the engagement between said hollow member and said extensible member preparatory to the withdrawal of the latter from the former.

2,453,435
PIEZOELECTRIC CRYSTAL APPARATUS
Harald Havstad, Northport, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 28, 1945, Serial No. 637,662
19 Claims. (Cl. 250—36)

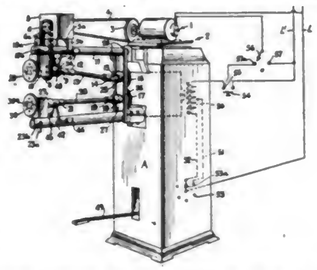


18. An oscillation system comprising an electron tube having cathode, control grid, screen grid and plate electrodes, a tuned plate circuit connected in circuit relation with said plate electrode, a tuned cathode circuit connected in circuit relation with said cathode and control grid electrodes, a piezoelectric crystal element having electrodes connected in circuit relation with at least one of said tuned circuits, said crystal electrodes comprising a pair of insulating bodies of substantially zero temperature coefficient of expansion having at least one pair of opposite metallic coatings formed integral therewith for establishing at least one electrical field through said crystal element disposed therebetween connector terminals including said electrodes for said crystal element, a holder for said connector terminals and said crystal element, said holder and said connector terminals constituting static capacitance means disposed in shunt circuit relation with respect to said crystal element, and a capacitor electrically connected across said connector terminals, said cathode tuned circuit, said crystal holder and connector terminals and said capacitor constituting a balanced circuit wherein said capacitor comprises means for balancing out said static capacitance of said crystal holder and connector terminals, said tuned cathode circuit being tuned to a mechanical harmonic of the fundamental thickness mode frequency of said crystal element, and said tuned plate circuit being tuned to an electrical harmonic of said mechanical harmonic frequency of said crystal element.

2,453,436
FLIGHT TRAINING APPARATUS
Ben Hertz, New York, N. Y., assignor to International Mutoscope Corporation, Long Island City, N. Y., a corporation of New York
Application March 9, 1943, Serial No. 478,511
16 Claims. (Cl. 35—12)

13. In apparatus of the character described wherein a shadow of a simulated airplane nose is cast on a movable translucent screen at the back thereof and is visible at the front of said screen, said nose being mounted for movement behind said screen, means for moving said nose, means for moving said screen, a reversible electric motor for operating said nose-moving means, simulated flight-control means at the front of said screen for controlling the operation of said electric motor, a reversible electric motor for operating said screen-moving means, and means operable under the control of said nose moving means for controlling the operation of said last mentioned motor.

2,453,437
COIN SELECTING DEVICE
Otto A. Hokanson, Snyder, N. Y., assignor to The Rudolph Wurlitzer Company, Chicago, Ill., a corporation
Application December 11, 1944, Serial No. 567,581
3 Claims. (Cl. 194—99)

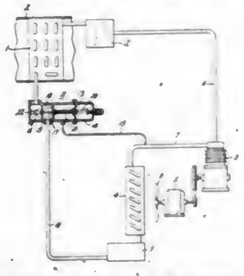


1. A coin selecting device including a coin receiving chute, a selector providing a confined space for receiving coins of predetermined size from said chute, a sloping runway in said space for causing said coins to roll downwardly thereon and drop therefrom, means for producing a magnetic field through which said coins are directed by said runway to vary their velocity and trajectory upon leaving said runway depending upon the magnetic composition thereof, a yielding diverter adjustably supported on said selector below said runway generally in the path of said coins to divert those coins dropping on said diverter to one side or the other thereof, depending upon the relative positions of the center of gravity of said coins when striking said diverter, said diverter comprising a lever pivotally mounted intermediate its ends having a counterbalance weight on one end thereof and a pivoted pendulum on its opposite end with a depending bob, and an intermediate lug on said pendulum extending into the path of the coin to be struck thereby.

2,453,438
ELECTRIC WELDING APPARATUS
William S. Horth, Cleveland Heights, Ohio
Application April 11, 1946, Serial No. 661,194
9 Claims. (Cl. 219—4)

1. Means for converting into a seam welding machine a spot welding machine provided with the necessary operating electrical circuits and having upper and lower spot welding arms and means for moving the upper arm toward and from the lower arm, the converting means comprising bearing blocks detachably connected to the respective arms and projecting toward each other, a shaft journaled in each of said bearing

blocks and each having a welding wheel secured thereto, flexible drive means secured to and extending between said shafts, a shaft and means



for driving the same, and driving means connecting the last mentioned shaft with the upper welding wheel shaft.

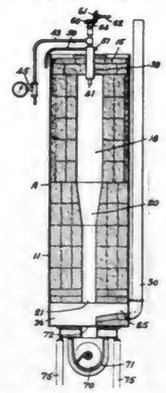
2,453,439

REFRIGERATION CONTROL SYSTEM

Albert B. Hubbard, Caldwell, N. J., assignor to General Electric Company, a corporation of New York

Application November 20, 1946, Serial No. 711,087
8 Claims. (Cl. 62—4)

1. A refrigerating system comprising a compressor and a condenser and an evaporator arranged in a closed refrigerant circuit, a motor for driving said compressor, a variable flow controlling device arranged in said circuit between said condenser and said evaporator and constituting the sole refrigerant flow controlling device in said system, and means responsive directly and substantially solely to a condition of operation on the high pressure side of said system for actuating said device automatically to control the flow of refrigerant to said evaporator and for maintaining the load on said motor substantially constant throughout each operating period thereof, said means constituting the sole means for actuating said device automatically.



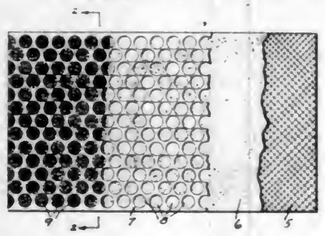
2,453,440

CARBON BLACK

Charles Kaufmann and Ronald H. Hall, Shawinigan Falls, Quebec, Canada, assignors to Shawinigan Chemicals Limited, Montreal, Quebec, Canada, a corporation of Canada

Application April 12, 1944, Serial No. 530,638
In Canada May 11, 1943
2 Claims. (Cl. 23—209.4)

1. A continuous process of forming carbon black from an endothermic hydrocarbon gas comprising heating a chamber initially to a temperature at which the gas will dissociate into carbon black and hydrogen, continuously introducing the gas into the heated chamber in the form of a stream of appreciably smaller cross section than that of said chamber, cooling the gas as it is introduced into the chamber, continuously mechanically cleaning the inlet constituting the point of introduction of the gas into the chamber, the rate of introduction of the gas being effective to maintain



a dissociation temperature from the heat given off in the dissociation reaction, maintaining substantially constant the rate of introduction of the stream into the chamber thereby to cause substantially uniform structural formation of the carbon black, and recovering said carbon black from the chamber.

2,453,441

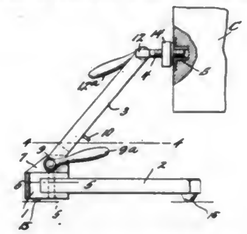
ORNAMENTAL FABRIC AND ARTICLES MADE THEREFROM

Samuel La Fair, Philadelphia, Pa.

Application June 15, 1946, Serial No. 676,996
5 Claims. (Cl. 154—47)

1. An ornamental fabric comprising a foundation sheet having a pressure sensitive adhesive on one face thereof to which is secured by said adhesive a sheet of plastic material having a plurality of perforations, and particles of tinsel disposed in said perforations and held therein by said adhesive.

2,453,442



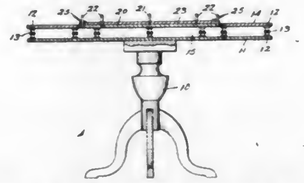
FOLDING CAMERA SUPPORT

David G. Lewis, Sunnyvale, Calif.

Application December 23, 1946, Serial No. 718,084
6 Claims. (Cl. 248—166)

1. A folding camera support comprising an anchor block, a pair of feet pivotally mounted upon the anchor block for movement in a horizontal plane, a strut pivoted at one end to the anchor block for movement in a vertical plane, said feet and strut being adapted to be swung from parallel closely spaced position to angularly spaced-apart position relative to each other,

spring means biasing said feet to spaced-apart position, a camera-supporting bracket pivoted to the other end of said strut for movement in a ver-



tical plane and an interengaging pin-and-socket connection between the strut and feet for preventing pivotal movement of the feet when the support is in folded condition.

2,453,443

SELF-SERVING TABLE

Evelyn Logan, Washington, D. C.

Application August 21, 1946, Serial No. 691,996
1 Claim. (Cl. 311—33)

A device of the character described, comprising a table top, a pedestal secured thereto, vertically disposed pegs on said top spacing members on said pegs for supporting a ring in spaced relation thereto, a bracket secured to and extending beyond the periphery of the inner opening of said ring, a pin carried by said bracket to support revolving means thereon, a circular member mounted on said revolving means, a tray mounted on said circular member, and vertically disposed pegs on said member for coaction with openings in said tray for detachably mounting said tray on said circular member.

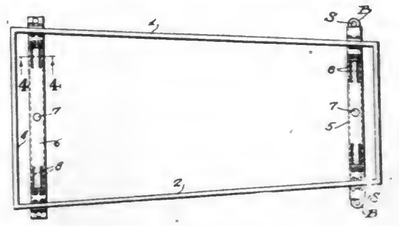
2,453,444

MAGNESIUM BASE LITHIUM ALLOYS

Alfred C. Loonam, New York, N. Y., assignor to Mathieson Chemical Corporation, a corporation of Virginia

No Drawing. Application June 28, 1945, Serial No. 602,171
3 Claims. (Cl. 75—168)

1. A magnesium-base alloy comprising at least 70% of magnesium, from 3.6% to 12% of lithium, and substantially less than 0.1% of sodium, said alloy having improved ductility because of the low sodium content.



2,453,445

ANTISKID VEHICLE FRAME

Martin C. Lubcke, Emmett, Idaho

Application January 28, 1947, Serial No. 724,853
1 Claim. (Cl. 280—143)

In a body frame for use with the bolsters of a vehicle, the combination with a frame having a pair of spaced longitudinally extending sills, of a pair of transversely arranged inverted channel beams each having a pair of parallel slots adjacent its ends and mounted upon the bolsters, a pair of interchangeable angle brackets mounted on opposite ends of each beam and located beneath the sills, a pair of bolts passed through the

slots at each end of a beam and through an angle plate and nuts for securing said bolts, and a pair of bolts passed through each bracket and through a sill, and locking nuts for the last mentioned bolts.

2,453,446

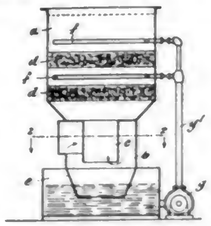
PREPARATION OF CARBONATE SALTS OF CALCIUM AND MAGNESIUM

Walter McGeorge, Kingston Hill, and Francis Highland Milner, Twickenham, England

No Drawing. Application July 23, 1940, Serial No. 347,037. In Great Britain August 25, 1939
1 Claim. (Cl. 167—72)

A process for the preparation of a stomach powder base comprising mixing an aqueous solution of sodium carbonate containing sodium carbonate in the ratio of 100 parts by weight of sodium carbonate to 230 to 4000 parts by weight of water, with a solution of calcium chloride and magnesium chloride containing calcium and magnesium in substantially equimolecular proportions desired in the product and at the ratio of 100 parts by weight of the two chlorides in 155 to 4000 parts by weight of water by flowing the sodium carbonate solution and the calcium chloride and magnesium chloride solution together into a common flow zone whereby the two solutions are intermingled and caused to interact resulting in the coprecipitation of both calcium and magnesium in carbonate form and in a finely divided and intimately mixed condition, the quantity of the sodium carbonate solution being in excess of the theoretical quantity required for precipitating the calcium and magnesium.

2,453,447



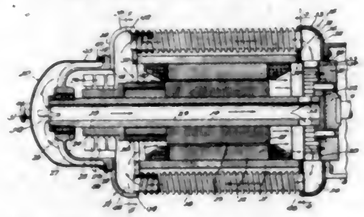
FILTER FOR GASEOUS MEDIUMS

Charles George McKeown, Dudley, England, assignor to Controlled Heat & Air Limited, Smethwick, England, a British company

Application January 24, 1945, Serial No. 574,226
In Great Britain February 1, 1944
1 Claim. (Cl. 183—16)

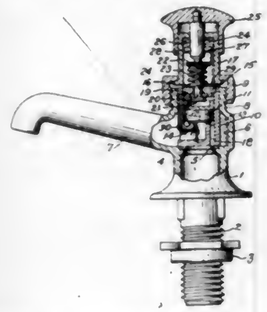
In an apparatus of the class described, in combination, a gas-washing chamber, a horizontal porous partition extending across the chamber, means for distributing liquid with substantial uniformity upon the partition, a central inlet into the bottom of the chamber having a horizontal cross-sectional area which is substantially less than that of the partition, an open-bottom intake chamber that has a tangential inlet and extends below and around the inlet of the gas-washing chamber, whereby the whirling gas in the intake chamber is forced to pass radially inward through a continuous annular curtain of liquid falling

from the inlet of the gas-washing chamber, and a settling tank below the intake chamber, the



walls of the intake chamber extending below the liquid level in the settling tank.

2,453,448
HEAT EXCHANGER
Morton H. McTurk, Philadelphia, Pa.
Application November 15, 1945, Serial No. 628,763
7 Claims. (Cl. 257—262.20)

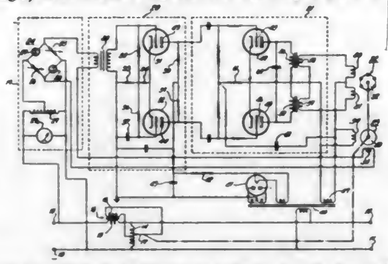


1. In a heat exchanger, a tube having a wall of substantially even thickness throughout and adapted to contain fluid the temperature of which is to be influenced, wire conductors on the exterior of said tube, and securing means for holding said wire conductors on said tube, said securing means comprising three wires encircling said tube and arranged side by side, and said wire conductors being in heat exchanging position on the exterior of said tube and extending between the center one of said three wires and said tube and thence between said center wire and the securing wires at the opposite sides thereof, said wire conductors extending outwardly from said tube and from position between said securing wires, the outer two wires of said three wires of said securing means being directly against the surface of said tube.

2,453,449
DYNAMOELECTRIC MACHINE WITH CLOSED AIR CIRCULATING SYSTEM
Lee W. Melcher, Oconomowoc, Wis., assignor to Waukesha Motor Company, Waukesha, Wis.
Application October 4, 1946, Serial No. 701,351
10 Claims. (Cl. 171—252)

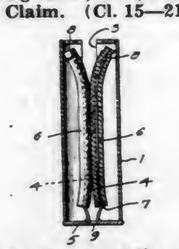
1. A dynamo-electric machine comprising an elongated shell having closure members at its ends, a stator in the shell, an armature within the stator, a rotary shaft for the armature, extending lengthwise through the shell and having a longitudinal open ended passage therein, a hollow heat exchanger disposed exteriorly of the shell, having the interior thereof in communication with the ends of the passage in the armature shaft, and forming with said passage a closed air circulating system, and a fan disposed in the system and arranged and adapted during drive thereof to cause the air in the system to circulate repeatedly first through said passage and then through the heat exchanger.

2,453,450
PRESSURE CONTROLLED SELF-CLOSING VALVE
James F. Molloy, Oakland, Calif.
Application June 24, 1946, Serial No. 678,823
2 Claims. (Cl. 137—139)



1. A valve in the class described, comprising a body with an inlet and an outlet; a block in said body having a pressure chamber open to said inlet and a base sealing said inlet and having a stop valve seat in its upper portion open to said outlet in said body; a disk closing the top of said pressure chamber and having a spring seated vent valve therein with a stem projecting above said disk; a cap on said body and bearing against said disk and communicating with the outlet from said body; a push button having a shank projecting through the top of said cap and contacting said valve stem below and having a transverse pin projecting therefrom; a stop in the top of said cap adapted to hold said button down when engaged by said pin and having a transverse slot adapted to release said button when engaged by said pin; and a stop valve in said pressure chamber closing said stop valve seat, when said vent valve stem is released.

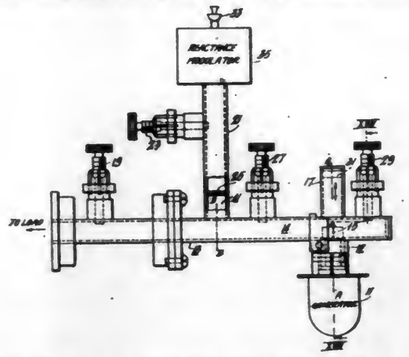
2,453,451
VOLTAGE REGULATOR SYSTEM
Francis L. Moseley, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application May 21, 1947, Serial No. 749,577
5 Claims. (Cl. 323—45)



1. A voltage regulator system comprising input terminals supplied with alternating voltage, output terminals, transformer means coupling said input and output terminals, said transformer means including an autotransformer having an adjustable contact arm, means responsive to the position of said arm to apply a compensating voltage to the supply voltage to maintain the output voltage at a desired fixed level, and means to automatically adjust said arm, the last-mentioned means including a follow-up motor, means to produce a follow-up control voltage proportional to the extent to which said supply voltage departs from said desired level, and means to apply said control voltage to cause rotation of said motor

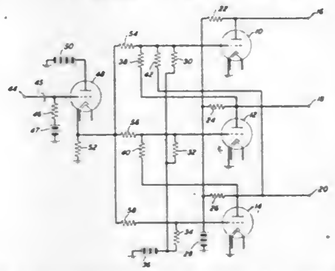
to an extent sufficient to move said arm to a point to restore said output voltage to said desired level, said means to produce said follow-up control voltage comprising a Wheatstone bridge which is normally balanced when said output voltage is at the desired level; and said means to apply said control voltage comprises a pair of grid-controlled gaseous discharge tubes which are connected to said bridge so as to be selectively fired in accordance with the direction of unbalance of said bridge, said follow-up motor having a pair of ex-

citation windings for producing a rotating field, means coupling each of said windings respectively to the output circuit of one of said gas tubes, a condenser connected in common to the plate circuits of said gaseous tubes, and means responsive to the firing of one tube to connect said condenser effectively in series with one of the motor windings and the A. C. power supply therefor while effectively bridging the said A. C. power supply substantially directly across the other winding.



2,453,452
DIP STICK CLEANER
Kenneth Nielsen, Westby, Wis.
Application August 24, 1945, Serial No. 612,363
1 Claim. (Cl. 15—210)

In a dip stick cleaner of the character specified, a longitudinally slotted tube and a cleaning element removably mounted in said slotted tube, said cleaning element comprising a pair of corresponding longitudinally disposed fabric covered steel spring strips pressed together at the desired tension, but adapted to be spread apart against such tension when the dip stick is drawn crosswise through the slotted portion of the tube to clean the former and a circular base to which the lower ends of said strips are attached, said base adapted to fit against the lower end of the slotted tube.

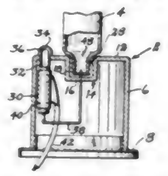


2,453,453
FREQUENCY MODULATION SYSTEM
Lowell E. Norton, Princeton Junction, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 26, 1945, Serial No. 579,767
19 Claims. (Cl. 179—171.5)

1. The method of employing a variable control impedance for modulating the frequency of a signal generator comprising the steps of transforming the impedance value of said variable impedance to a lower variable impedance value having a relatively higher Q, resonating a predetermined

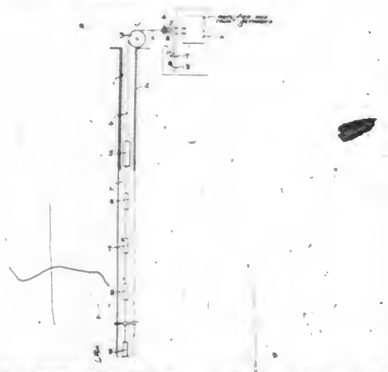
value of said transformed impedance value substantially to said generator frequency, and shunting said generator by said resonated transformed variable impedance value.

2,453,454
CODER FOR CODE MODULATION TRANSMISSION
Andrew C. Norwine, Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 31, 1946, Serial No. 694,256
7 Claims. (Cl. 179—1.5)



1. In a communication system, a coder for generating representations of the instantaneous amplitude of a wave to be transmitted according to a code of a plurality of code elements each representative of a different fixed portion of the total possible amplitude of said wave, said coder comprising a plurality of relays each controlling an output signal corresponding to one of said code elements, means for applying said wave to all of said relays, means for deriving from the outputs of all of said relays except that representing the largest portion of the signal amplitude voltages proportional to the amplitude portions which the relays respectively represent, and means for applying the voltage derived from each relay to each other relay controlling a larger derived voltage.

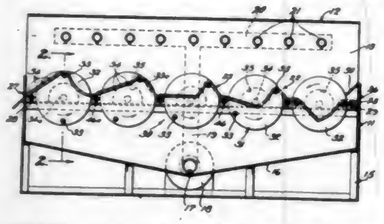
2,453,455
VAPORIZER
Carl Persak, Wallington, N. J.
Application July 21, 1947, Serial No. 762,364
6 Claims. (Cl. 219—38)



1. A vaporizer comprising in combination a vaporizing chamber, means to heat the chamber

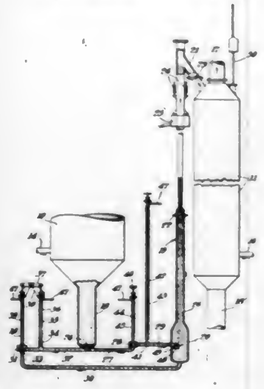
to vaporize the liquid therein, means to discharge such vapor from the chamber, and means to feed liquid to be vaporized into the chamber comprising a small diameter tube of generally U shape, the first leg of the U being connected to the bottom of the chamber and the second leg of the U projecting to a height on a level between the

top and somewhat above the bottom of the vaporizing chamber, a supply container mounted above such second leg of the small U tube, such supply container having in its bottom an aperture slightly larger than the outer diameter of such U tube, the upper end of the second leg of the U tube projecting into the body of the supply container through said aperture.



2,453,456
INSTRUMENT FOR MEASURING WATER FLOW IN WELLS
Raymond G. Piety, Tuckahoe, N. Y., assignor to Phillips Petroleum Company, a corporation of Delaware
Application March 7, 1945, Serial No. 581,471
9 Claims. (Cl. 250—83.3)

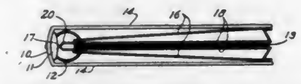
1. An apparatus for measuring the flow of fluid in a bore hole, comprising means in the bore hole for injecting a radioactive sample into the fluid in the bore hole, a plurality of spaced gamma ray detectors in the bore hole below said injector, means for suspending said injector and detectors in the bore hole in any one of a desired number of fixed positions, and means at the upper end of the bore hole for successively recording the output of said detectors.



2,453,457
PRODUCE WASHING MACHINE
Leland H. Platt, Leland H. Platt, Jr., and John D. Platt, Los Angeles, Calif.
Application May 13, 1946, Serial No. 669,305
2 Claims. (Cl. 198—108)

1. Produce washing equipment comprising a flexible belt, a housing including vertical walls extending along and in close proximity to the sides of the belt, a series of opposed pairs of vertical discs rotatable adjacent the insides of said walls, a pair of rods carried by each opposed pair of discs and extending transversely beneath the belt, said rods operating alternately to engage

and elevate the undersurface of the belt, and means for driving said disc pairs to effect progressive wave-like deflections of the belt to advance the produce thereon.

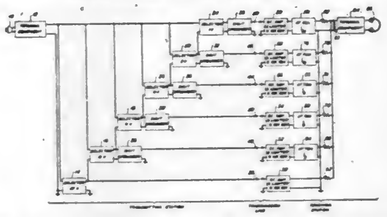


2,453,458
CATALYST TRANSFER SYSTEM
Carl S. Reed, New York, August Henry Schutte, Hastings-on-Hudson, and Vernon O. Bowles, Dobbs Ferry, N. Y., assignors to The Lummus Company, New York, N. Y., a corporation of Delaware
Application November 24, 1943, Serial No. 511,558
14 Claims. (Cl. 23—1)

6. In a catalytic reaction process wherein a catalyst of solid material in a divided state is passed downwardly through a reaction zone to a low point of the latter, elevated to a relatively high level above said point, passed to a catalyst reactivation zone for downward passage therethrough to a low point and elevated and returned to the reaction zone for re-use, the improvement in each of said catalyst transfers between said zones, with prevention of gas exchange between the zones, comprising passing the catalyst from the low point of one of the zones into a body of sealing liquid non-wetting and non-reactive with respect to the catalyst and heavier than the latter, forming of said liquid a column extending upwardly from the level of said low point of the respective zone, passing from said body to said column a stream of the liquid containing the received catalyst for elevation of the catalyst by flotation to the top of the column, constraining the catalyst so elevated to form a column thereof sustained by the column of liquid and reaching to the said high level, passing the catalyst from the upper end of the column thereof into the other of said zones, passing a return stream of the liquid from said column thereof to said body, and regulating the delivery of the liquid by said return stream to maintain a predetermined level of the liquid of said body at said low point.

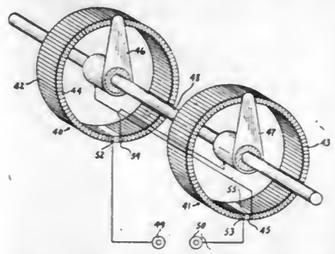
13. In a catalytic reaction apparatus in which a solid catalyst in a divided state passes downwardly through an enclosed zone and leaves said zone through a liquid seal, the combination of a chamber defining the reaction zone, a chamber defining a catalyst regeneration zone, catalyst transfer connections leading respectively from a low point of the reaction chamber to a high point of the regeneration chamber and from a low point of the regeneration chamber to a high point of the reaction chamber, each of said transfer connections comprising a standpipe extending upwardly along one of said chambers to a relatively high level above the bottom of the chamber, a delivery conduit connection between the lower portion of said chamber and the lower portion of said standpipe, said lower portion of the chamber, communicating with said conduit connection, being substantially reduced in horizontal cross section, pump means associated with said conduit connection, a return conduit connection between the lower end portion of said standpipe and the lower portion of said chamber, a valve mechanism associated with said return conduit connection and responsive to delivery of liquid through said return conduit connection to said chamber to control such delivery and maintain liquid in the lower portion of the chamber at a predetermined level, and a catalyst delivery connection between the upper portion of said standpipe and the other one of said chambers.

2,453,459
EXPANDER FOR LOOSE-LEAF NOTE BOOKS
William B. Roberts, Junction City, Kans.
Application June 6, 1947, Serial No. 753,079
6 Claims. (Cl. 129—4)



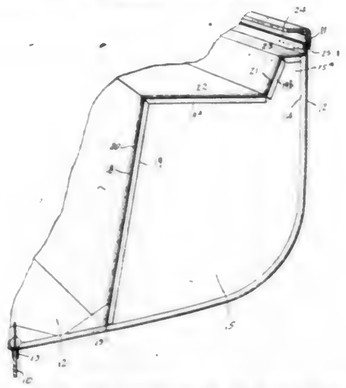
1. An expander for use in a conventional loose leaf binder having a back, rings carried by said back to support a filler, and a pair of covers hinged to said back to respectively overlie opposite sides of said filler; said expander comprising a sheet of resiliently pliable material medially transversely folded to provide a pair of similar inner plates receiving said filler between them and having ring receiving slots adjacent said fold, and a pair of outer plates each joined along one edge to the edge of a corresponding inner plate parallel to said fold and having ring receiving holes in the free edges thereof, each inner plate having opposite, parallel folds adjacent its junction with the corresponding outer plate to provide interplate portions operative to exert resilient pressure between the sides of said filler and said covers when said binder is closed.

2,453,460
MANUFACTURE OF TETRAALKYL THIURAM MONOSULFIDE
Walter Arnold Robshaw, Wrexham, Wales, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application September 16, 1944, Serial No. 554,552. In Great Britain May 9, 1944
5 Claims. (Cl. 260—567)



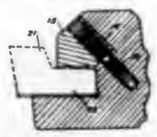
1. The process of manufacturing tetra alkyl thiuram monosulfides which consists in oxidizing an alkali metal salt of a dialkyl dithiocarbamic acid in the presence of an alkali metal cyanide.

2,453,461
CODE MODULATION COMMUNICATION SYSTEM
John C. Schelleng, Interlaken, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 19, 1946, Serial No. 677,667
18 Claims. (Cl. 179—1.5)



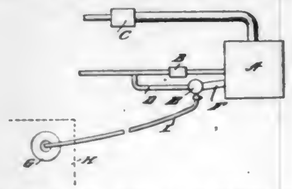
12. In a system for generating binary code representations of the magnitude of a complex wave, a group of selectors each responsive only to an input greater than its individual operating input, the operating inputs of said selectors being related in magnitude as powers of two, means for applying the complex wave to the selector having the largest operating input, means for applying to each of the other selectors an input signal equal to the magnitude of the complex wave less the sum of the operating inputs of operated selectors having larger operating inputs, means for producing output signals for the selectors which are operated, separate channels for transmitting said signals to a receiving station, means at the receiving station for converting the transmitted operating voltages into voltages proportional to the operating voltages of the selectors represented thereby, and means for adding the converted voltages together.

2,453,462
MULTIPLE ELEMENT RHEOSTAT
John K. Sellers, Warren, Ariz.
Application March 25, 1946, Serial No. 656,796
8 Claims. (Cl. 201—56)



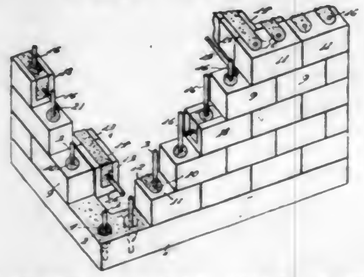
1. An adjustable multiple element rheostat, adapted for inclusion into a current carrying circuit, comprising a plurality of interconnected resistance elements each provided with permanent circuit connections at both ends, and with a contact member movable along said element, one of said permanent end connections being an interconnection between the resistance elements, connecting one end of a resistance element permanently with the movable contact member of another resistance element.

2,453,463
CONSTRUCTION OF SMALL BOATS
Alvin G. Sherman, Grosse Pointe Park, Mich., assignor to Globe American Corporation, Kokomo, Ind., a corporation
Application June 12, 1945, Serial No. 599,024
3 Claims. (Cl. 9—6)



1. A small boat constructed of sheet metal, including a keel, gunwales secured to said keel at opposite ends thereof, a sheet metal hull, a series of spaced bulkhead plates secured to and extending inwardly from said hull, cockpit plates extending upwardly from said hull between said bulkhead plates flush with the inner and upper edges thereof, said cockpit plates having inwardly flanged side edges extending along the edge portions of each adjacent bulkhead plate with the edges of the latter lying substantially flush with the outer surfaces of said cockpit plates, and a continuous welded seam extending over the edges of the bulkhead plates and between the adjacent flanged portions of the cockpit plates to secure them together in sealing relation.

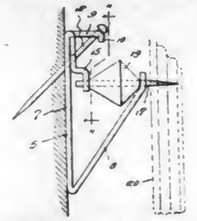
2,453,464
TOOLHOLDER
Henry M. Sheridan, Erie, Pa., assignor to Apex Tool & Cutter Company, Shelton, Conn., a corporation of Connecticut
Application May 31, 1945, Serial No. 596,820
1 Claim. (Cl. 29—96)



In a tool bit holder, a straight solid shank, a bit seat constituting a straight axial extension of said shank having a bit receiving surface substantially parallel with the axis of said shank, a vertical terminal wall of said shank constituting an inner terminal wall for said bit receiving surface, an inclined guide surface formed on said shank outwardly of said terminal wall and overlying said bit receiving surface and disposed with respect thereto at an angle of substantially 45°, a wedge adjustably mounted on said guide surface having a bit surface disposed towards said bit receiving surface and in a plane substantially parallel therewith to form in combination with said bit receiving surface and said terminal wall a bit shank receiving pocket bounded by three right angularly disposed surfaces, a plurality of transversely disposed spaced flat faced pressure ribs formed on said wedge bit surface having their flat faces in a single plane to engage a flat bit surface at spaced parallel areas, and adjusting means comprising an adjusting screw having separate reversely threaded sections, one of said sections threadedly engaging said wedge while the other section threadedly engages the shank, said screw being operable from the bit end of said shank to move said wedge towards and from said bit receiving surface to apply vertical pressure by said pressure ribs against a bit shank seated thereon.

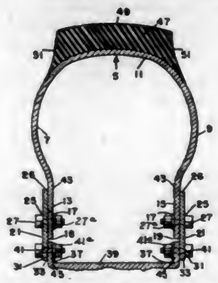
2,453,465
APPARATUS FOR MIXING DRILLING MUD
John I. Sloan, Tulsa, Okla., assignor of one-fifth to John H. Poe, Tulsa, Okla.
Application November 16, 1945, Serial No. 629,089
11 Claims. (Cl. 259—4)

1. Apparatus for mixing powdered ingredients with drilling mud, including a settling pit, a main circulating line for conveying the drilling mud from the pit to the well and back to the pit, a pump for forcing the drilling mud through the circuit, a by-pass line leading from the main circuit, beyond the pump, back to the pit, whereby the pump forces a portion of the drilling mud through said by-pass back to the pit, a mud mixing chamber in the by-pass line, said mixing chamber having an opening for the admission of the powdered ingredients, means for creating a vacuum at said opening, a vacuum pick-up head for insertion in the supply of powdered ingredients, an operative connection between said vacuum head and said opening, and said connection including a flexible line whereby the vacuum pick-up head may be variably positioned, close to or distant from the mixing chamber, in accordance with the variable location of the supply of powdered ingredients.



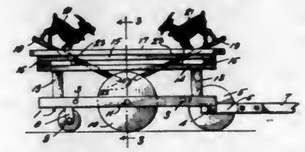
2,453,466
BUILDING CONSTRUCTION
Joseph Slobodzian, Phoenixville, Pa.
Application April 20, 1944, Serial No. 531,864
2 Claims. (Cl. 72—15)

1. A building construction, having the regular courses in its walls formed of rectangularly



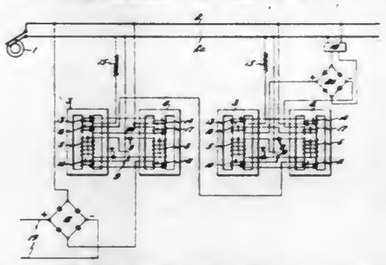
shaped, solid blocks of Foam Glass, machined to size and having spaced apertures opening through their tops and bottoms, the wall blocks at a floor level being formed of rectangularly shaped blocks of Foam Glass machined to size with apertures opening through their tops and bottoms to register with the apertures in the blocks of the regular courses and having slots extending laterally from their apertures and terminating above the bottoms of the blocks at a floor level, rectangularly shaped floor blocks having longitudinally extending channels opening through their tops, metal reinforcements in said apertures of the blocks of the regular courses, metal reinforcements in the channels of the floor blocks extending through said slots and into apertures of the blocks of the regular courses at opposite walls, and concrete embedding said reinforcements and bonded with said wall and floor blocks.

2,453,467
PICTURE HANGER
Thomas F. Smith, Pasadena, Calif.
Application September 28, 1945, Serial No. 619,066
3 Claims. (Cl. 248—28)



1. In a hanger for picture frames and the like, a bracket having a backing strip adapted for attaching to a wall or the like, said backing strip having a receiving socket therein, and also having an arm extending outward from the lower end thereof with an open socket thereon aligned with the socket in the backing strip, a screw adapted for mounting in a picture frame with the axis thereof perpendicular to the surface of the frame, said screw having an enlargement thereon for positioning between the receiving and open sockets of the bracket with the screw freely held in said sockets.

2,453,468
SPRING STEEL SHOE WITH RUBBER SOLE
William J. Sprong, Alhambra, Calif.
Application March 29, 1945, Serial No. 585,508
2 Claims. (Cl. 152—249)

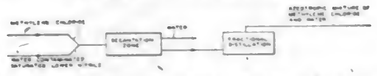


1. A device of the type described, comprising a tempered spring steel body having resilient arcuate side portions and an arcuate tread receiving portion formed integral therewith a rubber traction tread member secured to the outer surface of said tread receiving portion, circular flange engaging portions depending from said side portions, and circular flanges having staggered relatively spaced openings therein engaging the outer faces of said flange engaging portions for connecting said flange engaging portions to a vehicle wheel head.

2,453,469
WHEELED FIGURE TOY
Elia Stapan, Chicago, Ill.
Application October 25, 1946, Serial No. 705,552
5 Claims. (Cl. 46—107)

5. A toy comprising a platform formed with longitudinally extending slots, tracks extending longitudinally of the platform, carriers extending vertically through the slots and converging downwardly, guides carried by the carriers and engaged with the tracks to mount the carriers for sliding movements longitudinally of the slots and tilting movements towards and away from each other during their sliding movements, rotary drive means under the platform connected with the lower ends of the carriers and imparting movement to them when rotated, and objects carried by the carriers above the platform and moved toward and away from each other by movements of the carriers.

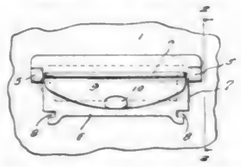
2,453,470
ELECTRIC CONTROLLING APPARATUS
Stephan Steinitz, New York, N. Y., assignor to Ward Leonard Electric Company, a corporation of New York
Application December 7, 1945, Serial No. 633,402
11 Claims. (Cl. 323—89)



11. Amplifying apparatus comprising an alternating current source and reactive means, said means comprising two main windings supplied with current from said source and delivering current to a controlled circuit, half-wave rectifiers in the circuit of said main windings respectively for causing each of said windings to be subjected to a current in one direction during half-wave periods, the output circuit from said windings being connected to deliver alternating current to the controlled circuit, two windings subjected to an approximately constant current and respectively related to said main windings for reducing the magnetizing current of said main windings, two windings subjected to said alternating cur-

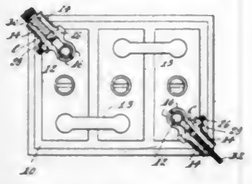
rent of the controlled circuit and respectively related to the main windings to cause their magnetomotive forces when the main windings are inactive to be in the same direction respectively as the magnetomotive forces of the main windings when active, and two control windings subjected to changes in current and respectively related to the main windings for increasing the current in the main windings upon increase of current in the control windings and for decreasing the current in the main windings upon decrease of current in the control windings.

2,453,471
PRESERVING CAUSTIC SODA FROM CONTAMINATION IN METAL CONTAINERS
John Lyman Switzer and John C. Michalek, Niagara Falls, N. Y., assignors to Mathieson Chemical Corporation, a corporation of Virginia
No Drawing. Application May 2, 1940, Serial No. 332,966
4 Claims. (Cl. 117—75)



3. The method of preserving caustic soda in metallic containers from contamination with corrosion products of the metals of the containers which comprises applying to the metal surface a priming coat having good adherence for the metal and comprising corrosion inhibiting pigments mixed with chlorinated rubber and a compound selected from the group consisting of phenolic resins and long oil alkyd resins, and subsequently applying to the primed surface a mixture containing a relatively large proportion of polystyrene and a relatively smaller proportion of a finely-divided pigment that is substantially inert with respect to caustic.

2,453,472
DEHYDRATION OF SATURATED NITRILES
John W. Teter and Walter J. Merwin, Chicago, Ill., assignors to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application October 12, 1944, Serial No. 558,475
1 Claim. (Cl. 202—60)

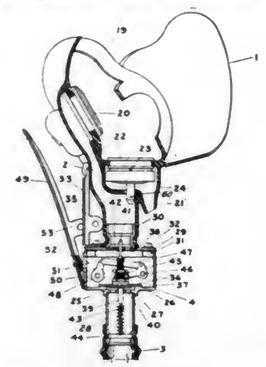


A process for the dehydration of saturated nitriles of 2 to 4 carbon atoms per molecule which comprises adding methylene chloride to a hydrous nitrile, subjecting the mixture to stratification to separate an aqueous upper layer, and fractionally distilling the water and methylene chloride from the lower layer as a binary azeotrope.

2,453,473
STOVE FLUE COVER
Catherine H. Thieman, Beaver Dam, Wis.
Application December 7, 1945, Serial No. 633,396
1 Claim. (Cl. 126—280)

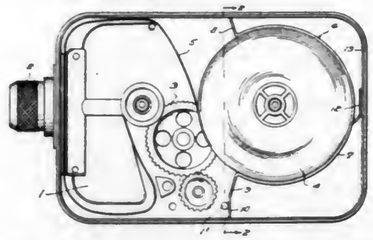
In a stove having a wall provided with an opening, a flue connected to said wall and communicating with said opening, there being an outwardly-extending offset at each of the upper corners of said opening, a catch including an upwardly-projecting looped branch arranged exteriorly of said wall adjacent to each of said offsets and spaced from the wall so as to provide a space therebetween, a plate adapted to be detachably connected to said wall adjacent said opening in a position to form an apron for the latter and in a position to form a closure for said opening, said plate being provided with a slot in each end thereof, the side edges of the slots engaging opposite surfaces of said wall adjacent the edges of said opening when the plate is in a position to form an apron for said opening, and a projection on the exterior face of said plate serving as a supporting brace when the plate is in position to form an apron for said opening, each end of said plate being formed with an offset so as to provide a shoulder, the shoulders of said plate being received within the aforesaid spaces when the plate is in a position to form a closure for said opening.

2,453,474
BATTERY TERMINAL CLAMP
Wesley W. Thumann, Stuttgart, Ark.
Application December 4, 1944, Serial No. 566,417
2 Claims. (Cl. 173—259)



1. In a battery terminal clamp, a pair of identical clamping elements, said elements having registering holes intermediate their ends for reception of a bolt for securing the elements together, said elements when assembled forming a terminal hole transversely therethrough at one end thereof, the opposite ends of said elements having mating faces spaced apart when in parallel relation, said mating faces having registering longitudinal recesses formed therein for gripping a cable, said recesses having spiral ribs formed therein, and the ends of said mating faces opposite said terminal hole having registering cross-grooves of shallower dimension than said recesses.

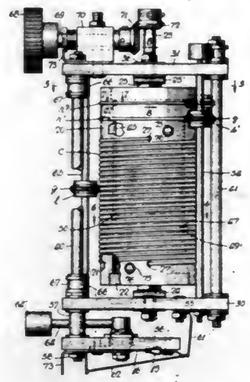
2,453,475
RESUSCITATION APPARATUS
Cornelius A. Tobias, Berkeley, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Application September 14, 1945, Serial No. 616,389
3 Claims. (Cl. 128—29)



2. A resuscitation apparatus including a breathing mask; a manually operated valve comprising a valve body and a valve disk attached to said mask so arranged that one hand can be employed both to apply said mask and to control said valve; said manually operated valve communicating on its high pressure side with a source of compressed gas and on its low pressure side through a first check valve with the interior of said mask, said first check valve closing in response to relatively superior pressure within the interior of said mask; a second check valve opening in response to pressure within the interior

of said mask superior relative to that in said valve body, for controlling flow of fluid between the interior of said mask and the atmosphere through a passage independent of said valve

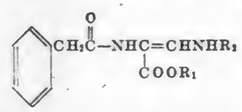
body; a port communicating between said valve body and the atmosphere; and means for opening said port simultaneously with the seating of the disk of said manually operated valve.



2,453,476
FILM SPOOL GUIDE RING
Robert A. Troidl, Lake George, N. Y.
Application March 8, 1946, Serial No. 653,085
2 Claims. (Cl. 242—71)

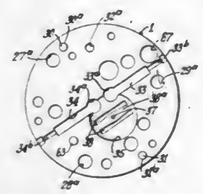
1. In combination with a moving picture camera having a film feed spool, film rolled upon said feed spool, a resilient arcuate film guide ring disposed concentrically about said feed spool and film engageable with said film as it feeds from said feed spool, radially extending bearing extremities on the ends of said guide ring engageable with the opposite inner edges of said camera, a resilient positioning and bearing tongue struck from the guide ring between said bearing extensions engageable with the inner end of said camera, and a cross pin disposed transversely of said camera engaged by one of said bearing extremities forming a positioning stop for said guide ring.

2,453,477
BROAD BAND VARIABLE TUNING COIL
Shirley Irving Weiss, New York, N. Y.
Application July 27, 1944, Serial No. 546,869
8 Claims. (Cl. 171—242)



1. An inductor unit, comprising a frame, an insulating cylindrical drum thereon, an inductor coil about said drum, a plurality of collector rings coaxial with said drum, means affixed within said drum electrically connecting each of the rings to a different portion of the coil, contacts on the frame electrically connected to the respective collector rings, a contact shoe engaging the inductor coil,

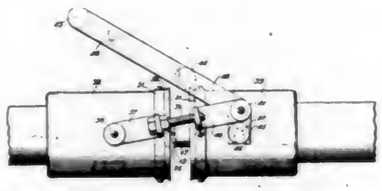
means for connecting an impedance load to said contact shoe and means for adjusting the position of said contact shoe along said coil.



2,453,478
PHENYL- AND PHENYLALKYLAMINO-METHYLENEPHENACETURATES
Arthur W. Weston, Waukegan, Ill., assignor to Abbott Laboratories, North Chicago, Ill., a corporation of Illinois
No Drawing. Application January 16, 1946, Serial No. 641,635
4 Claims. (Cl. 260—471)

3. Compounds represented by the formula

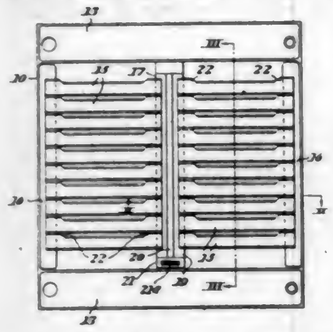
where R_1 is an alkyl group and R_2 represents a member selected from the class consisting of benzyl and phenyl groups.



2,453,479
TIME FUSE
Richard H. Whitehead, New Haven, Conn., assignor, by mesne assignments, to the United States of America
Application October 5, 1939, Serial No. 298,128
1 Claim. (Cl. 102—84)

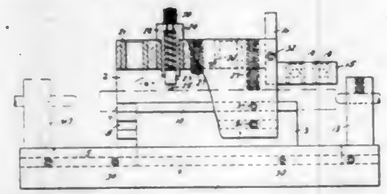
A time fuze comprising a detonating device, a timing mechanism, a means for connecting the timing mechanism to the detonating device for releasing the latter, said timing device comprising a plate having a lateral recess, an escapement wheel pivoted within said recess in said

plate, a second plate parallel to said first mentioned plate and above said wheel, said second plate being relatively thin and having a pair of openings therethrough in alignment with the periphery of said wheel and defining between them a bridge connected to said plate at both ends and overlying the periphery of said wheel, an oscillating element pivoted in said bridge and having relatively short pins extending through said openings in said thin second plate into the plane of said wheel in position to cooperate therewith, said first mentioned plate having substantially parallel slots therethrough closely spaced to provide a narrow bridge portion between them having the pivot for the escapement wheel, said slots and second mentioned bridge providing for adjustment of the pivot bearing relative to said pins of the oscillating element.



2,453,480
QUICKLY DETACHABLE COUPLING
Hilding V. Williamson and Raymond Harry Griesemer, Chicago, Ill., assignors to Cardox Corporation, Chicago, Ill., a corporation of Illinois
Application November 2, 1945, Serial No. 626,308
11 Claims. (Cl. 285—171)

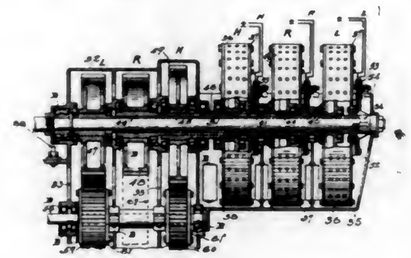
1. A coupling for fluid conduits to carry a cooled medium, comprising a pair of hollow members, heat insulation means on the outside of said members, seating surfaces including a gasket at the meeting ends of said members to cooperate to establish a tight seal when the members are together, sealing means spaced outwardly from said seating surfaces to cooperate to establish a seal between the contiguous ends of said insulating means to exclude atmospheric moisture from the region of said seating surfaces, and releasable means for retaining the member together.



2,453,481
ANODE FOR ELECTROLYTIC COATING
Abram B. Wilson, Hollidays Cove, W. Va., assignor to National Steel Corporation, a corporation of Delaware
Application March 14, 1944, Serial No. 526,393
2 Claims. (Cl. 204—286)

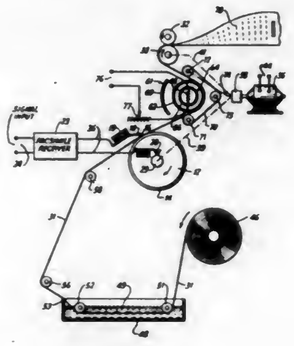
1. In an electroplating apparatus wherein a plurality of anodes are disposed in spaced, side-by-side relation in a bank in an electroplating bath, the combination of a plurality of anode bars and spaced guides in said bath for supporting the anode bars and over which they may be moved, one of said guides being an electrical contact member for supplying current to the anode bars, each anode bar comprising an elongated body portion, the cross section of which is quadrilateral, and quadrilateral end portions adapted to ride on said guides, said end portions being of greater cross-sectional area than and extending laterally beyond said body portion, and having coplanar faces parallel to the axis of the body portion, the faces of the end portions resting on the guides, together with the corresponding faces of adjacent anode bars, substantially completely covering the

portions of the guides traversed by the anode bars as they are moved therealong.



2,453,482
UNIVERSAL DRILL JIG
Charles H. Woolson, Syracuse, N. Y.
Application September 14, 1946, Serial No. 697,029
1 Claim. (Cl. 77—62)

A universal drill jig including a base, a carriage, drill guide openings, the block being adjustable lineally along the ways of the base, and the carriage adjustable lineally along the ways of the block to locate drill openings relative to the work between the carriage and the block, a reversible work holder block between the base and the carriage and having ways slidably interfitting with ways of the base and of the carriage and reversible to interlock the ways interfitting with the base with the ways interfitting with the carriage and vice-versa, the block having work receiving channels of different contour on opposite sides thereof arranged to be alternately brought into position opposed to the carriage upon reversing of the block, the carriage having a plurality of duplicate ways for coacting with the ways of the block and arranged to space the block different distances from the carriage, whereby work of different diameters are clamped between the opposing faces of the block and the carriage in juxtaposition to the drill guide openings.



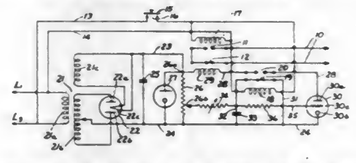
2,453,483
ELECTROMECHANICAL RAILROAD LOCOMOTIVE
Frank B. Yingling, Hamilton, Ohio
Application December 3, 1942, Serial No. 467,762
4 Claims. (Cl. 105—130)

1. In an electromechanical coupling unit for transmitting power and including a plurality of spaced impellers, the combination with a drive shaft having a driving head rigid with one of the impellers and detachable joints rigidly uniting adjoining impellers, a plurality of driven tubular shafts concentric with the drive shaft, a rotor rigid with each driven shaft, and selective

electrical means for energizing a selected coupling.

2,453,484
ELECTROLYTIC SIGNAL RECORDING
Charles J. Young, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 31, 1946, Serial No. 673,225
4 Claims. (Cl. 346—74)

1. Facsimile recording apparatus comprising means for producing a record electrolytically which is visible on a record sheet, means for thereafter treating said record sheet with light from a light source to fix the color of the background of said sheet, said light source being of a nature to evolve heat, and means for utilizing the heat from said light source to dry and smooth the sheet.

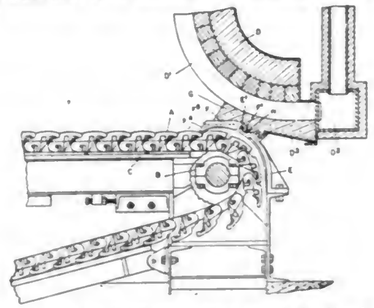


2,453,485
EAR DECORATION
Gene M. Axtell, Berkeley, Calif.
Application February 20, 1947, Serial No. 729,722
6 Claims. (Cl. 63—14)

1. An article of the class described comprising a continuous resilient member of looped form adapted to be looped over the upper part of the helix and over the lobe of the ear with one side of the loop extending along the back of the ear and the other side of the loop extending along the front of the ear and acting as a support for decorative elements, and decorative elements mounted on and extending along the side of the looped member which extends along the outer side of the ear to provide ear ornamentation ex-

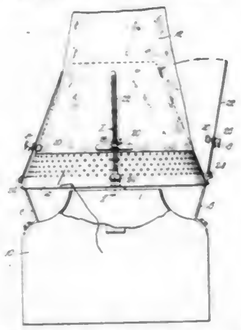
tending from the upper part of the helix to the lobe of the ear.

2,453,486
ELECTRONIC TIMER
Jack Ball, Cleveland, Ohio, assignor to Picker X-Ray Corporation Waite Manufacturing Division, Inc., Cleveland, Ohio, a corporation of Ohio
Application January 1, 1945, Serial No. 570,977
5 Claims. (Cl. 315—238)



1. Means for timing the period of energization of a power circuit comprising means for causing energization of said circuit including a first relay, means for causing de-energization of said circuit including a second relay, an energizing timing circuit for said second relay including in series a pair of normally open contacts and a space discharge tube of the trigger type having a control grid controlling the conductivity condition of said tube and a source of substantially constant electric potential for said timing circuit, a condenser circuit including a condenser controlling the potential of said grid and a source of electricity for charging said condenser and a short circuit for said condenser including a pair of normally closed contacts, voltage regulator means for controlling the potential of said electrical sources for said timing circuit and for said condenser circuit, relay means for opening said normally closed contacts of said condenser circuit and for closing said normally open contacts of said timing circuit, means for energizing said relay means substantially simultaneously with energization of said first relay, and said second relay being responsive to a change in the conductivity condition of said tube to cause deenergization of said power circuit.

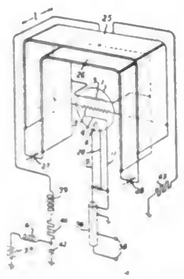
2,453,487
SEALING MEANS FOR TRAVELING GRATE STOKERS
Royce L. Beers, Birmingham, Mich., assignor to Detroit Stoker Company, Monroe, Mich., a corporation of Michigan
Application February 16, 1945, Serial No. 578,169
2 Claims. (Cl. 110—40)



1. In a stoker, the combination with a traveling grate and a furnace wall adjacent to one end thereof, of sealing means between said grate and furnace wall comprising a member pivotally anchored at one end and extending over said grate in the direction of travel thereof to rest there-

upon, and a yieldable packing between said furnace wall and said member permitting movement

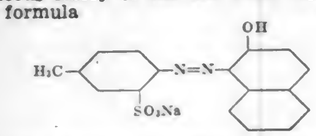
of the latter to ride over any irregularity in the surface of the grate.



2,453,488
GARMENT DRIER HEAD
Phil C. Bowen, Merriam, Kans.
Application September 10, 1945, Serial No. 615,320
1 Claim. (Cl. 34—106)

A garment drier part of the character described comprising a foraminous open end metal body adapted for insertion into the lower part of the garment; and clamps, each pivotally secured at one end thereof to said body, said clamps being swingable toward and from the body for securing the garment in place there against said clamps each comprising an elongated arm and a magnetic jaw of sufficient strength to prevent accidental displacement of the garment from beneath the same when the jaw is held thereagainst by the magnetic attraction established between the metal body and said jaw, said jaws being slidably mounted on respective arms for adjustment longitudinally therealong.

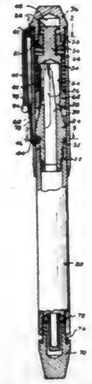
2,453,489
ULTRA HIGH FREQUENCY OSCILLATOR
Irwin M. Bruntil, Bridgeport, and Earl F. Reihman, Fairfield, Conn., assignors to General Electric Company, a corporation of New York
Application August 12, 1944, Serial No. 549,262
5 Claims. (Cl. 250—36)



1. A high frequency wave generator including an electron discharge device having an anode, a cathode and a control electrode, a tank circuit including a transmission line formed of a pair of sheets of electrically conducting material disposed in parallel spaced relation, one end of one of said sheets being connected to said anode and one end of the other of said sheets being connected to said control electrode, said sheets having a width great relative to their length and being curved in a plane transverse to the direction of wave propagation, said length being meas-

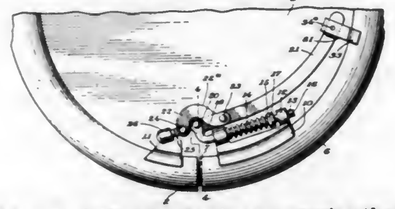
ured in said direction from one of said ends of one of said sheets to the respectively opposite end thereof, the sheet connected to said control electrode surrounding and shielding the sheet connected to said anode.

2,453,490
PROCESS OF PRODUCING A BARIUM LAKE PIGMENT
Jack Beniah Callaway, Summit, and Donald Bernard Killian, Newark, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 23, 1946, Serial No. 671,910
2 Claims. (Cl. 260—197)



2. The process of producing an improved barium lake pigment, which comprises treating an aqueous slurry of the azo color represented by the formula

with sodium rosinate and barium chloride in the presence of a soluble metallic bicarbonate, alkalizing the mixture to a pH of at least 10, digesting the same at a temperature not less than 80° C., and eventually separating the color from the aqueous phase.



2,453,491
FOUNTAIN PEN
Carl J. Cardin, Downers Grove, Ill.
Application November 29, 1944, Serial No. 565,584
14 Claims. (Cl. 120—42.01)

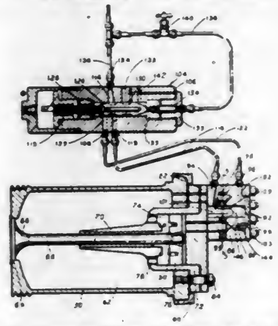
1. The combination comprising a fountain pen barrel having an undercut annular groove, an external cap adapted to be fitted over the end of said pen and to extend beyond said groove, said cap being provided with an aperture in the proximity of said groove when said cap is fitted over said barrel, a sealing cap slidably mounted within said external cap for engagement with the end of said pen barrel, resilient means mounted within said cap for urging said sealing cap against the end of said barrel, a connecting member to unite said external cap and said sealing member comprising a shaft and headed portion, said shaft operably connected to said sealing cap with said headed portion positioned externally of said cap, and an elongated spring catch carried by said external cap and having an

end portion adapted to extend through said aperture for engagement with said groove.

2,453,492
BARREL CLOSING RING
Ben Carter, Granite City, Ill., assignor of one-half to Robert V. Warga, Rolla, Mo.
Application March 29, 1945, Serial No. 585,563
1 Claim. (Cl. 24—71)

A barrel closing ring having an opening therein, a bearing bracket mounted on the inner surface of the said ring spaced from the opening thereof, a swivel bracket also mounted on the inner surface of the said ring spaced from the opening thereof and positioned on the opposite side of the opening from that on which the bearing bracket is mounted, an L-shaped rod with one leg rotatably mounted in said bearing bracket, and the other leg extended inwardly toward the center of the ring, a pin rotatably mounted in the said swivel bracket and having a head limiting longitudinal movement thereof toward the opening of the ring, a hand lever positioned within said ring with an end thereof pivotally mounted on the end of the centrally extended leg of the L-shaped rod, and a U-shaped link pivotally attached to the pin in the swivel bracket at one end and with the other end pivotally attached to the said hand lever.

2,453,493
HALOGENATED HYDROCARBON COMPOSITION
Frank M. Clark and Edward L. Raab, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York
No Drawing. Application June 18, 1945, Serial No. 600,214
6 Claims. (Cl. 252—63.7)



1. A liquid composition suitable for insulating and dielectric purposes consisting essentially of the combination of normally stable halogenated aromatic hydrocarbon compounds and a fixative for halogen decomposition products consisting of a polycyclic compound containing at least one heterocyclic ring and a plurality of hetero atoms at least one of which is nitrogen, said fixative constituting at least 0.1 to 10 per cent of said composition.

2,453,494
FLUORENONE DIELECTRIC COMPOSITION
Frank M. Clark, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
No Drawing. Application August 12, 1947, Serial No. 768,276
3 Claims. (Cl. 252—65)

1. A composition which is suitable for the impregnation of paper-spaced capacitors consisting of the following ingredients in the approximate proportions indicated:

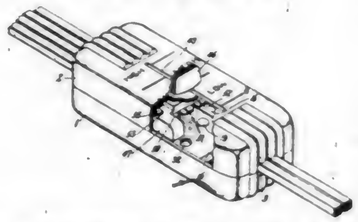
	Percent
Monochlor fluorenone	65–76
Dichlor fluorenone	20–21
Unchlorinated fluorenone	15– 3

2,453,495
STARTING SYSTEM FOR FREE PISTON UNITS
Kenneth C. Cooper, Portland, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application January 28, 1944, Serial No. 520,072
10 Claims. (Cl. 222—3)

1. In an accumulator device, a housing having a storage chamber and an outlet port for the chamber, a valve closing the port and movable to open position by pressure in the chamber acting on said valve, a piston and cylinder one of which is connected to said valve, inlet means for admitting fluid under pressure to said chamber, a connection from said chamber to the cylinder at one side of the piston for admitting pressure to the cylinder to hold the valve closed, and means for admitting fluid under pressure to the other end of said cylinder for causing the valve to open and for simultaneously closing said inlet means.

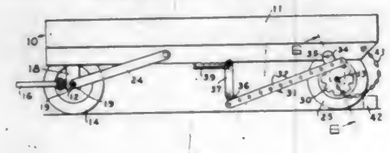
2,453,496
PROCESS OF CONVERTING NICOTINONITRILE INTO NICOTINAMIDE
James F. Couch and Charles F. Krewson, Glenside, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application October 19, 1943, Serial No. 506,873
1 Claim. (Cl. 260—295.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A process of obtaining substantially pure nicotinamide from nicotinonitrile comprising: react-

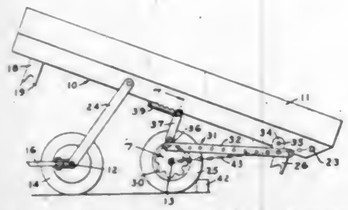


ing nicotinonitrile with hydrogen peroxide and sodium hydroxide dissolved in water in the proportions of about 3.5 moles of the hydrogen peroxide and about 0.30 moles of the sodium hydroxide to 1 mole of the nicotinonitrile, in the presence of about 5 ml. of alcohol to each gram of nicotinonitrile, chilling the reaction mixture until heat is no longer evolved to maintain a temperature not substantially in excess of 50° C., then maintaining the temperature at about 50° C. for about 6 hours, then neutralizing the reaction mixture with weak sulfuric acid, removing the alcohol and water from the neutralized mixture, extracting the residue with ethyl acetate, removing the ethyl acetate, and drying the residue to obtain the purified product.

2,453,497
HONDA
Harold V. Cross, Miles City, Mont.
Application November 24, 1947, Serial No. 787,661
3 Claims. (Cl. 24—233)



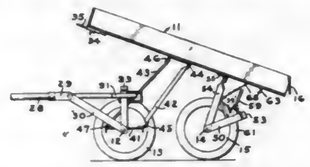
1. In a honda including a pair of coacting jaws adapted to abut each other, a channel-like insert attached to one of said jaws, the abutment of said jaws being covered by said insert.



2,453,498
ELECTRIC SWITCH
George C. Crowley, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application April 15, 1947, Serial No. 741,560
1 Claim. (Cl. 200—16)

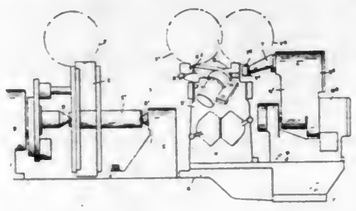
An electric switch of the through switch type comprising an elongated hollow housing having wire receiving openings at both ends and formed in two parts comprising a recessed base member and a cover member, a stationary contact mounting element comprising a flat insulating plate, means integral with said base member and extending upwards therefrom for removably supporting said plate spaced from the bottom of said base member, a plurality of rows of stationary contacts on the upper surface of said plate, said stationary contacts having integral conductive means extending through said plate and having terminal members on the lower surface of said plate adapted to receive all wire connections for circuits to be controlled by the switch, said cover member having a longitudinal slot formed therein, a movable contact carrier positioned beneath the cover and having means extending through said slot to the outside of the cover for the operation of the carrier, a movable contact on said carrier comprising a spring contact finger having a total width sufficient to span all of said rows of stationary contacts, said movable contact being mounted on said carrier in position to cooperate with said stationary contacts for selectively completing circuits between them, said carrier having smooth bottom surfaces adapted to slide on the upper surface of said plate, corrugated ridges extending inwardly from the surface of said cover member, spring tensioned ball bearings mounted in said carrier and positioned to bear against corrugations and thereby to press said movable contact against said stationary contacts, whereby said plate is held in position on its supporting means and there is provided a snap positioning action as said carrier is moved, the number of corrugations corresponding to the number of switch positions, and means holding said base and cover members together against the pressure of said movable contact and ball bearings.

2,453,499
VEHICLE CONSTRUCTION
Arthur Raymond Cunningham, Detroit, Mich.
Application December 23, 1946, Serial No. 718,003
15 Claims. (Cl. 298—20)



14. A vehicle comprising a body, first and second axles for supporting the body, connections between the body and axles releasable from the latter upon upward movement of the body relative to the axles, means for relatively moving the axles in directions toward each other, and means responsive to relative movement of the axles toward one another to raise the body off the axles and to swing the body about one of said axles.

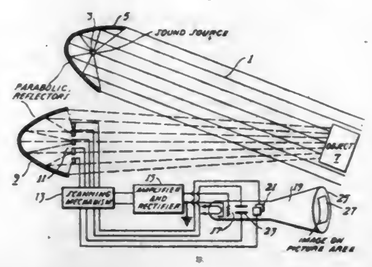
2,453,500
VEHICLE CONSTRUCTION
Arthur Raymond Cunningham, Detroit, Mich., assignor to Ray Cunningham and Sons, Inc., Detroit, Mich., a corporation of Michigan
Application April 7, 1947, Serial No. 739,909
10 Claims. (Cl. 298—20)



1. A vehicle comprising a body, an axle having ground engaging wheels thereon, a pair of arms having the lower ends supported on the axle for swinging movement about the axis of the axle, a member at the upper end of one arm removably engageable with the body to support the latter on the axle, means pivotally connecting the upper end of the second arm to the body in advance of

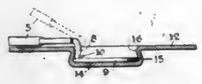
the member, a connection between the arms responsive to shifting movement of the body in one direction relative to the axle to swing the arms

about the axle and raise the body, and means responsive to continued shifting movement of the body in the above direction to swing the body about the axle.



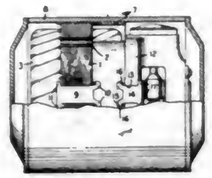
2,453,501
TRIMMING MECHANISM FOR GRINDER WHEELS
Robert W. Dickieson, Detroit, Mich., assignor to The Gear Grinding Machine Company, Hamtramck, Mich., a corporation of Michigan
Application April 3, 1944, Serial No. 529,314
4 Claims. (Cl. 125—11)

1. A trimmer mechanism for grinder wheels comprising a rock shaft, a rock arm revoluble therewith, a shaft parallel to said rock shaft mounted at the outer end of said rock arm, a trimmer point mounted on the latter shaft at a predetermined distance from the axis thereof, a second rock arm independently revolubly mounted on said rock shaft, resilient yieldable means coupling said rock arms, a connection between said second rock arm and the shaft carrying said trimmer point whereby said shaft will be rotated by independent rocking movement of said second rock arm, a stop for limiting the angular movement of said first mentioned rock arm, a stop for limiting the movement of said second rock arm positioned to permit movement of the latter after arrest of movement of said first rock arm, whereby said trimming point will first trace a curve about the axis of said first mentioned shaft and will then trace a short radius curve tangent to the first curve about the axis of said second mentioned shaft.



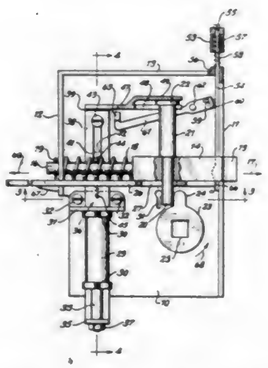
2,453,502
SOUND-TO-IMAGE TRANSDUCING SYSTEM
Glenn L. Dimmick, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application May 11, 1944, Serial No. 535,111
6 Claims. (Cl. 178—6.8)

1. Apparatus for ascertaining the structure of an object in water comprising a source of compressional waves in the sonic or ultrasonic range adapted to be immersed in water, means for projecting waves from said source upon said object whereby the intensity of said waves will be modified and said modified waves will be reflected in a pattern corresponding to the structure of said object, a mosaic adapted to be arranged in the path of said reflected waves and comprising a multiplicity of vibratile elements each capable of translating reflected waves which impinge thereon into an electrical wave corresponding to the



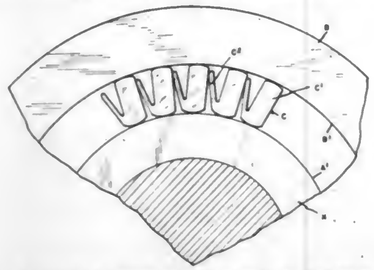
position and intensity of the compressional waves in said reflected wave pattern, means focussing said reflected pattern on said mosaic means for transmitting said electrical waves out of said water, and means responsive to the impress thereon of said discrete electrical waves for converting said electrical waves into an optical image corresponding to the intensity and relative position of the compressional waves in said reflected wave pattern.

2,453,503
METHOD OF ATTACHING TEAR STRIP WINDING KEYS TO RECEPTACLES
Clarence L. Emmons, Jersey City, N. J., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application February 21, 1944, Serial No. 523,286
3 Claims. (Cl. 29—148)



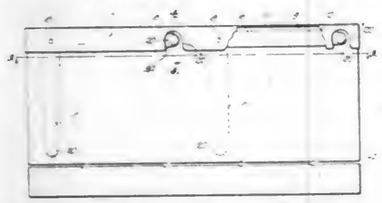
1. A method of temporarily securing a tear strip winding key having a main body including a slotted shank and a turning head and an angularly offset shank extension with a weakening groove thereacross and a circular mounting head extending from the shank extension in a plane paralleling the plane in which said main body lies to a can end having a wall defined circular recess centered therein which consists in bringing said can end and key together with the mounting head in the recess with the shank extension groove well down in the recess within the depth of the recess defining wall, and reshaping recess defining wall portions while maintaining the fixed position of the key by peripherally spreading the edges of said mounting head thereby to present wall portions in overhanging relation to the defining edges of the mounting head and effective to retain the same in the recess so that upon lifting of said main body portion it can be broken away at the weakened shank groove without pulling away said mounting head and without leaving any raw metal edges extended above the wall defined recess.

2,453,504
DYNAMOELECTRIC MACHINE AND SECURING DEVICE
Frank H. Fleischer, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application November 27, 1945, Serial No. 631,168
7 Claims. (Cl. 171—252)



1. A dynamoelectric machine stationary member including a laminated core of magnetic material with a plurality of longitudinally extending grooves in the outer periphery thereof, a frame around said core having a supporting ring having a plurality of pairs of outwardly curved angularly extending openings in a side thereof adjacent said core corresponding to said plurality of grooves and arranged in engagement with one side of said core, and means including retaining devices arranged in said grooves and each having a bifurcated end mechanically anchored in said ring openings with transversely extending fingers at the other end thereof arranged in engagement with a surface of said core for retaining said core in said frame.

2,453,505
SAFETY DOOR LOCK
Lawrence J. Fornwald, Plymouth, Mich.
Application February 21, 1946, Serial No. 649,310
10 Claims. (Cl. 70—283)

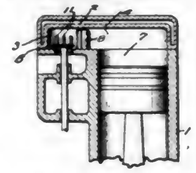


1. A safety door lock comprising in combination, a supporting plate, a spring pressed bolt slidable on said plate, an actuating pin extending transversely through said bolt, an externally operable element and an internally operable element engaging said pin, and solenoid actuated means for disengaging said pin from said elements.

2,453,506
SPRAG
Ivor J. Gruenberg, Pleasant Ridge, Mich., assignor to The Gear Grinding Machine Company, Hamtramck, Mich., a corporation of Michigan
Application December 10, 1945, Serial No. 634,007
5 Claims. (Cl. 192—45.1)

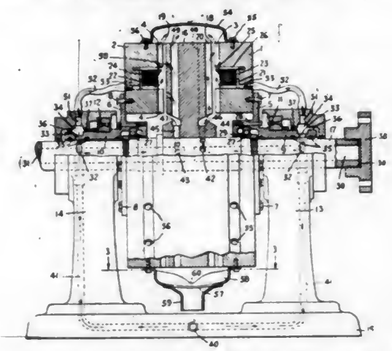
1. A sprag having a body and an integral portion constituting a resilient finger for bearing against an adjacent sprag.

2,453,507
LOOSE-LEAF BINDER
Elmer E. Harper, deceased, late of Monrovia, Calif.; by Esther Pardee Harper executrix, Monrovia, Calif.
Application July 16, 1945, Serial No. 605,386
2 Claims. (Cl. 129—35)



1. A loose leaf binder construction comprising, an elongated channel shaped holder providing a clamping space for the margins of loose leaf material, a curved spring element pivoted within said clamping space to one side of the holder and having swinging movement out of said space into a position at substantially right angles to the holder to permit insertion or removal of the loose leaf material and provide guiding means of curved contour for facilitating said insertion of the loose leaf material and also having swinging movement into said space to be compressed by the holder into pressure retaining engagement with said material after the insertion thereof.

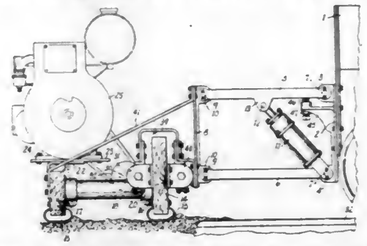
2,453,508
VALVE COOLING MEANS FOR INTERNAL-COMBUSTION ENGINES
August F. W. Helmbold, Augusta, Ga.
Application January 17, 1946, Serial No. 641,792
1 Claim. (Cl. 123—177)



In an internal combustion engine embodying a valve chamber having a pair of intake and exhaust poppet valves therein for admitting gas into said chamber and exhausting the same therefrom, respectively, deflecting means in said chamber for causing the gas admitted by said intake valve to pass over said exhaust valve to cool the same, and cooling studs on said exhaust valve through and around which the deflected gas

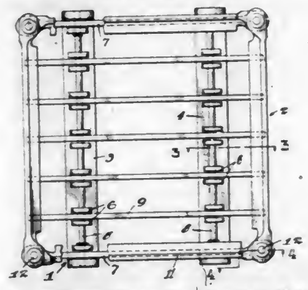
may pass, said deflecting means comprising an elongated deflector baffle extending alongside said pair of valves and comprising a major portion

curving part way around the intake valve for collecting gas and terminating in an oppositely curved minor portion opposite the exhaust valve.



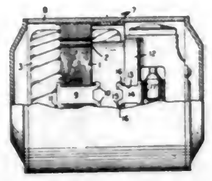
2,453,509
DYNAMOELECTRIC MACHINE
Adolph C. Hugin, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 11, 1945, Serial No. 634,215
15 Claims. (Cl. 188—104)

1. A dynamoelectric machine including a stationary member having a pair of core members of magnetic material anad having radial faces, a rotatable member having radial faces arranged between said stationary core members with an air gap between said stationary member and the adjacent rotatable member radial faces, one of said members being formed with a plurality of outwardly extending teeth in the radial faces thereof, means for magnetically exciting said stationary and rotatable members, outwardly extending passages through said rotatable member communicating with said air gaps and with the spaces between said teeth, and means including a hollow perforated shaft for supplying cooling fluid to said rotatable member passages and into said air gap in contact with said radial faces of said stationary and rotatable members for cooling said members by direct contact therewith and by passage through said rotatable member passages.



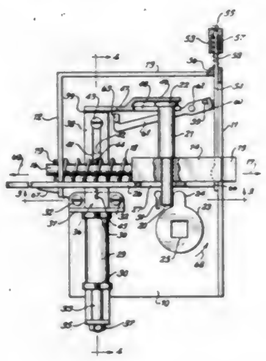
2,453,510
SCREEDING AND COMPACTING MACHINE FOR CONCRETE SLABS AND THE LIKE
Corwill Jackson, Ludington, Mich., assignor to Jackson Vibrators, Inc., Ludington, Mich., a corporation of Michigan
Application September 17, 1945, Serial No. 616,837
15 Claims. (Cl. 94—48)

1. In a machine for screeding and compacting concrete, the combination of a plank-shaped front vibratory screed member disposed vertically edgewise, a plank-like rear motor support and vibratory member disposed vertically edgewise in substantially rearwardly spaced relation to said front member, resilient non-extensible connections between said front and rear members whereby they coact to mutually support each other in upright position, an unbalanced rotor mounted on said front member, a motor mounted on the rear member and having a flexible driving connection to said rotor, said connections between said front and rear members constituting a vibration dampening means whereby the vibrations of the rear member are relatively slight as com-



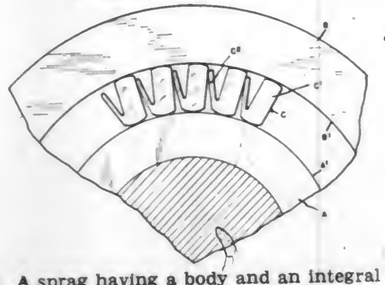
pared to the vibrations of the front member, a draw head, pairs of draft bars pivotally connected to said draw head for vertical swinging movement, crossheads for the rear ends of said pairs of draw bars, vibration absorbing means supportingly connecting said front vibratory screed member to said crossheads for raising and lowering said front vibratory member with said crossheads, a resilient brace connecting the upper ends of said crossheads to the rear member, means for raising and lowering the swinging ends of said draw bars, and adjustable stop means on said draw head for limiting the downward movement of said draft bars.

2,453,511
FURNACE TRAY BASKET
Harold F. Jackson, Springfield, Ohio, assignor to The Ohio Steel Foundry Company, Lima, Ohio, a corporation of Ohio
Application May 8, 1946, Serial No. 668,115
3 Claims. (Cl. 263—47)



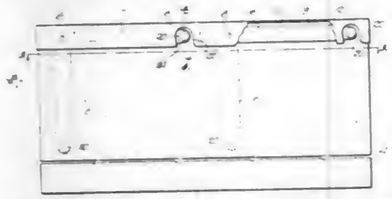
1. In a furnace tray bracket, a flexible tray forming the basket bottom and comprising runners and a plurality of transversely spaced cross bars, a pin rising from each end of each outer cross bar, a plurality of side bars built up in separable superimposed relation on the tray to form each side of the basket, each bar having a body portion of transversely inclined slat-form with its adjacent edges transversely offset to provide louver spaces for air circulation therebetween, and each bar having at each end of said

2,453,504
DYNAMOELECTRIC MACHINE AND SECURING DEVICE
Frank H. Fleischer, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application November 27, 1945, Serial No. 631,168
7 Claims. (Cl. 171—252)



1. A dynamoelectric machine stationary member including a laminated core of magnetic material with a plurality of longitudinally extending grooves in the outer periphery thereof, a frame around said core having a supporting ring having a plurality of pairs of outwardly curved angularly extending openings in a side thereof adjacent said core corresponding to said plurality of grooves and arranged in engagement with one side of said core, and means including retaining devices arranged in said grooves and each having a bifurcated end mechanically anchored in said ring openings with transversely extending fingers at the other end thereof arranged in engagement with a surface of said core for retaining said core in said frame.

2,453,505
SAFETY DOOR LOCK
Lawrence J. Fornwald, Plymouth, Mich.
Application February 21, 1946, Serial No. 649,310
10 Claims. (Cl. 70—283)

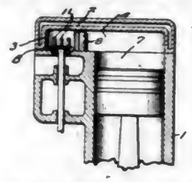


1. A safety door lock comprising in combination, a supporting plate, a spring pressed bolt slidable on said plate, an actuating pin extending transversely through said bolt, an externally operable element and an internally operable element engaging said pin, and solenoid actuated means for disengaging said pin from said elements.

2,453,506
SPRAG
Ivor J. Gruenberg, Pleasant Ridge, Mich., assignor to The Gear Grinding Machine Company, Hamtramck, Mich., a corporation of Michigan
Application December 10, 1945, Serial No. 634,007
5 Claims. (Cl. 192—45.1)

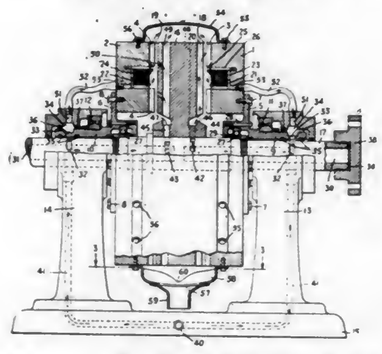
1. A sprag having a body and an integral portion constituting a resilient finger for bearing against an adjacent sprag.

2,453,507
LOOSE-LEAF BINDER
Elmer E. Harper, deceased, late of Monrovia, Calif.; by Esther Pardee Harper executrix, Monrovia, Calif.
Application July 16, 1945, Serial No. 605,386
2 Claims. (Cl. 129—35)



1. A loose leaf binder construction comprising, an elongated channel shaped holder providing a clamping space for the margins of loose leaf material, a curved spring element pivoted within said clamping space to one side of the holder and having swinging movement out of said space into a position at substantially right angles to the holder to permit insertion or removal of the loose leaf material and provide guiding means of curved contour for facilitating said insertion of the loose leaf material and also having swinging movement into said space to be compressed by the holder into pressure retaining engagement with said material after the insertion thereof.

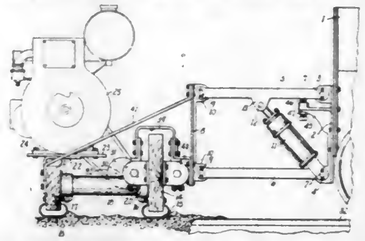
2,453,508
VALVE COOLING MEANS FOR INTERNAL-COMBUSTION ENGINES
August F. W. Helmbold, Augusta, Ga.
Application January 17, 1946, Serial No. 641,792
1 Claim. (Cl. 123—177)



In an internal combustion engine embodying a valve chamber having a pair of intake and exhaust poppet valves therein for admitting gas into said chamber and exhausting the same therefrom, respectively, deflecting means in said chamber for causing the gas admitted by said intake valve to pass over said exhaust valve to cool the same, and cooling studs on said exhaust valve through and around which the deflected gas

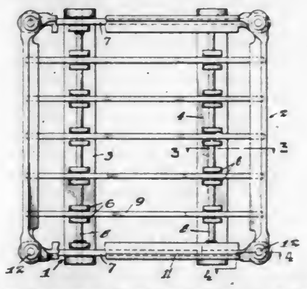
may pass, said deflecting means comprising an elongated deflector baffle extending alongside said pair of valves and comprising a major portion

curving part way around the intake valve for collecting gas and terminating in an oppositely curved minor portion opposite the exhaust valve.



2,453,509
DYNAMOELECTRIC MACHINE
Adolph C. Hugin, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 11, 1945, Serial No. 634,215
15 Claims. (Cl. 188—104)

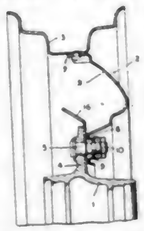
1. A dynamoelectric machine including a stationary member having a pair of core members of magnetic material anad having radial faces, a rotatable member having radial faces arranged between said stationary core members with an air gap between said stationary member and the adjacent rotatable member radial faces, one of said members being formed with a plurality of outwardly extending teeth in the radial faces thereof, means for magnetically exciting said stationary and rotatable members, outwardly extending passages through said rotatable member communicating with said air gaps and with the spaces between said teeth, and means including a hollow perforated shaft for supplying cooling fluid to said rotatable member passages and into said air gap in contact with said radial faces of said stationary and rotatable members for cooling said members by direct contact therewith and by passage through said rotatable member passages.



2,453,510
SCREEDING AND COMPACTING MACHINE FOR CONCRETE SLABS AND THE LIKE
Corwill Jackson, Ludington, Mich., assignor to Jackson Vibrators, Inc., Ludington, Mich., a corporation of Michigan
Application September 17, 1945, Serial No. 616,837
15 Claims. (Cl. 94—48)

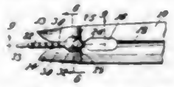
1. In a machine for screeding and compacting concrete, the combination of a plank-shaped front vibratory screed member disposed vertically edgewise, a plank-like rear motor support and vibratory member disposed vertically edgewise in substantially rearwardly spaced relation to said front member, resilient non-extensible connections between said front and rear members whereby they coact to mutually support each other in upright position, an unbalanced rotor mounted on said front member, a motor mounted on the rear member and having a flexible driving connection to said rotor, said connections between said front and rear members constituting a vibration dampening means whereby the vibrations of the rear member are relatively slight as com-

pared to the vibrations of the front member, a draw head, pairs of draft bars pivotally connected to said draw head for vertical swinging movement, crossheads for the rear ends of said pairs of draw bars, vibration absorbing means supportingly connecting said front vibratory screed member to said crossheads for raising and lowering said front vibratory member with said crossheads, a resilient brace connecting the upper ends of said crossheads to the rear member, means for raising and lowering the swinging ends of said draw bars, and adjustable stop means on said draw head for limiting the downward movement of said draft bars.



2,453,511
FURNACE TRAY BASKET
Harold F. Jackson, Springfield, Ohio, assignor to The Ohio Steel Foundry Company, Lima, Ohio, a corporation of Ohio
Application May 8, 1946, Serial No. 668,115
3 Claims. (Cl. 263—47)

1. In a furnace tray bracket, a flexible tray forming the basket bottom and comprising runners and a plurality of transversely spaced cross bars, a pin rising from each end of each outer cross bar, a plurality of side bars built up in separable superimposed relation on the tray to form each side of the basket, each bar having a body portion of transversely inclined slat-form with its adjacent edges transversely offset to provide louver spaces for air circulation therebetween, and each bar having at each end of said

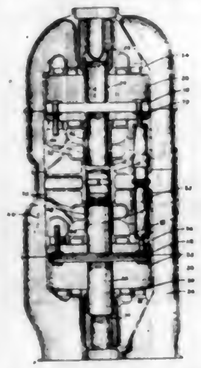


body portion a perforated lug for loosely receiving said pin, said lug being substantially half the depth of the body portion to alternate on a pin with the respective bar lugs of an adjacent side of the basket, and means cooperating with the pins to retain the tray and several side bars in loosely assembled relation.

2,453,512
VEHICLE WHEEL
Emil R. Jacobi, Detroit, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application October 30, 1944, Serial No. 560,972
3 Claims. (Cl. 301—9)

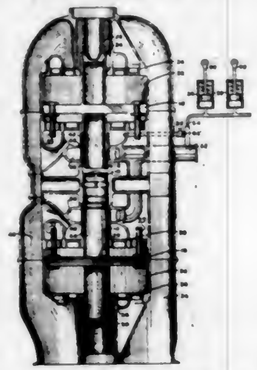
1. A vehicle wheel comprising a wheel hub having an annular series of axially extending bolts, a wheel body having an annular series of bosses extending in an outboard direction with each boss provided with a hole registering with and receiving one of said bolts and also provided with faces diverging in an inboard direction, and nuts threaded on said bolts for securing said wheel body on said wheel hub, said nuts engaging and confining said faces.

2,453,513
CARRIER FOR KNITTING MACHINES
Martin Jauch, Irvington, N. J.
Application August 19, 1946, Serial No. 691,501
5 Claims. (Cl. 66—126)



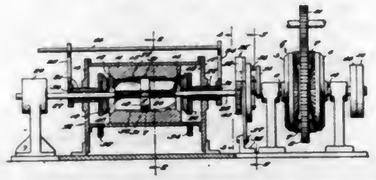
1. In a carrier for knitting machines, the combination of a carrier having means for attachment to a knitting machine, and having a guiding point portion, with an opening, and a thread guiding attachment including a cylindrical button member adapted to seat in the walls of said opening, a flexible tube secured at one end to said button member by a connection member, and a thread guiding nozzle secured to the other end of said flexible tube.

2,453,514
FLYING FUSELAGE
Ivan Jerome, Mineola, N. Y.
Application February 10, 1942, Serial No. 430,255
5 Claims. (Cl. 244—7)



3. In a flying machine as set forth in claim 2, propelling means in said front section whereby a change of angle between said front and said fixed central section will have a lifting effect on the machine, and running gears at the two ends of said relatively fixed central section.

2,453,515
RESTRAINING MECHANISM FOR FREE-PISTON UNITS
Andrew Kalitinsky, Eagleville, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application November 6, 1944, Serial No. 562,249
6 Claims. (Cl. 74—57)

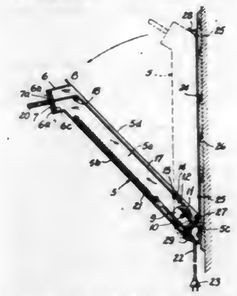


1. A free-piston unit having opposed pistons, in combination with a restraining mechanism for said pistons, including a pair of rods, one extending from each of the opposed pistons, a pair of rotary sleeves, one for each rod, said sleeves having interengaging means for rotation in unison and interengaging threads on the sleeves and the associated rods for turning the sleeves as the rods are reciprocated with the pistons.

2,453,516
ENGINE CONTROL FOR FREE-PISTON UNITS
Andrew Kalitinsky, Eagleville, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application November 6, 1944, Serial No. 562,251
4 Claims. (Cl. 230—56)

1. An engine-and-compressor unit including an engine having an exhaust duct, a compressor driven by the engine and providing air under pressure for scavenging the engine, pressure responsive control means connected to the exhaust duct and actuated by exhaust pressure, and a connection between said means and the exhaust duct, in combination with means for admitting scavenge air from said compressor to the connection between said means and the exhaust duct, including a restriction for limiting the quantity and pressure of scavenge air entering said connection.

2,453,517
VARIABLE-SPEED TRANSMISSION MECHANISM
Paulo Kemeny, Sao Paulo, Brazil
Application June 28, 1946, Serial No. 680,003
In Brazil July 10, 1945
2 Claims. (Cl. 74—293)

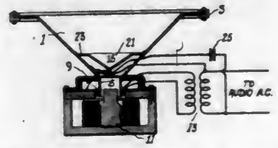


1. A variable speed transmission mechanism comprising, in combination, a planetary type differential gearing having two differential gears and a ring gear, power means for driving one of said gears, means to operatively connect another of said gears to machinery to be driven, and manually-controlled hydraulic means to regulate the speed of the remaining gear for gradually varying the speed of said machinery, said hydraulic means comprising a cylinder having a piston reciprocable therein, means affording circulation of fluid outside said cylinder from either end of the latter to the opposite end thereof, manually adjustable means for adjustably restricting the flow of fluid correspondingly and simultaneously into or out of the opposite ends of said cylinder, a screw shaft for actuating said piston, and mechanism operatively connecting said screw shaft with the associated gear of the differential gearing so as to convert continuous rotary motion of said gear in one direction to reciprocating rotary motion of said screw shaft.

2,453,518
HOLDER FOR ARTIFICIAL TEETH
James R. King, Florence, S. C., assignor to The Columbus Dental Manufacturing Company, Columbus, Ohio, a corporation of Ohio
Application January 30, 1946, Serial No. 644,205
3 Claims. (Cl. 32—68)

1. A holder for the detachable reception of artificial teeth, comprising a relatively elongated handle, a substantially U-shaped tooth-mounting clip carried by one end of said handle, said clip including a pair of spaced legs joined by a connecting web, one of said legs being rigidly secured to said handle, the other of said legs being apertured to receive said handle and resiliently movable thereon and with respect to said rigid leg, a finger-engaging extension formed with said resiliently movable leg, and contractible and expansible means formed with said clip for resiliently engaging and retaining in connection therewith an artificial tooth, the operation of said means being controlled by the movement of said movable leg.

2,453,519
COMBINATION RAZORSTROP HOLDER AND HEATER
William V. Kommer, Catawissa, Mo.
Application January 23, 1946, Serial No. 642,822
4 Claims. (Cl. 219—19)



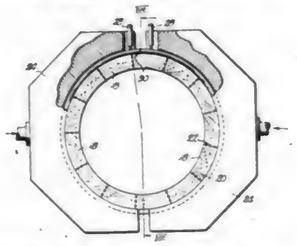
1. In a device of the kind described, an elongated base plate for affixing vertically to a support, an elongated case hingedly mounted at its lower end to the lower end of the base plate and arranged to close up vertically against the base plate and to swing angularly out therefrom, an angularly down-set nose portion extended from the outer end of the case, a disk rotatably mounted in the outer end of the nose portion, said disk having a straight razor strop slot formed therethrough, a roller journaled transversely within the outer end of the case immediately back of the said nose portion and adjacent the upper side of the case, a flexible razor strop retractively mounted within the case and passed out through the slotted disk thereof over the said roller, the said strop being so mounted that it may be turned and reversed within the case, simultaneously with the rotation of the said disk, when drawn fully out from the case.

2,453,520
ORGANIC TITANIUM COMPOUND AND METHOD OF MAKING SAME
Carl Martin Langkammerer, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 28, 1946, Serial No. 700,158
3 Claims. (Cl. 260—429)

3. A water-soluble, organic titanium compound having the formula $CH_2OHCOOH.2Ti(OH)_4$, said compound being electrolyte-free and insoluble in organic solvents.

2,453,521
SUPERIMPOSED DUPLEX LOUD-SPEAKER
John F. Marquis, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 30, 1942, Serial No. 445,179
1 Claim. (Cl. 179—109)

A loudspeaker comprising a pair of conical diaphragms, a magnetic motor including a mov-



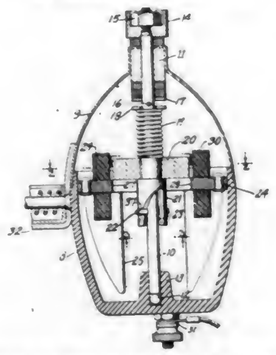
able element connected to a first one of said diaphragms for driving said first diaphragm, and a piezoelectric motor carried by said first diaphragm, the other of said diaphragms being connected to said piezoelectric motor and being adapted to be driven by said piezoelectric motor, said other diaphragm and said piezoelectric motor being nested within said first diaphragm, said other diaphragm having a mouth diameter which is smaller than that of said first diaphragm, and the mouth of said other diaphragm having a compliant connection with said first diaphragm.

2,453,522

METHOD OF PRODUCING WOOD PIPE

Leon T. Mart, Mission Township, Johnson County, Kans., assignor to The Marley Company, Inc., Kansas City, Kans., a corporation of Kansas

Application September 10, 1943, Serial No. 501,825
1 Claim. (Cl. 144—309)



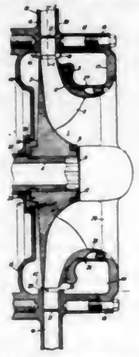
The method of producing wood pipe having a body comprising longitudinally disposed staves circumscribed by a plurality of bands, which method consists in introducing sealing material between the abutting edges of the staves; applying inward pressure to both the staves and the bands to deform the sealing material into the contours of the opposed faces of said staves; and welding together the ends of the bands to produce a solid continuous member of each while said pressure is maintained.

2,453,523

BICYCLE GENERATOR REGULATED BY ROTOR TORQUE VARIATIONS

Delbert McCullough, Fairfield, Ill., assignor to Chefford Master Manufacturing Co. Inc., a corporation of Illinois

Application March 24, 1947, Serial No. 736,774
6 Claims. (Cl. 171—209)



1. A bicycle generator comprising a shaft, a rotor slidably and rotatably mounted on the shaft, stationary field windings associated with the rotor, a member fixed to the rotor, a part fixed to the shaft, said member having a surface inclined to the axial direction of the shaft and engageable by said part, a spring axially forcing said member against said part and urging the rotor toward the windings, said spring being fixed near one end to the shaft and having its other end mounted in fixed relation to the rotor for torsionally urging said part in a direction away from said inclined surface, the torque required to rotate the rotor faster than a predetermined rate producing, against the torsional urge of the spring means, sufficient pressure between said inclined surface and said part to induce, against the axial force of the spring means, the rotor to slide along the shaft away from said windings.

2,453,524

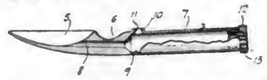
CENTRIFUGAL COMPRESSOR

Kenton D. McMahan, Scotia, and Neil P. Bailey, Troy, N. Y., assignors to General Electric Company, a corporation of New York

Application March 31, 1945, Serial No. 585,906
8 Claims. (Cl. 230—127)

1. In a centrifugal compressor, the combination of an impeller having a web defining one side of the impeller passages, a shroud defining the opposite side of the impeller passages, both web and shroud having substantially parallel outer circumferential edge portions, a diffuser surrounding the impeller having at least one expanding diffusing passage and an inner circumferential edge portion arranged to form a close clearance with one of said outer circumferential edge portions, a casing surrounding the impeller and defining an annular surge chamber adjacent the clearance space between impeller exit and diffuser inlet, the inner circumferential edge portion of the diffuser being shaped to define a pressure relief passage communicating between the surge chamber and the clearance space between impeller and diffuser at the high pressure side of the diffusing passage inlet.

2,453,525



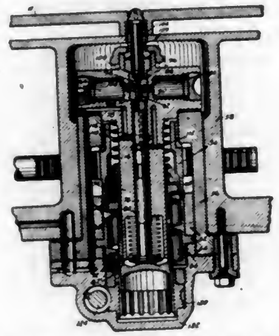
MEDICINE ADMINISTERING SPOON

Albert George McNeill, Philadelphia, Pa., assignor to Bachmann Bros., Inc., Philadelphia, Pa., a corporation of Pennsylvania

Application September 22, 1945, Serial No. 617,971
7 Claims. (Cl. 30—125)

1. A medicine administering spoon comprising a bowl, a handle having a medicine chamber therein, a conduit communicating between the interior of said bowl and said medicine chamber,

the upper portion of said handle being formed with a vent opening, said vent opening being in the form of a boss of sufficient length to arrest



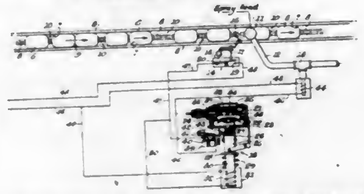
enough air to maintain a bubble of air in the vent opening which will serve to prevent the medicine from contacting the finger of the user placed over said vent opening.

2,453,526

TIMING OF FUEL INJECTION SYSTEMS

Donald E. Meitzler, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware

Application July 23, 1943, Serial No. 495,929
6 Claims. (Cl. 103—154)



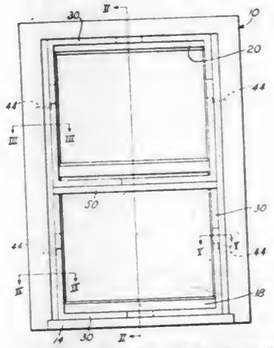
1. Fuel injection apparatus for a free-piston engine-and-compressor unit having opposed pistons and a restraining linkage connecting said pistons including an oscillating pinion, said apparatus including an injection plunger, a cylinder in which said plunger reciprocates, said plunger and cylinder having cooperating injection control means dependent upon the longitudinal position of the plunger in the cylinder, means including a helix and follower connecting said pinion and plunger for reciprocating the plunger in response to oscillation of the pinion, and means for adjusting the longitudinal position of the plunger with respect to said connecting means to shift the plunger stroke longitudinally within the cylinder.

2,453,527

LARD SPRAY CONTROLLING MEANS

Ralph M. Mero, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Application August 21, 1945, Serial No. 611,847
7 Claims. (Cl. 91—44)



1. The combination of means for feeding cans in processional order, means for spraying a fluid substance into said cans, a solenoid valve for controlling the spraying means, a solenoid controlling circuit and a control switch connected in said circuit and disposed to be actuated by can contact for causing the valve to open and stay open while a can is passing the spraying means, and a timing relay unit connected in said circuit and normally operable to maintain the valve open, subject to said control switch, and operable in the event that the machine stops with a can in contact with said control switch to break said circuit and prevent continuous spraying into the can stationary opposite said spraying means.

2,453,528

STORM WINDOW AND SCREEN COMBINATION

Gerald Merryweather, Cuyahoga Falls, Ohio

Application October 27, 1943, Serial No. 507,796
6 Claims. (Cl. 20—55)

4. In combination with a window-frame structure having vertical side members which present toward each other, as their nearest faces, parallel plane surfaces which are continuous substantially throughout the height of the window, a window assembly comprising a pair of half-frame structures each of channel shape in cross-section for receiving a side margin and parts of the top and bottom margins of a single light-admitting panel, said structures having telescopic connection with each other at their tops and at their bottoms, and means at a substantial distance from their tops and from their bottoms for hinging them on a horizontal axis in embraced relation to the said plane surfaces of the said side members, so that the said side members constitute means for holding them in position on the said panel, the said half-frame structures lying wholly between the planes of the aforesaid plane surfaces.

2,453,529

METHOD OF HIGH-FREQUENCY HEATING

Eugene Mittelmann, Chicago, Ill.

Application July 19, 1943, Serial No. 495,273
3 Claims. (Cl. 219—13)

1. The method of heat treating an object the electrical characteristics of which vary with the absorption of energy by the object, which method comprises coupling the object to be heated with reactive heating means to which high frequency energy is supplied from an electronic high frequency generator having coupled plate and grid circuits between which energy is transferred to maintain oscillations, so that the equivalent impedance of the load across the points of coupling to the generator is substantially equal to the internal impedance of the generator between the same terminals, varying the coupling of the heat-

ing means to the generator in definite relation to variations in the electrical characteristics of the object, and varying the feed-back between the

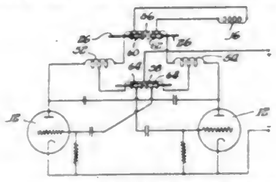


plate and grid circuits of the generator in definite relation to the variation in the electrical characteristics of the object to maintain the generator in a steady state of oscillation.

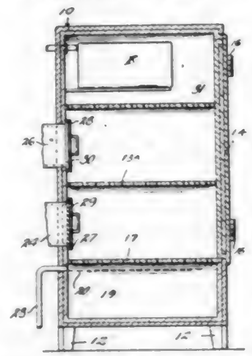


2,453,530

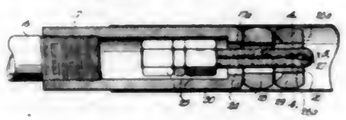
FOOD PRESERVING APPARATUS

Homer L. Moore, Chamblee, Ga.

Application August 30, 1944, Serial No. 551,976

2 Claims. (Cl. 98—51)

1. Preserving apparatus of the class described comprising a cabinet, said cabinet having a food compartment, a water reservoir in the bottom of the cabinet open to the food compartment, a draft pipe, a vent pipe above the draft pipe, said draft pipe and vent pipe communicating with the interior of the food compartment and the outside air, said draft pipe being disposed above and adjacent the reservoir, and refrigerating means within the cabinet above the food compartment to produce a lower temperature within the food compartment than that of said water reservoir.



2,453,531

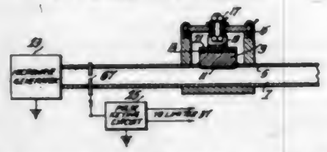
INTERNAL MANDREL

Harold C. Myers, Kansas City, Mo., assignor to Butler Manufacturing Company, Kansas City, Mo., a corporation of Missouri

Application April 27, 1945, Serial No. 590,626

2 Claims. (Cl. 153—63)

1. In an internal mandrel for use in bending pipe and tubing, a tubular body, arbor members, a flexible connection between the arbor members and body including a doubled stranded member having its free ends anchored within the tubular body, an apertured plug secured on said stranded member and one of said arbor members adjustably mounted on said plug.



2,453,532

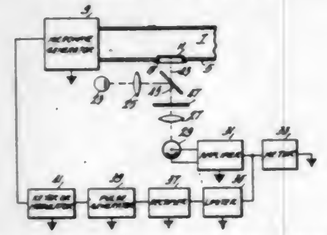
ELECTROSTATIC MICROWAVE ENERGY MEASURING APPARATUS

Lowell E. Norton, Princeton Junction, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application June 11, 1945, Serial No. 598,739

14 Claims. (Cl. 171—95)

1. The method of utilizing a movable element for measuring microwave energy comprising the steps of subjecting said element to the field of said microwave energy to provide mechanical displacement thereof substantially only in response to electrostatic field stresses induced in said element by said field, employing said mechanical displacement of said element to control electrical energy, and measuring said controlled electrical energy.



2,453,533

ELECTROSTATIC MICROWAVE ENERGY MEASURING APPARATUS

Lowell E. Norton, Princeton Junction, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application June 11, 1945, Serial No. 598,741

9 Claims. (Cl. 171—95)

1. The method of detecting microwave energy comprising the steps of utilizing said microwave energy to establish a microwave field having an electric field component, converting said electric field energy to kinetic energy, utilizing said kinetic energy to control light energy, detecting said controlled light energy, and converting said detected controlled light energy to electrical energy characteristic of the magnitude of said microwave energy.

2,453,534

PROCESS FOR ISOLATION OF GRAMICIDIN

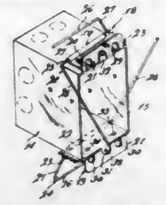
Harold S. Olcott and Heinz L. Fraenkel-Conrat, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application September 21, 1945, Serial No. 617,913

5 Claims. (Cl. 260—236.5)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. The method of separating gramicidin from tyrocidine as they are found in tyrothricin, comprising dissolving the tyrothricin in 95 to 100% ethanol, adding to the solution phosphotungstic acid to precipitate the tyrocidine, removing the precipitate from the solution, diluting the mother liquor with water and adding salt to coagulate the gramicidin, subjecting the precipitate to washing with a dilute solution of ammonium carbonate to remove phosphotungstate and washing and drying the precipitate.



2,453,535

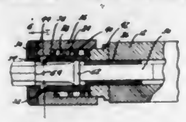
MOUNTING ATTACHMENT FOR ELECTRICAL OUTLET BOXES

Charles W. Pallas, Elyria, Ohio

Application December 27, 1946, Serial No. 718,659

3 Claims. (Cl. 248—205)

1. A clamping attachment for use with an electrical outlet box comprising a pair of corresponding units each including a base having means for detachably and adjustably securing it to the outer side of a wall of an outlet box, adjacent the open end of said box, each base being provided with an outturned flange adapted to engage the front side of a wall, adjacent an opening in which the box is adapted to be detachably mounted, each unit including a lever arm having an angularly disposed portion journaled in a portion of the base and a wall engaging portion disposed to be moved into engagement with the back side of the wall when the lever arm is swung in one direction and a toothed locking strip associated with each of the base portions of said units, each of the locking strips being detachably and adjustably engaged by the lever arm of the other unit for releasably retaining the wall engaging portion thereof in engagement with the wall and on the opposite side thereof to said flanges, the locking strip of each unit constituting an integral extension of one end of the base portion of said unit.



2,453,536

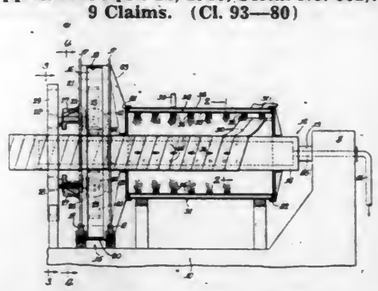
CHISEL RETAINER FOR PNEUMATIC HAMMERS

William H. Peck, Royal Oak, Mich.

Application June 26, 1947, Serial No. 757,177

2 Claims. (Cl. 279—19.5)

1. A releasable holding means for a shanked tool at the end of the barrel of a pneumatic hammer comprising a tubular member constructed and arranged for press fit insertion into the open end of the hammer barrel and to slidingly receive the shank of a tool therein; a ball cage having a diameter greater than the diameter of said tubular member having a plurality of circumferentially spaced apertures through the wall thereof, balls in the apertures of said ball cage, an axially slidable and rotatable sleeve having circumferentially spaced recesses in its inner periphery over said ball cage, an outwardly extending flange at the outer end of said ball cage for limiting the outward axial movement of said sleeve, and a retaining ring press fitted on said tubular member for limiting the inward axial movement of said sleeve.



2,453,537

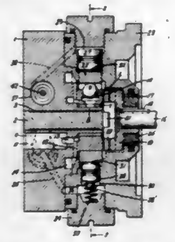
TUBE-FORMING MACHINE

Edwin R. Phillips, Evanston, Ill., assignor to Morton Salt Company, Chicago, Ill., a corporation of Illinois

Application April 12, 1946, Serial No. 661,776

9 Claims. (Cl. 93—80)

2. In a paper-tube-forming machine, a rotatable mandrel upon which strips of paper are wound to form the tube, means for rotating said mandrel and for continuously stripping from said mandrel off of a free end thereof the formed tube, a plurality of rows of nozzles extending longitudinally of said mandrel in spaced relation thereto and directed radially inwardly against said mandrel, and means for supplying fluid under pressure to said nozzles.

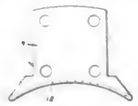


2,453,538

CONSTANT PRESSURE PUMP

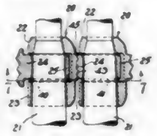
William T. Rauch, Voorheesville, N. Y., assignor to General Electric Company, a corporation of New York

Application October 4, 1947, Serial No. 778,010



11 Claims. (Cl. 103—161)

4. In combination, a pump casing provided with fluid conduit means for admitting and discharging fluid, a radial piston pump rotatable in said casing, a stroking ring for varying the stroke of said pump between full stroke and low stroke positions, biasing means for maintaining said pump ring initially in said full stroke position, said biasing means comprising a piston adapted to reciprocate in a cylinder in said casing and to move said ring in response to fluid pressure in said cylinder, and fluid conduit means interconnecting said cylinder and the fluid discharge con-

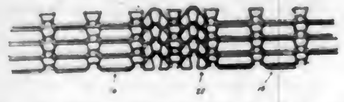


duit of said pump whereby the pressure in said discharge conduit biases said ring to full stroke position, and counterbiasing means for moving said ring toward said low stroke position, said counterbiasing means comprising second piston means adapted to reciprocate in another cylinder in said casing and to move said ring in response to fluid pressure in said other cylinder, means including a valve for selectively interconnecting said cylinder with either said fluid discharge conduit or the fluid inlet conduit of said pump, valve biasing means for positioning said valve to connect said other cylinder and said inlet conduit initially, and means for then operating said valve in opposition to said biasing means in response to the pressure in said fluid outlet conduit whereby said second piston moves said stroking ring toward low stroke position to hold the pressure differential between said outlet conduit means and said inlet conduit means constant.

2,453,539
DYNAMOELECTRIC MACHINE CORE SURFACE TREATMENT
Robert T. Reardon, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application November 6, 1944, Serial No. 562,120
10 Claims. (Cl. 171—252)

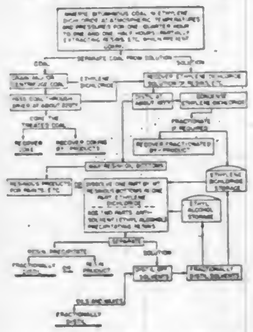
5. A dynamoelectric machine having a member with a core of magnetic material having magnetically open slots therein, a second relatively rotatable member with a core of magnetic material having a surface thereof arranged adjacent said first-mentioned core with an air gap therebetween, said cores having a case impregnation of the adjacent surfaces thereof of 6 to 20% silicon to a depth of between 0.001 to 0.06 inch and having properties characteristic of such material, said cores being annealed at between 650° C. and 1300° C. in a non-oxidizing atmosphere subsequent to said case impregnation providing diffusion of the silicon in said cores whereby the magnetic reluctance is reduced improving permeability and reducing hysteresis losses.

2,453,540
CARTRIDGE BELT
James S. Reid, Cleveland Heights, Ohio, assignor to The Standard Products Company, Detroit, Mich., a corporation of Ohio
Application October 19, 1942, Serial No. 462,571
3 Claims. (Cl. 89—35)



1. A cartridge belt, comprising a plurality of links, each having two oppositely extending loops, the adjacent loops of adjacent links being in axial alignment, a cartridge in each pair of axially aligned link loops, the cartridges constituting hinge pintles for the flexible connection of the links, and resilient retaining elements carried by alternate links for the releasable retention of the cartridges in the axially aligned link loops, each such retaining element having two oppositely extending cartridge-receiving ring-like parts in axial alignment with the two oppositely extending loops of the link by which such element is carried.

2,453,541
MATRIX RETAINER
David Reiter, Woodside, Long Island, N. Y.
Application July 11, 1946, Serial No. 682,897
5 Claims. (Cl. 32—63)

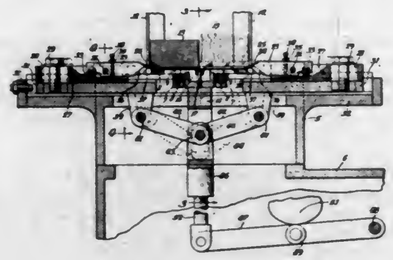


1. In a dental matrix retainer, the combination of, a frame member having a central guideway, power means pivotally mounted on said frame member and having a portion extending into said guideway, a block arranged in said guideway and movable longitudinally thereof by said power means, a post pivoted to said block at each side thereof, a slot in each post, a matrix band having ends thereof extending through said post slots and means carried by said posts for fixing said matrix band to said posts.

2,453,542
KNIT FABRIC WITH GATHERS THEREIN
Bernard Sapin, New York, N. Y.
Application January 28, 1948, Serial No. 4,786
10 Claims. (Cl. 66—200)

1. Knit material comprising a half cardigan knit fabric having a section in which all the half cardigan knit stitches of a plurality of wales are dropped, said section being disposed between laterally spaced groups of wales of the original half cardigan knit stitches of said fabric, the yarn released by said dropped stitches forming gathers in said section.

2,453,543
PROCESS OF TREATING BITUMINOUS COAL
Ernest J. Schabelitz, Rincon, Calif.
Application April 9, 1948, Serial No. 20,089
8 Claims. (Cl. 260—107)

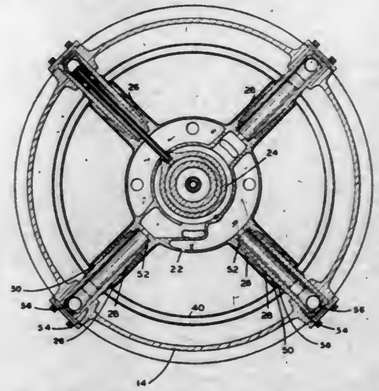


1. A process comprising: leaching bituminous poorly cokable coal of the type containing resinous and other soluble constituents which render the coal poorly cokable, the leaching being performed by immersing the coal in ethylene dichloride under atmospheric temperature and pressure ranges for a brief period of time between about one-quarter of an hour and one and one-half hours to remove from the coal resinous and other ethylene-dichloride-soluble materials to yield a coal having good coking properties; separating the treated coal from the ethylene dichloride solution to recover the resultant cokable coal; and recovering from the solution the resinous and other constituents of the coal dissolved therein.

2,453,544
PROCESS FOR PREPARING AND COKING BITUMINOUS COAL
Ernest J. Schabelitz, Rincon, Calif.
No Drawing. Application April 9, 1948, Serial No. 20,090
10 Claims. (Cl. 202—25)

1. A process comprising: leaching bituminous poorly cokable coal of the type containing resinous and other soluble constituents which render the coal poorly cokable, the leaching being performed by immersing the coal in ethylene dichloride under atmospheric temperatures and pressures for a brief period of time between about one-quarter of an hour and one and one-half hours to remove from the coal resinous and other ethylene-dichloride-soluble materials to yield a coal having good coking properties; separating the ethylene dichloride solution from the treated coal; and recovering the resultant coal.

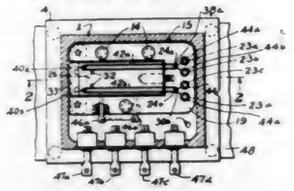
2,453,545
CAN END FEEDING MECHANISM
Justin Simpson, Elmhurst, Ill., assignor to Cameron Can Machinery Company, Chicago, Ill., a corporation of Illinois
Application January 13, 1945, Serial No. 572,663
6 Claims. (Cl. 113—114)



2. In a can end feeding mechanism, the combination of a can end magazine including stationary base plates upon which the lowermost end in the magazine rests, a pair of horizontally reciprocable separators movable transversely of the magazine, a magnet vertically movable beneath the magazine, and means for moving said separators and said magnet in timed relation, including a vertically reciprocable operating member, a link connection between said member and the separators and a lost motion connection between said member and the magnet, whereby the magnet is withdrawn downwardly away from the magazine subsequently to the separating action of the separators.

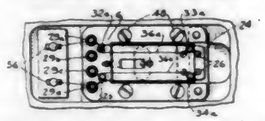
2,453,546
CIRCUIT BREAKER
Ezra S. Smith, Attleboro, Mass., assignor to Metals & Controls Corporation, Attleboro, Mass., a corporation of Massachusetts
Application October 30, 1944, Serial No. 560,929
4 Claims. (Cl. 200—116)

1. A circuit breaker comprising separable contacts, a tripping mechanism for said contacts including a thermostatic element, manually operable means having a lost-motion connection with said tripping mechanism for reclosing said contacts after separation thereof and cooling of said thermostatic element, and a shunt switch adapted to be closed by said manually operable means upon taking up said lost motion for shunting said separable contacts and closing the circuit, the movable contact element of said switch comprising a fuse, thereby providing for insertion of a fuse into the circuit only upon shunting operation, control of said circuit being restorable to said separable contacts and tripping mechanism upon opening of said switch whether or not the fuse has blown during the shunting operation.



2,453,547
TURBINE CONSTRUCTION
Carl R. Soderberg, Weston, Mass., and John A. Clark, Glastonbury, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a a corporation of Delaware
Application January 28, 1944, Serial No. 520,067
5 Claims. (Cl. 253—39)

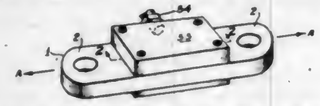
5. A turbine including a housing, a casing within the housing and defining a path for power fluid spaced from said housing, a rotor within the hous-



ing, a bearing mounting within the housing for said rotor, said mounting being located in the fluid path, said mounting having a number of legs and pins slidable in said housing and engaging said legs for supporting the mounting.

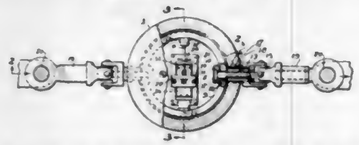
2,453,548
ACCELEROMETER WITH ELECTRIC STRAIN WIRES
Louis D. Statham, Beverly Hills, Calif., assignor to Statham Laboratories, Inc., Los Angeles, Calif., a corporation of California
Application July 14, 1947, Serial No. 760,775
10 Claims. (Cl. 201—63)

10. A strain wire accelerometer, comprising a frame having opposite faces, an inertial mass having opposite faces complementary to the faces of said frame, a flat spring mounted on said frame and upon one end of said inertial mass, the other end of said mass being free, pins mounted on each of the opposite faces of said mass and positioned on said mass adjacent the axis of bending of said spring, pins mounted on the opposite faces of said frame adjacent the free end of said mass, strain wires mechanically mounted on and extending between the pins on the complementary faces of said frame and mass and substantially parallel to the said faces and substantially perpendicular to the axis of bending of said spring.



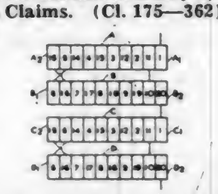
2,453,549
ELECTRIC STRAIN GAUGE
Louis D. Statham, Beverly Hills, Calif., assignor to Statham Laboratories, Inc., Los Angeles, Calif., a corporation of California
Application July 14, 1947, Serial No. 760,772
10 Claims. (Cl. 201—63)

1. A dynamometer for a strain wire gauge, comprising a frame, a cantilevered armature, a hinge mounting for said armature connected to said frame and one end of said armature, the other end of said armature being free, a strain wire support mounted on said frame and spaced from said hinge, another strain wire support mounted on said armature substantially at said hinge, a strain wire mechanically connected to each of said supports and insulated from said frame and said armature, and an electrical connection at the ends of said strain wire.



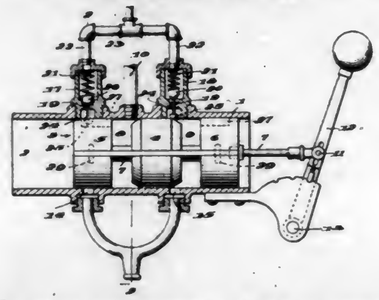
2,453,550
BAR TYPE-HIGH RANGE GAUGE
Louis D. Statham, Beverly Hills, Calif., assignor to Statham Laboratories, Inc., Los Angeles, Calif., a corporation of California
Application July 14, 1947, Serial No. 760,771
2 Claims. (Cl. 201—63)

1. A draw bar electrical strain gauge dynamometer, comprising a bar, an opening in said bar intermediate the ends of said bar, a frame mounted intermediate the ends of said opening, an armature reciprocably mounted in said frame, a rod connecting said armature and one end of said opening, an electrical strain wire support



mounted on said frame, an electrical strain wire support mounted on said armature, and an electrical resistance strain wire mechanically mounted on said support and insulated therefrom and extending parallel to said rod.

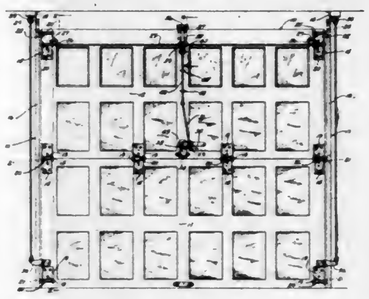
2,453,551
RING TYPE RESISTANCE STRAIN GAUGE DYNAMOMETER
Louis D. Statham, Beverly Hills, Calif., assignor to Statham Laboratories, Inc., Los Angeles, Calif., a corporation of California
Application July 31, 1947, Serial No. 765,010
5 Claims. (Cl. 201—63)



5. A ring type electrical resistance wire dynamometer, a metallic ring, a pair of diametrically disposed bores in the wall of said ring, pull heads mounted in said bores, said pull heads including a shank passing through said bores, a universal joint on said shank, the axis of said shank being positioned upon a diameter of said ring, a frame mounted on said ring, an armature reciprocably mounted in said frame, a rod connected to said armature and said ring, the axis of said rod being at an angle substantially different from 45° to said diameter, a plurality of coils of electrical strain wires, supports upon said armature and said frame for said coils, the wires of said coils being insulated from said supports and extending in a direction substantially parallel to the axis of said rod, and electrical terminals connected to said coils.

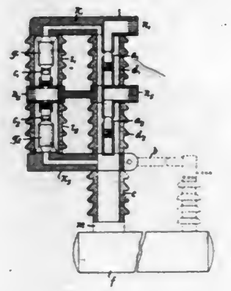
2,453,552
TRANSFORMER WINDING
George Fletcher Stearn, Stafford, England, assignor to The English Electric Company Limited, London, England, a British company
Application January 2, 1946, Serial No. 638,660
In Great Britain January 4, 1945
6 Claims. (Cl. 175—362)

1. An inductive winding having a portion at its high potential end arranged in a pair of annular sections spaced apart along a common axis and having cross-connections between them, one of the sections containing at least one conductor which consists of a plurality of turns spiralling inwards and the other of the sections containing at least one conductor which consists of a plurality of turns spiralling outwards, characterized in that there is a conductive path from a starting turn near the outside edge of one section to a finishing turn near the outside edge of the other section, this conductive path comprising, in the order named, from the starting turn an inward spiral in one section, an inner cross-connection, an outward spiral in the other section, an outer cross-connection, a second inward spiral in the first-named section, a second inner cross-connection, and a second outward spiral in the second-named section to the finishing turn, and further characterized in that there is a capacitive by-path from said starting turn to said finishing turn comprising in the order named, the capacitive coupling between the starting turn and the first turn of the second inward spiral, said outer cross-connection, and the capacitive coupling between the last turn of the first outward spiral and the finishing turn.



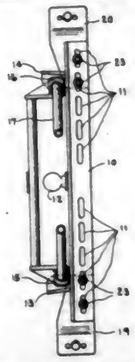
2,453,553
MEASURING VALVE MECHANISM
Leslie R. Tansley, Columbus, Ohio
Application July 28, 1944, Serial No. 547,067
7 Claims. (Cl. 225—26)

1. A valve for dispensing fluids in measured quantities, comprising a casing having an open ended valve chamber, an inlet for admitting fluid into said chamber, a movable valve member mounted in said chamber, said valve member being formed with outer and intermediate heads, the intermediate head being spaced from the outer heads to provide a pair of annular grooves, manually operated means disposed exteriorly of said casing for imparting sliding movement to said valve member, and a pair of spaced fluid outlets provided in said casing, said outlets being arranged on opposite sides of said inlet, the relative spacing of said inlet, outlets and grooves being such that when one of said grooves is in registration with said inlet to cause a filling thereof with a fluid undergoing measured dispensing, the other of said grooves occupies a position of registration with one of said outlets, and, when the valve member is moved to bring the fluid-filled groove into registration with the other of said outlets, the second groove will occupy a position in registration with said inlet means and out of registration with either of said outlets.



2,453,554
OVERHEAD DOOR GUIDING AND LATCHING MECHANISM
John Thomas, Milwaukee, Wis.
Application May 11, 1945, Serial No. 593,136
11 Claims. (Cl. 160—201)

1. An overhead door, comprising a pair of superimposed, hingedly connected sections, tracks mounted adjacent both side edges of the door to guide the door from a vertical to a horizontal position, guide rollers carried by the lower section of the door, independent bearing units hingedly mounted upon the upper corner portions of the top section of the door and carrying on



their free ends rollers to engage said tracks, and means engaging said bearing units and extending to a position on the door remote therefrom for manually controlling relative rocking movement between the top section of the door and said bearing units.

2,453,555
GAS BLAST CIRCUIT BREAKER
Hans Thommen, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland
Application March 12, 1945, Serial No. 582,255
In Switzerland September 11, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 11, 1963
10 Claims. (Cl. 200—148)

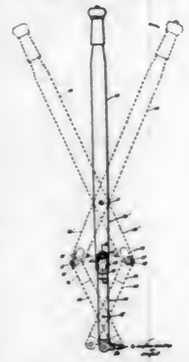
1. In a circuit breaker, a plurality of normally closed sets of main contacts connected in series circuit relation and operable to open by the application of pressure gas thereto, a plurality of impedances in parallel circuit relation across said sets of main contacts to carry the current upon opening of the main contacts and for controlling the voltage distribution over said main contacts on opening thereof, said impedances having a relatively low magnitude to thereby draw a relatively high order of control current, and pressure gas operated switch means individual to each impedance connecting the same in series circuit relation and adapted to interrupt the flow of current therethrough.

2,453,556
ADJUSTABLE DRAWBAR AND ADJUSTABLE MOUNTING THEREFOR
Ethan W. Vars, Duncannon, Pa., assignor, by mesne assignments, to George Harold Bell & Associates, York, Pa., a partnership
Application August 29, 1946, Serial No. 693,717
11 Claims. (Cl. 280—33.14)

1. A drawbar and mounting therefor adapted to be transversely attached to the rear horizontal bumper of a tractor vehicle and selectively adjustable horizontally and vertically with respect to the bumper so that a hitch means on the drawbar may be centered with the longitudinal center line of the tractor vehicle and at a selected height above road level, including, in combination, a drawbar having a centrally located hitch means and a series of horizontally disposed slots spaced on either side of the hitch means; and a mounting plate for each series of slots, each plate having a plurality of holes by which a plate may be selectively attached to the drawbar, and said plates each having at right angles to the holes a second row of holes by which the plate may be attached to the bumper, whereby the hitch means may be centrally located with respect to the longitudinal center line of the tractor vehicle at a selected height above the road.

2,453,557
PROCESS OF PREPARING A DISPERSION OF CARBON BLACK
Andries Voet, New York, N. Y., assignor to J. M. Huber, Incorporated, New York, N. Y., a corporation of New Jersey
No Drawing. Application November 28, 1945, Serial No. 631,485
8 Claims. (Cl. 106—32)

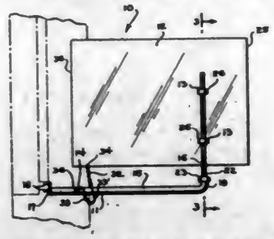
1. The process of preparing a dispersion of carbon black in an organic substance which comprises mixing compacted carbon black with an organic substance which is liquid at 70° F., boils at a temperature substantially above 140° F. and wets carbon black, and grinding the mixture in a mill of the ball mill type at a temperature of from about 140° F. to about 200° F. but below the boiling point of the organic liquid.



2,453,558
PRINTING INK
Andries Voet, New York, N. Y., assignor to J. M. Huber, Incorporated, New York, N. Y., a corporation of New Jersey
No Drawing. Application November 28, 1945, Serial No. 631,486
10 Claims. (Cl. 106—32)

1. An ink consisting essentially of a pigment, a mineral oil vehicle, and from about 2% to about 20% by weight based on the oil of a petroleum polymer which is fluid at room temperatures, has a viscosity of from about 200 seconds to about 250 seconds Saybolt at 210° F. and is obtained by solvent extraction of solid adsorbents used in the refining of a petroleum hydrocarbon which is a member of the group consisting of petrolatums, greases and amorphous waxes.

2,453,559
POLYLACTYLIC ACID RESINS AND PROCESS FOR MAKING THEM
Paul D. Watson, Arlington, Va., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Original application May 27, 1944, Serial No. 537,663. Divided and this application June 18, 1946, Serial No. 677,467
7 Claims. (Cl. 260—23.3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

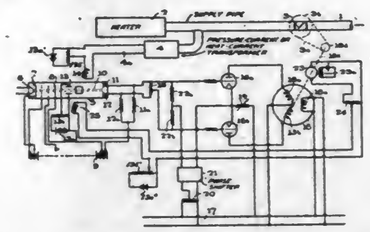


1. A process for preparing a resinous material which comprises heating at polymerizing temperatures a mixture of between 35 and 70% polylactylic acids, between 20 and 50% fatty drying oils, and about 5% of a member selected from the group consisting of fumaric acid, maleic anhydride, and mixtures of fumaric acid and maleic anhydride until partial polymerization is effected, then adding between 10 and 15% of an oil-soluble hydrogenated coumarone-indene resin having a melting point of from 145° to 155° C., said percentages being based on the total weight of the ingredients, and continuing the heating under conditions permitting the removal of volatile products of reaction until a viscous, elastic, resinous product is formed.

2,453,560
AIRFOIL OPERATING MECHANISM
Arthur Harold Westberg, Baldwin, and Charles S. Aldrich, Babylon, N. Y., assignors to Republic Aviation Corporation, a corporation of Delaware
Application September 28, 1943, Serial No. 504,104
7 Claims. (Cl. 74—516)

1. In an airfoil control, the combination with a primary lever, the outer extremity of the work arm of said primary lever having a slot therein, a central longitudinal ridge on one side of said slot, a pair of spaced ridges each at one edge of the other side of said slot, a secondary lever, a plurality of rollers carried by one extremity of the secondary lever and adapted to operate in said slot, a number of said rollers being arranged to contact against the spaced ridges on one side of the slot and the remaining rollers contacting against the central ridge on the opposite side of the slot, and an airfoil connection associated with the opposite end of said secondary lever.

2,453,561
WINDOW AIR VANE DEVICE
Jack Wolff, Brooklyn, N. Y.
Application December 18, 1945, Serial No. 635,693
4 Claims. (Cl. 98—44)

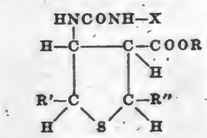


1. The combination with a bracket arm for attachment at one end to a window frame and having its other end bent upward, a vertical rod secured at its lower end to the upper portion of the upturned end of the bracket arm, collars fixedly mounted on said vertical rod in spaced relation to each other, eyebolt elements rotatively engaged on said rod and retained in spaced relation thereon by having their bottom faces resting on the top faces of said collars, said eyebolt elements being formed with vertically aligned flat sides, screw threaded shanks projecting from the flat sides of said eyebolt elements, a flat vertical vane formed with spaced holes adjacent one vertical edge thereof and through which the free ends of said threaded shanks pass, and nuts threadedly engaged on the free ends of said threaded shanks to be tightened against the adjacent face of said vane and clamp the opposite face thereof against the flat sides of said eyebolt elements.

2,453,562
HEAT-CURABLE ELASTIC COMPOSITIONS OF MATTER
James G. E. Wright, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application March 11, 1948, Serial No. 14,385
10 Claims. (Cl. 260—37)

1. A composition of matter comprising a solid, elastic, curable methylpolysiloxane consisting of methyl radicals and silicon and oxygen atoms and containing an average of from 1.98 to 2.00 methyl groups per silicon atom, said solid methylpolysiloxane having been obtained by condensing a liquid comprising essentially polymeric dimethylsiloxane containing up to 2 mol per cent copolymerized monomethylsiloxane, having incorporated therein an amount of a zirconyl nitrate sufficient to effect curing of the elastic product.

2,453,563
REGULATOR SYSTEM
Herbert Ziebolz, Chicago, Ill., assignor to Electronbeam, Ltd., Chicago, Ill., a partnership
Application November 22, 1943, Serial No. 511,332
4 Claims. (Cl. 318—28)

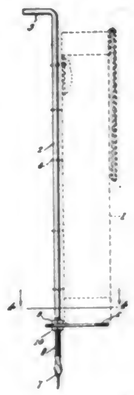


4. In a regulator system, the combination of a movable control element for varying the magnitude of a condition to be regulated, means for operating said control element including an electron beam relay having beam deflecting means, magnitude setting means comprising means for normally deflecting the electron beam of said relay in a direction to increase the magnitude of said condition, means responsive to the magnitude of said condition and acting on said beam deflecting means in opposition to the action of

said magnitude setting means and thereby limiting the increase in said condition to a value determined by the setting of said magnitude setting means, and means controlled by movement of said control element for energizing said beam deflecting means in proportion to the speed of movement of said control element and in a direction tending to oppose the movement of said control element.

2,453,564
UREYLENETHIOPHANE CARBOXYLIC ACIDS AND ESTERS AND METHODS OF PREPARING SAME
Bernard R. Baker, Nanuet, N. Y., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 16, 1945, Serial No. 605,467
12 Claims. (Cl. 260—329)

1. Chemical compounds having the general formula:

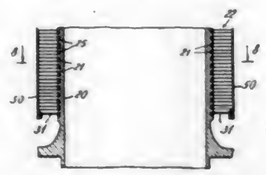


wherein X is a member of the group consisting of hydrogen, alkyl and aryl radicals, R is a member of the group consisting of hydrogen, alkyl and alkali metal radicals and R′ and R″ are members of the group consisting of hydrogen, carboxyalkyl and carbalkoxyalkyl radicals.

2,453,565
SUPPORT FOR GOLF BAGS
William A. Barden, Waynesville, N. C.
Application January 22, 1946, Serial No. 645,021
2 Claims. (Cl. 248—96)

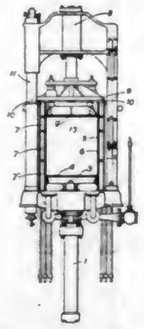
2. A support for a golf bag comprising a rod having a handle at one end and a ground penetrating point at the other end, a plate provided with an eccentrically positioned aperture for receiving the rod, and securing means on said rod adjacent the ground penetrating point cooperating with said plate for holding the plate at different positions of adjustment on the rod where-

by when the rod is turned to one position the plate underlies the bag and when the rod is



turned to another position the plate extends outwardly beyond the bag to form a support.

2,453,566
DIALKYL THIOACETALS OF CHOLESTANONE AND METHOD
Seymour Bernstein, Pearl River, and Louis Dorfman, New York, N. Y., assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 26, 1945, Serial No. 585,011
4 Claims. (Cl. 260—397.2)



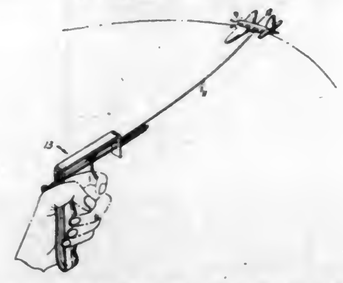
1. Dialkyl thiocetals of cholestanone-3.

2,453,567
COOLING FIN STRUCTURE FOR INTERNAL-COMBUSTION ENGINES
Wilhelm B. Bronander, Montclair, N. J.
Application September 23, 1944, Serial No. 555,545
1 Claim. (Cl. 257—261)

In combination, a cylindrical member to be cooled, a plurality of cooling fins mounted on and encircling said member, an annular protector ring for the fins secured to said member, said protector ring being formed of material stiffer than the material of the cooling fins to be protected, said protector ring comprising a ring channeled in section and having flanges at the inner and outer periphery thereof, said protector ring being split and having formed therein opposite the split a slit extending from the inner periphery to an elongated slot disposed adjacent the outer flange and extending substantially at right angles in opposite directions from the slit whereby the ring can be bent at the slit to open up the ring, and means for securing a deflector plate to said protector ring.

2,453,568
APPARATUS FOR THE MANUFACTURE OF CORKBOARD BY INJECTION OF A HEATED GAS
Cipriano Ribeiro Calleia, Lisbon, Portugal
Application September 13, 1945, Serial No. 616,097
In Portugal September 15, 1944
5 Claims. (Cl. 18—6)

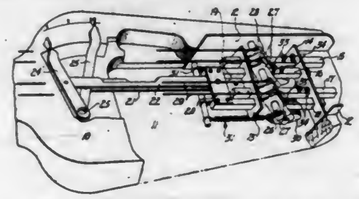
1. Apparatus for the manufacture of corkboard blocks and the like comprising a mould having perforated end plates and perforated side walls for directly engaging the block, means for first compressing the material in the mould, means for then admitting heated gas through one of the end plates and inwardly through all the side walls to penetrate the compressed material, means whereby such gases all escape through the second end wall, and means for the removal of the material from the mould.



2,453,569
PLASTICIZED POLYVINYL ACETAL RESIN
Max O. Debacher, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application June 30, 1945, Serial No. 602,665
14 Claims. (Cl. 260—23)

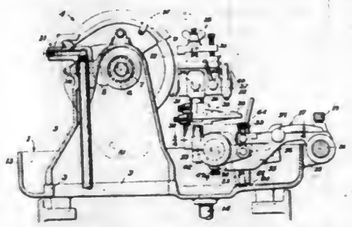
1. A composition comprising 100 parts of a polyvinyl acetal resin derived from a polyvinyl ester in which at least 30% of the ester groups have been replaced by acetal groups and not more than 50% of the ester groups have been replaced by hydroxyl groups, 0.5–5 parts of sulfur and at least 10 parts of a blown ester of a polyhydric alcohol and a poly-unsaturated aliphatic acid, the acid residues thereof containing more than 9, but less than 21 carbon atoms, the amount of said ester not exceeding its compatibility in said composition.

2,453,570
PLASTICIZED POLYVINYL ACETAL RESIN
Max O. Debacher, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application June 30, 1945, Serial No. 602,666
18 Claims. (Cl. 260—31.6)



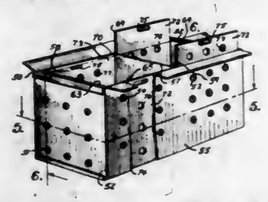
1. A composition comprising a polyvinyl acetal resin derived from a polyvinyl ester in which at least 30% of the ester groups have been replaced by acetal groups and not more than 50% of the ester groups have been replaced by hydroxyl groups, 25–150 parts of a partial ester of a non-resinous polyhydric alcohol and a poly-unsaturated aliphatic acid, the polyhydric alcohol residue of said ester containing at least one free hydroxyl group, and 0.05–30 parts of sulfur for every 100 parts of polyvinyl acetal resin.

2,453,571
CONTROL DEVICE
Joseph Louis De Barbieri and Edward Kishner, Brooklyn, N. Y.
Application April 19, 1946, Serial No. 663,295
4 Claims. (Cl. 74—502)



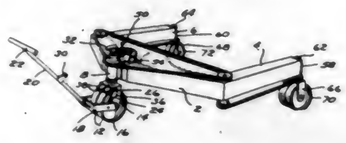
1. A control handle for guiding model planes in flight by means of cords, and comprising an inverted J frame having a hole in each leg thereof and said holes being axially aligned, a bar slidably disposed in said holes, a trigger secured to said bar for transporting it to the rear, the shorter leg of said frame having a second hole to receive the control cords for guiding the plane, a pulley on the longer leg of the said frame and about which one of the said control cords pass, means on the said slidable bar for securing the control cords, for the transmission of movement of the said bar to the said plane, and springs associated with the said bar to maintain said bar in a predetermined position.

2,453,572
MEANS FOR VARYING THE TUNING OF STRINGED INSTRUMENTS
David John Ferrier, St. Kilda, Victoria, Australia
Application December 9, 1947, Serial No. 790,626
In Australia June 12, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires June 12, 1965
11 Claims. (Cl. 84—312)



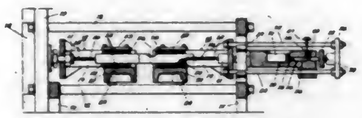
1. Means for varying the tuning of a string in a stringed instrument, comprising a tensioning member pivoted to the frame of the instrument, one end of the string being affixed to the upper end of said member, a roller on the lower end of the tensioning member, a member slidably mounted in the frame, an abutment on the slidable member, and means for actuating the slidable member in order to move the abutment thereon into engagement with the roller on the tensioning member, thereby altering the tension of the string.

2,453,573
GRINDER MACHINE
Emil F. Hager, Queens Village, N. Y.
Application February 2, 1945, Serial No. 575,749
16 Claims. (Cl. 51—125)



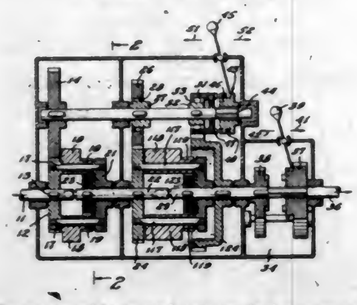
1. In a work shaping apparatus having a spindle and work shaping means carried by said spindle, a bar disposed parallel to said spindle, a carriage mounted at least in part on said bar for movement in directions parallel to said spindle, a member carried by said carriage with a given axis thereof disposed at an angle to the axis of said spindle, means on said carriage for moving said member relative to said carriage in directions parallel to said spindle, means for pivotally adjusting said member about said given axis, a work supporting means carried by said member, and means for pivotally adjusting said work supporting means about an axis transverse to said given axis.

2,453,574
CONTROLLED VENTILATED CONTAINER
Irving Hill, Lawrence, Kans., assignor to The Lawrence Paper Company, Lawrence, Kans., a corporation of Kansas
Application May 13, 1946, Serial No. 669,406
8 Claims. (Cl. 229—42)



3. An egg case comprising, a container having bottom, side and end walls, said side and end walls of the container having ventilation openings therein, a liner removably mounted in the container, said liner having a fold line at substantially the center thereof and folded downwardly laterally and upwardly to form a partition, bottom and end panels for the container, said partition separating the container into compartments and being provided with ventilation openings and the end panel having ventilation openings registering with the ventilation openings in the end walls of the container, and a plurality of liners removably mounted in the container including bottom members and upwardly extending panels, the upwardly extending panels being provided with ventilation openings, the openings of one panel registering with the ventilation openings in one side wall of the container and the ventilation openings in the opposite panel being adapted for out-of-registry with the ventilation openings in the opposite side wall of the container, said liners being reversible for controlling ventilation of the respective compartments.

2,453,575
TONGUE ACTUATED BRAKE FOR HAND TRUCKS
William C. House, Greene, N. Y., assignor to Lyon-Raymond Corporation, Greene, N. Y., a corporation of New York
Original application November 2, 1943, Serial No. 508,711, now Patent No. 2,388,692, dated November 13, 1945. Divided and this application November 10, 1945, Serial No. 627,823
9 Claims. (Cl. 188—119)

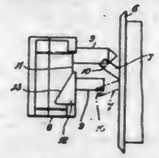


1. In a truck, the combination with the truck frame, a swivelled steering wheel and a steering and draft tongue having a steering connection to said steering wheel swivel and pivoted to swing also in vertical planes between a substantially upright position and a position below draft level, of a brake for the steering wheel and means for operating said brake comprising a vertically slidable brake-depressing plunger extending through said steering wheel swivel, cooperating means carried by said plunger and said steering tongue respectively to effect a depression of said plunger to apply said brake when said steering tongue is moved into its upright position and other cooperating means carried by said plunger and said steering tongue respectively to effect a depression of said plunger to apply said brake when said steering tongue is moved into its position below draft level, said two plunger depressing means being independent of each other and both being inoperative between said approximately extreme tongue positions.

2,453,576
SPOT WELD TESTER
Fraser B. Jacob, Lynn, Mass., assignor to The Electroloy Company, Incorporated, Bridgeport, Conn., a corporation of Connecticut
Application March 2, 1945, Serial No. 580,565
1 Claim. (Cl. 73—88)

A measuring head for a spot weld coupon testing device comprising a resilient restraining means, means for transmitting movement from a gripping head of said device to said restraining means, means for indicating the deflection of said restraining means, and means for retaining a reading of said indicating means, said last mentioned means comprising a plunger for transmitting movement from said restraining means to said indicating means, said plunger having a tapered notch therein and a friction pin resting in said notch and being urged against the tapered surface, and means for manually releasing said pin from said tapered surface to restore the indicating means to normal.

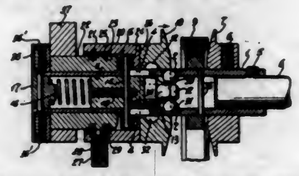
2,453,577
VARIABLE-SPEED TRANSMISSION
Constantin Krispis, Athens, Greece
Application July 19, 1947, Serial No. 762,172
In Greece March 28, 1947
2 Claims. (Cl. 74—260)



1. In a variable speed transmission comprising a driving shaft and an independently rotatable driven shaft, of a driving gear, an auxiliary shaft rotated by said driving shaft, two spaced gears keyed to said driven shaft, one of said keyed gears having a large diameter and the other one a comparatively smaller diameter, and means for transmitting energy from said driving gear to one of said keyed gears on said driving shaft selectively, depending on the ratio of energy imparted to said driving shaft and a load applied to said driven shaft, respectively, said means comprising a planetary gear pivoted to said driving gear spaced from said driving shaft and adapted to assume a stationary position relative to said driving gear upon attainment of a predetermined speed ratio intermediate said driven shaft and said driving shaft, and a gear meshing with said large keyed gear and unidirectionally driven by said auxiliary shaft for turning said driven shaft prior to attainment of said predetermined speed ratio between said driven and said driving shafts.

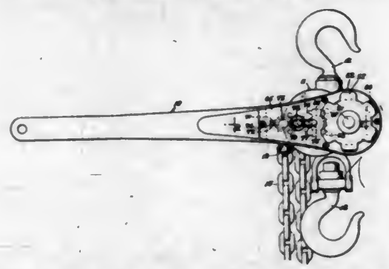
2,453,578
PREPARATION OF CHEMILUMINESCENT COMPOSITION OF MATTER
Harold T. Lacey, Plainfield, and Robert E. Brouillard, Somerville, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application February 19, 1944, Serial No. 523,157
2 Claims. (Cl. 260—250)

1. A process of preparing a mixture of 5- and 6-nitro-1,4-dioxotetrahydrophthalazines which comprises reacting a mixture, obtained by nitrating phthalic anhydride with a mixture of concentrated sulfuric and nitric acids and then bubbling sulfur dioxide therethrough for a sufficient time to destroy any residual nitric acid, with hydrazine sulfate in concentrated sulfuric acid.



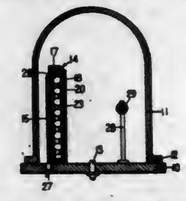
2,453,579
ELECTRIC PLUG AND SOCKET CONNECTION
Jack Lund, Salford, England, assignor to Dorman & Smith Limited, Salford, England
Application August 28, 1945, Serial No. 613,055
In Great Britain August 29, 1944
3 Claims. (Cl. 200—51.09)

1. An electric connector comprising a plug member provided with projecting pins, a socket member having sockets for the reception of said pins, a shiftable switch arm carried by said socket member and projecting from the front thereof toward said plug member, said switch arm being manually operable to shift the same into "on" position after engagement of the plug and socket members, and cooperating means carried by said switch arm and plug member for



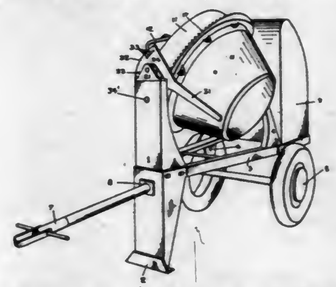
automatically shifting the arm to "off" position during disengagement of the plug member from the socket member, said cooperating means being effective also to prevent engagement of the plug and socket members when the arm is in "on" position.

2,453,580
V-BELT DRIVE PULLEY
Albert F. Lusk, Pontiac, Mich.
Application June 20, 1946, Serial No. 678,054
21 Claims. (Cl. 74—230.24)



1. In a V-belt drive pulley construction, the combination of a pulley having one half thereof fixedly mounted on a rotatable shaft and the other half slidably mounted on said shaft, means for rotating said shaft, means for moving the slidable half of said pulley along said shaft and into operative position with respect to the fixed half during the rotation of said shaft, means for effecting the operation of said pulley moving means, and means for causing the slidable half of the pulley to become locked to said shaft so that it will rotate therewtih as it is moved into operative position with respect to the fixed half thereof.

2,453,581
CLUTCH AND BRAKE DEVICE
George E. Moore, Muskegon Heights, Mich., assignor to Manning, Maxwell & Moore, Inc., Muskegon Heights, Mich., a corporation of New Jersey
Application May 17, 1945, Serial No. 594,239
8 Claims. (Cl. 192—16)



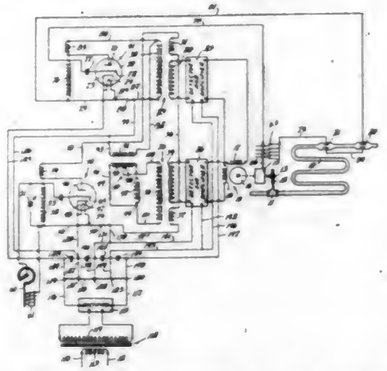
1. In a hoist, in combination, a load shaft, a driving member mounted on said shaft for rotation relative thereto, a load brake for said shaft, means operable in response to the relative rotation of said member and shaft in one direction for rendering said brake effective to prevent rotation of said shaft in a load lowering direction, said brake being released upon relative rotation of said member and said shaft in the opposite direction, and means operable to releasably latch said member and said shaft together in a position to maintain said brake released.

2,453,582
APPARATUS FOR MAKING PATTERN MIRRORS AND OTHER COATINGS
Willard L. Morgan, Columbus, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application June 9, 1944, Serial No. 539,530
5 Claims. (Cl. 91—12.2)

1. In an apparatus for producing pattern coatings having clear uncoated areas and a coated area, the combination of a vacuum chamber, an evaporating source located within the chamber, means for supporting a workpiece to be coated also located within said chamber, a plurality of unsupported metallic magnetic plates engaging the front face of said workpiece, and means for maintaining said plurality of plates in predetermined positions on said front face, said last-named means comprising a plurality of permanent magnets.

2,453,583
TILTING BOWL CONCRETE MIXER
Walter Muller, Dunellen, N. J., assignor to Muller Machinery Company, Inc., Metuchen, N. J., a corporation of New Jersey
Application March 8, 1946, Serial No. 653,006
9 Claims. (Cl. 259—176)

1. In apparatus of the character described, a pair of upright frame members, bearing members therein and projecting inwardly therefrom, a yoke formed of a curved piece of metal substantially U-shaped in cross section mounted on the inwardly projecting portion of said bearing members near its ends and normally depending downwardly between them, a mixing bowl mounted for rotation in said yoke between said bearing



members and adapted to oscillate thereon with said yoke, an annular rack on the exterior of said bowl, a pinion in mesh with said rack for rotating said bowl a driving shaft on which said pinion is fixed, said shaft extending through and journaled in one of said bearing members outwardly and inwardly of said yoke, said yoke-metal being provided with an aperture in its inwardly disposed web through which said bearing member passes.

2,453,584

REFRIGERATING CONTROL APPARATUS

Alwin B. Newton, Dayton, Ohio, assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application June 8, 1944, Serial No. 539,299
19 Claims. (Cl. 62—8)

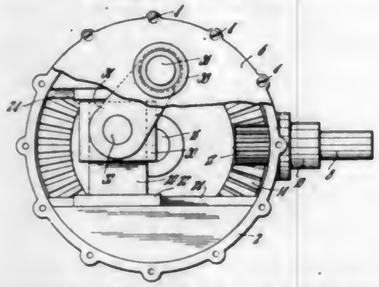
1. Control means for a refrigerating system of the sort wherein refrigerant is circulated through an evaporator including; valve means for controlling the flow of refrigerant through such an evaporator, reversible motor means for operating said valve means, said motor means being variable in speed, means for responding to the electrical impedance value of the refrigerant at the outlet of the evaporator, and means including said responsive means for controlling said motor means to move said valve means toward closed position upon an increase of said value and to move said valve means toward open position upon a decrease of said value, the speed of operation of said motor means being dependent upon the variation of said impedance from a predetermined quantity.

2,453,585

PROCESS OF MAKING A SUBSTANTIALLY ALKALI-FREE HYDROGEL CATALYST

John W. Payne, Thomas P. Simpson, and James I. Butzner, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application August 24, 1945, Serial No. 612,560
5 Claims. (Cl. 252—254)



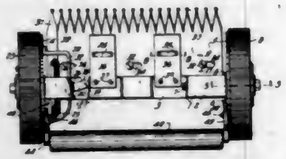
1. A method of making a substantially alkali-free silica-alumina gel type hydrocarbon conversion catalyst, which comprises permitting a hydrosol of silica and alumina containing zeolitic alkali metal to set to a hydrogel, contacting the hydrogel so obtained with hot water for a period sufficient to adjust its density to a predetermined value, soaking the resulting hydrogel in an aqueous polyvalent metal salt solution containing at least three times the theoretical quantity of polyvalent metal salt required to displace the alkali metal in the hydrogel, and thereafter soaking said hydrogel in an aqueous solution of an ammonium salt containing from about 0.5 to about 1.5 times the theoretical quantity of ammonium salt necessary to displace the original alkali metal in the hydrogel, water-washing the treated hydrogel free of soluble matter, and drying at an elevated temperature to yield a silica-alumina gel, whereby the residual quantity of alkali metal in said gel is decreased below the minimum which can be achieved by an equivalent base exchange using polyvalent metal or ammonium salts exclusively.

2,453,586

DRIVE MECHANISM

Julian L. Perkins, West Springfield, Mass., assignor, by mesne assignments, to The Gordon Armstrong Company, Inc., Cleveland, Ohio, a corporation of Ohio

Application September 27, 1945, Serial No. 618,845
2 Claims. (Cl. 74—70)



2. A driving mechanism of the class described comprising in combination, a casing, a drive shaft and a driven shaft journalled therein, intermeshing gears fixed to said shafts, a slide guided for reciprocation in said casing, a block slidable on said slide, means carried by one of said gears engaging said slide whereby it is reciprocated by said gear, an oscillatable shaft journalled in said casing, and a crank fixed to said oscillatable shaft at one end and pivoted to said block at its other end whereby as the slide is reciprocated in opposite directions the block is reciprocated in directions opposite thereto to oscillate said oscillatable shaft.

2,453,587

LAWN MOWER

Edward W. Petri and Frank H. Seeley, Fort Plain, N. Y.

Application July 5, 1944, Serial No. 543,520
3 Claims. (Cl. 56—260)

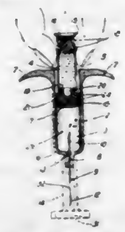
1. A lawn mower comprising a pair of spaced ground wheels, a shaft on which said wheels are rotatably mounted; one of said wheels having gear teeth therein forming an internal gear; a vertically-disposed, rectangular, open frame having an end plate thereon closely adjacent each of said gears; one of said plates forming with one of said wheels a substantially enclosed fly wheel housing, and the other of said plates forming with said internal gear wheel a substantially enclosed gear housing; a flywheel secured to said shaft within said flywheel housing, a first gear rotatably mounted on said shaft within said gear housing and a ratchet and pawl cooperating with said first gear and said shaft whereby said gear may drive said shaft but said shaft may override said gear; a pair of gears enclosed within said gear housing, each cooperating with said internal gear and said first gear and one of said two gears being provided with means forming a female clutch member, a male clutch member enclosed in said housing adapted to cooperate with said female member and having a shaft slidably mounted in a bearing secured to said frame, a motor mounted on said frame, speed reducing gears cooperating therewith and with said male clutch shaft for driving the same, a stationary cutting bar and a movable cutting bar cooperating therewith carried by the bottom of said frame, and mechanism driven from said first mentioned shaft for oscillating said movable bar.

2,453,588

PURIFICATION OF ORGANIC ACIDS

Orville L. Polly, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California

Application May 2, 1945, Serial No. 591,579
6 Claims. (Cl. 260—419)



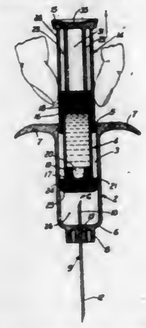
1. A method of separating monocarboxylic organic acids having more than eight carbon atoms in the molecule from non-acidic organic materials which comprises contacting said acids in the absence of water and in the presence of a non-polar solvent with a metal carbonate capable of forming a recoverable complex with said acids, separating said complex from said non-acidic organic materials and non-polar solvent and recovering said acids from the separated complex.

2,453,589

HYPODERMIC SYRINGE AND AMPOULE THEREFOR

Noel J. Poux, Meadville, Pa.

Application November 4, 1946, Serial No. 707,644
10 Claims. (Cl. 128—220)



3. A hypodermic syringe comprising, in combination, an elongated cylindrical hollow body member being open at one end and closed at its opposite end, a double pointed injection needle securely arranged in said closed end with one point extending into the hollow portion of said body member and with the other end extending outwardly therefrom, an elongated cylindrical ampule containing liquid to be injected positioned in the hollow portion of said body member and inserted through the open end thereof, a pair of stoppers with one disposed at each end of said ampule for hermetically sealing the same, one of said stoppers disposed wholly within the ampule with the other being shaped to fit around the end thereof with its outer part snugly fitting the end of the hollow portion of the body member, said last mentioned stopper adapted to be perforated by the needle point disposed in the hollow portion of said body member, and means for pushing the first mentioned stopper inwardly through the ampule to force the liquid through said needle.

2,453,590

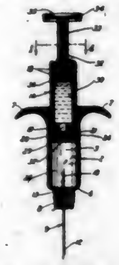
HYPODERMIC SYRINGE

Noel J. Poux, Meadville, Pa.

Application November 4, 1946, Serial No. 707,645
5 Claims. (Cl. 128—220)

1. A hypodermic syringe comprising, in combination, an elongated hollow body member being open at one end and closed at its opposite end, a double pointed injection needle securely arranged in said closed end with one point extending into the hollow portion of said body member and with the other end extending outwardly therefrom, an elongated ampule containing liquid adapted to be injected positioned in the hollow portion of said body member and inserted through the open end thereof, a pair of stoppers with one disposed at each end of said ampule for hermetically sealing the same, one of said stoppers having substantially the same diameter as the inner diameter of said ampule and adapted to act as a piston to force the liquid therefrom with the other stopper being shaped to fit over and around the end of the ampule, said last mentioned stopper adapted to be perforated by that needle point disposed in the hollow portion of said body member when the ampule is fully seated therein, and means for pushing the first mentioned stopper inwardly through the ampule to force the liquid through said needle consisting of an elongated hollow portion which is adapted to fit around the ampule for housing and holding the same and a plunger portion arranged within said hollow portion integral and concentric therewith which abuts against the first mentioned stopper and forces the same through the plunger when said means is forced into the ampule and syringe.

2,453,591



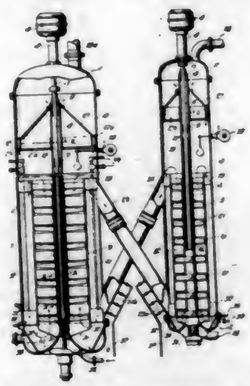
HYPODERMIC SYRINGE

Noel J. Poux, Meadville, Pa.

Application November 4, 1946, Serial No. 707,646
8 Claims. (Cl. 128—220)

5. A hypodermic syringe comprising, in combination, an elongated cylindrical body member made from a transparent plastic material, said body having a cylindrical chamber therein so as to provide a relatively thin wall body member with said chamber being open at one end and

closed at its opposite end, a double pointed injection needle securely arranged in said closed end with one point extending centrally into said chamber and with the other point extending outwardly from the body member, an elongated cylindrical ampule containing the liquid to be injected, a pair of resilient stoppers with one disposed in each end of said ampule for hermetically sealing the same, one of said stoppers disposed wholly within the ampule and the other fitting securely around the end thereof, said



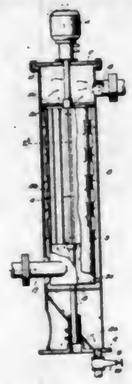
ampule inserted through the open end of said chamber with said last mentioned stopper adapted to be perforated by the needle point in said chamber, and a combination cap and plunger member consisting of a hollow cylindrical portion adapted to act both as a cap portion and as a guide for said ampule having a plunger portion detachably connected thereto at one end thereof, said plunger adapted to push the first mentioned stopper inwardly through the ampule to force the liquid through said needle.

2,453,592

CONTACTING APPARATUS FOR CATALYTIC PROCESSES

David H. Putney, Kansas City, Mo., assignor to Stratford Development Corporation, Kansas City, Mo., a corporation of Delaware

Application December 8, 1944, Serial No. 567,240
2 Claims. (Cl. 23—288)



1. In an apparatus for intimately mixing a solid pulverulent catalyst with fluid reactants wherein the catalyst is circulated in a cyclic ring during mixing, the combination with a vertical vessel having inlet and outlet ports for the catalyst and reactants, an open-ended circulating tube within the vessel, a power-driven shaft extending axially of the tube, a plurality of impellers within the tube rotated by the shaft and adapted to create a cyclic circulation of the catalyst reactant mixture upwardly through the tube and downwardly in the annular space surrounding the tube, radial stationary straightening vanes within the circulating tube located both on the suction and discharge sides of the impellers, said straightening vanes having a length substantially that of the impellers and having a curved lower portion, said curved lower portion lying outside the plane in which the noncurved portion of the straightening vane lies.

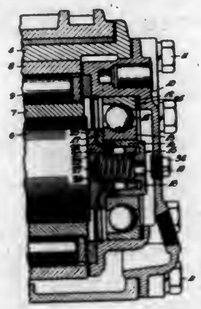
2,453,593

APPARATUS FOR SEPARATING ENTRAINED SOLIDS FROM GASES

David H. Putney, Kansas City, Mo., assignor to Stratford Development Corporation, Kansas City, Mo., a corporation of Delaware

Application January 11, 1946, Serial No. 640,620
2 Claims. (Cl. 183—77)

1. An apparatus for separating entrained solids from gaseous materials comprising concentric vessels of different diameters, the annular space therebetween closed at the top and open at the bottom, an inlet opening into the outer vessel, an outlet opening in the upper portion of the inner vessel having communication with an outlet in the upper portion of the outer vessel, a solids discharge opening in the bottom of the outer vessel, said inner vessel having an opening in the bottom and thereby being in communication with the outer vessel, rotative elements within the inner vessel adapted to rotate the gaseous mass passing through it and peripheral apertures in the shell of the inner vessel for the passage of solids and gases.



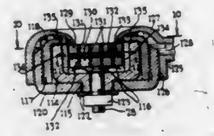
2,453,594

JOURNAL BOX

Harry R. Reynolds, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a corporation of Connecticut

Application December 1, 1945, Serial No. 632,245
7 Claims. (Cl. 308—41)

1. In a journal box having a rotatable and axially movable shaft journaled therein, a thrust bearing for the shaft comprising inner and outer bearing rings with interposed anti-friction bearing members, means for mounting the outer of said bearing rings against movement away from the end of the shaft, a plug fixedly secured in the bore of the inner of said rings and having an outwardly facing flange engaging the edge of the inner bearing ring adjacent the end of the shaft, a bushing including a sleeve slidably mounted in said plug, means for limiting the sliding movement of said sleeve in said plug, a spring interposed between said plug and bushing for urging



the latter toward the end of the shaft, said bushing having a thrust flange for cooperation at one side with the end of the shaft and for cooperation at the other side with the outwardly facing flange on the plug.

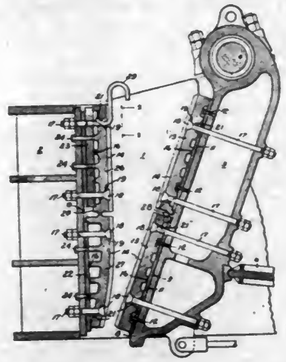
2,453,595

APPARATUS FOR DISPENSING LIQUID FUEL

Adolph H. Rosenthal, New York, N. Y., assignor to Scophony Corporation of America, New York, N. Y., a corporation of Delaware

Application August 27, 1943, Serial No. 500,242
5 Claims. (Cl. 123—119)

4. A dispensing device for liquid fuel, including an element having a vibratory surface and internal fuel conducting channels leading to spaced openings distributed over said surface, and means for vibrating said element in a direction substantially perpendicular to its vibratory surface and at supersonic frequency.



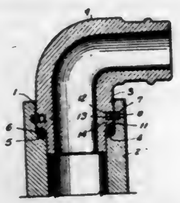
2,453,596

LINER PLATE FOR JAW CRUSHERS

Alexander J. Roubal, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application June 9, 1944, Serial No. 539,436
4 Claims. (Cl. 241—300)

4. In a crusher jaw structure, a jaw body having a pressure receiving face, a pair of replaceable wear plates rigidly secured to said body in pressure transmitting relation to said face in longitudinally spaced relation, to form a wear receiving jaw plate mounting surface for said jaw body having a transverse groove intermediate its length, a pair of jaw plates for said jaw each having a working face, a rear face and a transverse ledge projecting from one end of said rear face, of depth less than said groove and thickness approximately half the width of said groove, said jaw plates being mounted on said jaw plate mounting surface with their ledge ends abutting and the ledges engaged in said groove to prevent longitudinal displacement of said jaw plates, and means securing said jaw plates firmly against said



jaw plate mounting surface and said jaw body to form an operative unit.

2,453,597

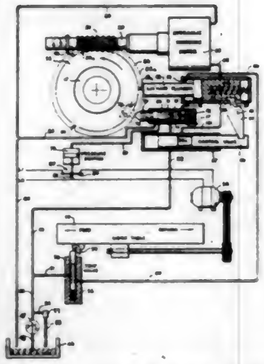
FITTING FOR PIPE OR HOSE CONNECTIONS

Emmett F. Sarver, Erie, Pa., assignor to Rohlm Manufacturing Company, Inc., Erie, Pa., a corporation of Kansas

Application October 30, 1944, Serial No. 561,041
2 Claims. (Cl. 285—97.3)

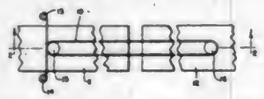
1. A swivel pipe fitting including complementary male and female tubular members, the female member having at one end an enlarged socket forming an annular shoulder at the inner end of said socket, an annular groove around the inner periphery of the socket in spaced relation to the shoulder, a compressible gasket ring adapted to seat on the annular shoulder in the socket, the male tubular member having a portion shaped to fit and enter the socket, a pilot on said male member shaped to fit and extend into the female tubular member beyond the annular shoulder in the socket, an annular ledge being provided around the periphery of said male member between the pilot and the portion fitting in the socket, said ledge engaging the gasket ring, an annular groove around the outer periphery of the male member in spaced relation to the ledge and adapted to mate with the annular groove in the socket when the gasket ring is compressed between the shoulder and the ledge of the respective members, and a split retaining ring of a size to enter the socket when compressed in the groove of said male member and of a thickness greater than the depth of the groove in the socket into which it is adapted to expand to engage both of said grooves for retaining the tubular members together with a sealed joint and permit relatively rotary motion of said members.

2,453,598
FERROUS ALLOYS AND ROTOR FORGINGS FOR GAS TURBINES
Adolph O. Schaefer, Whitpain Township, Montgomery County, Pa., assignor to The Midvale Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application August 29, 1945, Serial No. 613,423
4 Claims. (Cl. 75—128)



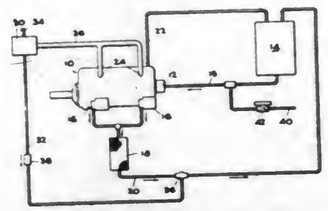
1. A ferrous alloy particularly adapted for the manufacture of rotor forgings for gas turbines, said alloy containing carbon .05 to less than .3 per cent, manganese over .3 and less than one per cent., silicon over .3 and less than one per cent., nickel over 9 to less than 15 per cent., chromium over 15 to less than 25 per cent., tungsten over 2 to less than 5 per cent., columbium over .5 to less than 2 per cent and nitrogen over .05 to less than .3 per cent., with a maximum of phosphorus and sulphur not over .03 per cent. each, substantially all of the remainder being iron which comprises the major proportion of the alloy, the percentage of chromium substantially exceeding the percentage of nickel and the percentage of tungsten substantially exceeding the percentage of columbium; said composition being characterized by great ease in casting and forging, adequate strength at the temperature range of operation of gas turbines, high ductility permitting of maximum automatic distribution of stresses, and uniformity of product particularly in parts of widely different thicknesses.

2,453,599
DOUGH-PREPARING DEVICE FOR LATTICE-WORK PIE CRUSTS
Kurt Schlegel, New York, N. Y.
Application February 21, 1947, Serial No. 730,051
5 Claims. (Cl. 107—47)



1. A dough-preparing device for lattice-work pie-crust embodying, in combination, a multiplex group of tubular dough-cutting dies adapted to perforate a sheet of pie-crust dough and having cutting edges extending to a common level to simultaneously cut a group of apertures of suitable design, the members of said group being positioned in closely spaced relationship to each other to provide inter-die channels for the formation between said perforations of open-work lattice strips of said perforated sheet, means for supporting said group of dies in said spaced group position, each of said dies having adjacent to the cutting edges wall portions inclined-inwardly toward the axis of the die to enable complete severence of dough pieces from the sheet and also to produce at the outer sides of said cutting edges outwardly-inclined channel walls engageable with and providing increased engaging surface between the channels and lattice strips to enable retention of such strips therein, and ejecting means movable within said channel to eject said perforated sheet of pie-crust dough from said channels.

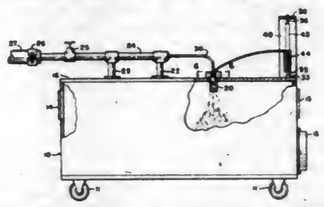
2,453,600
INDEXING MECHANISM
Harold R. Soden, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Co., Cincinnati, Ohio, a corporation of Ohio
Application July 13, 1944, Serial No. 544,778
15 Claims. (Cl. 90—56)



1. In a machine tool, a work table, a prime mover for actuating said work table, an indexible work holder, a driving motor for moving said work holder to indexed positions, a yieldable driving connection between said motor and said work holder, a locking plunger mechanism arranged to cooperate with said work holder for accurately holding said work holder in indexed positions, means rendered operative by the movement of said work table to initially withdraw said locking plunger, means rendered operative upon initial withdrawal of said locking plunger to effect a limited amount of indexing movement in said work holder while said driving motor is inoperative, and means responsive to withdrawal of said locking plunger from positioning said work holder to effect rotation of said motor.

2,453,601
ELECTRIC STRAIN GAUGE
Louis D. Statham and Carlos J. Baker, Los Angeles, Calif., and Karl D. Swartzel, Snyder, N. Y., assignors to Curtiss-Wright Corporation, a corporation of Delaware
Application September 21, 1944, Serial No. 555,168
14 Claims. (Cl. 201—63)

1. A mounting for strain wire whose electrical resistance varies with length and whose length varies reversibly with an applied load, comprising a metallic base member, a plurality of aluminum pins mounted in said base member, an anodized surface on each of said pins forming thereby an electrical insulating surface, a metallic collar loosely mounted on said pin and in contact only with said insulating surface, a pair of electrical terminals insulated from each other, each of said terminals being fixed in position with respect to one of said pins, and a strain wire attached at one end to one said terminal and at the other end to the other said terminal and wound successively around each of said pins under a predetermined tension and adhesively secured to said metallic collars thereon.

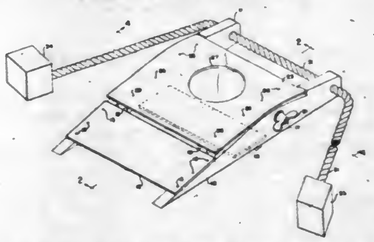


2,453,602
ENGINE LUBRICATION SYSTEM
John F. Strickler, Jr., Williamsville, and Stuart K. Edleson, Niagara Falls, N. Y., assignors to Bell Aircraft Corporation, Wheatfield, Niagara County, N. Y.
Application March 28, 1946, Serial No. 657,678
5 Claims. (Cl. 123—196)

1. An internal combustion engine lubrication system, comprising in combination, an engine casing, a first conduit leading from said casing, a pump in operative communication with said first conduit for inducing flow of oil therethrough away from said casing, an oil cooling radiator connected to said first conduit for cooling the oil passing therethrough, a second conduit leading from said radiator to convey oil discharged therefrom, an oil supply tank having an inlet port connected to said second conduit, a third conduit coupled to said oil supply tank and to said engine casing for conveying oil from said tank into said casing, a second pump device connected to said third conduit and operable to displace oil therethrough whereby the engine casing oil may be continuously withdrawn and circulated through said radiator and said tank and returned to said casing, a fourth conduit arranged to convey under pressure a liquid diluent for said engine casing oil supply and connected to said third conduit, a vent conduit interconnecting said engine casing and said oil supply tank for venting vapor from the oil supply tank into the engine casing, said engine casing having a breather outlet port and a fifth conduit connected thereto for carrying oil-containing vapors from the engine casing, an oil separator connected to said fifth conduit and having a separated air discharge port and a recovered oil discharge port, a sixth conduit connected to said recovered oil port and connected to a check valve permitting displacement of oil through said sixth conduit only in a direction leading away from said separator, and an eductor connected into said second conduit and having its induction intake port coupled to said sixth conduit and so arranged that displacement of oil through said second conduit in the direction of said oil supply tank induces addition thereto of oil recovered from said separator.

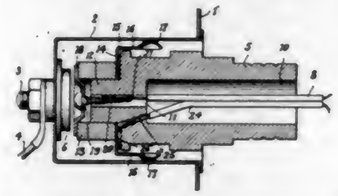
2,453,603
METHOD AND APPARATUS FOR STRIPPING YARN PACKAGES
Columbus C. Sumner, Elon College, N. C.
Application June 19, 1947, Serial No. 755,780
9 Claims. (Cl. 28—19)

3. That method of stripping a roving from a yarn package which comprises supporting the package for rotation, passing the free end of a roving through a restricted member, forcing compressed air through the restricted member to unwind the roving from the package and to disintegrate the roving to convert the roving into fibrous bulk form.



2,453,604
METHOD OF MAKING PROSTHETIC ARTICLES
Adele Tenenbaum and Milton Tenenbaum, Jamaica, N. Y.
Application April 7, 1945, Serial No. 587,054
8 Claims. (Cl. 18—47.5)

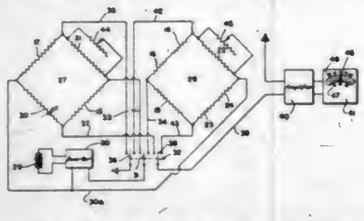
1. The method of making prosthetic articles utilizing a reversible rubber mold which comprises applying a layer of latex upon the exterior surface of the reversed mold, applying a layer of a first coloring matter upon localized areas of said first coat of latex, said areas being in conformance with those having said coloration in the article simulated, applying a sealing coat of latex over the coloring matter and the underlying latex layer, applying a second coloring matter in localized areas in accordance with such second coloration in the article simulated, applying a sealing coat of latex over said second coloring matter and the underlying latex layer, reversing the mold to thereby make the applied latex layers lie on the interior surface of the mold, the last applied layer being innermost, applying an additional plurality of latex layers to the interior surface of the structure, stripping the mold from the structure and vulcanizing the thus formed composite structure.



2,453,605
INDOOR GOLF PUTTING PRACTICE APPARATUS
Leon C. Thomas, Greensboro, N. C.
Application March 19, 1947, Serial No. 735,726
3 Claims. (Cl. 273—35)

1. In a golf putting apparatus, a pair of bars disposed in spaced relation to each other, means secured between the bars for holding them in

fixed relation, a pair of bars pivotally secured on the proximate surfaces of the first two bars and having a sheet member secured to their upper surfaces, the lateral edges of the sheet member overlapping the upper edges of the two first-named bars, the sheet member having a hole therethrough, one end of the first-named bars being sloped to a point and adapted to be inserted beneath the edge of a carpet, rug and the like and a flexible member secured to the rear ends of the two first-named bars and having anchoring members secured to the free ends thereof so that the flexible member may be extended laterally on each side of the golf-putting device and in spaced relation to the front portion thereof.



2,453,606
AUTOMOBILE TROUBLE LIGHT
Vincent S. Ward and Gordon K. Hurlbut, Binghamton, N. Y., assignors, by mesne assignments, to B M C Manufacturing Corporation, Binghamton, N. Y., a corporation of New York
Application April 12, 1946, Serial No. 661,529
1 Claim. (Cl. 173—361)

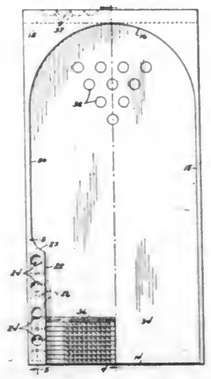
In an appliance of the character described, a plug having a body composed of a pair of tubular sections of insulating material, the first of said sections constituting a body section, said first section having a part fitted within a part of the other section, a ring-like metal contact member fitted around the first section and presenting a peripheral surface for contact with the interior wall of a cigar-lighter socket of an automobile, a two-wire cord extending through the body of the plug, the first section having an aperture through one of its walls and through which the bared end of one of the wires in said cord is passed to be thereby disposed between the outside of the body section and an inner surface of said metal ring, a resilient contact disk mounted at the forward end of the plug, the second section of the body plug being interposed between said ring and contact member a screw extending axially of the plug and threaded into one of the body sections for holding the contact disk and second section in place, the second wire of the cord having a bared end electrically connected to the disk by means of said screw.

2,453,607
CENTER OF GRAVITY LOCATION INDICATOR
Meredith C. Wardle, Buffalo, and Donald J. Howard, Akron, N. Y., assignors to Curtiss-Wright Corporation, a corporation of Delaware
Application June 6, 1944, Serial No. 539,016
3 Claims. (Cl. 73—65)

3. In an aircraft having first and second ground load support means spaced in opposite directions from the aircraft center of gravity, each of said support means being subject to strains proportionate to the loads borne thereby, the combination therewith of means for indicating the location of the aircraft center of gravity in the direction of such spacing of said support means, said indicating means comprising: a plurality of electrical resistance type strain gages secured to said support means to be strained thereby according to the load induced strain in the support means, a Wheatstone bridge circuit having in opposite arms thereof such strain gages secured to said first support means and having in the other two arms thereof such strain gages secured to said

second support means; a source of electric current connected across opposing arm junctions of said bridge; a current amplifier connected across the other opposing arm junctions of the bridge to receive and amplify the bridge current output; and an indicator connected to the amplifier and responsive to the curent output of the latter for reflecting the location of the center of gravity of the aircraft.

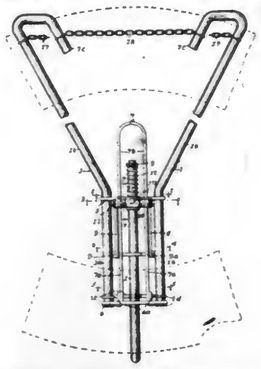
2,453,608
CELLULOSE ETHER COMPOSITIONS
Herbert J. West, Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 26, 1941, Serial No. 408,345
2 Claims. (Cl. 260—15)



2. The process of rendering water-soluble ethers of cellulose substantially water-insoluble, which comprises preparing an aqueous solution of about 4 parts of a water-soluble cellulose ether with about 1 part of methyl ether of polymethylol melamine, and heating in the presence of an acidic hardening catalyst.

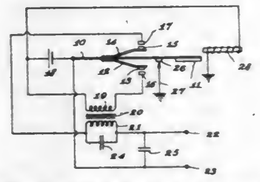
2,453,609
AREAWAY WALL
Irving P. Whitehouse, South Euclid, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
Application November 17, 1944, Serial No. 563,829
1 Claim. (Cl. 189—1)

A horizontally corrugated areaway wall having vertical end edges and slots near the end edges thru inwardly extending corrugations, and a plurality of clips for attaching said wall to and pressing said edges against a fixed wall, each of said clips including a clamping portion extending thru one of said slots, bearing against the inner convex side of the corrugation above and below its crest and spanning the outer concave side of said corrugation, and a securing portion extending laterally from the clamping portion between said slot and the adjacent end edge of the metal wall and close to that edge.



2,453,610
BOWLING GAME BOARD
Jess Willard, Minot, N. Dak.
Application October 17, 1944, Serial No. 559,014
1 Claim. (Cl. 273—37)

A toy bowling game comprising an oblong-shaped game board simulating a bowling alley, said game board having side walls with the inner surfaces of the far ends thereof curving inwardly and together describing a semi-circle at the far end of the board, the opposite end of said board being open, the end of one of said side walls at the open end of the game board having a wide portion of greater width than the width of the wall end and having ball-receiving recesses in the upper surface and pin-holding recesses in the inner side surface, said wide portion having an arcuate inner end merging with the adjacent inner surface of the side wall for directing balls traveling along the wall toward the opposite corner of the board, the upper surface of the far end of said board having a plurality of circles thereon positioned in a triangle to represent ten pins on a bowling alley, and a stationary foot-piece on the underside of the game board transversely positioned across the far end of the board for supporting the far end of the game board whereby the board slopes downwardly and forwardly to facilitate the return of balls rolled toward the pins in said far end back to the open end of the board by gravity.

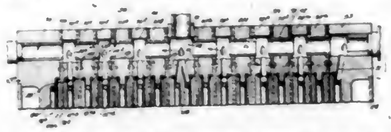


2,453,611
ANTISKID DEVICE
Eric H. Zimmer, Wyckoff, N. J.
Application November 8, 1946, Serial No. 708,706
4 Claims. (Cl. 152—225)

1. An anti-skid appliance for vehicle wheels comprising an assembly to span the wheel, said assembly including a first part having an inner and an outer end, a plurality of elongated members projecting generally radially from the outer end of such first part, said members having hooks on their outer ends to engage over the wheel tread, and a second part slideably mounted on the first part, said second part comprising an elongated member projecting in a direction generally opposite from the first named members carried by the first part, said last named member having a hook on its outer end to engage over the wheel tread, the inner end of the last named member projecting through the first part of the assembly, and toggle linkage means connected between the inner ends of the first and second parts of the assembly to move the first named elongated hook bearing members on the first part toward and away from the elongated hook bearing member on the second part to cause the hooks to engage the wheel tread and to be disengaged from the wheel

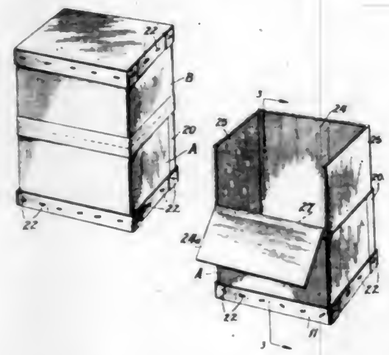
tread by straightening and collapsing the toggle linkage means, respectively, and a compression spring between the toggle and the second part, whereby the hooks are yielding engaged with the wheel tread.

2,453,612
VIBRATOR POWER SUPPLY
Robert J. Aust, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application April 14, 1944, Serial No. 531,091
2 Claims. (Cl. 171—97)



1. A vibrator power supply system comprising in combination a vibratory reed having vibratory interrupter and rectifier contacts mounted on opposite sides thereof, stationary interrupter and rectifier contacts arranged for cooperation with the corresponding vibratory contacts, a step-up transformer having a primary and a secondary winding, connections between said transformer and said contacts to alternately connect the said primary winding to a source of low-voltage current and the said secondary winding to an output load whereby said secondary winding will be loaded during the "break" cycle of the said primary winding, and electromagnetic driver means energized from said source and under the control of said reed for maintaining the reed in vibration.

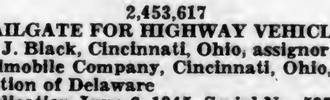
2,453,613
SANITARY FILTER
Daniel R. Babbitt, San Francisco, Calif., assignor to Electric Steel Foundry, Portland, Oreg., a corporation of Oregon
Application April 26, 1945, Serial No. 590,395
4 Claims. (Cl. 210—188)



2. In a sanitary filter structure, a filter unit which, in combination with the co-acting part of the filter structures, is adapted to grip the marginal portion of a filter medium, said filter unit

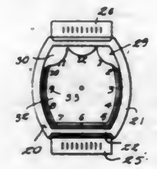
comprising screen plates, a metal frame provided with a through bore of circular shape, a counterbore at each end of said frame for supporting a screen plate, and an annular groove extending axially into each end of the metal frame and spaced radially of the counterbore in concentric relationship to the through bore, the frame end surface between the annular groove and the counterbore providing a clamping surface for said filter medium, the counterbores at opposite ends of the frame being separated by a portion of the frame extending inwardly in a radial direction and providing annular shoulders at the inner ends of the counterbores, the screen plate in each counterbore engaging one of said annular shoulders and being carried by said frame, the axial surface of each counterbore being provided with an annular groove concentric with the through bore, a resilient spring member located in each of the counterbore grooves, each of said spring members extending inwardly toward the through bore from one of the grooves sufficiently to overlap the margin of the screen plate and retain it in the frame and against one of said shoulders, each of said resilient spring members also being provided with a flat surface on the side engaging the screen plate and with an outwardly diverging surface on its opposite side for wedge-like engagement in the groove.

4. In a sanitary filter press assembly including a supporting structure consisting of a pair of pedestals joined by a plurality of tie rods, a filter press structure carried by said tie rods and comprising a pair of end press plates, the said end press plates being provided with projecting slotted lugs engaging a plurality of said tie rods for supporting the press plates, each press plate also being provided with a conduit adapted to be used as a fluid inlet or outlet, and each press plate having therein an annular counterbore terminating near a wall and defining a substantially circular recess between the end of the counterbore and said wall, a plurality of perforated circular screen plates, each of said perforated screen plates fitting into the counterbore of each press plate and covering the adjacent recess, the axial surface of the counterbore of each press plate also having an annular groove therein concentric with and spaced from the wall, and a spring wire located in said groove in each press plate for holding each screen plate in place against the end surface of the counterbore, there being also a plurality of open metal screen frames located between said press plates, each of said open screen frames having a through bore and being provided at each end of the through bore with a plane annular thrust face, and a screen plate located against each thrust face, annular grooves in said frames adjacent each of said thrust faces and concentric with the through bore, the latter screen plates being secured against the thrust faces by resilient members sprung into the annular grooves in the open screen frames, spirally formed spacers between the screen plates of each screen frame, and there being a filter medium between each end press plate and the adjacent open screen frame and between each pair of screen frames, the open screen frames being separated into two series by a separator plate disposed between the screen frames of the series, said separator plate being integrally constructed to provide an annular side wall, a partition wall extending across the through bores of the screen frames of the filter press assembly and a conduit outside of the side wall, and fluid passages in said press plates and separator plate connecting said conduits to said recesses and the spaces adjacent said screen plates on opposite sides of the partition wall, the said conduits being connected and arranged for fluid flow first through a plurality of filter media supported by the screen frames and press plates on one side of the separator plate, then through the conduit of the separator plate, and thereafter through a plurality of filter media supported by frames and plates on the other side of the separator plate to provide two stages of filtration.



2,453,614
EASY PACKING CONTAINER
Jack Russell Belsinger, Atlanta, Ga., assignor to Belsinger Inc., Atlanta, Ga., a corporation of Georgia
Application May 15, 1946, Serial No. 669,750
2 Claims. (Cl. 229—23)

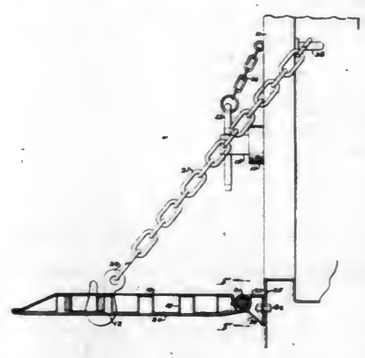
1. A shipping container comprising a relatively tall tubular upright liner defined by a plurality of side wall panels extending substantially throughout the entire length of the container, and upper and lower outer closure sections telescopingly engaging over the opposite end portions of the liner and of such depth as to extend into substantially abutted relation approximately midway the height of the liner, substantially all of one of the liner wall panels above the upper edge of said lower closure section being free to swing outwardly to provide an access opening in the side wall above said lower closure section and adapted when swung to closed position to complete the liner and be covered by said upper closure section when the latter is applied to the upper end portion of said liner.



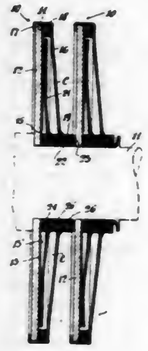
2,453,615
TINSEL WIRE CONNECTOR
Martin D. Bergan, Westfield, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a corporation of New Jersey
Application August 10, 1946, Serial No. 689,648
2 Claims. (Cl. 173—269)

2. A preformed article of manufacture constituting an electrical terminal for attachment to an insulated cable having a conductor core, said terminal formed of one piece of sheet metal bent back upon itself to form two superposed sections in firm flatwise abutting relation to form a tongue of a double thickness of material at one end of the terminal, the free end of one section terminating in a sleeve open at opposite ends, the free end of the other section terminating in a prong

extending axially into the sleeve, said sleeve being axially offset from the tongue and providing at the point where the sleeve joins with the tongue a Z-bend to form a stop for limiting the insertion of the cable into the sleeve end of the prong into the conductor core.



2,453,616
WATCH BEZEL
Leo Berstell, Waterbury, Conn.
Application June 6, 1944, Serial No. 538,942
1 Claim. (Cl. 58—91)

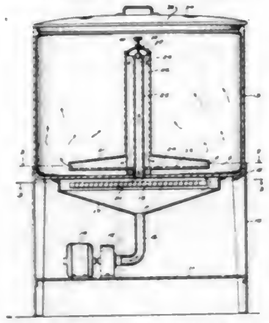


A watch bezel consisting of a metal frame shaped to provide a concavo-convex body, of narrow cross-section, with spaced longitudinal side strips and with a pair of integral end cross strips joining the longitudinal strips, the end strips being secured to the longitudinal strips inwardly of the outermost ends of the longitudinal side strips so that four corner lugs are provided integrally by said side strips projecting beyond the end strips, a countersunk segmental crystal seat-forming strip formed upon the side and end strips and extending between the convex and concave sides of the body with its perimetral edges spaced inwardly from the perimetral edges formed by the end and side strips of the segmental body, one of the end portions of the countersunk strip being made wider than the other end portion thereof, the end strips of the body proper extending transversely of the body in back of the countersunk strip flush with the concave side of the body.

2,453,617
TAILGATE FOR HIGHWAY VEHICLES
James J. Black, Cincinnati, Ohio, assignor to The Trailmobile Company, Cincinnati, Ohio, a corporation of Delaware
Application June 6, 1945, Serial No. 597,794
8 Claims. (Cl. 296—57)

6. A tailgate for highway vehicles comprising a corrugated metal plate forming a section for said tailgate, the corrugations in said plate extending transversely of the vehicle body, a plurality of hinge straps extending across the under surface of the corrugated plate transverse of the corrugations to provide cross bracing for said inner plate, the ends of said hinge straps being adapted to be pivotally secured to the vehicle body and a substantially flat upper plate disposed on the upper surface of the corrugated plate to provide a smooth loading surface, said plates and straps being entirely formed from metal and being integrally welded together to form a substantially light and strong unitary structure braced in both directions.

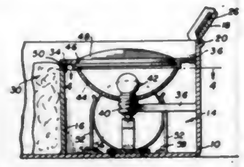
2,453,618
MECHANICAL SEAL FOR SELENIUM RECTIFIER CELLS
Sol Blumenthal, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application December 29, 1945, Serial No. 638,049
4 Claims. (Cl. 175—366)



1. A sealed dry disc rectifier cell comprising a supporting shaft, an apertured metal rectifier disc mounted on said shaft and having an active surface for current rectification, means including an annular apertured cap with a main body portion and an outer flange, said flange being used for sealing the peripheral portions of said rectifier disc, a resilient contact washer for engaging said active surface mounted on the shaft between the rectifier disc and said body portion of said cap, said contact washer having a portion extending through the aperture in said cap for contact with an adjacent rectifier disc, and means associated with said shaft for providing a seal between an inner portion of said rectifier disc, the portion of said cap adjacent said aperture, and the contact washer adjacent said aperture whereby the active surface of the rectifier cell is enclosed within a sealed chamber.

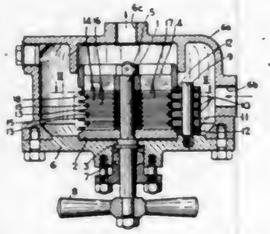
2,453,619
1,3-DIKETONES
Alva C. Byrns, Los Altos, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application August 2, 1944, Serial No. 547,807
10 Claims. (Cl. 260—586)

1. A process for the preparation of 1,3-diketones which comprises reacting a mono-olefin with diketene in the presence of an acylation catalyst.



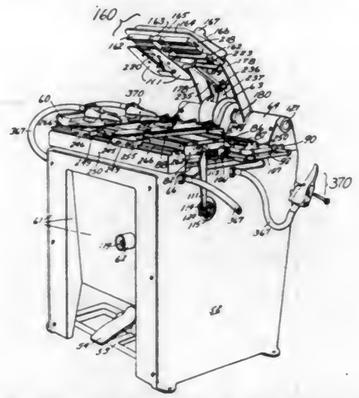
2,453,620
WASHING MACHINE
Clarence D. Cathey and Jesse E. Miller, Checotah, Okla.
Application November 1, 1944, Serial No. 561,424
1 Claim. (Cl. 68—183)

In combination with a washing machine including a receptacle for clothes and water, a vented closure cover therefor, a source of power, an air blower operable thereby having a discharge air duct terminating in a conical receptacle underlying the major portion of the bottom of said receptacle and secured thereto, a heater for the air disposed in said conical receptacle positioned immediately below said receptacle bottom and underlying the major portion thereof, means for directing said heated air into said receptacle adjacent its base including a tube extending through the bottom of said receptacle terminating adjacent the top thereof, said tube being open at its upper end and communicating at its lower end with said conical receptacle, a sleeve closed at its upper extremity extending downwardly about and spaced from said tube and communicating at its lower end with a pair of outwardly extending spaced baffle plates, a plurality of radially extending vertical baffle plates disposed between said first mentioned baffle plates, and means for controlling the quantity of air admitted to said receptacle including a valve seat in the upper end of said tube and a valve therefor adjustable exteriorly of said sleeve.



2,453,621
ILLUMINATED COMPACT
Orville W. Chinn, Lexington, Ky.
Application April 24, 1947, Serial No. 743,505
1 Claim. (Cl. 240—6.45)

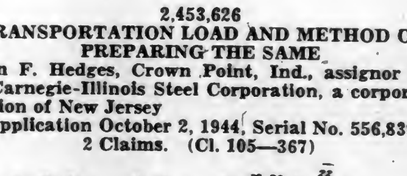
In an illuminating compact the combination of a case, a first chamber in said case adapted to receive cosmetics therein, a second chamber in said case, a hingedly mounted lid thereover, a plurality of dry cells spaced apart and located in said second chamber, friction clamps for securing said cells in said second chamber, a socket located between the cells and adapted to receive an illuminating means in said second chamber, a transparent member on said lid and in alignment with said socket, an electrical circuit in said second chamber, a manually operated circuit breaker secured to said lid and forming a part of said electrical circuit, a bracket attached horizontally to said case and supporting said socket, a block of insulating material in said second



chamber and between the cells; said circuit including a resilient contact attached to said block and engaging one of said cells and one contact of said socket and a second resilient contact mounted on said block and engaging the second contact of said socket and the other cell, and closure means on said case having latching means thereon.

2,453,622
STRAINING OR FILTERING APPARATUS FOR LIQUIDS
Leonard Walter English, London, England
Application December 1, 1944, Serial No. 566,203
In Great Britain December 3, 1943
5 Claims. (Cl. 210—152)

1. In a strainer for liquids comprising a straining wall consisting of a plurality of similarly shaped and similarly disposed plane filter elements mounted side by side in parallel relation on a carrier and each having a hole therethrough, separating means between adjacent elements to space them apart and form endless peripheral slots through which the liquid flows between the exterior and interior of the straining wall in a direction substantially parallel with the plane faces of the elements of the latter, scraper means separate from the elements and permanently in engagement with the straining wall, and means for producing relative movement between the straining wall and the scraper means, the construction in which any pair of adjacent filter elements are of different sizes and the leading edge of the one element of the pair, considered in the direction of flow of the liquid through the straining wall, is of the same dimensions as the trailing edge of the other element of the said pair, considered in the same direction, so that the peripheral slot between the elements of the said pair is defined solely by the said edges which are located in a common plane normal to the plane faces of the elements, and in which the scraper means comprises a plurality of elements each contacting at least one of the slot-defining edges of a pair of adjacent filter elements and extending across but not into the slot between the said adjacent elements.



2,453,623
INFOLDING METHOD AND MACHINE
Alfred G. Gilbert, South Acton, and William H. Rogers, Jr., Malden, Mass., assignors to Reece Folding Machine Company, East Cambridge, Mass., a corporation of Maine
Application June 2, 1945, Serial No. 597,190
44 Claims. (Cl. 223—38)

1. The method of infolding and pressing cloth or like blanks in a machine having a bed to support each blank and a lowerable and liftable die adapted to descend upon and thereby define the blanks resting on the bed and a set of one or more movable folders operable above the bed; such method comprising, placing each blank in position upon the bed, defining the folds to be formed by lowering the die in position upon the blank, and forming the blank margin or margins into folds by moving inwardly the folders over the die edges; characterized by next relieving the blank body of frictional pressure between the bed and the die by slightly lifting the die parallelly from the bed; and then freeing the blank folds from occupation by the die by extracting the die from beneath the blank margins and folders for its extensive uplift above the bed, squeezing and fixing the blank folds by depressing the folders to bear upon the folds and applying high pressure between the folders and bed, and finally releasing the blank for removal by relieving the squeezing pressure and then retracting outwardly the folders.

2,453,624
ELECTRICAL CONTROL CIRCUIT
Paul Glass, Chicago, Ill., assignor to Askania Regulator Company, Chicago, Ill., a corporation of Illinois
Application February 28, 1945, Serial No. 580,261
12 Claims. (Cl. 175—363)

1. An electrical control circuit comprising a signal input circuit having two sets of output terminals and operable to produce at each set of output terminals a direct current which at zero signal is equal at both sets of terminals and is above zero in magnitude and upon increase in signal magnitude increases in magnitude at one set of terminals and decreases correspondingly at the other set of terminals, increase or decrease of the output current at a set of terminals being dependent upon the sign of the signal, a saturable reactor circuit comprising a pair of saturable reactors each having a pair of A. C. coils and a control coil wound on a common core, the A. C. coils being so arranged as not to induce an A. C. voltage in the associated control coil and said control coils being connected one to each set of output terminals of said input circuit, and a supply circuit for an

A. C. load adapted for connection to a source of alternating current, the A. C. coils of said reactors being connected in the supply circuit to form with the load separate circuits each including the A. C. coils of one reactor reversely connecting the load in said supply circuit, and a full wave rectifier circuit connected to form the load for said supply circuit and having output terminals for the connection of a D. C. load thereto, the output of said rectifier circuit varying in sign and magnitude with the input signal.

2,453,625
PROCESS OF PREPARING AND PACKING MENHADEN FOR MARKETING
George T. Harrison, Tilghman, Md.
No Drawing. Application May 18, 1944, Serial No. 536,197
1 Claim. (Cl. 99—188)

The method of preparing and packing menhaden for marketing which comprises washing cut portions of menhaden in hot water at approximately 212° F. and raising the temperature of said cut portions of menhaden to approximately 212° F., violently cooling the cut portions of menhaden through a temperature of approximately 162° F., centrifugally acting upon the cut portions of menhaden while maintaining the temperature thereof at approximately 50° F. for freeing the fleshy portions of the menhaden from the skin, scales and oil, grinding the fleshy portions of the menhaden to small particles, filling containers with the small particles of menhaden substantially free of skin, scales and oil, and cooking the small particles of menhaden in the containers for producing a solid mass of fleshy menhaden substantially free of skin, scales and oil.

2,453,626
TRANSPORTATION LOAD AND METHOD OF PREPARING THE SAME
Don F. Hedges, Crown Point, Ind., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application October 2, 1944, Serial No. 556,839
2 Claims. (Cl. 105—367)

2. A transportation load of a plurality of bundles of slightly flexible heavy strips or the like

which extend longitudinally of a railway car with one end extending unsupported therefrom, comprising three cross timbers of varying thickness fastened to the floor of the car, the center cross timber being of less thickness than the average of the end cross timbers, a plurality of layers of the bundles resting on said cross timbers with their ends extending from the car at the end having the thickest cross piece, said bundle sagging in the middle so as to raise the overhanging end thereof, vertical separators between the bundles in each layer, horizontal separators between each layer adjacent the vertical separators, and straps around the load close to each set of separators.

2,453,627

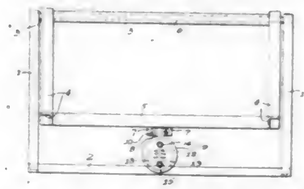
2 - SUBSTITUTED - 3, 4 - DIAMINO - FURAN URETHANS AND DERIVATIVES THEREOF

Klaus Hofmann, Pittsburgh, Pa., assignor to Ciba Pharmaceutical Products, Incorporated, Summit, N. J., a corporation of New Jersey

No Drawing. Application March 27, 1945, Serial No. 585,193
10 Claims. (Cl. 260—345)

1. The 2-substituted furan compounds of the formula

$$\begin{matrix} R_2OOCHN \\ \\ R_2OOCHN \end{matrix} \!\!> X-(CH_2)_x-R_1$$



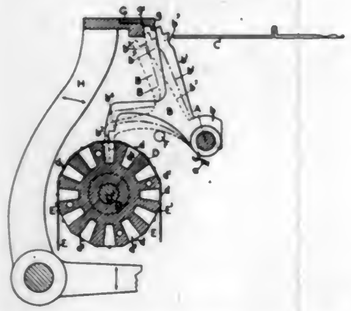
wherein X is a nucleus selected from the group consisting of the furan and tetrahydrofuran nuclei, the R_2OOCHN— groups being severally attached in the 3 and 4 positions of the said nucleus and the $-(CH_2)_x-R_1$ group being attached in the 2-position of the said nucleus, x stands for one of the integers 1, 2, 3, 4, 5 and 6, R_1 stands for a member selected from the group consisting of hydrogen, hydroxyl, carboxyl, carboxylic acid ester groups and carboxylic acid amide groups, and R_2 stands for a member selected from the group consisting of alkyl, aralkyl and aryl.

2,453,628

BOAT HOIST

Orille F. Hook, Pontiac, Mich.

Application November 16, 1944, Serial No. 563,648
2 Claims. (Cl. 214—1)



2. A boat hoisting and tipping device comprising an approximately L-shaped frame structure, an approximately L-shaped cradle structure pivotally connected thereto to swing upward therefrom, said frame and cradle structures having approximately horizontal portions arranged to be submerged in shallow water and approximately vertical portions extending upward therefrom, and a fluid pressure motor disposed approximately horizontally between the horizontal portions of said frame and cradle structures in the lowered position thereof and having a cylinder member and a piston member, one of said members being pivotally connected to said frame structure and the other member being operatively connected to said cradle structure remote from the pivotal connection of said cradle structure to said frame structure, said members being pivotally connected respectively to said frame structure and said cradle structure adjacent the junctions of their horizontal and vertical portions.

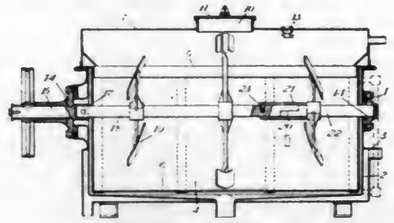
2,453,629

PATTERNING MECHANISM OF FLAT SINGLE BED KNITTING MACHINES

Gustav Huber, Cleator, England, assignor to Kangol Wear Limited, Cleator, England, a company of Great Britain

Application October 24, 1946, Serial No. 705,327
In Great Britain November 6, 1945
3 Claims. (Cl. 66—76)

1. Controlling mechanism for the knitting needles of a flat bed knitting machine of the type used for knitting berets and similarly shaped articles, said mechanism comprising a series of pivotally mounted two armed levers one end of each lever being normally adjacent to the end of a needle, an intermittently rotated cylinder having a plurality of longitudinal grooves spaced at equal distances apart around its periphery, a series of flats arranged as an endless band passing over the said cylinder, the width of each flat being equal to the pitch of the grooves in the periphery of the cylinder, means for registering the flats over the grooves in the cylinder as each groove is below the opposite ends of the two armed levers to the ends adjacent to the needles, each flat being provided with transverse patterning slots through which the end of each two armed lever corresponding to a needle not to be operated according to the pattern will fall into the groove in the cylinder to remove the other end away from the end of the needle and a bar having a to and fro movement which engages the two armed levers which have remained stationary through their ends not falling into the groove in the cylinder and causes them to operate the corresponding needles.



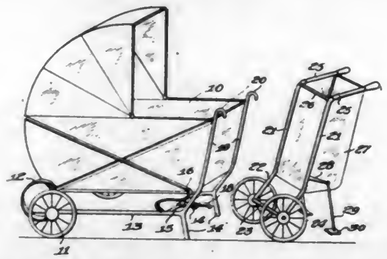
2,453,630

PRODUCTION OF GELATIN OR GLUE FROM HIDES AND OTHER COLLAGEN OR OSSEIN-CONTAINING MATERIALS

Joseph Kenyon, Barnes, London, and Victor Silberstein, Kensington, London, England, assignors of one-third to Hatim Attari, London, England

Application August 22, 1945, Serial No. 612,073
In Great Britain March 12, 1943
3 Claims. (Cl. 260—118)

1. The process of extracting gelatin or glue from collagen or ossein-containing materials having a fat or wax content which comprises treating the material with a dilute solution of caustic alkali of the order of 1 to 5 parts per thousand of water at a stabilizing temperature not substantially above 6° C. while maintaining the material



in motion in a finely divided state in the alkali solution to effect saponification and emulsification of the fats and waxes, bleaching the resulting defatted and de-waxed material, and extracting the glue or gelatin therefrom.

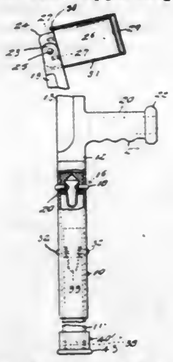
2,453,631

COMBINATION BABY CARRIAGE AND SHOPPING CART

Jack M. Leser and Norman Louis Severeign, Milwaukee, Wis.

Application April 11, 1946, Serial No. 661,220
8 Claims. (Cl. 280—34)

1. In combination, a body carriage having a frame, said frame being provided with a ground-engaging pair of wheels at one end and a pair of downwardly opening hooks at the other end, and a shopping cart including a frame having a cross-bar engageable in said hooks and having a pair of wheels adapted to form the second pair of wheels for the combined vehicle upon engagement of said hooks and cross-bar.



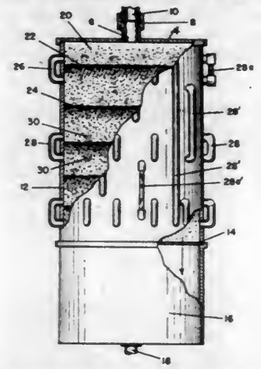
2,453,632

CRUTCH

Anders R. Lofstrand, Jr., Silver Spring, Md.

Application October 15, 1945, Serial No. 622,338
3 Claims. (Cl. 135—50)

1. A crutch comprising an elongated supporting member formed of a pair of telescoping tubular rods, an elongated supporting bar, a reduced stud on the lower end of said bar engaging in the upper end of the outer of said tubular members, locking pins engaging through said stud and said outer member, said outer member formed with a longitudinal series of transversely aligned openings therein, locking pins engaging through the upper end of the inner of said tubular members and in selected openings of said outer tubular member securing said members in selected adjusted position, an obtusely disposed upper portion on said supporting bar, and a split



arm supporting sleeve rockably carried by said upper portion of said bar.

2,453,633

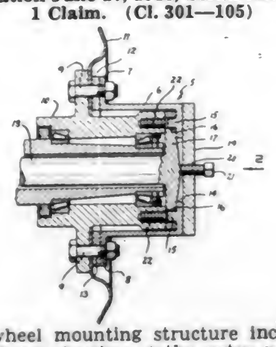
PROCESS FOR EXTRACTING AND PURIFYING BITUMEN

Victor R. Logan, Brownsville, Ky.

Application October 14, 1946, Serial No. 703,233
6 Claims. (Cl. 196—14)

1. In the process for extracting and purifying bitumen from an aggregate of bitumen-bearing crushed ore, the steps which comprise flowing a solvent for the bitumen through the body of the aggregate until bitumen stratifies horizontally to form at least one hard pan in the body, withdrawing solvent off the top of the hardpan, and introducing the withdrawn solvent into the hardpan near the bottom thereof.

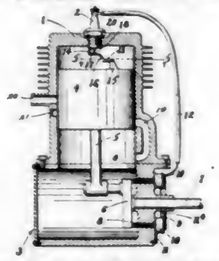
2,453,634



GLYCIDYL ETHERS

Kenneth E. Marple, Oakland, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application May 27, 1944, Serial No. 537,729
3 Claims. (Cl. 260—348)

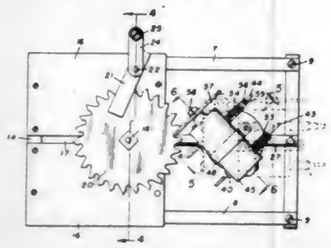


1. A process for the production of a 3,3,5-trialkylcyclohexyl ether of a glycidol which comprises reacting the corresponding 3,3,5-trialkylcyclohexyl ether of a glycerol monohalohydrin with a basic-reacting compound capable of effecting the removal of one mole of hydrogen halide from one mole of the halohydrin ether at a temperature of about 80° C. to about 90° C.

2,453,635
EMERGENCY HUB ADAPTER
Frank B. Martin, Jr., Pensacola, Fla.
Application June 17, 1946, Serial No. 677,325
1 Claim. (Cl. 301—105)

In a wheel mounting structure including an axle shaft terminating at the outer end thereof in a bolting flange formed with a plurality of apertures, a hub, a wheel, and a plurality of studs securing said wheel to said hub, an emergency hub adapter comprising a tubular body, an inturned rim at one end and an out-turned rim at the remaining end of said body, said out-turned rim being secured to said hub by said studs, a plurality of lugs provided on said inturned rim and engaging said apertures, and a clamping screw provided on said body, said clamping screw being engageable with the outer end of said shaft.

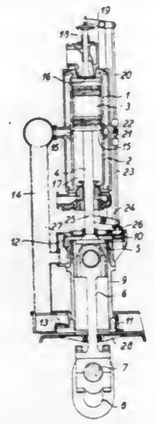
2,453,636
LOW-TENSION IGNITION SYSTEM FOR MINIATURE TWO-CYCLE GAS ENGINES
Maurice P. McKay, Troutdale, Oreg.
Application October 31, 1944, Serial No. 561,239
4 Claims. (Cl. 290—1)



1. In a structure of the class described, in combination, a cylinder, a piston slidable therein, a crank shaft mounted for rotation in a bearing, a crank arm on said crank shaft, said crank arm being in the form of a permanent magnet, an operating connection between the piston and crank arm, a pair of coils mounted on the exterior of the cylinder and having associated cores projecting into operating association with said crank arm.

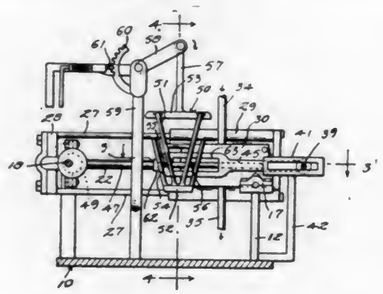
2,453,637
HYDRATED LIME PRODUCT AND METHOD OF MAKING THE SAME
Leonard John Minnick, Cheltenham, Pa., assignor to G. and W. H. Corson, Inc., Plymouth Meeting, Pa., a corporation of Delaware
No Drawing. Original application July 2, 1943, Serial No. 493,288. Divided and this application December 2, 1946, Serial No. 713,465
8 Claims. (Cl. 106—118)

1. The process of treating a dry finely divided hydrated lime which has been hydrated under super-atmospheric steam pressure and which attains substantially its ultimate properties, including fluid consistency and plasticity, substantially immediately upon mixing with water, which fluid consistency remains substantially the same upon aging with water, to convert said hydrate into a product in dry powdered form capable of forming a gel in admixture with water which gel upon subsequent working reverts to fluid consistency, and to impart other improved properties to said hydrated lime, including an increase in the affinity of said hydrate for water, which comprises mixing with said dry finely divided hydrated lime a dry inorganic carbonate of greater water-solubility than calcium carbonate, at least a substantial portion of which is non-reacted chemically with said dry hydrated lime to provide a product which, when mixed with water, furnishes carbonate ions for reaction with said hydrated lime to form thixotropic-type calcium carbonate on the particles of said hydrated lime and thus impart said properties to the product.



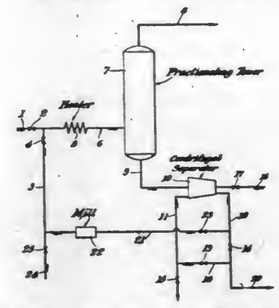
2,453,638
CIRCULAR SAW RECONDITIONING RIG
Albert B. Nietfeld, Fort Laramie, Wyo.
Application June 30, 1947, Serial No. 758,155
3 Claims. (Cl. 76—41)

1. A circular saw reconditioning rig including a supporting frame having parallel longitudinally extending supporting rails, a frame supported on one end of said rails, a work support on said last-mentioned frame comprising spaced bench members having a longitudinally extending guide channel formed therebetween, a saw supporting arbor adjustably supported for movement in said guide channel, pivoted clamping means on one end of said bench member for holding said saw in fixed position, a supporting bar mounted longitudinally of said frames, a motor supporting cradle rotatably and tiltably mounted on said supporting bar, a vise clamp for holding said cradle in fixed position, a motor and grinding wheel detachably mounted in said cradle, and resilient feed means for said motor and grinding wheel.



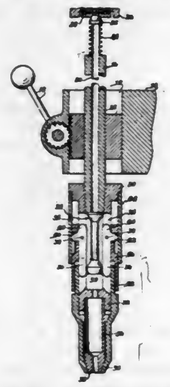
2,453,639
INTERNAL-COMBUSTION ENGINE WITH DOUBLE-ACTING CROSSHEAD SCAVENGE PUMP
Ove Petersen, Gentofte, near Copenhagen, Denmark
Application September 7, 1945, Serial No. 614,926
In Denmark January 7, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires January 7, 1964
6 Claims. (Cl. 123—62)

1. In an internal combustion engine, an engine cylinder, a piston in the cylinder and having a piston rod, a pumping cylinder, a pump piston in the pump cylinder and connected with said rod, said pump piston and pump cylinder forming, respectively, a crosshead and guide and the pump cylinder having a pumping chamber on each side of the pump piston, a crank shaft, a



connecting rod connecting the pump piston with the crank shaft, and a partition member receiving and participating in the oscillatory movement of the connecting rod and forming a closure for the adjacent end of the pump cylinder.

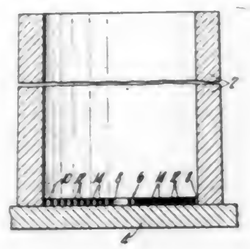
2,453,640
VALVE ACTUATION FOR OSCILLATING CYLINDER EXPANSIBLE CHAMBER MOTORS
Archie N. Pigg, Ferndale, Mich.
Application September 12, 1947, Serial No. 773,587
2 Claims. (Cl. 121—63)



1. A steam engine comprising a base, a cylinder, means rockably mounting said cylinder on said base, a crankshaft rotatably carried by said base, a piston slidable in said cylinder, a piston rod connecting said piston with said crankshaft, a pair of slide rods fixed in parallel relation to said piston rod, a pair of guides for said slide rods carried by said cylinder, a steam chest carried by said cylinder, a valve slidable in said steam chest, a valve shifting rod connected at one end to said valve, a valve operating cam on said crankshaft, said valve shifting rod including a pair of telescoping rod members, and means adjusting said rod members relative to each other to thereby vary the valve position.

2,453,641
METHOD OF PRODUCING COLLOIDAL FUEL
Carl S. Reed, New York, N. Y., assignor to The Lummus Company, New York, N. Y., a corporation of Delaware
Application February 5, 1944, Serial No. 521,215
2 Claims. (Cl. 196—55)

1. The method of producing a substantially stable colloidal fuel containing pulverized carbonaceous material suspended therein which comprises continuously introducing finely divided coke particles of petroleum origin into a feed stream of reduced crude bottoms, continuously passing the mixture thus formed through a cracking zone, heating the mixture in said zone to a cracking temperature sufficient to deposit some petroleum coke on the said coke particles but insufficient to form a completely dry coke, removing the volatile materials liberated by such heating, separating the thus treated bottoms into a liquid fraction and a coke paste fraction, blending the liquid fraction with an amount of the coke paste fraction sufficient to produce a colloidal fuel of desired viscosity, and continuously recycling a portion of the separated coke paste fraction through a mill and thence into the feed stream of reduced crude bottoms.



2,453,642
AUTOMATIC CHUCK
Emil Roy, Webster, Mass.
Application August 18, 1947, Serial No. 769,513
6 Claims. (Cl. 279—51)

3. A device of the class described comprising a rotatable and axially movable elongated member, a head thereon, holding fingers on the head, a finger actuator axially movable on the head, an element axially movable with respect to the mem-

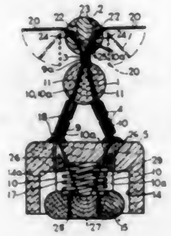
ber, means on the head to move the finger actuator, means on the element to operate said first named means as the element is moved relative to the member, means to constantly urge the element in one direction relative to the member, and an abutment to move the element in the opposite direction, said first named means comprising a radially swinging lever, and a connection between the lever and the finger actuator.

2,453,643
METAL TEEMING
William E. Schmertz, Pittsburgh, Pa.
Application November 7, 1945, Serial No. 627,240
1 Claim. (Cl. 22—139)

A chill mat for ingot mold stools comprising a coil formed of a plurality of spaced convolutions of solid sheet steel and spacers formed of solid corrugated sheet steel disposed between said convolutions, said convolutions and the corrugations of said corrugated sheet being closely spaced to form openings sufficiently small to break up a stream of molten steel teemed thereon into small particles and chill the same sufficiently to solidify them and thereby prevent the stream of molten steel from striking the mold stool under the mat, the steel of said convolutions and spacers substantially retaining its identity and shape in the bottom portion of an ingot teemed thereon.

2,453,644
HOT MELT COATING COMPOSITION CONTAINING POLYETHYLENE, TERPENE RESIN, CHLORINATED DIPHENYL RESIN, AND PARAFFIN
Walter C. Steinkraus, Chicago, Ill.
No Drawing. Application December 6, 1945, Serial No. 633 270
4 Claims. (Cl. 260—28.5)

1. A composition for coating webs by hot-melt technique which comprises the following four ingredients in substantially the following percentages, to-wit: polyethylene thermoplastic 20%, hydrocarbon thermoplastic terpene resin 12%, chlorinated diphenyl resin 28%, paraffin 40%.

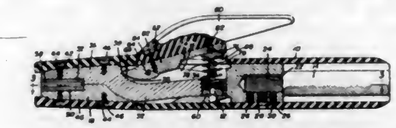


2,453,645
MICROWAVE POWER MEASURING APPARATUS
John W. Tiley, Philadelphia, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 30, 1944, Serial No. 551,950
8 Claims. (Cl. 171—95)

1. A device for the measurement of ultra high frequency power comprising a wave guide, an impedance device mounted within said wave guide and arranged so as to produce substantially no reflection of energy, said impedance device comprising a body composed of a material capable of dissipating the energy entering said body, a casing surrounding said wave guide, means for supplying to said casing a flow of air under constant conditions, means for preventing the flow of air forwardly along said wave guide, slotted

apertures provided in the walls of said wave guide for permitting said air to enter therein and to move rearwardly along the wave guide past said impedance element, and thermopile means responsive to the temperature of the air before and after passing said impedance element.

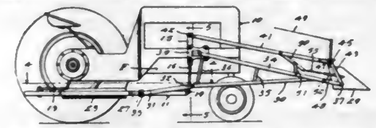
2,453,646
TOY, DISPLAY DEVICE, AND THE LIKE
George M. Tomlin, Flixton, near Manchester, and Harry Burrows, Manchester, England
Application April 9, 1946, Serial No. 660,674
In Great Britain December 4, 1945
1 Claim. (Cl. 46—161)



A device of the character described, comprising a plurality of relatively movable parts formed with bores or passages, at least one relatively inextensible flexible element threaded through the said bores or passages to connect the parts together in abutting relation and in a predetermined sequence, means attaching one end of the flexible element to the one endmost part in the sequence, a support abutting against the other endmost part in the sequence, a member movable in relation to the support and having the other end of the flexible element attached thereto, resilient means interposed between the support and the movable member initially to subject the flexible element to tension, a further part mounted on one of the first mentioned relatively movable parts to be movable in relation to the said part but not connected thereto by the flexible element, means operatively connecting the said further part to one end of a second relatively inextensible flexible element, a second member movable in relation to both the first member and the support and having the other end of the second flexible element attached thereto, and further resilient means interposed between the support and the second member initially to tension the second flexible element.

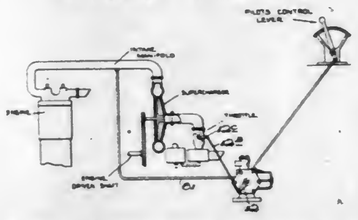
2,453,647
ELECTRIC DISCHARGE TUBE WITH DEFLECTION CONTROL
Adrianus Johannes Wilhelmus Marie van Overbeek, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application May 2, 1946, Serial No. 666,565
In the Netherlands August 15, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires August 15, 1960
5 Claims. (Cl. 250—159)

1. An electric discharge tube comprising a cathode for generating an electron stream, a pair of anodes, a deflecting member for deflecting the electron stream to one or the other of the anodes according to the potential on said deflecting member, said member comprising a plurality of spaced parts which jointly form a curved surface whose concave side faces the path of the deflected electron stream, and in which a describing line of the enveloping surface of the member forms a right angle with the direction of deflection.



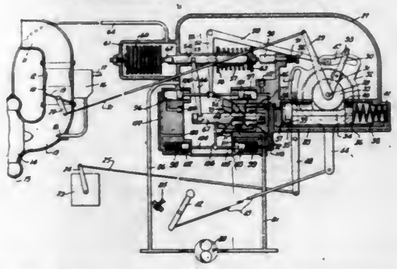
2,453,648
ELECTRODE HOLDER
Henry J. Wagner, Jackson, Mo.
Application December 17, 1946, Serial No. 716,865
5 Claims. (Cl. 219—8)

1. An electrode holder including a tubular handle, a main jaw assembly secured to said handle, an annular channel within the main jaw assembly, a secondary jaw assembly received within said main jaw assembly and an operating element for moving said secondary jaw assembly relative to the main jaw assembly, said secondary jaw assembly including a circular portion at its inner end slidably engaging said annular chamber and a flat jaw at its forward end having a transverse notch, said operating element having a nose engaged in said notch for actuating said secondary jaw assembly.



2,453,649
SHOVEL LOADER ATTACHMENT FOR TRACTORS
William V. Warren, Salina, Kans., assignor, by mesne assignments, to The Wyatt Manufacturing Company, Incorporated, Salina, Kans., a corporation of Kansas
Application April 5, 1946, Serial No. 659,937
4 Claims. (Cl. 214—140)

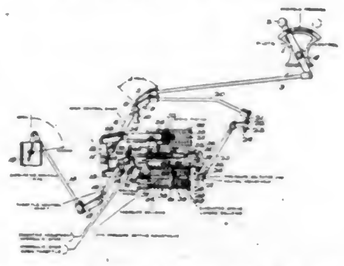
1. In a material handling means, a scoop, means swingably supporting said scoop, means for elevating said scoop, said elevating means including means for maintaining said scoop in approximately horizontal loading position during elevation thereof, releasable latch means for holding said scoop in loading position, and means carried by said elevating means and engaging said scoop active by lowering of said scoop



for effecting delayed movement of said scoop from a discharging position to a loading position.

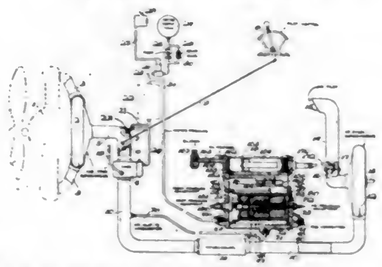
2,453,650
ENGINE CONTROL
Howard A. Alexanderson, Wood-Ridge, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Original application November 4, 1941, Serial No. 417,855. Divided and this application August 22, 1944, Serial No. 550,646
25 Claims. (Cl. 123—103)

1. A control mechanism comprising in combination a floating lever, control means connected to the lever, motor means including a vane, a shaft pivotally supporting said vane, said vane being controlled by the control means, actuating means operatively connected to said lever to affect said control means, and a follow up mechanism between the shaft and the floating lever, including a member mounted at one end of and in eccentric relation to said shaft and operably connecting said shaft and said floating lever, said member directly supporting said floating lever in pivotal relation to said shaft.



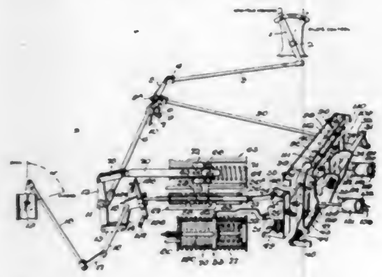
2,453,651
CONTROL FOR INTERNAL-COMBUSTION ENGINES
Frank C. Mock, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 27, 1942, Serial No. 440,669
42 Claims. (Cl. 170—135.6)

1. In a control for an internal combustion engine throttle, a pinion rotatably mounted on a movable member, a pair of independently movable toothed members in engagement with said pinion, means connecting one of said members to



the throttle, manually operable means for actuating another of said members, power means gear connected to the third of said members, and additional means interconnecting said manually operable means and said power means.

2,453,652
THROTTLE CONTROL FOR AIRCRAFT ENGINES
Howard A. Alexanderson, Wood-Ridge, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Continuation of application Serial No. 508,724, November 2, 1943. This application October 31, 1947, Serial No. 783,237
38 Claims. (Cl. 123—103)



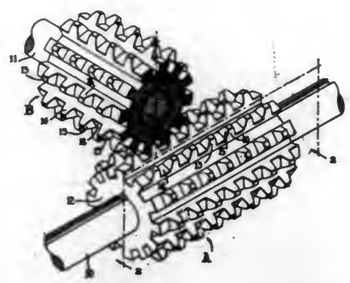
1. A throttle control, comprising, in combination, engine manifold pressure responsive means for automatically adjusting said throttle, manual control means for adjusting said manifold pressure responsive means, stop means for limiting the adjustment of said throttle by said automatic means at a predetermined position of said throttle, connecting means arranged for the adjustment of said throttle by said manual control means without interference from said stop means, means arranged for actuating said stop means into said limiting position upon a predetermined adjustment of said throttle, and separate means for adjusting said stop means so as to vary the predetermined adjustment of said throttle at which said stop means may be actuated into said limiting position.

2,453,653
REGULATOR
Howard A. Alexanderson, Wood-Ridge, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application August 24, 1944, Serial No. 551,036
8 Claims. (Cl. 123—103)

1. A regulator for the induction system of a supercharged aircraft engine comprising, in combination, a first bellows responsive to a first induction pressure condition of the engine, a second bellows responsive to a second operation condition of the engine, spring biasing means interposed between said first and second bellows for biasing said bellows in opposite directions, control means operated by said first bellows in response to said first condition, and said second bellows adjusting the biasing force of said spring means from a first to a second predetermined value in response to said second condition so as to vary the datum of said second first bellows and the setting of said control means.

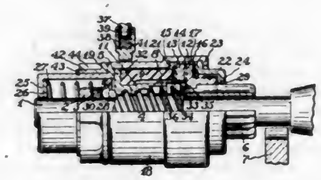
2,453,654
CONTROL DEVICE AND SYSTEM
Harold Arthur Wheeler, Grand Rapids, Mich., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application August 31, 1945, Serial No. 613,833
19 Claims. (Cl. 123—25)

1. For use with an aircraft engine having a pilot's main control element; a regulator comprising, in combination, condition responsive means for automatically adjusting a control device for said engine, a first control member for adjusting the datum of said automatic means in accordance with a first predetermined program and governed by the position of said main control element, a second control member for alternately adjusting the datum of said automatic means in accordance with a different second predetermined program and governed by the position of said main control element, means for limiting the adjustment of both of said members, and another condition responsive means for selectively placing said limiting means in and out of operative relation with said members.



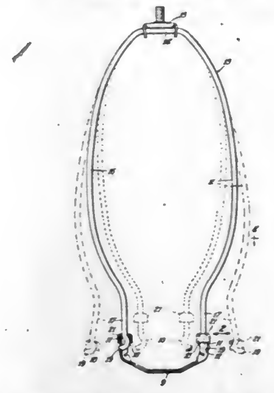
2,453,655
VINYL CARBOXYLATE POLYMERIZATION USING A THIOUREA STOPPER
Harold W. Bryant, Kenmore, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 8, 1948, Serial No. 1,269
15 Claims. (Cl. 260—87)

1. In a vinyl carboxylate polymerization process, the method for controlling the properties of the polymeric product which comprises stopping the polymerization reaction at a predetermined extent of polymerization by adding thereto a thiourea having the formula



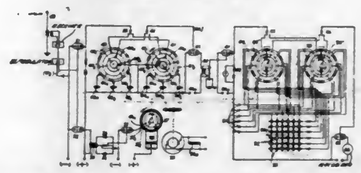
where R and R' represent a radical selected from the group consisting of hydrogen, alkyl and aryl.

2,453,656
RACK AND PINION GEAR MEANS
Edward P. Bullard, III, Fairfield, Conn., assignor to The Bullard Company, a corporation of Connecticut
Application September 15, 1945, Serial No. 616,568
4 Claims. (Cl. 74—422)



1. A mechanical motion device comprising in combination, a pair of shafts, each adapted to be moved between a plurality of axial positions and to be oscillated at any of said axial positions; and a pair of intermeshing spur gears of substantially identical design on said shafts, each including axially-spaced circumferential rows of teeth having full addendum and dedendum dimensions alternating with axially-spaced circumferential rows of teeth having dedendum dimensions only, the addendum of the teeth of both members intermeshing with the teeth of the other member having dedendum dimensions only.

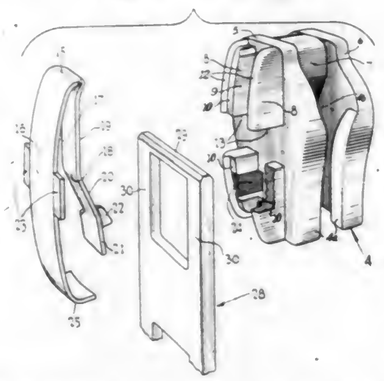
2,453,657
ENGINE STARTING GEARING
James E. Buxton, Elmira, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware
Application November 27, 1946, Serial No. 712,545
7 Claims. (Cl. 74—7)



1. In an engine starter drive a power shaft, a screw shaft fixed thereon, a pinion slidably journalled on the power shaft for movement into and out of mesh with a gear of the engine to be started; a flanged control nut threaded on the screw shaft, a block of elastically deformable material seated on the control nut against the flange, a friction clutch member in the path of movement of the elastic block so as to be engaged thereby, a second friction clutch member fixed to the pinion; means limiting the longitudinal movement of the pinion to define its operative position, a frictional connection from the pinion to the control nut to accelerate the control nut when the pinion overruns the drive, and manually controllable means for limiting the backward movement of the control nut when it overruns the screw shaft.

2,453,658
LAMP SHADE HOLDER
Paul Chilo, Chicago, Ill.
Application November 9, 1946, Serial No. 708,980
5 Claims. (Cl. 240—148)

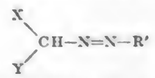
1. In a lamp shade holder, a base having two oppositely disposed upright side members of channel shape, each having an aperture in the U bend thereof and the two apertures being aligned, a harp having two connected together legs, each having a U bend adjacent its end and both being confined in the channels of the side members and bearing against the inner faces of the flanges thereof, said legs terminating in outwardly offset ends seated in the apertures in the side members, and collars adapted to surround the channeled upright portions of the side members and U bends of the legs, whereby to prevent accidental disconnection between the harp and base.



2,453,659
SECRET TELEGRAPH SIGNALING
Henri Jean Joseph Marie de Regnauld de Bellescize, Saint-Germain au Mont-d'Or, Rhone, France, assignor to E. Gutzwiller & Co., Basel, Switzerland, a Swiss company
Application December 21, 1942, Serial No. 469,684
In France September 5, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires December 12, 1961
7 Claims. (Cl. 250—8)

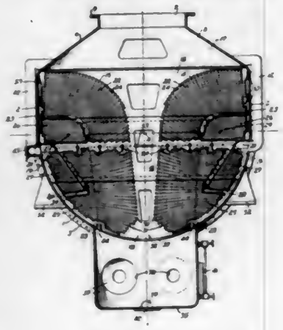
7. In a telegraph system, a keying device for generating telegraph characters all divisible into successive unit elements having the same given length, means for periodically separating these elements into groups independently of the characters sequences, means for permuting the elements within each group, means for transmitting the series of permuted elements from the sending station to the receiving station, storage means for accumulating each received element over its whole duration substantially so as to derive a final effect from this accumulation, means for individually transforming the said accumulative effects into standard effects by distributing

them among three definite classes according to their values with respect to the limits of these classes, means for separating the series of standard effects into same groups, means for permuting again the effects within each group so as to restore them to their initial order and means for recording the effects.



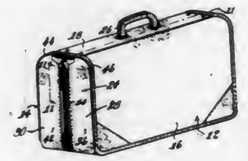
2,453,660
SLIDER FOR SLIDE FASTENERS
Osborne Firing, New Dorp, Staten Island, N. Y., assignor to Talon, Inc., a corporation of Pennsylvania
Application July 28, 1944, Serial No. 546,986
13 Claims. (Cl. 24—205.5)

4. In a slider for slide fasteners having a slider body with a channel arranged therethrough, a spring locking element comprising an elongated relatively thin strip of resilient material bent upon itself so as to provide a pair of spaced-apart portions, means carried by the outer wall of one of the slider wings for attaching one of said portions thereto at a spaced distance therefrom with the other of said portions disposed yieldably between said first mentioned portion and said slider body so as to be movable relative to both said slider body and said first mentioned portion, and a pin portion arranged on the outer free end of said last mentioned portion.



2,453,661
COLORED COUPLERS
Dudley B. Glass, Paul W. Vittum, and Arnold Weissberger, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application May 3, 1944, Serial No. 533,930
9 Claims. (Cl. 95—6)

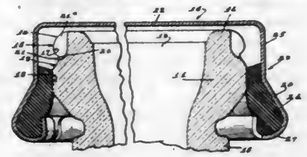
1. The method of developing a colored image in a silver halide emulsion layer, which comprises exposing said emulsion and developing it with a primary aromatic amino developing agent in the presence of a coupler compound having the formula:



where X and Y are negative groups selected from the class consisting of —COR, —COOR, —COCOR, —COCOOR, —CONHR, —$C_6H_4NO_2$, and —CN, R is selected from the class consisting of alkyl, aryl, and heterocyclic groups and R′ is selected from the class consisting of aromatic and heterocyclic radicals and said coupler compound contains no other reactive CH group, and at the place of the silver image formed by the development, splitting said coupler compound at the azo linkage and coupling said coupler compound where the splitting occurs, with the development product of the primary aromatic amino developing agent.

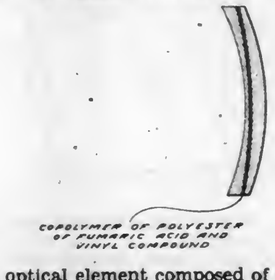
2,453,662
CONDENSER
Harold M. Graham, Kenmore, N. Y., assignor to Graham Manufacturing Co., Inc., New York, N. Y., a corporation of New York
Application March 2, 1944, Serial No. 524,741
4 Claims. (Cl. 257—43)

1. A steam condenser comprising a shell, having a steam inlet at the top and a condensate outlet at the bottom, an interior air manifold along each side of said shell in the central portion, a pair of condenser tube banks mounted in said shell, each bank extending between the ends of said shell along one side, substantially filling said side of said shell from the top to the bottom portions thereof, and extending about the adjacent air manifold to provide a substantial tube bank section in all directions inside said shell from said air manifold through which steam must pass toward said manifold, each bank being formed of a plurality of spaced parallel condenser tubes having a cross-sectional pattern wherein each tube lies in a transverse row and also in an intersecting row, the transverse tube rows radiating from said air manifolds to provide tapering steam passages extending transversely through each bank decreasing in size toward said manifolds, said intersecting tube rows in the central portion and lower end of each bank extending in spaced parallel relation and slightly inclined to the vertical central plane of said shell and the upper ends of said intersecting tube rows curving outwardly in concentric spaced relation into substantially horizontal portions where said intersecting tube rows end adjacent the upper inner sides of said shell, said tube banks being spaced apart in the central portion of said shell and cooperating to form a central funnel-shaped steam lane having a wide upper portion curving inwardly about the inner faces of said tube banks into a narrow and downwardly extending passage in the central portion to the bottom of said shell, said banks being formed to provide outwardly tapering lower inner portions at the bottom of said shell for cooperation therewith to form a central condensate reheating chamber under the lower inner portions of said banks, said tube banks and shell providing the only means forming said reheating chamber in said shell, and said tube banks providing the only obstruction in said shell between said reheating chamber and air manifolds whereby said shell and tube banks cooperate to condense steam in all parts of said banks and provide a higher steam pressure in said condensate reheating chamber than at the steam inlet for heating condensate passing therethrough to a higher temperature than the steam temperature at said inlet.



2,453,663
WARDROBE SUITCASE
James Hinson, Waterloo, Iowa, assignor to The Hinson Manufacturing Company, Waterloo, Iowa, a corporation of Iowa
Application March 29, 1946, Serial No. 658,127
1 Claim. (Cl. 190—49)

A wardrobe suitcase including a pair of rigid metal shells, each shell having inner and outer open sides and comprising a U-shaped member having substantial depth as measured between the planes of the inner and outer open sides, the ends of the legs of each U-shaped member opposite the web being connected by a curved partial closure plate, the closure plate having its inner and outer longitudinal edges parallel to the web, the outer longitudinal edge lying in the plane of said outer open side and the inner longitudinal edge lying between the planes of said open sides, an intermediate metal strip hinged to the inner longitudinal edges of the curved closure plates for enabling the shells to be folded together, the combined depth of the intermediate strip and the curved closure members when the shells are folded together being equal to the combined depth of both U-shaped members, the legs of each U-shaped member having lugs stamped therefrom and extending inwardly in a plane substantially parallel with the plane of the respective inner open side, said lugs being adapted to receive an inner container therebetween in the suitcase, said suitcase having a flexible covering extending over the exterior surface of the shells and over the outer open sides.



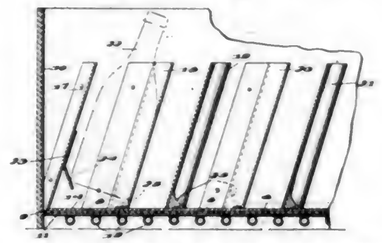
2,453,664
CONTAINER AND CLOSURE THEREFOR
John Hohl, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio
Application January 19, 1946, Serial No. 642,285
5 Claims. (Cl. 215—40)

1. In combination, a container having a generally circular neck defining a filling opening, an annular external bead formed on the neck in close proximity to said opening, there being an annular groove immediately beneath said bead and an annular sealing surface below the groove, venting means extending across the bead into said groove, a closure for hermetically sealing the container including an attaching skirt, a sleeve gasket secured at its lower end to the lower margin of the skirt against bodily sliding movement relative thereto, said gasket adapted under some sealing conditions to contact said sealing surface and under both conditions to engage both the sealing surface and said bead and thereby retain

the closure against axial movement sufficient to break the hermetic seal.

2,453,665
COMPOUND OPTICAL ELEMENT CEMENTED WITH A POLYESTER OF FUMARIC ACID
Edward L. Kropa, Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application December 29, 1943, Serial No. 516,097
4 Claims. (Cl. 88—57)

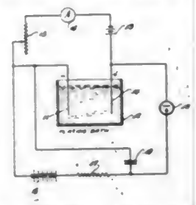
1. An optical element composed of at least two components of different refractive index and a synthetic, clear, substantially colorless thermoset adhesive between said components, said adhesive having an index of refraction of at least 1.5 and being a copolymer of a composition comprising (1) at least 25% by weight of at least one substance containing the $CH_2{=}C<$ group, said substance being a liquid having a boiling point of at least 100° C. and having an index of refraction of at least 1.5 and (2) at least 25% by weight of a compatible, polymerizable, unsaturated alkyd resin which is a polyester of fumaric acid.



2,453,666
COMPOUND OPTICAL ELEMENT CEMENTED WITH A POLYESTER OF MALEIC ACID
Edward L. Kropa, Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application January 21, 1944, Serial No. 519,199
4 Claims. (Cl. 88—57)

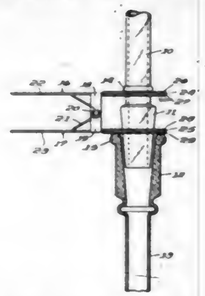
1. An optical element composed of at least two components of different refractive index and a

synthetic clear substantially colorless thermoset adhesive between said components said adhesive having an index of a frection of at least 1.5 and being a copolymer of a composition comprising (1) at least 25% by weight of a substance containing the $CH_2{=}C<$ group said substance being a liquid having a boiling point of at least 100 C. and having an index of refraction of at least 1.5 and (2) at least 25% by weight of a compatible polymerizable unsaturated alkyd resin which is a polyester of maleic acid.



2,453,667
APPARATUS FOR COOLING BOTTLED BEVERAGES
Francis M. Lambert, Narberth, Pa., assignor to Heintz Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 19, 1946, Serial No. 648,730
15 Claims. (Cl. 62—141)

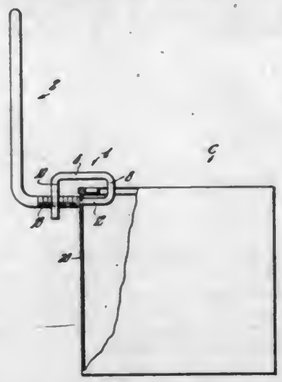
1. Bottle retaining means for refrigerated beverage bottle coolers and the like comprising a plurality of retainer members adapted to be disposed in spaced parallel relationship within the cooling compartment of the cooler, each of said retainer members being inclined upwardly at an angle from the vertical, said retainer members each being formed with a plurality of curved portions the concave faces of which face upwardly and are complementary in contour to the side wall of a bottle and provides supporting surfaces for contact with a substantial wall area of each bottle, said curved portions of adjacent retainer members being staggered with respect to each other, each retainer member having an inclined surface on its rear side at the base opposite the concave face of the adjacent retainer member, so that when a bottle is disposed between the retainer members said inclined surface will urge the bottle into intimate contact with the concave face of the retainer member opposite it, each of said retainer members having an integral enlarged flat surfaced base portion providing support for said retainer members.



2,453,668
ELECTROLYTIC METHOD FOR THE PRODUCTION OF POROUS, CATALYTIC METAL
Milton M. Marisic and Thomas F. Rutledge, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application June 2, 1944, Serial No. 538,388
2 Claims. (Cl. 204—49)

1. The process for producing a porous catalytic metallic body consisting of a plurality of alternate layers of dense and porous nickel, which consists in the electrodeposition of nickel by imposing a current having a density of approximately 1.5 amperes per square decimeter across the electrodes of an electrolytic cell containing an aqueous electrolytic bath of 0.30 N. nickel sulfate having a pH between about 4.6 and about 5.5, maintained at substantially room temperature, to effect the deposition of a smooth, dense layer of nickel, simultaneously imposing from a high voltage source, the poles of which are connected to poles of like charge of said electrolytic cell, sudden surges of overvoltage of between about 75 and about 80 volts at intervals of between about

0.5 and about 1 second to produce during the imposition of said overvoltage the deposition of a porous nickel layer, thereby effecting, as a result of said surges of overvoltage upon the steady lower current, an alternate deposition of smooth and porous layers of metallic nickel to yield a resulting composition characterized by high structural strength.



2,453,669
GLASS TUBING JOINT
Hector A. Meneses, Chicago, Ill., assignor to Able Scientific Glass Apparatus Co., Chicago, Ill.
Application June 19, 1946, Serial No. 677,683
8 Claims. (Cl. 285—173)

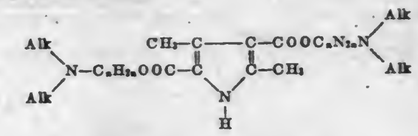
1. A separable taper joint for glass tubing comprising a first tube having an externally tapered male end, a second tube having an enlarged internally tapered female end, a bead on said first tube adjacent said externally tapered end, a bead on said second tube adjacent said internally tapered end, and adapted to receive means to engage the outer sides of the two beads to pull the tapered ends together and to engage the inner sides of the two beads to push the tapered ends apart.

2,453,670
HOOK
Tage G. Persson, Bloomfield, N. J.
Application March 9, 1946, Serial No. 653,403
2 Claims. (Cl. 248—211)

1. As a new article of manufacture a two-part device for suspending a paint can from the rung of a ladder or the like comprising, a strip of metal formed to provide a clamp having an upper horizontal portion and inner and outer end portions extending downwardly therefrom with a jaw portion extending forwardly from the inner end portion towards the outer end portion, the horizontal portion adapted to overlie the rim of a can wall and the end of the jaw portion adapted to abut the inner side of the can wall below said rim with the outer end portion disposed outside said wall and spaced therefrom, said outer end portion provided with a tapped hole, and a hook

member formed to have a threaded horizontal portion in engagement with said tapped hole and a vertical portion extending therefrom having a curving hook end, the end of the horizontal portion of the hook member and the end of the jaw portion adapted to clamp the wall of a can therebetween.

2,453,671
ALKAMINE ESTERS OF PYRROLE-3,4-DICARBOXYLIC ACIDS
Donald E. Sargent, Easton, Pa., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 13, 1946, Serial No. 709,406
6 Claims. (Cl. 260—313)



1. Compounds selected from the group consisting of esters of 1-cyclohexyl pyrrole 3,4-dicarboxylic acids with dialkylamino alkanole and addition salts of the esters with strong acids.

2,453,672
ALKAMINE ESTERS OF PYRROLE-3,4-DICARBOXYLIC ACIDS
Donald E. Sargent, Easton, Pa., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 13, 1946, Serial No. 709,407
6 Claims. (Cl. 260—313)

1. Compounds selected from the group consisting of esters of 1-dialkylaminoalkylpyrrole-3,4-dicarboxylic acids with dialkylamino alkanol and the acid addition salts of the esters with strong acids.

2,453,673
ALKAMINE ESTERS OF PYRROLE-3,4-DICARBOXYLIC ACIDS
Donald E. Sargent, Easton, Pa., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 14, 1946, Serial No. 709,779
4 Claims. (Cl. 260—313)

1. A member of the group consisting of esters of 2,4 - dimethylpyrrole-3,5 - dicarboxylic acids having the formula:

in which n is a positive integer greater than zero and Alk is alkyl, and addition salts of the esters with strong acids.

2,453,674
ALKAMINE ESTERS OF PYRROLE SUBSTITUTED ACRYLIC ACIDS
Theodore F. Scholz, Plainfield, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 14, 1946, Serial No. 709,781
3 Claims. (Cl. 260—313)

1. Compounds selected from the group consisting of esters of 1,2,4-trimethylpyrrole-5-carboxy-3-acrylic acid with dialkylamino alkanols and addition salts of the esters with strong acids.

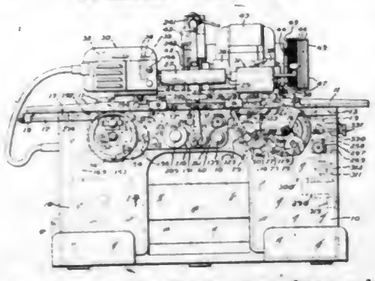
2,453,675
ALKAMINE ALKYL ESTERS OF PYRROLE-3,4-DICARBOXYLIC ACIDS
Jackson P. Sickels, Plainfield, N. J., and Donald E. Sargent, Easton, Pa., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 13, 1946, Serial No. 709,404
7 Claims. (Cl. 260—313)

1. A compound selected from the group consisting of esters of 1,2,5-trialkyl-3-carbalkoxpyrrole-4-carboxylic acid with dialkylamino alkanols and the addition salts of the esters with strong acids.

2,453,676
ALKAMINE ESTERS OF PYRROLE-3,4-DICARBOXYLIC ACIDS
Jackson P. Sickels, Plainfield, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 13, 1946, Serial No. 709,409
10 Claims. (Cl. 260—313)

1. A compound selected from the group consisting of esters of 1-alkylpyrrole-3,4-dicarboxylic acids with dialkylamino alkanols and salts of the esters with strong acids.

2,453,677
ALKAMINE ESTERS OF PYRROLE-3,4-DICARBOXYLIC ACIDS
Jackson P. Sickels, Plainfield, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 13, 1946, Serial No. 709,410
11 Claims. (Cl. 260—313)



1. A member of the group consisting of diesters of dialkylamino alkanols and 1-aralkylpyrrole-3,4-dicarboxylic acids and salts of the esters with strong mineral acids.

2,453,678

CYLINDRICAL GRINDING MACHINE

Herbert A. Silven, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts

Application June 11, 1945, Serial No. 598,799
11 Claims. (Cl. 51—95)

1. A grinding machine having a base, a longitudinally reciprocable work supporting table, a rotatable grinding wheel, a transversely movable slide therefor, means including a piston and cylinder to move said grinding wheel rapidly to and from a grinding position, means including a fluid motor to produce a grinding feed, control means for said fluid motor to produce a continuous plunge-cut grinding feed of said wheel, control means for said fluid motor to produce an intermittent infeed of the grinding wheel during table reversal for a traverse grinding feed, and a selector valve whereby either of said control means may be rendered operative while the other remains inoperative.

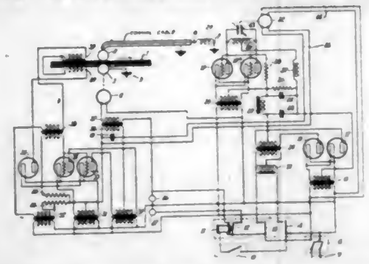
2,453,679

METHOD OF FORMING COMPRESSED WOOD STRUCTURES

Alfred J. Stamm, Raymond M. Seborg, and Merrill A. Millett, Madison, Wis.

No Drawing. Application December 8, 1943, Serial No. 513,470
5 Claims. (Cl. 154—133)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The method of forming a compressed wood structure comprising subjecting a wood structure having a moisture content from 6 percent to 15 percent, based on the oven-dry weight of the wood, to pressure at an initial temperature from 210° F. to 240° F. until the wood is substantially completely compressed to a specific gravity from 1.3 to 1.4, thereby tending to seal the moisture in the wood in the subsequent heating step, followed by raising the temperature to from 330° F. to 360° F., while maintaining the pressure, and maintaining the temperature so raised for a minimum from 3 to 50 minutes, the higher moisture content requiring the lower temperature and lesser minimum time, the interval of time used being sufficient to cause the lignin-cementing material in the wood to flow, thereby to stabilize the structure against recovery from its compression when wetted.



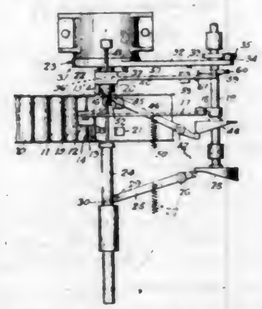
2,453,680

SPEED AND FREQUENCY CONTROL APPARATUS FOR RADIO-FREQUENCY BONDING SYSTEMS

Charles P. Sweeny, Somerville, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Application December 7, 1944, Serial No. 567,106
10 Claims. (Cl. 219—47)

7. In an apparatus of the character described, an oscillator, spaced electrodes, means for transmitting the oscillator output to said electrodes to provide a high-frequency electric field gap, an adjustable speed motor, means driven thereby for feeding varying-thickness bondable material



through said gap, means for sensing thickness changes in said material in advance of said gap, motor speed control means, oscillator frequency control means, and means responsive to the sensed material thickness changes adapted to control both said control means.

2,453,681

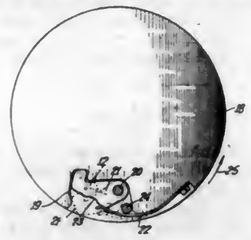
TUBE PERFORATING MACHINE

Harold F. Temple, Elmont, N. Y., assignor to Victor Metal Products Corporation, Brooklyn, N. Y., a corporation of New York

Application December 14, 1946, Serial No. 716,403
7 Claims. (Cl. 164—108)

1. A perforating machine comprising an annular cam ring having a cam portion on its inner edge, a punch mounted for radial movement relatively to the cam ring and spring-pressed into engagement with the cam portion, means for rotating the ring, and a hollow mandrel arranged axially of the ring and in the path of movement of the punch and comprising a support, a removable perforated sleeve and means for removably securing the sleeve around the support.

2,453,682



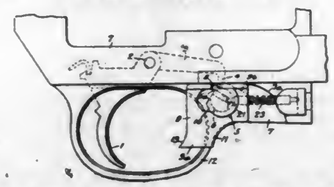
BORE SAFETY DEVICE FOR TIME FUSES

Richard H. Whitehead, New Haven, Conn., assignor, by mesne assignments, to the United States of America

Application June 20, 1939, Serial No. 280,071
2 Claims. (Cl. 102—84)

1. In a time fuse having a timing mechanism, a firing pin mounted for movement parallel to its own longitudinal axis, means releasable by said timing mechanism to retain said pin in cocked position, means to move said pin when so released, a plate disposed transversely to said pin

and apertured for passage thereof, and a dog pivoted at one end disposed to cover said aperture when in unarmed position and movable by centrifugal force to uncover said aperture, the pivotal point of said dog lying angularly in advance of said aperture in the direction of rotation of said fuse when in flight in a projectile, the center of gyration of said dog being so positioned with respect to the pivotal point of the dog that



centrifugal force does not move said dog until acceleration has ceased, a leaf spring fixed at one end and having a free end bearing against the edge of said dog more remote from the center of said device to oppose fortuitous movement of said dog, there being in said edge of the dog, a cut-out portion in which said free end of the spring engages when said dog has been moved to uncover said aperture to lock said dog after being moved.

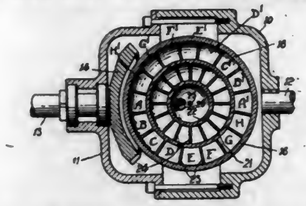
2,453,683

SAFETY FOR FIREARMS

Alexander W. Caldow, Chicago, Ill.

Application February 13, 1946, Serial No. 647,389
1 Claim. (Cl. 42—70)

In a trigger actuated firearm having a trigger provided with an integral safety nose portion, a trigger housing including a trigger guard, and a rotatably mounted locking body in the path of the trigger safety nose, said locking body having a gear fixed thereto for motion therewith, and being arranged to obstruct said safety nose portion in one rotational position of said gear and to provide a "fire" position in another rotational position of said gear, and a manually operated rack slidably mounted with relation to said trigger housing and cooperatively associated with said gear to rotate same by sliding motion, the rearward portion of said rack extending into the trigger guard opening in the "safe" position and clearing the trigger guard opening when slid forward into the "fire" position.



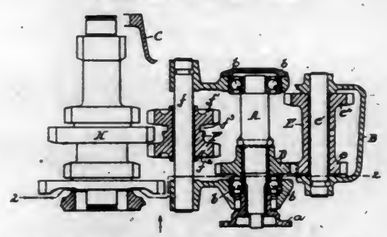
2,453,684

HYDROKINETIC COUPLING

Floris Cloete, Detroit, Mich.

Application September 17, 1945, Serial No. 616,773
4 Claims. (Cl. 74—259)

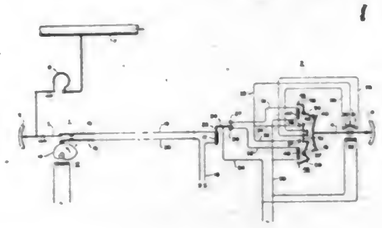
1. In a variable torque transmission mechanism between a driving shaft and a driven shaft, a casing rigid with the driving shaft and journaled for rotation around the driven shaft extending into one end thereof, fluid controlled means inside the said casing for varying the torque imposed on the driven shaft coincident with the rotational speed of the driving shaft, said means including a hollow spherical hydraulic member enclosing rigidly a series of walled fluid filled arcuate channels arranged along meridian planes around the polar axis of the sphere with a common connecting chamber at each pole to provide a passage for free fluid communication between the



different channels, two opposed polar stub shafts rigid with the said spherical hydraulic member and journaled for rotation in bearings rigid with the said casing about a polar axis transverse to the axis of the said driving shaft, a beveled planet gear secured to one of the said stub shafts for rotation therewith, a beveled sun gear meshing with the said beveled planet gear and secured to the inner end of the said driven shaft for rotation therewith, substantially as described.

2,453,685

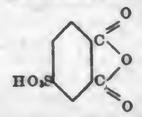
MEANS FOR TAKING OFF POWER FROM THE DRIVE TRANSMISSION OF MOTOR VEHICLES



Julius Charles Haefeli, Birmingham, England, assignor to The Austin Motor Company Limited, Birmingham, England

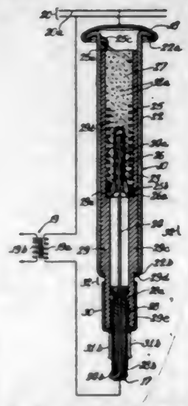
Application July 21, 1945, Serial No. 606,420
In Great Britain August 7, 1944
3 Claims. (Cl. 74—11)

1. Means for taking off power from the drive transmission of a motor vehicle, said means comprising an endwise slidable sleeve, a pair of toothed wheels of the same diameter rigid with said sleeve, means for moving said sleeve endwise, a lay shaft wheel of the change-speed gear of the vehicle with which either of said slidable wheels is engageable, a power take-off shaft, a toothed wheel of said power take-off shaft with which the second of said slidable wheels engages when the first slidable wheel engages said lay shaft wheel, an intermediate shaft, a rotatable sleeve mounted upon said intermediate shaft, a first toothed wheel rigid with said rotatable sleeve with which the first of said slidable wheels engages when the second of said slidable wheels engages with said lay shaft wheel, and a second toothed wheel rigid with said rotatable sleeve and in constant mesh with the said toothed wheel of the power take-off shaft.



2,453,686
TELEMETRIC SYSTEM
Howard T. Hoffman, Cleveland, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Application October 25, 1947, Serial No. 782,113
12 Claims. (Cl. 318—18)

1. A telemetric system comprising, in combination, a transmitter operating to transmit a signal during portions of fixed time periods, said portions varying directly with changes in a variable, a receiver including a movable receiving member, a reversible motor for positioning said receiving member, circuits operable selectively for energizing said motor to effect its operation in one direction or the other, control members movable towards and away from positions for closing said circuits, abutments movable with said receiving member and engageable by said control members for limiting movement of the latter away from their circuit closing positions, means for yieldingly holding said control members in engagement with said abutments, motors for moving said control members from said abutments toward their circuit closing positions, means operating in response to said transmitted signal for energizing one of said motors, and means operating on the termination of said signal for energizing the other of said motors.

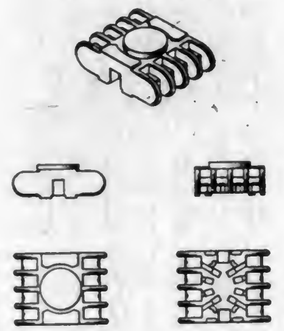


2,453,687
CATION-EXCHANGE RESINS MADE BY CONDENSING A SULFOPHTHALEIN AND FORMALDEHYDE
Stanley P. Rowland, Philadelphia, Pa., assignor to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application March 21, 1946, Serial No. 656,155
6 Claims. (Cl. 260—49)

1. An insoluble, infusible, porous, resinous composition having cation-exchange properties, which comprises a cured condensate of (1) a sulfophthalein, which is the product of condensing sulfophthalic anhydride having the formula

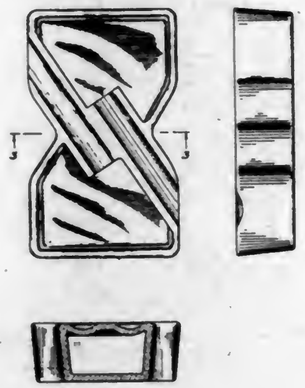
and a phenol from the group consisting of phenol, m-cresol, 3,5-dimethylphenol, and resorcinol, and (2) formaldehyde, the latter being condensed in the ratio of 2 to 4 mols per mol of said phthalein.

2,453,688
FUSE
Edward H. Yonkers, Chicago, Ill., assignor to Joslyn Mfg. and Supply Co., Chicago, Ill., a corporation of Illinois
Application May 3, 1944, Serial No. 533,824
19 Claims. (Cl. 200—115)



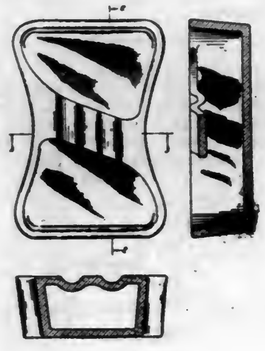
16. A fuse link comprising a tubular metal casing having an open end, a fusible element, a heating element for heating said fusible element, said elements being connected in series and disposed within said casing, a conductor connected to said fusible element and adapted to be biased to separate unfused portions of said fusible element when said fusible element is ruptured, and means including a fixed electrode spaced from said casing and electrically connected to said fusible element for defining with said casing a surge by-pass gap normally shunting said heating element and having a fixed gap dimension before, during and after the movement of said conductor which occurs incident to rupture of said fusible element.

DESIGNS



NOVEMBER 9, 1948

151,670
DESIGN FOR A VACUUM TUBE SOCKET
Charles J. Adams, Park Ridge, and Harold Z. Benton, Woodstock, Ill.
Application November 12, 1946, Serial No. 134,719
Term of patent 14 years
(Cl. D26—1)



The ornamental design for a vacuum tube socket, as shown.

151,671
DESIGN FOR AN ASH TRAY
Charlotte Tremper Armus, New York, N. Y.
Application January 8, 1947, Serial No. 136,000
Term of patent 7 years
(Cl. D85—2)

The ornamental design for an ash tray, as shown.

151,672
DESIGN FOR AN ASH TRAY
Charlotte Tremper Armus, New York, N. Y.
Application January 8, 1947, Serial No. 136,001
Term of patent 7 years
(Cl. D85—2)

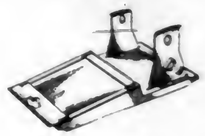
The ornamental design for an ash tray, as shown.

151,673
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Leonard G. Arpin, Montclair, N. J.
Application December 17, 1946, Serial No. 135,571
Term of patent 3½ years
(Cl. D45—9)

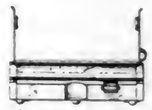
The ornamental design for an earring or similar article, as shown.

151,674
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Leonard G. Arpin, Montclair, N. J.
Application December 17, 1946, Serial No. 135,574
Term of patent 3½ years
(Cl. D45—9)

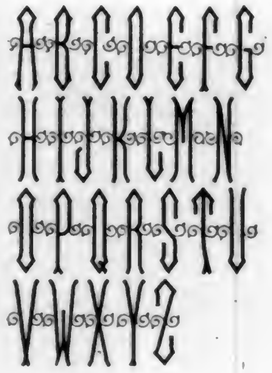
The ornamental design for an earring or similar article, as shown.



151,675
DESIGN FOR A ROCKING CHAIR
Edward Bird, London, England
Application June 5, 1946, Serial No. 130,434
In Great Britain January 28, 1946
Term of patent 14 years
(Cl. D15—6)



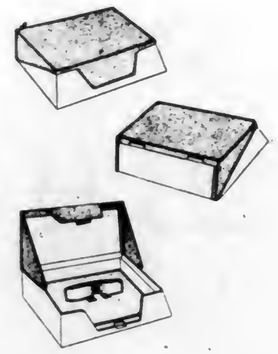
The ornamental design for a rocking chair, as shown.



151,676
DESIGN FOR A PAPER ROLL HOLDER OR SIMILAR ARTICLE
Frederick Bietzinger, Sr., Chicago, Ill.
Application January 24, 1947, Serial No. 136,371
Term of patent 14 years
(Cl. D74—1)

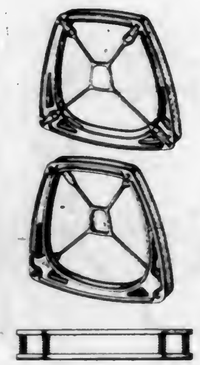
The ornamental design for a paper roll holder or similar article, as shown.

151,677
DESIGN FOR A FONT OF TYPE
Mathieu Bloch, New York, N. Y., assignor to Bloch Freres, Inc., New York, N. Y., a corporation of New York
Application March 19, 1948, Serial No. 145,211
Term of patent 3½ years
(Cl. D64—12)



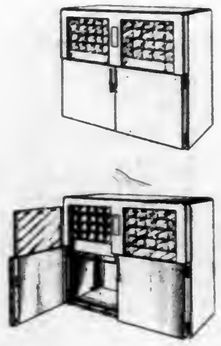
The ornamental design for a font of type, as shown.

151,678
DESIGN FOR A BOBBY PIN AND HAIRPIN HOLDER
Leo W. Blouin, Middleboro, Mass.
Application January 7, 1947, Serial No. 135,976
Term of patent 7 years
(Cl. D86—10)



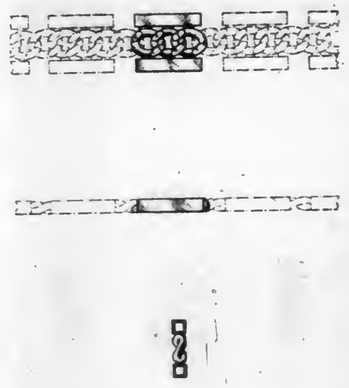
The ornamental design for a bobby pin and hairpin holder, as shown and described.

151,679
DESIGN FOR A WATCH AND JEWELRY DISPLAY BOX
Samuel Braun, Rockville Centre, and Max Crystal, Forest Hills, N. Y.
Application August 15, 1946, Serial No. 132,532
Term of patent 7 years
(Cl. D80—5)



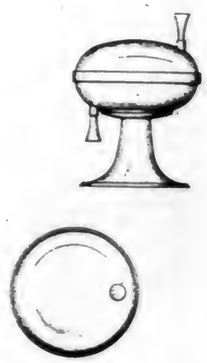
The ornamental design for a watch and jewelry display box, substantially as shown.

151,680
DESIGN FOR A RACQUET PRESS
Charles Bernard Briggs, Horbury, England, assignor to Slazengers Limited, London, England, and William Sykes Limited, Horbury, England, both companies of Great Britain
Application May 26, 1947, Serial No. 139,270
In Great Britain February 21, 1947
Term of patent 14 years
(Cl. D34—5)



The ornamental design for a racquet press, substantially as shown.

151,681
DESIGN FOR A SELF-SERVICE REFRIGERATED DISPLAY CASE
Edward F. Brill, Milwaukee, Wis.
Application April 15, 1946, Serial No. 128,595
Term of patent 3½ years
(Cl. D80—11)

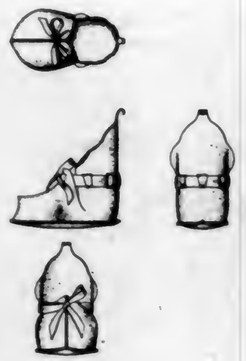


The ornamental design for a self-service refrigerated display case, substantially as shown.

151,682
DESIGN FOR A CHAIN FOR A BRACELET OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application February 11, 1948, Serial No. 144,412
Term of patent 7 years
(Cl. D45—16)

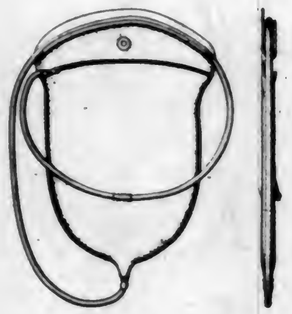
The ornamental design for a chain for a bracelet or similar article, substantially as shown and described.

151,683
DESIGN FOR A POWDER BLENDER
James R. Clarke, Oneida, N. Y.
Application January 30, 1947, Serial No. 136,545
Term of patent 3½ years
(Cl. D86—10)



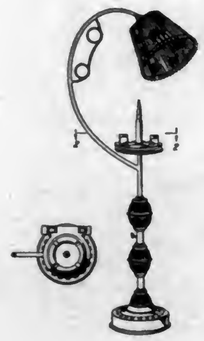
The ornamental design for a powder blender, substantially as shown and described.

151,684
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Maurice Duvalet, Congers, N. Y., assignor to Van Cleef & Arpels, Inc., New York, N. Y., a corporation of Delaware
Application June 9, 1948, Serial No. 146,849
Term of patent 7 years
(Cl. D45—19)



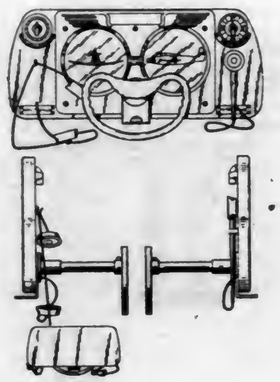
The ornamental design for brooch or similar article, substantially as shown.

151,685
DESIGN FOR A BOOTEE
Philip F. Eberle and Louis E. Sans, San Francisco, Calif.
Application June 14, 1948, Serial No. 146,964
Term of patent 14 years
(Cl. D7—7)



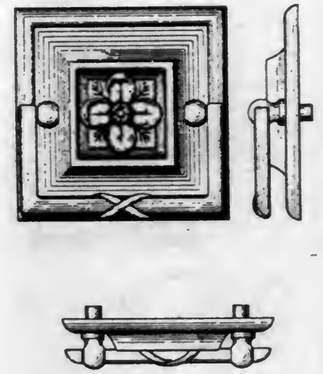
The ornamental design for a bootee, as shown.

151,686
DESIGN FOR A COMBINED SYRINGE BAG AND TUBE SUPPORT
Robert O. Ferguson, Bristol, Tenn., assignor of one-half to Bristol Steel & Iron Works, Inc., Bristol, Va.-Tenn., a corporation of Virginia
Application October 30, 1945, Serial No. 123,323
Term of patent 14 years
(Cl. D83—1)



The ornamental design for a combined syringe bag and tube support, as shown.

151,687
DESIGN FOR A COMBINED LAMP AND SMOKING STAND
Earl R. Fisk, Depew, Okla.
Application October 28, 1947, Serial No. 142,172
Term of patent 3½ years
(Cl. D48—20)

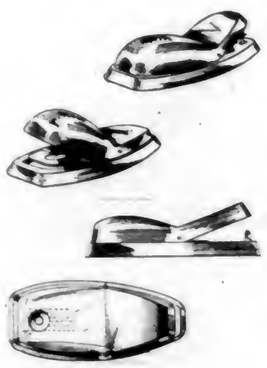


The ornamental design for a combined lamp and smoking stand, as shown.

151,688
DESIGN FOR AN AIRPLANE CONTROL TOY
Charles H. Foster, New York, N. Y.
Application August 5, 1948, Serial No. 147,947
Term of patent 14 years
(Cl. D34—15)

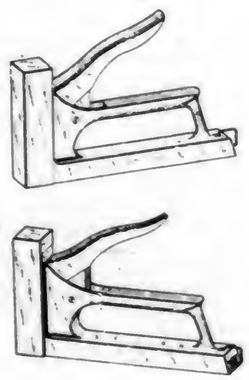
The ornamental design for an airplane control toy, substantially as shown and described.

151,689
DESIGN FOR A DRAWER PULL
Robert W. Gane, Jamestown, N. Y., assignor to Chautauqua Hardware Corporation, Jamestown, N. Y.
Application July 25, 1947, Serial No. 140,518
Term of patent 3½ years
(Cl. D10—8)



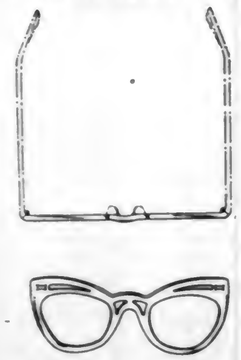
The ornamental design for a drawer pull, substantially as shown.

151,690
DESIGN FOR A JACKET
Harry Goldberg, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application December 29, 1947, Serial No. 143,416
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a jacket, substantially as shown.

151,691
DESIGN FOR AN ANIMAL TRAP
Arthur C. Haggstrom, Rockford, Ill., assignor to Style Line Products Co., Rockford, Ill., a corporation of Illinois
Application July 22, 1946, Serial No. 131,798
Term of patent 14 years
(Cl. D31—4)



The ornamental design for an animal trap, substantially as shown and described.

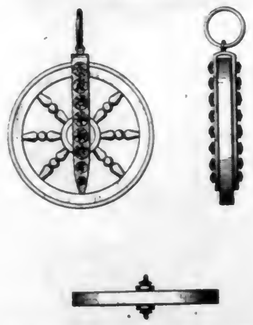
151,692
DESIGN FOR A STAPLING MACHINE OR SIMILAR ARTICLE
Harold S. Heller, Cleveland Heights, Ohio
Application March 21, 1947, Serial No. 137,792
Term of patent 14 years
(Cl. D74—1)

The ornamental design for a stapling machine or similar article, as shown and described.

151,693
DESIGN FOR A SPECTACLE FRAME
Louis Jacobson, New York, N. Y.
Application January 27, 1948, Serial No. 144,073
Term of patent 14 years
(Cl. D57—1)

The ornamental design for a spectacle frame, substantially as shown and described.

151,694
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 25, 1948, Serial No. 147,199
Term of patent 7 years
(Cl. D45—19)

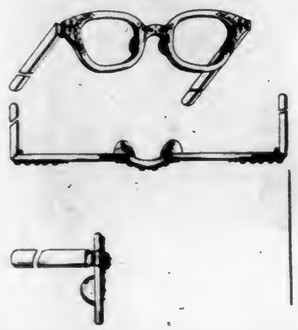


The ornamental design for a brooch or similar article, substantially as shown.

151,695
DESIGN FOR A STRAW HOLDER
Henry Edgar Kelley, Jr., Kirkwood, Mo., assignor to Glenmore Distilleries Company, Louisville, Ky., a corporation of Delaware
Application April 15, 1947, Serial No. 138,414
Term of patent 3½ years
(Cl. 2—3)

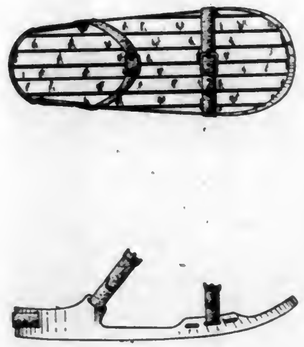
The ornamental design for a straw holder, as shown.

151,696
DESIGN FOR A JEWELRY CHARM
Charles Kiaschek, Brooklyn, N. Y., and George Kiashek, London, England
Application February 19, 1948, Serial No. 144,607
Term of patent 3½ years
(Cl. D45—17)



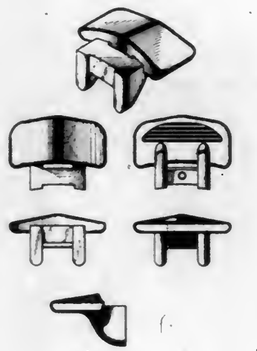
The ornamental design for a jewelry charm, substantially as shown and described.

151,697
DESIGN FOR A LIPSTICK CASE OR SIMILAR ARTICLE
William H. Leavin, New York, N. Y.
Application November 7, 1947, Serial No. 142,384
Term of patent 7 years
(Cl. D86—10)



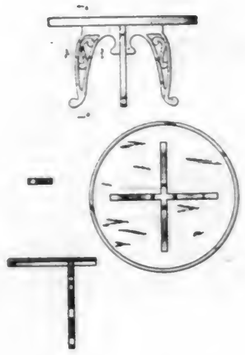
The ornamental design for a lipstick case or similar article, substantially as shown and described.

151,698
DESIGN FOR A SPECTACLE FRAME
Monroe B. Levoy, New York, N. Y.
Application March 29, 1946, Serial No. 128,052
Term of patent 3½ years
(Cl. D57—1)



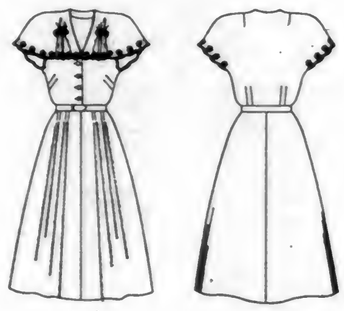
The ornamental design for a spectacle frame, as shown and described.

151,699
DESIGN FOR A SKI SANDAL
George William Lothrop, Wayne, Mich.
Application April 3, 1948, Serial No. 145,512
Term of patent 7 years
(Cl. D7—7)



The ornamental design for a ski sandal, as shown.

151,700
DESIGN FOR A HANDLE FOR KITCHEN UTENSILS OR SIMILAR ARTICLES
Walter C. Lueneburg, Evanston, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application April 4, 1947, Serial No. 138,154
Term of patent 14 years
(Cl. D44—29)

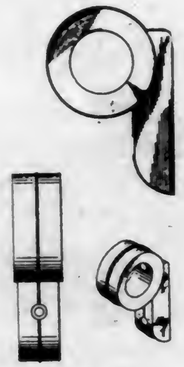


The ornamental design for a handle for kitchen utensils or similar articles, as shown.

151,701
DESIGN FOR A TABLE OR SIMILAR ARTICLE
Eugene J. Lux, New York, N. Y., assignor to Columbia Protektosite Company, Inc., Carlstadt, N. J., a corporation of New Jersey
Application March 28, 1947, Serial No. 138,020
Term of patent 7 years
(Cl. D33—14)

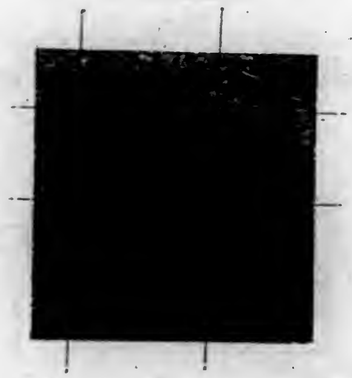
The ornamental design for a table or similar article, substantially as shown and described.

151,702
DESIGN FOR A DRESS
Mildred Macpherson, New York, N. Y.
Application February 14, 1948, Serial No. 144,496
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

151,703
DESIGN FOR A GARDEN TRACTOR
Ed B. Meripol, Los Angeles, Calif., assignor, by mesne assignments, to Adel Precision Products Corp., Burburbank, Calif., a corporation of California
Application March 28, 1947, Serial No. 138,022
Term of patent 14 years
(Cl. D14—3)



The ornamental design for a garden tractor, substantially as shown and described.

151,704
DESIGN FOR A UTENSIL HANDLE
Edna M. Oster, Kewaskum, Wis., assignor to Kewaskum Utensil Company, Kewaskum, Wis., a corporation of Wisconsin
Application December 7, 1946, Serial No. 135,327
Term of patent 14 years
(Cl. D44—29)

The ornamental design for a utensil handle, as shown.

151,705
DESIGN FOR A TEXTILE FABRIC
Edmund M. Patterson, New York, N. Y.
Application October 23, 1947, Serial No. 142,106
Term of patent 7 years
(Cl. D92—1)

The ornamental design for a textile fabric, substantially as shown and described.

151,706
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 9, 1948, Serial No. 147,457
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,707
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 13, 1948, Serial No. 147,526
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,708
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 15, 1948, Serial No. 147,579
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,709
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 2, 1948, Serial No. 147,877
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

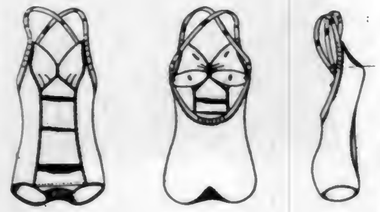
151,710
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 4, 1948, Serial No. 147,920
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

151,711
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 4, 1948, Serial No. 147,921
Term of patent 7 years
(Cl. D45—16)

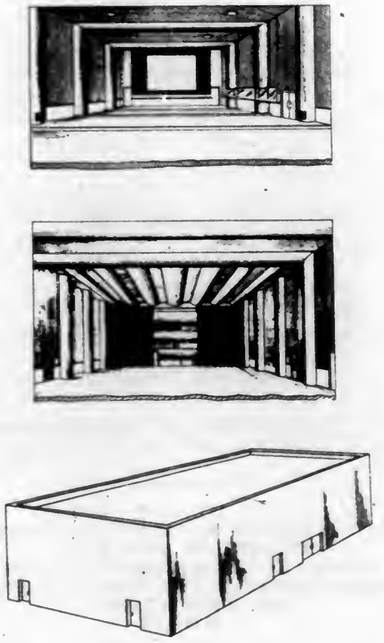
The ornamental design for a necklace or similar article, substantially as shown and described.

151,712
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 4, 1948, Serial No. 147,922
Term of patent 7 years
(Cl. D45—16)



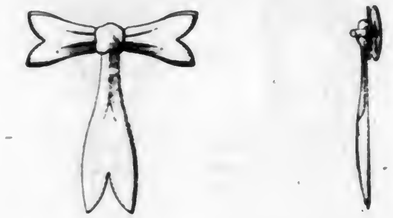
The ornamental design for a necklace or similar article, substantially as shown and described.

151,713
DESIGN FOR AN AIRPLANE
Wilfrid A. Pulver, Sherman Oaks, and Arthur E. Flock, Van Nuys, Calif., assignors to Lockheed Aircraft Corporation, Burbank, Calif.
Application September 11, 1947, Serial No. 141,310
Term of patent 14 years
(Cl. D71—1)



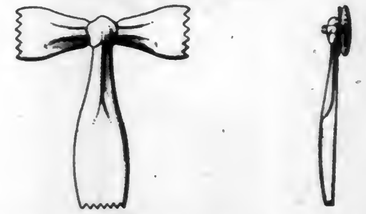
The ornamental design for an airplane, substantially as shown.

151,714
DESIGN FOR A BATHING SUIT
Rose Marie Reid, Los Angeles, Calif.
Application October 10, 1946, Serial No. 133,867
Term of patent 7 years
(Cl. D3—17)



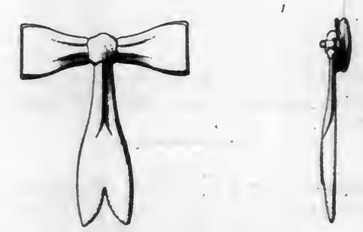
The ornamental design for a bathing suit, as shown.

151,715
DESIGN FOR A RECORDING STUDIO BUILDING OR THE LIKE
Michael Rettinger, Encino, Calif., assignor to Radio Corporation of America, a corporation of Delaware
Application September 17, 1946, Serial No. 133,363
Term of patent 14 years
(Cl. D13—1)



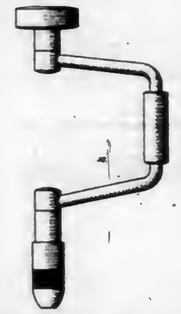
The ornamental design for a recording studio building or the like, substantially as shown.

151,716
DESIGN FOR A NECKTIE OR THE LIKE
Walter F. Rothe, Washington, D. C.
Application May 21, 1947, Serial No. 139,180
Term of patent 14 years
(Cl. D3—16)



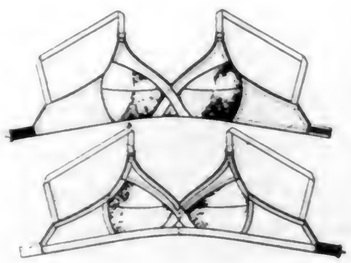
The ornamental design for a necktie or the like, substantially as shown.

151,717
DESIGN FOR A NECKTIE OR THE LIKE
Walter F. Rothe, Washington, D. C.
Application May 21, 1947, Serial No. 139,181
Term of patent 14 years
(Cl. D3—16)



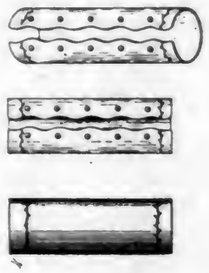
The ornamental design for a necktie or the like, substantially as shown.

151,718
DESIGN FOR A NECKTIE OR THE LIKE
Walter F. Rothe, Washington, D. C.
Application May 28, 1947, Serial No. 139,327
Term of patent 14 years
(Cl. D3—16)



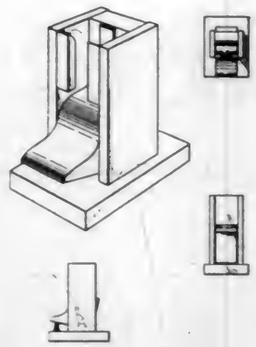
The ornamental design for a necktie or the like, substantially as shown.

151,719
DESIGN FOR A BRACE
William B. Ruger, Wilton, Conn., assignor to Ruger Corporation, Southport, Conn., a corporation of Connecticut
Application July 16, 1947, Serial No. 140,308
Term of patent 3½ years
(Cl. D93—4)



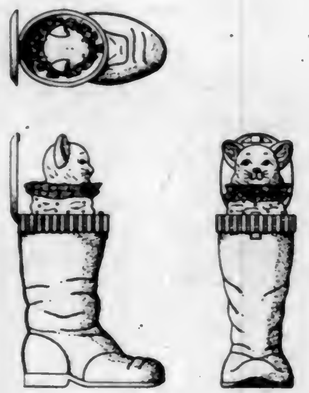
The ornamental design for a brace, as shown.

151,720
DESIGN FOR A BRASSIERE
Jack Selcow, New York, N. Y., assignor to Angel Bra Corp., New York, N. Y., a corporation of New York
Application October 10, 1947, Serial No. 141,848
Term of patent 7 years
(Cl. D20—4)



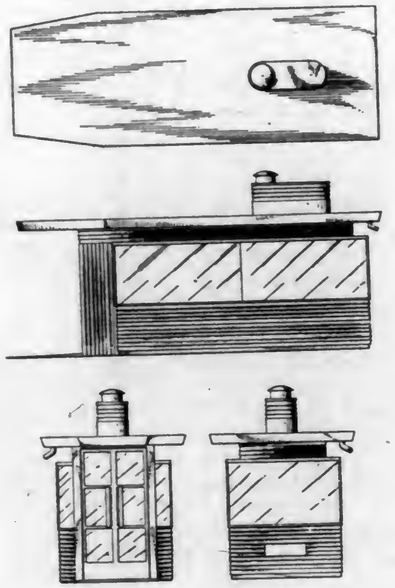
The ornamental design for a brassière, as shown.

151,721
DESIGN FOR A BOLSTER COVER FOR PILLOWS OR SIMILAR ARTICLE
Genevieve L. Such, Chicago, Ill.
Application December 26, 1946, Serial No. 135,774
Term of patent 7 years
(Cl. D5—2)



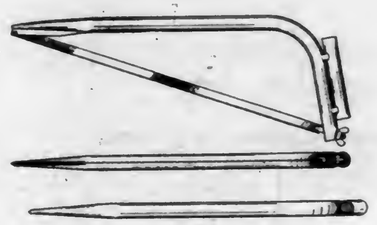
The ornamental design for a bolster cover for pillows or similar article, substantially as shown.

151,722
DESIGN FOR A DISPENSING DEVICE FOR DOG BISCUITS OR THE LIKE
Frederick E. Welsh, Springwater, N. Y.
Application September 7, 1946, Serial No. 133,162
Term of patent 14 years
(Cl. D52—2)



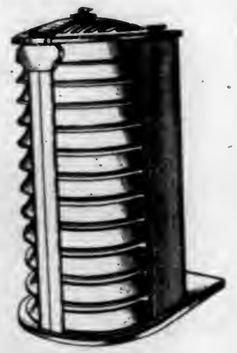
The ornamental design for a dispensing device for dog biscuits or the like, substantially as shown.

151,723
DESIGN FOR A TOY JACK-IN-THE-BOX OR SIMILAR ARTICLE
Constance Ray White, Beverly Hills, Calif.
Application August 8, 1947, Serial No. 140,778
Term of patent 7 years
(Cl. D34—15)



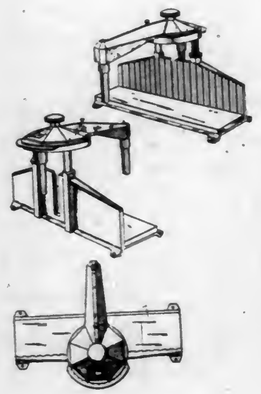
The ornamental design for a toy jack-in-the-box or similar article, substantially as shown.

151,724
DESIGN FOR A SERVICE STATION
Lysander T. White, New York, N. Y., assignor to Cities Service Oil Company, New York, N. Y., a corporation of Pennsylvania
Application January 22, 1947, Serial No. 136,313
Term of patent 14 years
(Cl. D13—1)



The ornamental design for a service station, as shown and described.

151,725
DESIGN FOR A PRUNING SAW
George L. Whitman, Weedsport, and Carl D. Gunn, Auburn, N. Y.
Application February 12, 1947, Serial No. 136,874
Term of patent 14 years
(Cl. D93—4)



The ornamental design for a pruning saw, substantially as shown.

151,726
DESIGN FOR A SPACE HEATER
Herman E. Winkler and Carl J. Winkler, Lebanon, Ind., assignors to U. S. Machine Corporation, Lebanon, Ind., a corporation
Application May 20, 1947, Serial No. 139,166
Term of patent 14 years
(Cl. D81—19)

The ornamental design for a space heater, as shown and described.

151,727
DESIGN FOR A MITER BOX
Harry J. Ziemann, Wauwatosa, Wis.
Application July 18, 1947, Serial No. 140,353
Term of patent 14 years
(Cl. D93—4)

The ornamental design for a miter box, as shown.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Abbott Laboratories, North Chicago, Ill. Hematinic preparation. Serial No. 552,826, Nov. 16. Class 6.

Acme White Lead and Color Works, Detroit, Mich. Agricultural and horticultural insecticides. Serial No. 536,744, Nov. 16. Class 6.

Adams Packing Association, Inc., Auburndale, Fla. Fresh citrus fruits. Serial No. 537,777, Nov. 16. Class 46.

Air Reduction Sales Company, assignee: *See*—
Wilson Welder and Metals Co. Inc.

Aircraft Screw Products Company, Inc.: *See*—
Heli-Coil Corporation.

Alkalax Company, The: *See*—
Howell, William C.

All American Fruit & Extract Co.: *See*—
Cohen, Harold.

American Laundry Machinery Company, The, Cincinnati, Ohio. Laundry machinery or apparatus. Serial No. 535,378, Nov. 16. Class 24.

Animal Trap Company of America, Lititz, Pa. Trap guns, anchoring and setting equipment and cartridges therefor. Serial No. 517,881, Nov. 16. Class 9.

Animal Trap Company of America, Lititz, Pa. Trap guns, anchoring and setting equipment and cartridges therefor. Serial No. 518,511, Nov. 16. Class 9.

Appleton, William H., San Francisco, Calif. Nonalcoholic, non-cereal, maltless beverages. Serial No. 512,310, Nov. 16. Class 45.

Ark-Les Switch Corporation, Watertown, Mass. Electric switches and rheostats. Serial No. 539,477, Nov. 16. Class 21.

Armour and Company, Chicago, Ill. Sausage. Serial No. 528,419, Nov. 16. Class 46.

Atkins & Durbrow, Inc., New York, N. Y. Fertilizer. Serial No. 509,324, Nov. 16. Class 10.

Atlantic Union College, Lancaster, Mass. Ironing boards. Serial No. 544,313, Nov. 16. Class 24.

Audio Industries, Michigan City, Ind. Electrical phonographs and parts therefor. Serial No. 497,443, Nov. 16. Class 21.

Aurora Industries, Inc., Chicago, Ill. Projection screens. Serial No. 528,114, Nov. 16. Class 26.

Babee-Tenda Corporation, The, Metropolis, Ill. Combined tables and chairs. Serial No. 540,763, Nov. 16. Class 32.

Bachmann Uxbridge Worsted Corporation, New York, N. Y. Woolen fabrics in the piece. Serial No. 554,546, Nov. 16. Class 42.

Badger Glove and Slipper Company, Milwaukee, Wis. Slippers. Serial No. 513,710, Nov. 16. Class 39.

Baron, H., & Co. Inc., Linden, N. J. Nonalcoholic, maltless fruit syrups and juices. Serial No. 531,422, Nov. 16. Class 45.

Bassett Company, Columbus, Ohio. Perfume. Serial No. 514,248, Nov. 16. Class 6.

Battle Creek Equipment Company, Battle Creek, Mich. Chair type therapeutic exercising apparatus. Serial No. 517,765, Nov. 16. Class 44.

Bauer, Arthur, Company, Inc., New York, N. Y. Watches. Serial No. 547,608, Nov. 16. Class 27.

Barley Dress Manufacturing Co., Seattle, Wash. Cotton house and street dresses, rayon house and street dresses, wool dresses, etc. Serial No. 514,748, Nov. 16. Class 39.

Bay State Abrasive Products Company, Westboro, Mass. Grinding, abrading, polishing, cutting-off and knife sharpening wheels. Serial No. 533,261, Nov. 16. Class 4.

Beauty Counselors, Inc., Grosse Pointe, Mich. Protective coating nail polish. 531,013, Nov. 16. Class 6.

Benrose Fabrics Corporation, New York, N. Y. Textile fabrics in the piece. Serial No. 536,486, Nov. 16. Class 42.

Berkshire Fine Spinning Associates, Inc., Providence, R. I., and Adams, Mass. Textile fabrics. Serial No. 555,484, Nov. 16. Class 42.

Bethlehem Steel Company, Bethlehem, Pa. Metal pipe and tubing. Serial No. 507,963, Nov. 16. Class 13.

Big Chief Medicine Company: *See*—
Schrugge, Barney T.

Black Star Coal Corporation, Louisville, Ky. Coal. Serial No. 522,946, Nov. 16. Class 1.

Blaw-Knox Company, Pittsburgh, Pa. Metal doors. Serial No. 519,566, Nov. 16. Class 12.

Bloch Brothers Tobacco Co., The, Wheeling, W. Va. Chewing and smoking tobacco. Serial No. 539,637, Nov. 16. Class 17.

Blue Ridge Cord Company, The: *See*—
Fullerton, George H.

Boland Mfg. Co., Chicago, Ill. Following goods made of plastic film, shower caps, bathing caps, etc. Serial No. 521,241, Nov. 16. Class 39.

Cleaning compounds, Liquid and powdered. O. W. Meeker. 503,974, Nov. 16; Serial No. 543,728, published Aug. 17, 1948.
Cleaning powder for general household use. Bon Ami Company. 504,032, Nov. 16; Serial No. 519,168.
Cleanser in powdered form. Diversey Corporation. 503,867, Nov. 16; Serial No. 522,734, published Aug. 17, 1948.
Detergent, and a wetting agent. Oil-Dri Corporation of America. 504,016, Nov. 16; Serial No. 552,161, published Aug. 17, 1948.
Detergents, Sodium phosphate. General Chemical Company. 355,860–1, Apr. 5, 1938. Republished Nov. 16.
Furniture-cleaning compound. Hillyard Chemical Company. 251,181, renewed Jan. 1, 1948. O. G. Nov. 16.
Liquid solvents for carbon, paint, aniline dyes, etc. Practical Products Company. 441,344, Nov. 16; Serial No. 516,375, published Aug. 17, 1948.
Plasticlike material for use on greasy and wet floors and surfaces, Non-slip. Walter G. Legge Company, Inc. 503,899, Nov. 16; Serial No. 532,141, published Aug. 17, 1948.
Polish in liquid form, Metal. Diversey Corporation. 503,866, Nov. 16; Serial No. 521,248, published Aug. 17, 1948.
Polishes, shoe blackings, shoe cleansers, etc., Shoe. Griffin Manufacturing Company, Inc. 504,001, Nov. 16; Serial No. 546,847, published Aug. 17, 1948.
Sal soda and bicarbonate of soda, Baking soda. Church & Dwight Co., Inc. 503,872, Nov. 16; Serial No. 526,792, published Aug. 17, 1948.
Sal soda, baking soda, (bicarbonate of soda). Church & Dwight Co., Inc. 503,869, Nov. 16; Serial No. 526,742, published Aug. 17, 1948.
Sal soda, baking soda, (bicarbonate of soda). Church & Dwight Co., Inc. 503,870, Nov. 16; Serial No. 526,761, published Aug. 17, 1948.
Sal soda, monohydrated carbonate of soda, and baking soda, etc. Church & Dwight Co., Inc. 503,871, Nov. 16; Serial No. 526,779, published Aug. 17, 1948.
Soap. The Fair. 503,925, Nov. 16; Serial No. 536,366, published Aug. 17, 1948.
Soap. Polk Miller Products Corp. 295,145, June 21, 1932. Republished Nov. 16.
Soap. Polk Miller Products Corporation. 331,351, Jan. 7, 1936. Republished Nov. 16.

Soap powder, soap grains, soap flakes, hand soap and household cleanser. Great Atlantic and Pacific Tea Company. 503,952, Nov. 16; Serial No. 538,127, published Aug. 17, 1948.
Soaps, Medicinal. Stiefel Medicinal Soap Company, Inc. 504,015, Nov. 16; Serial No. 550,631, published Aug. 17, 1948.
Steel wool and soap cleaning pads. Ohio Match Company. 388,788, July 8, 1941. Republished Nov. 16.

CLASS 5

Dextrins. Corn Products Refining Company. 71,656, renewed Dec. 8, 1948. O. G. Nov. 16.
Glue, Liquid marine. Estate of H. B. Fred Kuhls. 382,945, Nov. 19, 1940. Republished Nov. 16.

CLASS 6

Acids, Organic. National Aniline & Chemical Company, Inc. 270,213, Apr. 29, 1930. Republished Nov. 16.
Ammonia. Trager Manufacturing Company, Inc. 272,288, July 1, 1930. Republished Nov. 16.
Antiseptic, Granular effervescent urinary. Western Pharmacal Company. 251,270, renewed Jan. 1, 1949. O. G. Nov. 16.
Base coat for nail polish. Avon Products, Inc. 504,037, Nov. 16; Serial No. 531,186.
Capsules. M. A. Wharam. 504,002, Nov. 16; Serial No. 547,079, published Aug. 17, 1948.
Capsules, Laxative, worm medicine, condition pills, etc. Folk Miller Products Corp. 350,436, Sept. 28, 1937. Republished Nov. 16.
Chemical compositions. North American Fibre Products Company. 404,093, Nov. 2, 1943. Republished Nov. 16.
Chemical compound. J. B. Hollifield. 504,021, Nov. 16; Serial No. 508,379.
Chemicals, Heavy. General Chemical Company. 354,571–2, Feb. 15, 1938. Republished Nov. 16.
Coal tar product. National Aniline & Chemical Company, Incorporated. 221,023, Nov. 23, 1926. Republished Nov. 16.
Composition for treatment of fuel oils. Metropolitan Refining Co., Inc. 503,860, Nov. 16; Serial No. 517,918, published Aug. 24, 1948.
Crudes, intermediates, dyestuffs, etc., Coal-tar. National Aniline & Chemical Company, Inc. 164,690, Feb. 27, 1923. Republished Nov. 16.
Crudes, intermediates, dyestuffs, etc., Coal-tar. National Aniline & Chemical Company, Incorporated. 173,271, Sept. 18, 1923. Republished Nov. 16.
Deodorants. J. A. Haines. 358,198, June 28, 1938. Republished Nov. 16.
Developer, Photographic. Eastman Kodak Company. 249,625, renewed Nov. 20, 1948. O. G. Nov. 16.
Developers, fixers, hardeners, etc. Pratt & Gray Company. 412,134, Feb. 20, 1945. Republished Nov. 16.
Dyeing aids, fibre treating, moistening, etc., Chemical. National Aniline & Chemical Company, Inc. 336,901, July 21, 1936. Republished Nov. 16.
Dyes, dyestuffs, and colors. National Aniline & Chemical Company, Inc. 160,928, Oct. 31, 1922. Republished Nov. 16.
Dyes, dyestuffs, and colors. National Aniline & Chemical Company, Inc. 161,242, Nov. 7, 1922. Republished Nov. 16.
Dyes, dyestuffs, and colors. National Aniline & Chemical Company, Incorporated. 195,765, Mar. 3, 1925. Republished Nov. 16.
Dyestuffs. National Aniline & Chemical Company, Incorporated. 165,706, Mar. 20, 1923. Republished Nov. 16.
Dyestuffs. National Aniline & Chemical Company, Incorporated. 187,553, Aug. 5, 1924. Republished Nov. 16.
Dyestuffs, Coal-tar. National Aniline & Chemical Company, Inc. 126,949, Oct. 14, 1919. Republished Nov. 16.
Dyestuffs, Coal-tar. National Aniline & Chemical Company, Inc. 153,804, Mar. 28, 1922. Republished Nov. 16.
Dyestuffs, Coal-tar. National Aniline & Chemical Company, Incorporated. 186,016, July 1, 1924. Republished Nov. 16.
Extracts, Tanning. International Products Corporation. 503,891, Nov. 16; Serial No. 530,513, published Aug. 24, 1948.
Face creams and lotions. Elizabeth Arden, Inc. 249,634, renewed Nov. 20, 1948. O. G. Nov. 16.
Facial creams. Elmo, Inc. 503,934, Nov. 16; Serial No. 537,025, published Aug. 17, 1948.
Fluid for automobile radiators, Non-freezing. Nourse Oil Company. 245,031, renewed Aug. 7, 1948. O. G. Nov. 16.
Fluxes, Tinning. Grasselli Chemical Company. 247,209, renewed Sept. 25, 1948. O. G. Nov. 16.
Food-colors. National Aniline & Chemical Company, Incorporated. 127,769, Dec. 2, 1919. Republished Nov. 16.

Food-colors. National Aniline & Chemical Company, Incorporated. 129,511, Feb. 24, 1920. Republished Nov. 16.
Food-colors. National Aniline & Chemical Company, Incorporated. 131,349, May 11, 1920. Republished Nov. 16.
Food-colors. National Aniline & Chemical Company, Incorporated. 131,351–6, May 11, 1920. Republished Nov. 16.
Food-colors. National Aniline & Chemical Company, Incorporated. 131,558–60, May 18, 1920. Republished Nov. 16.
Food colors, Certified. National Aniline & Chemical Company, Incorporated. 193,390, Dec. 30, 1924. Republished Nov. 16.
Food colors, Certified. National Aniline & Chemical Company, Incorporated. 194,837, Feb. 10, 1925. Republished Nov. 16.
Germicide. Northern Research Laboratories, Inc. 319,693, Dec. 4, 1934. Republished Nov. 16.
Hair dressings, pre-shave lotion, after shave lotion, etc. Courtley, Ltd. 441,335, Nov. 16; Serial No. 524,304, published Aug. 24, 1948.

Inhalants. Sharp & Dohme. 69,567, re-renewed June 23, 1948. O. G. Nov. 16.
Insecticide. I. F. Laucks, Inc. 433,394, Oct. 14, 1947. Republished Nov. 16.
Insecticides. Cook Chemical Company. 504,048, Nov. 16; Serial No. 554,952.
Insecticides. Trager Manufacturing Company. 155,543, May 30, 1922. Republished Nov. 16.
Liquid compound. North American Fibre Products Company. 363,078, Dec. 13, 1938. Republished Nov. 16.
Liquid remedy for dyspepsia. E. H. Tonge. 504,012, Nov. 16; Serial No. 550,104, published Aug. 17, 1948.
Lotion. Chamberlin Laboratories. 311,905, Apr. 10, 1934. Republished Nov. 16.
Lotion, Dandruff. A. Nadreau. 503,911. Nov. 16; Serial No. 534,652, published Aug. 17, 1948.
Lotion to be used on the skin. H. Clay Glover Co., Inc. 504,047, Nov. 16; Serial No. 553,488.
Lotions, Hair waving. Sales Affiliates, Inc. 441,293, Nov. 16; Serial No. 469,916, published Aug. 24, 1948.
Medicament. L. N. Renault & Sons, Inc. 305,814, Aug. 22, 1933. Republished Nov. 16.
Medicine. Hollander-Koshland Co. 144,796, July 19, 1921. New certificate. O. G. Nov. 16.
Ointment, Medicated greaseless. M. P. Minter. 366,256, Apr. 4, 1939. Republished Nov. 16.
Oxides and salts, Metallic. Vanadium Corporation of America. 244,653, July 24, 1928. Republished Nov. 16.
Oxidizing agent and kier-boiling assistant, Protective. National Aniline & Chemical Company, Inc. 362,307, Nov. 15, 1948. Republished Nov. 16.
Perfume and cologne. M. de Tuvaché. 414,206, May 29, 1945. Republished Nov. 16.
Perfume, toilet water, talcum powder, face powder, etc. Coty, Inc. 503,950–1, Nov. 16; Serial Nos. 538,100–1. published Aug. 10, 1948.
Perfumes. Jean-Pascal Lorriaux & Cie. 441,347, Nov. 16; Serial No. 520,401, published Aug. 17, 1948.
Pharmaceutical preparation. First Texas Chemical Mfg. Co. 441,353, Nov. 16; Serial No. 523,951, published Aug. 10, 1948.
Powder, talc, bubble bath, and toilet water, Dusting. Sportline, Inc. 441,329, Nov. 16; Serial No. 514,143, published Mar. 11, 1947.
Preparation intended to be taken internally. Reese Chemical Company. 504,010, Nov. 16; Serial No. 549,967, published Aug. 17, 1948.
Salts having a low melting point, Mixture of inorganic. E. F. Houghton & Co. 503,907, Nov. 16; Serial No. 533,572, published Aug. 24, 1948.
Scalp preparation. J. R. Jones. 122,324, July 23, 1918. Republished Nov. 16.
Sedative and hypnotic, Analgesic. H. A. Metz Laboratories, Inc. 247,513, renewed Sept. 25, 1948. O. G. Nov. 16.
Shampoo. H. Curtis Industries, a Division of National Industries, Inc. 503,847, Nov. 16; Serial No. 505,892, published Aug. 24, 1948.
Solution containing an active principle secured from the interstitial cells of leydig, a medicinal preparation. Harrower Laboratory, Inc. 242,870, June 5, 1928. Republished Nov. 16.
Tablets containing vitamin C. National Institute of Nutrition. 373,831, Dec. 26, 1939. Republished Nov. 16.
Tablets, Laxative digestive. G. Peplow. 241,388, Apr. 24, 1928. Republished Nov. 16.
Toilet vinegar, sachet, brilliantine, etc. Pinaud, Incorporated. 253,462, renewed Feb. 26, 1949. O. G. Nov. 16.
Tonic, Blood and nerve. A. R. Martino. 252,647, renewed Feb. 12, 1949. O. G. Nov. 16.
Tonic, General. L. N. Renault & Sons, Inc. 306,262–3, Sept. 12, 1933. Republished Nov. 16.
Tooth paste. Zonite Products Corporation. 504,013, Nov. 16; Serial No. 550,373, published Aug. 17, 1948.
Tooth paste, shampoo, hair lotion, etc. Helene Pessl, Inc. 441,328, Nov. 16; Serial No. 509,672, published Aug. 24, 1948.
Vitamins, Concentrated. Viavi Company. 396,680, July 28, 1942. Republished Nov. 16.
Wetting out agents, emulsifying agents, and dye assistants. National Aniline & Chemical Company, Inc. 284,944, July 14, 1931. Republished Nov. 16.

CLASS 8

Ash trays, cigar and cigarette cases and boxes, combination cigarette cases and lighters, etc. Colibri Lighters Limited. 441,305, Nov. 16; Serial No. 496,370, published Apr. 20, 1948.
Ash trays, cigarette receptacles. C. Spitzel. 503,962, Nov. 16; Serial No. 540,477, published Aug. 17, 1948.
Lighters, Pyrophoric cigar, candlesticks, condenser tubes. Chase Brass & Copper Co. Incorporated. 397,406, Sept. 8, 1942. Republished Nov. 16.
Pipes, Smoking. John Hudson Moore, Inc. 503,852, Nov. 16; Serial No. 512,072, published Aug. 17, 1948.
Pipes, Smoking, and cigarette holders. Kirsten Pipe Company. 416,980, Oct. 9, 1945. Republished Nov. 16.
Pipes, Smoking, and cigarette holders. Kirsten Pipe Company. 417,466, Oct. 30, 1945. Republished Nov. 16.

CLASS 9

Matches. Ohio Match Company. 355,761, Mar. 29, 1938. Republished Nov. 16.
Rifles, Air. A. B. T. Manufacturing Corp. 386,558, Apr. 15, 1941. Republished Nov. 16.
Rifles, Air. A. B. T. Manufacturing Corp. 390,137, Sept. 9, 1941. Republished Nov. 16.

CLASS 10

Fertilizer. Reliance Fertilizer Company. 349,383, Aug. 24, 1937. Republished Nov. 16.

CLASS 11

Carbon black. G. L. Cabot. 503,919, Nov. 16; Serial No. 535,794, published Aug. 17, 1948.
Carbon paper and inked ribbons. Underwood Corporation. 503,992, Nov. 16; Serial No. 545,564, published Aug. 17, 1948.
Inks and printing ink varnishes, Printing. Charles E. Salmon, Inc. 503,991, Nov. 16; Serial No. 545,538, published Aug. 17, 1948.

CLASS 12

Blocks of stone. Breen Stone & Marble Company. 243,656, June 26, 1928. Republished Nov. 16.
Bricks and blocks, Building and paving. Metropolitan Paving Brick Company. 275,556–7, Sept. 23, 1930. Republished Nov. 16.
Cement, Building and masonry. Florida Portland Cement Company. 359,256, Aug. 9, 1938. Republished Nov. 16.
Cement, Building and masonry. Trinity Portland Cement Company. 359,394, Aug. 16, 1938. Republished Nov. 16.
Cement, Portland. Consolidated Cement Corporation. 345,225, Apr. 20, 1937. Republished Nov. 16.
Cement, Portland. Consolidated Cement Corporation. 345,632–3, May 4, 1937. Republished Nov. 16.
Cement, Portland. Florida Portland Cement Company. 345,226, Apr. 20, 1937. Republished Nov. 16.
Cement, Portland. Northwestern States Portland Cement Co. 70,578, Sept. 15, 1908. Republished Nov. 16.
Cement, Portland. Signal Mountain Portland Cement Company. 345,227, Apr. 20, 1937. Republished Nov. 16.
Cement, Portland. Trinity Portland Cement Company. 345,228, Apr. 20, 1937. Republished Nov. 16.
Cement, Portland. Trinity Portland Cement Company. 348,237, July 20, 1937. Republished Nov. 16.
Cement, Portland. Trinity Portland Cement Company. 358,842, July 26, 1938. Republished Nov. 16.
Copper and copper alloy downspouts; copper and copper alloy gutters; copper and copper alloy fittings for downspouts, etc. Chase Brass & Copper Co. Incorporated. 397,783, Sept. 22, 1942. Republished Nov. 16.
Mixture, Prepared. Cleveland Builders Supply & Brick Company. 160,415, Oct. 24, 1922. Republished Nov. 16.
Relish and jam sets. Chase Brass & Copper Co. Incorporated. 398,429, Oct. 27, 1942. Republished Nov. 16.
Roofing, metal stalls, and stanchions, etc., Metal. United Co-Operatives, Inc. 393,720, Mar. 3, 1942. Republished Nov. 16.

Thinners used for lacquers and lacquer enamels. Waukegan Chemical Company. 196,895, Mar. 31, 1925. Republished Nov. 16.
Stain, Varnish. Hanna Paint Mfg. Co. 45,949, Aug. 29, 1905. Republished Nov. 16.
Varnishes. American Varnish Company. 39,044, Oct. 14, 1902. Republished Nov. 16.

CLASS 17

Cigarettes. P. Lorillard Company. 503,930, Nov. 16; Serial No. 536,929, published Aug. 17, 1948.
Cigarettes. P. Lorillard Company. 503,931, Nov. 16; Serial No. 536,931, published Aug. 17, 1948.
Cigars. Jose Escalante & Co. 504,041, Nov. 16; Serial No. 533,241.
Cigars. P. Lorillard Company. 503,932, Nov. 16; Serial No. 536,932, published Aug. 17, 1948.
Tobacco, Plug, twist and smoking. Cumberland Tobacco Works. 196,447, Mar. 17, 1925. Republished Nov. 16.
Tobacco, Smoking. Cumberland Tobacco Works, Inc. 163,303, Jan. 9, 1923. Republished Nov. 16.
Tobacco, Smoking. P. Lorillard Company. 503,933, Nov. 16; Serial No. 536,934, published Aug. 17, 1948.
Tobacco, Smoking and chewing. Cumberland Tobacco Works. 190,070, Oct. 7, 1924. Republished Nov. 16.

CLASS 19

Airplane propellers and propeller hubs and parts thereof. Continental Aviation and Engineering Corporation. 441,309, Nov. 16; Serial No. 499,390, published July 20, 1948.
Airplanes, airframes and airframe parts. Northrop Aircraft, Inc. 504,044, Nov. 16; Serial No. 537,609.
Airplanes and structural parts thereof. Lockheed Aircraft Corporation. 441,301, Nov. 16; Serial No. 490,250, published Aug. 10, 1948.
Airplanes and structural parts thereof. Piper Aircraft Corporation. 441,354, Nov. 16; Serial No. 524,080, published Aug. 3, 1948.
Airplanes and structural parts thereof. Vickers-Armstrongs Limited. 441,310, Nov. 16; Serial No. 500,150, published July 20, 1948.
Automobiles. Hillman Motor Car Company Limited. 504,026–7, Nov. 16; Serial Nos. 516,840–1.
Automobiles. Studebaker Corporation. 503,894, Nov. 16; Serial No. 531,160, published Aug. 17, 1948.
Automobiles and their structural parts. Chrysler Corporation. 290,320, Jan. 5, 1932. Republished Nov. 16.
Bicycles. Boren Bicycle Company. 503,890, Nov. 16; Serial No. 530,372, published Aug. 3, 1948.
Boats. Paul Bunyan Bait Company. 503,963, Nov. 16; Serial No. 540,515, published Aug. 17, 1948.
Boats, Power driven, row and sail. R. S. Boles. 503,843, Nov. 16; Serial No. 501,306, published Aug. 17, 1948.
Boats, Small. Southwest Manufacturing Company. 503,856, Nov. 16; Serial No. 513,220, published July 20, 1948.
Brake shoes. American Brake Shoe & Foundry Company. 74,793–4, Aug. 10, 1909. Republished Nov. 16.
Brake shoes. American Brake Shoe & Foundry Company. 106,193, Oct. 19, 1915. Republished Nov. 16.
Brake shoes. American Brake Shoe & Foundry Company. 106,280, Oct. 19, 1915. Republished Nov. 16.
Brake shoes. American Brake Shoe and Foundry Company. 288,054, Oct. 20, 1931. Republished Nov. 16.
Coaches, Automotive trailer house. Spartan Aircraft Company. 503,966, Nov. 16; Serial No. 540,726, published Aug. 3, 1948.
Covers for automobile seats. B. J. Lemberg. 503,972, Nov. 16; Serial No. 542,773, published Aug. 3, 1948.
Helicopters and structural parts thereof. Bell Aircraft Corporation. 441,320, Nov. 16; Serial No. 507,364, published Aug. 17, 1948.
Helicopters and structural parts thereof. Bell Aircraft Corporation. 441,321, Nov. 16; Serial No. 507,365, published Aug. 17, 1948.
Holders for maps and the like. A. J. Feltault. 441,346, Nov. 16; Serial No. 520,156, published July 20, 1948.
Map holders or jackets adapted for application to sun visors for automobiles. A. J. Feltault. 441,340, Nov. 16; Serial No. 518,882, published Aug. 10, 1948.
Mirrors for motor vehicles. Kales Stamping Company. 170,013, July 10, 1923. Republished Nov. 16.
Radiators, Automobile. Perfex Radiator Company. 148,703, Nov. 22, 1921. Republished Nov. 16.
Seat covers, Auto, boat covers and boat sails. Eveready Canvas Corporation. 503,880, Nov. 16; Serial No. 528,616, published Aug. 3, 1948.
Seat covers, Automobile. Glostex Products, Inc. 503,983, Nov. 16; Serial No. 544,442, published Aug. 3, 1948.
Tanks, combined fuel tanks and tool chests, etc., Fuel. Prior Products, Inc. 441,335, Nov. 16; Serial No. 516,506, published Aug. 3, 1948.
Trailers, House. Lighthouse Trailer Inc. 503,873, Nov. 16; Serial No. 526,884, published Aug. 3, 1948.
Trucks, floor trailers, casters, etc., Floor. Thomas Truck & Caster Co. 503,958, Nov. 16; Serial No. 539,239, published Aug. 3, 1948.
Trucks, Hand. Fairbanks Company. 504,042, Nov. 16; Serial No. 534,008.
Trucks of plastic fibre or metal, Hand. Fibrean Corporation. 441,312, Nov. 16; Serial No. 502,958, published Aug. 17, 1948.

Vehicle bodies, Automotive and railroad. Wayne Works. 503,889, Nov. 16; Serial No. 529,844, published Aug. 17, 1948.
Vehicle heaters. E. A. Laboratories, Inc. 503,967, Nov. 16; Serial No. 541,113, published Aug. 17, 1948.
Vehicles, Amphibian tracked landing. Food Machinery Corporation. 441,295, Nov. 16; Serial No. 472,948, published Aug. 10, 1948.
Wagons, trucks, and trailers, etc., Attachments for commercial. W. W. Jackson. 441,308, Nov. 16; Serial No. 498,902, published Aug. 17, 1948.

CLASS 20

Linseed oil on an asphaltum impregnated felt base, Composition of oxidized. Armstrong Cork Company. 223,736, Feb. 8, 1927. Amended. O. G. Nov. 16.
Oilcloth. Columbus-Union Oil Cloth Co. 194,212, Jan. 20, 1925. Republished Nov. 16.
Oiled cloth. Columbus-Union Oil Cloth Co. 196,264–5, Mar. 17, 1925. Republished Nov. 16.
Oiled cloth. Columbus-Union Oil Cloth Co. 196,428, Mar. 17, 1925. Republished Nov. 16.
Oiled cloth. Columbus-Union Oil Cloth Co. 232,382, Sept. 6, 1927. Republished Nov. 16.

CLASS 21

Amplifiers, Radio frequency power. Radio Engineering Laboratories, Inc. 503,939, Nov. 16; Serial No. 537,503, published Aug. 10, 1948.
Anodes, Copper, copper electrical bus bar electric table and floor lamps, etc. Chase Brass & Copper Co. Incorporated. 396,518, July 21, 1942. Republished Nov. 16.
Apparatus for providing audible indication to trace electronic signals in radio apparatus and the like; and electronic sound amplifiers. Precision Electronics, Inc. 441,345, Nov. 16; Serial No. 519,693, published Aug. 10, 1948.
Batteries. C. A. Hasslinger. 267,604, Feb. 25, 1930. Republished Nov. 16.
Buzzers, Electric. Wm. J. Murdock Co. 504,023, Nov. 16; Serial No. 513,268.
Connectors, Solderless. Jasper Blackburn Products Corporation. 503,882, Nov. 16; Serial No. 528,985, published Aug. 17, 1948.
Drills, Portable electric hand manipulable. E. S. Karlsen. 503,905, Nov. 16; Serial No. 533,319, published Aug. 10, 1948.
Electrical apparatus. Leland Electric Company. 503,929, Nov. 16; Serial No. 536,910, published Aug. 17, 1948.
Electrical equipment. Tradio, Inc. 441,315, Nov. 16; Serial No. 505,167, published Aug. 17, 1948.
Equipment and supplies, Electrical. Le Jay Manufacturing Co. 503,883, Nov. 16; Serial No. 529,059, published Aug. 17, 1948.
Fire alarms, Portable. R. B. Thornton. 503,936, Nov. 16; Serial No. 537,103, published Aug. 17, 1948.
Fittings and fixtures, Electrical line and conduit. Reliable Electric Company. 503,876, Nov. 16; Serial No. 527,539, published July 27, 1948.
Flashlights. Hamilton Art Metal Corporation. 504,022, Nov. 16; Serial No. 510,951.
Generators, armatures, starter drives and fuel pumps, Rebuilt electric. Generator-Ignition Sales Co. 441,330, Nov. 16; Serial No. 514,757, published July 27, 1948.
Generators, Electric, and parts thereof, gas and gasoline engine driven generator sets, electric motors, etc. Master Electric Company. 441,294, Nov. 16; Serial No. 471,267, published July 27, 1948.
Heaters, Electric. Wesix Electric Heater Co. 503,959, Nov. 16; Serial No. 539,246, published July 27, 1948.
Heating mantles and heaters, Electrical. Glas-Col Apparatus Company. 503,846, Nov. 16; Serial No. 503,898, published July 27, 1948.
Heating units of the resistance wire coil type, Electrical. Tuttle & Kift, Inc. 503,865, Nov. 16; Serial No. 520,481, published July 27, 1948.
Iron, Electric hand. Pioneer Products, Incorporated. 441,331, Nov. 16; Serial No. 514,841, published Aug. 3, 1948.
Irons, Automatic electric, electric heating pads and toasters. Son-Chief Electrics, Incorporated. 441,356, Nov. 16; Serial No. 524,578, published Aug. 3, 1948.
Lamps, Electric. Minuet Lamp Industries, Inc. 503,971, Nov. 16; Serial No. 542,628, published July 27, 1948.
Lamps, Incandescent, fluorescent, short wave, and ultraviolet. Industrial Electronics Corporation. 400,946, Apr. 13, 1943. Republished Nov. 16.
Lighting equipment, Electric. Bright Light Reflector Co., Inc. 503,949, Nov. 16; Serial No. 538,093, published Aug. 10, 1948.
Lighting fixtures, Electrical, and brackets and stands. Dazor Manufacturing Corp. 503,877, Nov. 16; Serial No. 527,914, published July 27, 1948.
Motor-clutches, Electric. Dynamatic Corporation. 503,874, Nov. 16; Serial No. 527,431, published Aug. 17, 1948.
Motors and various types of portable electrically-driven tools. Electrical. Louisville Electric Manufacturing Company. 503,903, Nov. 16; Serial No. 532,943, published July 27, 1948.
Motors, Electric. Universal Electric Corporation. 503,961, Nov. 16; Serial No. 539,581, published July 27, 1948.
Motors, Synchronous alternating current. Pioneer Instrument Company, Inc. 309,015, Dec. 26, 1933. Republished Nov. 16.
Panel boards, composite panels, switch board panels, etc., Electrical. Masonite Corporation. 503,850, Nov. 16; Serial No. 511,565, published Aug. 17, 1948.
Radio receiving and transmitting apparatus. Bendix Aviation Corporation. 504,024, Nov. 16; Serial No. 515,153.
Radio receiving antennae, television receiving antennae, frequency modulation receiving antennae, etc., Automobile. H. L. Dalis, Inc. 441,328, Nov. 16; Serial No. 513,557, published Aug. 17, 1948.
Radio receiving sets and parts thereof. Telephone Radio Company. 441,302, Nov. 16; Serial No. 491,437, published Aug. 10, 1948.
Range units and immersion heaters, and parts thereof, Electric. Edwin L. Wiegand Company. 441,363, Nov. 16; Serial No. 525,730.
Ranges and cookers, Electric. A. E. Rau. 503,842, Nov. 16; Serial No. 501,007, published Aug. 17, 1948.
Recording tape for magnetized reproduction. Minnesota Mining & Manufacturing Company. 503,908, Nov. 16; Serial No. 533,593, published Aug. 17, 1948.
Recording wire, Sound. National-Standard Company. 504,034, Nov. 16; Serial No. 520,829.
Reflectors for electric lights. F. A. Metlen. 503,854, Nov. 16; Serial No. 512,918, published Aug. 17, 1948.
Roasters, Electric food. Swartzbaugh Manufacturing Company. 503,858, Nov. 16; Serial No. 516,328, published July 27, 1948.
Separators, Magnetic. S. G. Frantz Co., Inc. 503,904, Nov. 16; Serial No. 533,156, published July 27, 1948.
Spark plugs. Windsor-Lloyd Products, Inc. 503,914, Nov. 16; Serial No. 534,704, published Aug. 3, 1948.
Spark plugs, and parts therefor, Automotive and gas engine. Stitt Ignition Company. 503,861, Nov. 16; Serial No. 518,111, published Aug. 17, 1948.
Storage batteries. Noah's Ark Auto Accessories, Inc. 306,006, Aug. 29, 1933. Republished Nov. 16.
Storage batteries. Pep Boys, Manny, Moe, & Jack. 503,912, Nov. 16; Serial No. 534,665, published Aug. 27, 1948.
Storage batteries. Pep Boys, Manny, Moe & Jack. 503,913, Nov. 16; Serial No. 534,667, published Aug. 10, 1948.
Storage batteries. Perrine Quality Products Corporation. 422,141, July 9, 1946. Republished Nov. 16.
Storage batteries and parts thereof. Hartford Battery Manufacturing Company. 134,677, Sept. 14, 1920. Republished Nov. 16.
Storage batteries and their parts. Perrine Quality Products Corporation. 311,588, Mar. 27, 1934. Republished Nov. 16.
Stoves, Electric cooking. Gibson Refrigerator Company. 503,916, Nov. 16; Serial No. 535,144, published Aug. 17, 1948.
Switches, mechanical actuator mechanisms for electric switches, etc., Electric. First Industrial Corporation. 441,319, Nov. 16; Serial No. 506,659, published July 27, 1948.
Tape and splicing-compound, Friction. Parr Electric Co. Inc. 503,878, Nov. 16; Serial No. 528,129, published Aug. 17, 1948.
Transmitting and/or receiving devices, Electrical. Bendix Aviation Corporation. 388,445, June 24, 1941. Republished Nov. 16.
Tools, Electrically operated portable. Buckeye Tools Corporation. 503,864, Nov. 16; Serial No. 519,623, published July 27, 1948.
Warning device for motor vehicles in form of periodic light interruptor, Electrical. United Accessories Corp. 441,332. Nov. 16; Serial No. 515,808, published Aug. 17, 1948.

CLASS 22

Amusement apparatus, Coin-controlled. Exhibit Supply Company. 504,040, Nov. 16; Serial No. 532,697.
Coin slides for coin-operated amusement devices and machines. A. B. T. Manufacturing Corp. 422,051, July 2, 1946. Republished Nov. 16.
Fishing spoons and fishing spinners. Paul Bunyan Bait Company. 429,195, Apr. 22, 1947. Republished Nov. 16.
Ice skates. Nestor Johnson Manufacturing Company. 246,706, renewed Sept. 11, 1948. O. G. Nov. 16.
Roller skates, ice skates, baseballs, etc. Spiegel, Inc. 433,286, Oct. 7, 1947. Republished Nov. 16.
Toy construction outfits. Playskool Institute, Inc. 296,802. Aug. 23, 1932. Republished Nov. 16.
Toy wheels and wheel assemblies. J. L. Brown. 504,019, Nov. 16; Serial No. 503,420.
Toys. Playskool Institute, Inc. 296,101, July 19, 1932. Republished Nov. 16.

CLASS 23

Apparatus for the treatment of solids suspended in liquids. Dorr Company. 248,626, renewed Oct. 23, 1948. O. G. Nov. 16.
Bearings, Composition, machinery shaft couplings; slides, etc. American Brake Shoe Company. 404,753, Dec. 21, 1943. Republished Nov. 16.
Beaters for culinary purposes. White and Hallock, Inc. 246,922, renewed Sept. 18, 1948. O. G. Nov. 16.
Boring bars, reamer bars, counterbores, etc., Expansion-cutter. Detroit Boring Bar Company. 267,248, Feb. 18, 1930. Republished Nov. 16.

Bushings, copper hammer heads, copper soldering tools, etc., Bronze and brass. Chase Brass & Copper Co. Incorporated. 397,446, Sept. 8, 1942. Republished Nov. 16.
Drills and drill-collars, Rotary earth-boring. Hughes Tool Company. 126,549, Sept. 16, 1919. Republished Nov. 16.
Gear manufacturing equipment. National Broach & Machine Co. 356,075, Apr. 12, 1938. Republished Nov. 16.
Governors for air-compressors, fire-pumps, boiler feed-pumps, etc. Fisher Governor Company. 80,117, Nov. 8, 1910. Republished Nov. 16.
Harvester, Combined, thresher, and separator. Gleaner Combine Harvester Corporation. 250,631, renewed Dec. 11, 1948. O. G. Nov. 16.
Heads for mechanical and hydraulic jacks. Blackhawk Mfg. Co. 348,419, July 27, 1937. Republished Nov. 16.
Hoist, Automobile. Globe Machinery & Supply Company. 269,292, Apr. 1, 1930. Republished Nov. 16.
Hoists, Automobile. Globe Hoist Company. 385,917, Mar. 25, 1941. Republished Nov. 16.
Lathes, Metal working. R. K. LeBlond Machine Tool Co. 503,868, Nov. 16; Serial No. 526,504, published July 20, 1948.
Lifts, Hydraulic. Globe Hoist Company. 391,635, Nov. 18, 1941. Republished Nov. 16.
Lubricators, Rail. American Brake Shoe Company. 423,512, Sept. 3, 1946. Republished Nov. 16.
Oilers, Hand-operated, oil guns, grease guns, etc. Chase Brass & Copper Co. Incorporated. 357,833, June 14, 1938. Republished Nov. 16.
Packaging machinery. J. L. Ferguson Company. 233,245, Sept. 27, 1927. Republished Nov. 16.
Proportioning apparatus for feeding liquids. Proportioneers, Inc. 326,570, July 30, 1935. Republished Nov. 16.
Pumps, parts thereof, and bases therefor, Proportioning. Proportioneers, Inc. 416,408, Sept. 11, 1945. Republished Nov. 16.
Razor blades. Club Razor & Blade Mfg. Corp. 332,182, Feb. 4, 1936. Republished Nov. 16.
Razor blades. Club Razor & Blade Mfg. Corp. 416,767, Sept. 25, 1945. Republished Nov. 16.
Razor blades. Rubie Blade Corporation. 246,846, renewed Sept. 18, 1948. O. G. Nov. 16.
Snow plow. Roto Plow Company. 410,488, Nov. 28, 1944. Republished Nov. 16.
Spray attachments for suction cleaners and the like. P. A. Geier Company. 244,174, July 17, 1928. Republished Nov. 16.
Tools, Metal working small. Cleveland Twist Drill Company. 169,822, July 3, 1923. Republished Nov. 16.
Tools, Metal-working small. Cleveland Twist Drill Company. 208,281, Jan. 26, 1926. Republished Nov. 16.
Tools, Metal-working small. Cleveland Twist Drill Company. 225,836, Mar. 29, 1927. Republished Nov. 16.
Tools, Sets of. Blackhawk Mfg. Co. 281,766, Mar. 31, 1931. Republished Nov. 16.
Wrenches. Coes Wrench Company. 64,696, Aug. 20, 1907. Republished Nov. 16.

CLASS 25

Chests in the nature of strong-boxes and safes, etc. Diebold, Incorporated. 503,896, Nov. 16; Serial No. 531,318, published Aug. 3, 1948.
Locks, Daylight vault door personnel protective. Diebold, Incorporated. 503,897, Nov. 16; Serial No. 531,319, published July 27, 1948.

CLASS 26

Apparatus for electrically indicating the conductivity of aqueous solutions of acids, alkalies, and salts to measure the concentration thereof. Apparatus Development Company. 441,322, Nov. 16; Serial No. 509,555, published Aug. 24, 1948.
Balls used in measuring and testing instruments. S K F Industries, Inc. 503,884, Nov. 16; Serial No. 529,092, published Aug. 24, 1948.
Balls used in measuring and testing instruments. S K F Industries, Inc. 503,885, Nov. 16; Serial No. 529,096, published Aug. 24, 1948.
Cameras, Photographic. General Aniline & Film Corporation. 503,910, Nov. 16; Serial No. 534,106, published Aug. 24, 1948.
Cameras, Photographic, and flash units. Federal Manufacturing & Engineering Corp. 503,954, Nov. 16; Serial No. 538,263, published Aug. 24, 1948.
Cameras, Strip-film, stripping cabinets, etching machines, etc. Chemco Photoproducts Company. 353,142, Dec. 28, 1937. Republished Nov. 16.
Canes which may be transposed into a stand for holding cameras. L. L. Blanchard. 441,348, Nov. 16; Serial No. 520,927, published Aug. 24, 1948.
Compasses, banking indicators, turn indicators, etc. Pioneer Instrument Company. 160,269, Oct. 17, 1922. Republished Nov. 16.
Compasses, Gyroscopically stabilized earth inductor. Bendix Aviation Corporation. 398,779, Nov. 24, 1942. Republished Nov. 16.
Compasses, Remote indicating magnetic, etc. Bendix Aviation Corporation. 396,990, Aug. 11, 1942. Republished Nov. 16.
Electrical apparatus. Polytechnic Research and Development Company Incorporated. 503,953, Nov. 16; Serial No. 538,173, published Aug. 24, 1948.
Gauges for measuring and recording vacuum pressure. F. J. Stokes Machine Company. 503,960, Nov. 16; Serial No. 539,452, published Aug. 17, 1948.
Gauges, Oil. Pioneer Instrument Company, Incorporated. 288,183, Oct. 20, 1931. Republished Nov. 16.
Gauging mechanisms, Electric. Arlin Products, Incorporated. 441,313, Nov. 16; Serial No. 504,024, published Aug. 24, 1948.
Gear manufacturing equipment. National Broach & Machine Co. 356,075, Apr. 12, 1938. Republished Nov. 16.
Glassware, Laboratory, experimental, hospital, clinical, chemical, and scientific. Macalaster Bicknell Company. 402,424, July 20, 1943. Republished Nov. 16.
Indicators, Aircraft speed and distance, electric turn indicators, electric pitch indicators, etc. Pioneer Instrument Company. 213,616, June 1, 1926. Republished Nov. 16.
Instruments, Electro-mechanical. Texas Company. 441,341–2, Nov. 16; Serial Nos. 519,146–7, published Aug. 24, 1948.
Lamps, Incandescent, fluorescent, short wave, and ultra violet. Industrial Electronics Corporation. 400,946, Apr. 13, 1943. Republished Nov. 16.
Motion pictures. Fox Case Corporation. 251,623, renewed Jan. 8, 1949. O. G. Nov. 16.
Motion pictures and motion picture films. Motion Picture Export Association, Inc. 504,028, Nov. 16; Serial No. 518,418.
Nozzles, Fluid flow metering. Builders Iron Foundry. 360,099, Sept. 6, 1938. Republished Nov. 16.
Opthalmic diagnostic instruments. American Optical Company. 441,304, Nov. 16; Serial No. 491,945, published Aug. 24, 1948.
Optical instruments. Farrand Optical Co., Inc. 441,362, Nov. 16; Serial No. 487,121.

Attorney General of the United States: *See*—
Rasmussen, Christian O.

Atwell, Clarence A., Pittsburgh, and E. O. Mueller, Irwin, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Dual generator ventilation. 2,454,120, Nov. 16.

Baby Haven Manufacturing Company, assignee: *See*—
Athey, Ralph S.

Backlund, Peter S.: *See*—
Polizzotto, Paul L., and Backlund.

Bacon, Emra D., Cleveland, Ohio. Synchronous electric motor. 2,454,026, Nov. 16.

Baeza, Daniel, Brooklyn, N. Y. Double-acting wrench for flanges. 2,454,027, Nov. 16.

Baker, Benjamin P., Turtle Creek, and D. C. Harker, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,454,121, Nov. 16.

Baker, John B., and H. D. Stover, assignors to The Timken Roller Bearing Company, Canton, Ohio. Self-contained roller-bearing cage. 2,454,028, Nov. 16.

Baldock, Harold: *See*—
Smith, Arthur E. W., Scaife, and Baldock.

Baldock, Herbert: *See*—
Smith, Arthur E. W., Scaife, and Baldock.

Ballard, Robert J.: *See*—
Boyer, John L., and Ballard.

Ballard, Seaver A.: *See*—
Finch, Harry D., Ballard, and Evans.

Baltimore Paper Box Co., The, assignee: *See*—
Bentham, Albert E.

Bankauf, William F., East Patterson, and H. B. Fisher, Belleville, N. J., assignors to Hewitt-Robins Incorporated. Dewatering apparatus. 2,453,961, Nov. 16.

Barber-Colman Company, assignee: *See*—
Ransome, Stafford M.

Barger, Fred H., Dayton, Ohio. Selective single control mechanism. 2,454,122, Nov. 16.

Barnett, Louis, Brooklyn, assignor to Raylite Electric Corp., Long Island City, N. Y. Heat and light concentrating holder for illuminated decorative lighting devices. 2,453,962, Nov. 16.

Barry, Louis J., and W. S. Hegamyer, Middletown, R. I. Torpedo. 2,453,828, Nov. 16.

Bartholomew, Charles J., Birmingham, assignor to Ford Motor Company, Dearborn, Mich. Enamel composition. 2,454,123, Nov. 16.

Basista, Theodore J., Westfield, Mass. Device for adjusting breaker units. 2,453,774, Nov. 16.

Bastian Blessing Co., The, assignee: *See*—
Buttner, William C., and Norway.

Bastis, Christ, assignee: *See*—
Sundel, Samuel.

Bates, C. J., & Son, assignee: *See*—
Bates, Wells C.

Bates, Wells C., assignor to C. J. Bates & Son, Chester, Conn. Producing plastic-coated knitting needles. 2,453,739, Nov. 16.

Beath, Laurence R., and H. S. Hill, Kenogami, assignors to Price Brothers & Company, Limited, Quebec, Quebec, Canada. Concentrating waste sulfite liquor with recovery of sulfur dioxide. 2,453,775, Nov. 16.

Beath, Laurence R.: *See*—
Hill, Harold S., and Beath.

Beath, Laurence R., and H. S. Hill, Kenogami, assignors to Price Brothers & Company, Limited, Quebec, Quebec, Canada. Electrical conductance heater. 2,453,776, Nov. 16.

Beaver, David J., St. Albans, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo. Vulcanizing synthetic rubber with dixanthic sulfides. 2,453,689, Nov. 16.

Becker, Sam B., assignor to Standard Oil Company, Chicago, Ill. Oxidation of organic compounds and manufacture of phthalic anhydride. 2,453,740, Nov. 16.

Beeck, Otto A.: *See*—
Smith, Albert E., and Beeck.

Bell Aircraft Corporation, assignee: *See*—
Schwartz, Arthur A.

Bell, Leroy V., Wakefield, R. I. Improved cigarette package opener and cigarette ejector. 2,453,777, Nov. 16.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Cesareo, Orfeo.
Ellwood, Walter B.
Hilsinger, Harry A., Jr.
Llewellyn, Frederick B.
Rea, Wilton T., and Wilkerson.
Robinson, Albert L.
Schelleng, John C.

Belling, Bernard A., Beaver Dam, Wis. Lighting set. 2,453,695, Nov. 16.

Benbow, Burtis W., Benbow, Calif. Electrical contacting equipment. 2,453,778, Nov. 16.

Bendix Aviation Corporation, assignee: *See*—
Flanagan, Robert.
Hegy, Louis.
Jandasek, Joseph.
Rodemann, Emmett P.

Bentham, Albert E., assignor to The Baltimore Paper Box Co., Baltimore, Md. Carton. 2,454,029, Nov. 16.

Bercaw, Henry B., Kenton, Ohio. Pulley block. 2,453,963, Nov. 16.

Berger, Earl O.: *See*—
Robinson, Lawrence R., and K. I., Berger and Lang.

Berglund, Nils, administrator: *See*—
Flater, Harold, Berglund, and Waernhoff, and Franson.

Bergstrom, Herman A.: *See*—
Von Glahn, William H., and Bergstrom.

Berk, Abraham A.: *See*—
Schroeder, Wilburn C., and Berk.

Berli, Norbert C., et al.: *See*—
Hufferd, George H., and Berli.

Berry, Mitchell M.: *See*—
Lidral, John P., and Berry.

Bertine, Gladys L., administratrix: *See*—
Schultz, Mortimer A., and Bertine.

Bertine, Robert E.: *See*—
Schultz, Mortimer A., and Bertine.

Besore, Jay M., Chevy Chase, assignor, by mesne assignments, to The Briggs Filtration Company, Bethesda, Md. Filter. 2,454,030, Nov. 16.

Best, David M.: *See*—
Claypool, Robbins M., and Best.

Betz, Albert, Hamilton, Ohio. Coupling for shafts. 2,453,964, Nov. 16.

Bevan, Leslie H.: *See*—
Fletcher, Roy A., and Bevan.

Bewley, Adele L., Buffalo, N. Y. Magnetic reflective toy. 2,453,965, Nov. 16.

Birsch, Edwin T., and W. D. Silcox, Lewistown, Pa., assignors to American Viscose Corporation, Wilmington, Del. Series filtration. 2,454,124, Nov. 16.

Bish, Ralph E.: *See*—
Prouty, Robert E., Bish, and Adams.

Bishop, J., & Co., Platinum Works, assignee: *See*—
Hickey, George M., and Matlack.

Blackman, Smith A., Kirkwood, assignor to Gaylord Container Corporation, St. Louis, Mo. Shipping carton. 2,453,829, Nov. 16.

Bley, Fred M., Glenview, Ill. Cutoff wheel. 2,454,125, Nov. 16.

Blocker, William B.: *See*—
Anthony, David S., and Blocker.

Bloomfield, Samuel, Wichita, Kans., assignor to C. Earl Hovey, Kansas City, Mo., trustee. Bottle closure. 2,454,126, Nov. 16.

Boardman, Hubert, Rochdale, England. Mask with adjustable supporting means for profile projectors. 2,454,127, Nov. 16.

Boeing Airplane Company, assignee: *See*—
Lidral, John P., and Berry.

Bojanower, Albert M., Downey, assignor to Western Waxed Paper Company, Oakland, Calif. Heat-sealing the seams of paper bags. 2,453,889, Nov. 16.

Bond, Donald C., Northbrook, and M. Savoy, assignors to The Pure Oil Company, Chicago, Ill. Preparation of alkyl halides. 2,453,779, Nov. 16.

Bondley, Ralph J., Scotia, N. Y., assignor to General Electric Company. Electric discharge device of the magnetron type. 2,454,031, Nov. 16.

Bone, Arthur G.: *See*—
Reilly, Hugh L., Scrimshaw, and Bone.

Boothroyd, Wilson P., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Electrical system. 2,454,128, Nov. 16.

Bopp, Cecil W., Waterloo, Iowa. Hydraulic hose coupling. 2,453,741, Nov. 16.

Bosland, Herman S.: *See*—
La Piana, Fred G., and Bosland.

Boulais, William A., Jr., Jersey City, N. J. Photographic border device. 2,454,032, Nov. 16.

Bourquin, Jean-Pierre: *See*—
Schnider, Otto, and Bourquin, and Grüssner.

Bowen, Henry B., and A. M. Vineberg, Montreal, Quebec, Canada. Terminal attachment for crutches and the like. 2,453,742, Nov. 16.

Boyer, John L., Wilkinsburg, and R. J. Ballard, West Newton, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Vapor electric device. 2,454,129, Nov. 16.

Brahm, Clarence A.: *See*—
Lorentz, Mynard R., and Brahm.

Braun, Armond W., Grafton, Iowa. Adjustable wheel structure. 2,454,130, Nov. 16.

Bray, Ulric B., Pasadena, Calif. Producing polyvalent-metal hydrocarbon sulfonate. 2,453,690, Nov. 16.

Brecht, Winston A., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Locomotive drive. 2,454,131, Nov. 16.

Bremner, John G. M., and D. G. Jones, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited. Oxidation of cyclic ethers. 2,453,890, Nov. 16.

Briggs Filtration Company, The, assignee: *See*—
Besore, Jay M.

Briggs, Southwick W., Washington, D. C. Filter. 2,454,033, Nov. 16.

Broadbent, John H., Willistown Township, Chester County, assignor to The Union Switch and Signal Company, Swissvale, Pa. Traffic protection apparatus. 2,454,249, Nov. 16.

Brooks, Phillips, Brooklyn, N. Y. Dental root preparation instrument. 2,453,696, Nov. 16.

Broughton, Douglas J., assignor to Buxton, Incorporated, Springfield, Mass. Flexible pocket receptacle. 2,453,780, Nov. 16.

Brown, Leo H., Glenville, Conn. Gun sight having a plurality of illuminated reticles. 2,453,697, Nov. 16.

Brown, Louis, and L. Lacey, Uvalde, Tex. Double-acting shock absorber. 2,453,966, Nov. 16.

Brown, Paul F., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Oscillating system. 2,454,132, Nov. 16.

Browne, Stewart R., Brooklyn, assignor to Stewart R. Browne Mfg. Co. Inc., New York, N. Y. Lamp support. 2,453,967, Nov. 16.

Browne, Stewart R., Mfg. Co. Inc., assignee: *See*—
Browne, Stewart R.

Bryant Heater Company, assignee: *See*—
Higley, Frank R.

Buchhorn, Robert H., Texas City, Tex. Attachment to geometrical instrument. 2,454,133, Nov. 16.

Buffalo Electro-Chemical Company, Inc., assignee: *See*—
Kuoch, Robert, and Shanley.

Bundy Tubing Company, assignee: *See*—
Payne, Arthur W.

Burk, Paul W.: *See*—
Chadwick, George A., and Burk.

Burleson, Ambrose L., Berkeley, Calif. Rotary drum filter. 2,454,134, Nov. 16.

Burns, Joseph R., Millbourne, Pa.: T. A. Foulke, executor of said Joseph R. Burns, deceased. Binding implement. 2,454,135, Nov. 16.

Burt, Clarence E., Pasadena, assignor to Grant Oil Tool Company, Los Angeles, Calif. Pressure release. 2,453,891, Nov. 16.

Bussert, Clarence, assignee: *See*—
Hamlet, Darrel P.

Buttner, William C., Winnetka, and H. L. Norway, Evanston, assignors to The Bastian Blessing Co., Chicago, Ill. Gas dispensing system. 2,453,968, Nov. 16.

Buxton, Incorporated, assignee: *See*—
Broughton, Douglas J.

Camp, Elza Q., et al.: *See*—
Viles, Prentiss S., and Camp.

Campbell, Robert A., Oak Park, Ill. Revolving polarized disk. 2,453,698, Nov. 16.

Carey, Philip, Manufacturing Company, The, assignee: *See*—
Marc, Henri M.

Carter, Edwin C., Rio Grande City, Tex. Artificial limb. 2,453,969, Nov. 16.

Carville, Theodore E. M., Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Two-speed single-phase motor. 2,454,136, Nov. 16.

Case, J. I., Company, assignee: *See*—
Irvine, Houston N.

Casson, Nicholas V., Bronx, N. Y. Ecclesiastical equipment. 2,453,892, Nov. 16.

Castagnola, Angelo B., Oakland, Calif. Molder's flask. 2,453,893, Nov. 16.

Celanese Corporation of America, assignee: *See*—
Fallows, Leonard, and Mellers.

Cesareo, Orfeo, Washington Township, Bergen County, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signaling system and training device for target tracking. 2,453,743, Nov. 16.

Chadwick, George A., and P. W. Burk, Washington, D. C. Machine gun. 2,453,830, Nov. 16.

Challis, Kenneth J.: *See*—
Dimsdale, Wilfrid H., and Challis.

Chambliss, Hiriam D., Oak Ridge, Tenn. Lathe. 2,453,744, Nov. 16.

Champion Forge Company, assignee: *See*—
Terhune, Howard.

Charrier, George M., Collingswood, N. J., assignor to Radio Corporation of America. Recognition system for pulse echo radio locators. 2,453,970, Nov. 16.

Chase Brass & Copper Co. Incorporated, assignee: *See*—
Mellette, Cyril W.

Chemlinski, Raymond, Schenectady, N. Y. Combined pipe stand and container for smoking tobacco. 2,453,971, Nov. 16.

Chicago Development Company, assignee: *See*—
Dean, Reginald S.

Chisholm, Clifton, Forest Hills, N. Y., assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio. Record controlled operating mechanism for embossing machine keyboards. 2,453,781, Nov. 16.

Chisholm, Clifton, Forest Hills, N. Y., assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio. Strip perforating apparatus. 2,453,782, Nov. 16.

Chorpening, Creed M., assignor to The Astatic Corporation, Conneaut, Ohio. Mounting stylus cartridge. 2,453,894, Nov. 16.

Chrysler Corporation, assignee: *See*—
Cousino, Walter P.
Iavelli, Teno.
Pennington, Gordon R.
Phelan, Hubert S.
Williams, Burdell S.

Cities Service Oil Company, assignee: *See*—
Mastin, Robert G.

Clark, Dayton P., Jr., assignor to Gulf Research & Development Company, Pittsburgh, Pa. Process for preparing sulfurized lubricating composition. 2,454,034, Nov. 16.

Clark, Earl W., Stuart, Fla. Knife and scissors sharpening device. 2,454,035, Nov. 16.

Clavé, Marcel: *See*—
Clavé, Serge and M.

Clavé, Serge and M., Paris, France. Machines for cutting and polishing nonspherical or conical surfaces by means of abrasive band tools. 2,453,972, Nov. 16.

Claypool, Don H., Mansfield, Ohio. Automatic shutoff for tractors. 2,453,783, Nov. 16.

Claypool, Robbins M., Bellaire, and D. M. Best, Houston, Tex. Tubing tool joint. 2,454,137, Nov. 16.

Clayton-Wright, Howard, Stratford-on-Avon, England, assignor to Simpson Catherwood Leonard, Detroit, Mich. Fluid seal for shafts. 2,454,036, Nov. 16.

Coates, Charles H., Baton Rouge, La. Cylinder plug for gas operated guns with grenade launchers. 2,453,699, Nov. 16.

Coats, William E., Los Angeles, Calif. Dustpan. 2,453,973, Nov. 16.

Colaluca, Phillip, Youngstown, Ohio. Ketchup dispenser. 2,453,974, Nov. 16.

Cole, Gilmoure N., Manchester, and C. R. Wells, Rocky Hill, assignors to United Aircraft Corporation, East Hartford, Conn. Engine cooling fan. 2,454,037, Nov. 16.

Colvin-Templeton, Inc., assignee: *See*—
Sears, Edward O.

Conjurske, Frank J., Sturgeon Bay, Wis. Sanitary cover and cushion for shampoo boards. 2,453,784, Nov. 16.

Conn, John B., and J. van de Kamp, Westfield, assignors to Merck & Co., Inc., Rahway, N. J. Electrolytic oxidation of quinoline to quinolinic acid. 2,453,701, Nov. 16.

Connecticut Tool & Engineering Company, assignee: *See*—
Tomek, Ernst J.

Control Instrument Company, Inc., assignee: *See*—
Herr, Donald L.

Coombs, Robert E., and R. C. Hale, United States Coast Guard. Life jacket. 2,453,700, Nov. 16.

Cork, Edward C.: *See*—
Holman, Herbert E., and Cork.

Corporon, Richard P.: *See*—
Lappin, Lester S., and Corporon.

Corwin, R. A., & Son, assignee: *See*—
Corwin, Richard F.

Corwin, Richard F., assignor to R. A. Corwin & Son, East Hampton, N. Y. Filter for sediment traps. 2,453,895, Nov. 16.

Coulter, Guy H., assignor to United Lens Corporation, Detroit, Mich. Direction signaling system for automatic vehicles. 2,453,702, Nov. 16.

Cousino, Walter P., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Holding apparatus with piston through which pressure fluid is passed. 2,453,785, Nov. 16.

Cox, Ralph E., Schenectady, N. Y., assignor to General Electric Company. High-frequency induction heating apparatus. 2,454,039, Nov. 16.

Crest Silver Mfg. Co., Inc., assignee: *See*—
Shatkin, Sidney.

Crever, Frederick E., Scotia, N. Y., assignor to General Electric Company. Control system for aircraft turbosuperchargers. 2,454,038, Nov. 16.

Croskey, Earl H., and V. M. Hackman, assignors of one-third to C. W. Mossman, Cedar Rapids, Iowa. Door check. 2,453,831, Nov. 16.

Crown Zellerbach Corporation, assignee: *See*—
Swift, Frank H.

Curtiss-Wright Corporation, assignee: *See*—
Molloy, Eddie, and Raiche.
Rowe, Donald C.

Dadson, Thomas E., Detroit, assignor of one-half to Kalamazoo Stove & Furnace Company, Kalamazoo, Mich., and one-half to Admiral Corporation, Chicago, Ill. Electric stove or range. 2,453,832, Nov. 16.

Dalton, William, Schenectady, N. Y., assignor to General Electric Company. Aircraft propeller. 2,454,040, Nov. 16.

Dance, Eldred L.: *See*—
Hill, Howard W., and Dance.

Davis, William S., Jr., Pittsburgh, Pa., and D. L. Wright, Westfield, N. J., assignors to Standard Oil Development Company. Corrosion preventive. 2,453,833, Nov. 16.

Day, Herbert O., Bowling Green, Ohio. Pivoting hydraulic power cylinders for dump trucks. 2,453,975, Nov. 16.

Dean, Reginald S., Salt Lake City, Utah, assignor to Chicago Development Company, Chicago, Ill. Treatment of titanium. 2,453,896, Nov. 16.

Dean, Walter N., et al.: *See*—
Isbister, Eric J., and Dean.

Debing, Lawrence M., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Molding composition of polyvinyl aromatic compound. 2,454,250, Nov. 16.

De Carlo, Ceasar P., Sr., Ceiba, P. R. Louver means for controlling air flow in refrigerators. 2,453,703, Nov. 16.

Deegan, Lola M., Melbourne, Victoria, Australia. Combination corset and stocking retainer. 2,453,834, Nov. 16.

Deizer, Reinhold, Portland, Oreg. Engine driven pump. 2,454,138, Nov. 16.

De Meo, Attilio, New York, N. Y. Reinforced plastic securing means in a frame for interchangeable hand mirrors. 2,454,041, Nov. 16.

De Muth, Linus J., Fresno, Calif. Road map holder, including a rotatable roller. 2,454,139, Nov. 16.

Derr, Willard A., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Remote control for electric transmission systems. 2,454,140, Nov. 16.

De Saracho, Enrique S. H., Mexico City, Mexico. Wire core extracting machine. 2,454,010, Nov. 16.

Dettinger, David, Little Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Standing-wave measuring apparatus. 2,454,042, Nov. 16.

Diesel Filter Co., assignee: *See*—
Sager, Victor.

Dimsdale, Wilfrid H., and K. J. Challis, assignors to Ilford Limited, Ilford, England. Gelatino-silver halide photographic elements containing higher fatty alcohols. 2,454,043, Nov. 16.

Dixon, Paul H., Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Feed mechanism for rapid-fire guns. 2,453,786, Nov. 16.

Dole Valve Company, The, assignee: *See*—
Drapeau, Harold B.

Dolorimeter, Inc., assignee: *See*—
Gluzek, Lorand J. B.

Donkin, William F., Cleveland Heights, assignor to Willard Storage Battery Company, Cleveland, Ohio. Battery handle and hold-down bracket. 2,453,835, Nov. 16.

Douglas Aircraft Company, Inc., assignee: *See*—
Mayo, Alfred M.

Dow Chemical Company, The, assignee: *See*—
Hill, Howard W., and Dance.

Downs, George W., Jr., Pasadena, Calif., assignor to the United States of America as represented by the Secretary of the Navy. Saw-tooth voltage generator. 2,453,787, Nov. 16.

Drapeau, Harold B., Oak Park, assignor to The Dole Valve Company, Chicago, Ill. Thermostatic liquid controlling device. 2,454,141, Nov. 16.

Dresser, Willis R.: *See*—
Waller, Fred, and Dresser.

Dunfee, Hod C., Miami, Fla. Golf game and instructional apparatus. 2,453,745, Nov. 16.

Dunlop, Andrew P., Riverside, Ill., and E. A. Reineck, Appleton, Wis., assignors to The Quaker Oats Company, Chicago, Ill. Furfuryl alcohol-phenolic resins. 2,453,704, Nov. 16.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
McGrew, Frank C.
Signaigo, Frank K.
Walling, Cheves T.

Durant, Lyndon A., and G. Horlick, Chicago, Ill., assignors to Royal Patent Corporation. Ball gate and elevating mechanism. 2,453,976, Nov. 16.

Duvall, George H., Jr., Los Angeles, Calif. Wheel and tire locking device. 2,453,746, Nov. 16.

Eakins, Merle M.: *See*—
Fisher, John M., and Eakins.

Eames, James O., Washington, assignor to R. S. Sanford, Woodbury, Conn. Cartridge feeding device. 2,453,977, Nov. 16.

Eggert, Herbert A., Oak Park, Ill. Draft regulator. 2,454,044, Nov. 16.

Egleson, James E. A., Essex Fells, N. J. Shotgun choke. 2,453,747, Nov. 16.

Eklund, Hans E., assignor to Aktiebolaget Ljungman Verkstäder, Malmo, Sweden. Safety for self-loading firearms. 2,453,897, Nov. 16.

Electric Service Manufacturing Company, assignee: *See*— McFarlin, John R.

Electric Storage Battery Company, The, assignee: *See*— Galloway, Charles D.

Electric & Musical Industries Limited, assignee: *See*— Holman, Herbert E., and Cork.

Elliott, Curtis M.: *See*— Jellinek, Curt.

Elliott, Paul C., assignor to L. K. Funkhouser, Dayton, Ohio. Machine for forming containers from flexible material. 2,453,836, Nov. 16.

Ellsworth, John T., Collinsville, Ill. Electrolytic recovery of zinc. 2,454,142, Nov. 16.

Ellwood, Walter B., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Amplifier. 2,454,045, Nov. 16.

Elmendorf, Duryea E., Cleveland, Ohio, assignor to General Electric Company. Electrode structure. 2,453,978, Nov. 16.

Elmore, Oran, assignee: *See*— Johnson, Marshal D.

Engel, George C.: *See*— Amend, Adolph, Jr., and Engel.

England, August J., Providence, R. I. Die set with feeding means. 2,454,143, Nov. 16.

Epstein, David W., Princeton, N. J., assignor to Radio Corporation of America. Image projection system. 2,454,144, Nov. 16.

Erkkila, Andrew, assignor to Independent Lock Company, Fitchburg, Mass. Lock casing construction. 2,454,145. Nov. 16.

Escher Wyss Maschinenfabriken Aktiengesellschaft, assignee: *See*— Schmidt, David.

Essex Wire Corporation, assignee: *See*— Prouty, Robert E., Bish, and Adams.

Eureka Williams Corporation, assignee: *See*— Whipple, Leon V.

Evans, Theodore W.: *See*— Finch, Harry D., Ballard, and Evans.

Exbelent, Georges E., Paris, France. Weaving machine. 2,454,146, Nov. 16.

Fairchild Engine and Airplane Corporation, assignee: *See*— Whitfield, Marshall G., and Sheshunoff.

Fallows, Leonard, and E. V. Mellers, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America. Polymerization of olefinic compounds. 2,453,788, Nov. 16.

Federal Products Corporation, assignee: *See*— Graves, Walter. Worthen, John H.

Feldscher, John C.: *See*— Ames, Robert S., Peterson, and Feldscher.

Fielder, Frederick D., Sharon, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical apparatus. 2,454,147, Nov. 16.

Fields, George C., Wilmette, Ill., assignor to Solar Corporation, Milwaukee, Wis. Motor scooter. 2,454,046, Nov. 16.

Finch, Harry D., El Cerrito, S. A. Ballard, Orinda, and T. W. Evans, Oakland, assignors to Shell Development Company, San Francisco, Calif. Conversion of alicyclic aldehydes. 2,454,047, Nov. 16.

Fisher, Edward J., and W. B. Franklin, Baytown, Tex., and D. A. Smith, Washington, D. C., assignors to Standard Oil Development Company. Apparatus for alkylation. 2,453,837, Nov. 16.

Fisher, Harry B.: *See*— Bankauf, William F., and Fisher.

Fisher, John M., and Merle M. Eakins, Ford City, assignors to Pittsburgh Plate Glass Company, Allegheny County, Pa. Surfacing runner. 2,453,748, Nov. 16.

Flanagan, Robert, Glen Rock, assignor to Bendix Aviation Corporation, Teterboro, N. J. Rotary air compressor. 2,454,048, Nov. 16.

Flater, Harold, deceased, Norrkoping, Sweden; by N. Bergiund, administrator, Djursholm, and E. T. Waernhoff, and N. G. Franson, Norrkoping, Sweden; said H. Flater and said E. T. Waernhoff, and N. G. Franson, assignors to International Harvester Company. Twine making machine. 2,453,789, Nov. 16.

Fletcher, Roy A., and L. H. Bevan, London, England. Apparatus for indicating the available seating accommodation at places of entertainment. 2,453,838, Nov. 16.

Florence Stove Company, assignee: *See*— Schneider, Frank H.

Floyd, George H., Jr., Schenectady, N. Y., assignor to General Electric Company. Electric capacitor. 2,454,049, Nov. 16.

Foddy, Harold M., Colrain, Mass. Ash tray. 2,453,790, Nov. 16.

Forbes, Charles J., Terre Haute, Ind. Ring lock cutter chain structure. 2,453,898, Nov. 16.

Ford Motor Company, assignee: *See*— Bartholomew, Charles J. Wharam, John J., and Jovanovich.

Fought, William O., Jr., Parkersburg, W. Va. Garment stand. 2,454,148, Nov. 16.

Foulke, Thomas A., Executor: *See*— Burns, Joseph R.

Franklin, Leslie U., and C. F. Plumhoff, Port Arthur, Tex., assignors to Gulf Oil Corporation, Pittsburgh, Pa. Isomerization of normal butane. 2,454,149, Nov. 16.

Franklin, William B.: *See*— Fisher, Edward J., Franklin, and Smith.

Franson, Nils G.: *See*— Flater, Harold, Berglund, Waernhoff, and Franson.

Fredendall, Gordon L., Feasterville, Pa., assignor to Radio Corporation of America. Voltage adjusting system. 2,454,150, Nov. 16.

Frick Company, assignee: *See*— Good, Daniel F.

Friden Calculating Machine Co., Inc., assignee: *See*— Moody, John L.

Friedmann, Hugo, Astoria, N. Y. Divider and the like with measuring scales. 2,454,050, Nov. 16.

Frontz, Le Roy, Allenwood, Pa. Portable wire reel holder. 2,453,979, Nov. 16.

Fuller Manufacturing Company, assignee: *See*— Trall, Herbert H.

Funkhouser, Luther K., assignee: *See*— Elliott, Paul C.

Furness, William H., Haddonfield, N. J., assignor to American Viscose Corporation, Wilmington, Del. Method and apparatus for spinning artificial filaments. 2,453,839, Nov. 16.

Gaines, Charles, Vallejo, Calif. Swiveling reciprocating-saw sawing machine. 2,453,899, Nov. 16.

Gallagher, John L., United States Army, Santa Ana, Calif. First-aid pressure dressing. 2,453,705, Nov. 16.

Galloway, Charles D., Wyndmoor, Pa., assignor to The Electric Storage Battery Company. Mold for the manufacture of storage batteries. 2,454,051, Nov. 16.

Galloway, Charles D., Wyndmoor, Pa., assignor to The Electric Storage Battery Company. Storage battery plate assembly. 2,454,052, Nov. 16.

Galloway, Charles D., Wyndmoor, Pa., assignor to The Electric Storage Battery Company. Process for the manufacture of storage batteries. 2,454,053, Nov. 16.

Garbo, Paul W., Freeport, N. Y. Catalytic production of amides. 2,453,706, Nov. 16.

Gardiner, William R., and J. T. Mays, Herrin, Ill. Film developing apparatus. 2,453,900, Nov. 16.

Gardner, Charles E., Hollis, Long Island, N. Y., assignor to Wingfoot Corporation, Akron, Ohio. Production of thread. 2,453,984, Nov. 16.

Gay, Walter A., Jr., assignee: *See*— Hare, Willis G. and Roebuck.

Gaylord Container Corporation, assignee: *See*— Blackman, Smith A.

Geertsema, Kenneth B., Valley Stream, N. Y., assignor to Heli-Coil Corporation. Insert coil setting tool. 2,453,840, Nov. 16.

General Aniline & Film Corporation, assignee: *See*— Anish, Alfred W. Mueller, Fritz W. H. Von Glahn, William H., and Bergstroj.

General Electric Company, assignee: *See*— Bondley, Ralph J. Cox, Ralph E. Crever, Frederick E. Dalton, William. Elmendorf, Duryea E. Floyd, George H., Jr. Greiner, Alfred and Seitz. Rietz, George A. Stacy, John D. Von Hoorn, Fred G. Woodson, Thomas T.

General Time Instruments Corporation, assignee: *See*— Amend, Adolph, Jr., and Engel.

Gerlach, Francis H., Wapakoneta, and J. D. Miner, Jr., Lima, Ohio, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric motor. 2,454,155, Nov. 16.

Gibb, Docia I., Denver, Colo. Egg poacher. 2,454,054, Nov. 16.

Gilchrist, Lawrence B., Hammondsville, Ohio, assignor to National Steel Corporation. Apparatus for handling material. 2,454,055, Nov. 16.

Gillette Safety Razor Company, assignee: *See*— Muros, Joseph.

Glass Fibers, Inc., assignee: *See*— Schiehr, Walter R.

Glick, Jack, Bronx, assignor to The Gluckin Corporation, New York, N. Y. Brassière. 2,454,151, Nov. 16.

Glick, Jack, Bronx, assignor to The Gluckin Corporation, New York, N. Y. Brassière and similar garment. 2,454,152, Nov. 16.

Glick, Jack, Bronx, assignor to The Gluckin Corporation, New York, N. Y. Brassière. 2,454,153, Nov. 16.

Glick, Jack, Bronx, assignor to The Gluckin Corporation, New York, N. Y. Supporting straps for brassières. 2,454,154, Nov. 16.

Gluckin Corporation, The, assignee: *See*— Glick, Jack.

Gluzek, Lorand, J. B., Parma, assignor to Dolorimeter, Inc., Cleveland, Ohio. Medical diagnostic device. 2,453,841, Nov. 16.

Goldfien, Irving, Milwaukee, Wis. Sewer design slide rule. 2,454,157, Nov. 16.

Goller, George N.: *See*— Weitzenkorn, Lee F., and Goller.

Gonsett, Faust R.: *See*— Gonsett, Robert R. and F. R.

Gonsett, Robert R. and F. R., Los Angeles, Calif. Compound wrench and screw-driver. 2,453,901, Nov. 16.

Good, Daniel F., Waynesboro, assignor to Frick Company, Franklin County, Pa. Peanut picker. 2,454,156, Nov. 16.

Goodrich, B. F., Company, The, assignee: *See*— Sapp, John P.

Goodyear Aircraft Corporation, assignee: *See*— Ames, Robert S., Peterson, and Feldscher.

Gorman, Nelson G., New Orleans, La. Fluid heater. 2,453,985, Nov. 16.

Gossard, Charles M., assignor to Pangborn Corporation, Hagerstown, Md. Abrasive blast table. 2,454,158, Nov. 16.

Graham & Barker, assignee: *See*— Graham, George C.

Graham, George C., assignor, by mesne assignments, to Graham & Barker, Ridgewood, N. J. Automatic washing machine. 2,453,707, Nov. 16.

Graham, Thomas A., San Leandro, Calif. Advertising folder with picture frame and easel. 2,453,902, Nov. 16.

Grant Oil Tool Company, assignee: *See*— Burt, Clarence E.

Graves, Walter, Ann Arbor, Mich., assignor, by mesne assignments, to Federal Products Corporation, Providence, R. I. Guide sleeve construction for plug gauges. 2,454,159, Nov. 16.

Gray, Alfred R., Bronx, N. Y. Theft alarm system for automobiles. 2,453,903, Nov. 16.

Green, Marty, and I. Sheroff, Brooklyn, N. Y. Apparatus for shaping and forming leather. 2,453,987, Nov. 16.

Greene, Otto W., Brighton, assignor to The Pfaudler Co., Rochester, N. Y. Corrosion resisting valve. 2,454,160, Nov. 16.

Greger, Herbert H., Washington, D. C. Aluminum phosphate binder and preparing the same. 2,454,056, Nov. 16.

Greiner, Alfred, Cleveland Heights, and A. W. Seitz, Euclid, Ohio, assignors to General Electric Company. Circular electric lamp. 2,453,986, Nov. 16.

Grenot, Leo D., Oakland, assignor to Shell Development Company, San Francisco, Calif. Electrolytic preparation of corrosion testing elements. 2,453,904, Nov. 16.

Grib, Boris F., Brooklyn, assignor to Times Facsimile Corporation, New York, N. Y. Facsimile recorder control circuit. 2,453,905, Nov. 16.

Grossman Music Company, assignee: *See*— Thompson, Josephus.

Grunwald, Albert C., River Forest, assignor to Precision Metal Workers, Chicago, Ill. Chair iron and seat cushion therefor. 2,454,057, Nov. 16.

Grüssner, André: *See*— Schnider, Otto, Bourquin, and Grüssner.

Guanella, Gustav, Zürich, Switzerland, assignor to Radio Patents Corporation, New York, N. Y. Automatic frequency control. 2,453,988, Nov. 16.

Guckert, Leonard S., Baltimore, Md., assignor to Mavest, Inc., New York, N. Y. Coat. 2,453,989, Nov. 16.

Gulf Oil Corporation, assignee: *See*— Franklin, Leslie U., and Plumhoff. Hill, Mark L., and Smith.

Gulf Research & Development Company, assignee: *See*— Clark, Dayton P., Jr.

Hackman, Victor M.: *See*— Croskey, Earl H., and Hackman.

Hale, Roger C.: *See*— Coombs, Robert E., and Hale.

Hall, Sherman B., Brockway, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical relay system. 2,454,161, Nov. 16.

Hamilton, Munroe H.: *See*— Toland W. C., and Hamilton.

Hamilton, Wallace, Albany, N. Y. Cartridge feeding mechanism for automatic guns. 2,454,251, Nov. 16.

Hamlet, Darrel P., assignor to C. Bussert, Melrose Park, Ill. Device for preserving objects requiring liquid supply. 2,453,906, Nov. 16.

Hammer, John J., Detroit, Mich. Traffic or display sign. 2,454,162, Nov. 16.

Hammond, John H., Jr., Gloucester, Mass. Gas bomb. 2,453,842, Nov. 16.

Hanson, Kenneth L., Minneapolis, Minn. Article holder for attachment to automobile visors. 2,453,843, Nov. 16.

Harder, Edwin L., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Protective relaying system. 2,454,163, Nov. 16.

Harder, Edwin L., Edgewood, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system. 2,454,164, Nov. 16.

Harder, Edwin L., Pittsburgh, and E. I. Pollard, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,454,165, Nov. 16.

Harding, William R., Export, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Plural electric motor control system. 2,454,166, Nov. 16.

Hare, Willis G., and C. B. Roebuck, Jr., assignors of one-third to W. A. Gay, Jr., Philadelphia, Pa. Game. 2,453,907, Nov. 16.

Harhay, John, assignor to Los Angeles Paper Box Factory, Los Angeles, Calif. Bottle carrier. 2,453,908, Nov. 16.

Harker, Donald C.: *See*— Baker, Benjamin P., and Harker.

Harris Manufacturing Company, assignee: *See*— Inskeep, Oliver W.

Harstick, William H., Richmond, Ind., assignor to International Harvester Company. Fluid clutch, governor controlled. 2,453,791, Nov. 16.

Hartford National Bank and Trust Company, trustee, assignee: *See*— Loosjes, Robert. Stigter, Willem H. Van den Berge, Hendrik J., and Hubee.

Hartman, Richard A., assignor to Tinnerman Products, Inc., Cleveland, Ohio. Fastening device for cables, wires, or the like. 2,453,980, Nov. 16.

Hartwig, Edward C., Tonawanda, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Counting circuit. 2,454,167, Nov. 16.

Hartwig, Edward C., Tonawanda, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Timing circuit. 2,454,168, Nov. 16.

Harwood, Michael J., Cleveland, Ohio. Tax computing device. 2,453,909, Nov. 16.

Haynes, Harold E., Audubon, N. J., assignor to Radio Corporation of America. Gain control system responsive to an average value. 2,454,169, Nov. 16.

Hays, Russell R., Lawrence, Kans. Apparatus for converting intermittent power to continuous power. 2,454,058, Nov. 16.

Hazeltine Research, Inc., assignee: *See*— Dettinger, David.

Heal, Henry T., assignor to Rotax Limited, London, England. Ignition magneto. 2,453,910, Nov. 16.

Heaney, Samuel J., Portland, Oreg. Umbrella. 2,454,059, Nov. 16.

Hegamyer, William S.: *See*— Barry, Louis J., and Hegamyer.

Hegy, Louis, Burbank, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind. Relay. 2,454,060, Nov. 16.

Helm Company, The, assignee: *See*— Helm, Lewis R.

Helm, Lewis R., assignor to The Helm Company, Fairfield, Conn. Lubricator head construction. 2,454,252, Nov. 16.

Heli-Coil Corporation, assignee: *See*— Geertsema, Kenneth B.

Helpy Selfy Service System, Inc., assignee: *See*— McEwen, Norman S.

Henley's, W. T., Telegraph Works Company Limited, assignee: *See*— Savage, John H.

Hepp, Harold J., Bartlesville, Okla., assignor to Phillips Petroleum Company. Combination isomerization and hydrogenation process. 2,454,171, Nov. 16.

Herr, Donald L., Milwaukee, Wis., assignor to Control Instrument Company, Inc., Brooklyn, N. Y. Selector mechanism. 2,453,911, Nov. 16.

Hetherington, Lionel S.: *See*— Armstrong, Charles W., Sadowsky, and Hetherington.

Hewitt-Robins Incorporated, assignee: *See*— Bankauf, William F., and Fisher.

Hickey, George M., Paoli, and W. W. Matlack, assignors to J. Bishop & Co. Platinum Works, Malvern, Pa. Making seamless platinum ruthenium alloy cannulae. 2,454,172, Nov. 16.

Hickman, Albert F., assignor to Hickman Pneumatic Seat Co. Inc., Eden, N. Y. Hydraulic clutch. 2,453,981, Nov. 16.

Hickman Pneumatic Seat Co. Inc., assignee: *See*— Hickman, Albert F.

Hicks, William M., Glen Head, N. Y. Tube socket. 2,454,173, Nov. 16.

Hiester, George A., Seattle, Wash. Stereotype cylinder printing plate. 2,454,170, Nov. 16.

Higley, Frank R., Cleveand Heights, Ohio, assignor to Bryant Heater Company. Volute type air-heating furnace and blower. 2,453,912, Nov. 16.

Higley, Frank R., Cleveland, Ohio, assignor to Bryant Heater Company. Radial flow forced-air heater. 2,453,913, Nov. 16.

Hill, Harold S.: *See*— Beath, Laurence R., and Hill.

Hill, Harold S., and L. R. Beath, Kenogami, assignors to Price Brothers & Company, Limited, Quebec, Quebec, Canada. Controlling the power input of electrical conductance heaters. 2,454,174, Nov. 16.

Hill, Howard W., Concord, and E. L. Dance, Berkeley, Calif., assignors to The Dow Chemical Company, Midland, Mich. Making ethyl chloride. 2,453,691, Nov. 16.

Hill, Mark L., Bethel Township, Delaware County, and H. G. Smith, Wallingford, assignors to Gulf Oil Corporation, Pittsburgh, Pa. 2-ethyl-hexyl, N-octadecyl tetrachlorophthalamidate and insecticidal compositions containing the same. 2,454,061, Nov. 16.

Hilsinger, Harry A., Jr., East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coil-winding machine. 2,453,749, Nov. 16.

Hlavaty, Rudolph F., Cicero, Ill. Multilayered fibrous batting. 2,454,175, Nov. 16.

Hoe, R. & Co., Inc., assignee: *See*—
Huck, William F.

Hoewischer, Frederick W.: *See*—
Woodberry, John H., and Hoewischer.

Hoffmann-La Roche Inc., assignee: *See*—
Schnider, Otto, Bourquin, and Grüssner.
Steiger, Norbert.

Hofman Laboratories, Inc., assignee: *See*—
Sulfrian, Gerard F.

Hollenback, George M., Los Angeles, Calif. Device for mixing plaster compounds and fixtures. 2,453,914, Nov. 16.

Holman, Herbert E., West Drayton, and E. C. Cork, Ealing, London, assignors to Electric & Musical Industries Limited, Hayes, Middlesex, England. High-frequency conductor having a low impedance movable electrical contact device. 2,454,062, Nov. 16.

Horlick, Gordon: *See*—
Durant, Lyndon A., and Horlick.

Houser, Walter J., San Marcos, Calif. Pleating device. 2,454,176, Nov. 16.

Hovey, C. Earl, assignee, trustee, *See*—
Bloomfield, Samuel.

Howard, Herman R., Pomona, Calif. Model railway vehicle truck. 2,453,915, Nov. 16.

Howard, Viola T., Saylesville, R. I., assignor to Swank, Inc. Necktie holder. 2,454,177, Nov. 16.

Howell, Gordon W., Seattle, Wash. Bottle carrier. 2,454,178, Nov. 16.

Hubee, Hendrik Pieter: *See*—
Van den Berge, Henrik J., and Hubee.

Huck, William F., Forest Hills, assignor to R. Hoe & Co., Inc., New York, N. Y. Printing press compensator. 2,453,982, Nov. 16.

Hudkins, Clyde, Moundsville, W. Va. Extensible anchor post. 2,454,179, Nov. 16.

Hufferd, George H., Shaker Heights, and N. C. Berli, Mayfield Heights, assignors to The Weatherhead Company, Cleveland, Ohio. Drain cock. 2,453,792, Nov. 16.

Hughes, Everett C., Cleveland Heights, and F. Veatch, assignors to The Standard Oil Company, Cleveland, Ohio. Grinding oil composition. 2,453,708, Nov. 16.

Hughes, Everett C., Cleveland Heights, and F. Veatch, assignors to The Standard Oil Company, Cleveland, Ohio. Grinding oil composition. 2,453,709, Nov. 16.

Hughes, Everett C., Cleveland Heights, and F. Veatch, assignors to The Standard Oil Company, Cleveland, Ohio. Grinding oil composition. 2,453,710, Nov. 16.

Hughes, Henry, and Son Limited, assignee: *See*—
Reilly, Hugh L., Scrimshaw, and Bone.

Hughes Tool Company, assignee: *See*—
Slate, Claude C.

Hungate, William, Houston, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Snap acting mechanism adapted for operating valves of steam engines. 2,453,844, Nov. 16.

Hveem, John J., Maywood, assignor to W. H. Miner, Inc., Chicago, Ill. Refrigerator car door. 2,453,793, Nov. 16.

Hydraulic Control Engineering Company, assignee: *See*—
Stephens, William T.

Iavelli, Teno, Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Power transmission. 2,453,794, Nov. 16.

Ilford Limited, assignee: *See*—
Dimsdale, Wilfrid H., and Challis.

Illinois Railway Equipment Company, assignee: *See*—
Johnson, Malcolm S.

Imperial Chemical Industries Limited, assignee: *See*—
Bramner, John G., M., and Jones.
Sexton, Wilfred A., and Slade and Templeman.
Smith, Arthur E. W., Scaife, and Baldock.
Wood, Clifford.

Independent Lock Company, assignee: *See*—
Erkkila, Andrew.

Inskeep, Oliver W., assignor to Harris Manufacturing Company, Stockton, Calif. Caster mount for single-wheel trailers. 2,453,916, Nov. 16.

Interior, United States of America, as represented by the Secretary of: *See*—
Schroeder, Wilburn C., and Hills.

International Harvester Company, assignee: *See*—
Flater, Harold B., Waernhoff, and Franson.
Harstick, William H.

International Nickel Company, Inc., assignee: *See*—
Renzoni, Louis S.

Irvine, Houston N., Burlington, Iowa, assignor to J. I. Case Company, Racine, Wis. Reel and rake apparatus for combines. 2,454,063, Nov. 16.

Isbister, Eric J., Forest Hills, and W. N. Dean, Larchmont, N. Y., assignors to The Sperry Corporation. Cathode-ray tube control circuit. 2,453,711, Nov. 16.

Isserstedt, Siegfried G., Toronto, Ontario, Canada, assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Electric motor control apparatus. 2,453,917, Nov. 16.

Jackson, Harold F., Springfield, assignor to The Ohio Steel Foundry Company, Lima, Ohio. Flexible work tray for heat-treating furnaces. 2,453,845, Nov. 16.

Jandasek, Joseph, Highland Park, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind. Fluid torque converter, including multiple energizing and energy absorbing elements. 2,453,795, Nov. 16.

Jansen, Joseph P., Milwaukee, Wis. Joint for composite structural element. 2,453,918, Nov. 16.

Jaynes, Edwin T., Garden City, N. Y., assignor to The Sperry Corporation. Automatic frequency control system. 2,454,265, Nov. 16.

Jellinek, Curt, County of Glamorgan, Wales, now by judicial change of name Curtis M. Elliott. Textile steaming or ageing machine. 2,453,796, Nov. 16.

Jerabek, Robert D.: *See*—
Runk, Robert H., and Jerabek.

Johns, Francis J., Buffalo, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Frame structure of dynamoelectric machines. 2,454,180, Nov. 16.

Johnson, John P., and L. C. Teague, Dallas, Tex. Garment hanger support. 2,453,919, Nov. 16.

Johnson, Malcolm S., assignor to Illinois Railway Equipment Company, Chicago, Ill. Pipe anchor. 2,454,064, Nov. 16.

Johnson, Marshal D., assignor of 50 per cent to O. Elmore, Abilene, Tex. Crankshaft dressing tool. 2,453,797, Nov. 16.

Johnson, Walter F., Cincinnati, Ohio. Panel and trim mounting. 2,454,066, Nov. 16.

Johnson, Wesley A., Augusta, Ga. Simulated baseball playing machine. 2,454,065, Nov. 16.

Jones, David G.: *See*—
Bramner, John G. M., and Jones.

Jones, Walter L., Belmont, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Holder for fastener attaching means. 2,453,990, Nov. 16.

Jordan, Evart L., Rockford, Ill. Sandal type shoe with instep guard. 2,454,181, Nov. 16.

Jovanovich, Milton: *See*—
Wharam, John J., and Jovanovich.

Kaemmerling, Gustav H., assignor to Lord Manufacturing Company, Erie, Pa. Rubber mounting. 2,453,991, Nov. 16.

Kalamazoo Stove & Furnace Company, assignee: *See*—
Dadson, Thomas E.

Kamlookhine, Igor A., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Endless track mechanism. 2,453,750, Nov. 16.

Kampa, George L., Minneapolis, Minn. Control device for rotary blade units. 2,454,182, Nov. 16.

Kehoe, Michael J., assignor of forty-nine per cent to F. J. Topp, Springfield, Ohio. Combined tobacco pouch and cigarette rolling device. 2,453,846, Nov. 16.

Kemline Metal Products Company, assignee: *See*—
Midouhas, Stephen P.

Kenyon, Alonzo F., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor control system. 2,454,183, Nov. 16.

Kimball, Albert W.: *See*—
Rustebakke, Homer M., and Kimball.

Kimberlin, Charles N., Jr., Baton Rouge, La., assignor to Standard Oil Development Company. Accelerating alumina hydrosol formation by aeration. 2,453,847, Nov. 16.

Kinnier, Donald, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Antenna reflector system. 2,453,751, Nov. 16.

Kittleson, Allen R.: *See*—
Mikeska, Louis A., Kittleson, and Smith.

Kleinhois, Milton P., East Chicago, Ind., assignor to Sinclair Refining Company, New York, N. Y. Purification of turpentine. 2,453,712, Nov. 16.

Kleintop, John H., Emmaus, Pa. Auxiliary frame and Sash. 2,453,992, Nov. 16.

Klicver, Waldo H., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Telemetric compass. 2,454,184, Nov. 16.

Kloos, Gerard, Mount Vernon, assignor, by mesne assignments, to Philips Laboratories, Inc., Irvington-on-Hudson, N. Y. X-ray apparatus. 2,453,798, Nov. 16.

Kmiecik, Leo J., assignor, by mesne assignments, to McDonnell & Miller, Inc., Chicago, Ill. Snap switch. 2,454,185, Nov. 16.

Knivetон, James, Wyncote, assignor to Selas Corporation of America, Philadelphia, Pa. Method of and apparatus for heating stacked bodies. 2,454,253, Nov. 16.

Kohl, Everard F., Lakewood, Ohio. Circuit interrupting device. 2,454,067, Nov. 16.

Kohut, Joseph P., U. S. Navy. Novelty lighter. 2,453,713, Nov. 16.

Kreisler, Jacques, New Rochelle, N. Y., assignor to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J. Connector for bracelets, wrist watch straps, etc. 2,453,993, Nov. 16.

Kreisler, Jacques, Manufacturing Corporation, assignee: *See*—
Kreisler, Jacques.

Krochler Mfg. Co., assignee: *See*—
Stauffer, Edward J.

Kuhlman, William A., Los Angeles, Calif. Valve seat grinder. 2,454,068, Nov. 16.

Kuoch, Robert, Tonawanda, and E. S. Shanley, Kenmore, assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y. Stabilized organic peroxides. 2,454,254, Nov. 16.

Kysela, Rudolph, Los Angeles, Calif. Flower and candy display package. 2,453,920, Nov. 16.

Lacey, Leo: *See*—
Brown, Louis, and Lacey.

La Fleur, Elphege D., Lancaster, assignor to Norton Company, Worcester, Mass. Crankpin grinding machine. 2,454,186, Nov. 16.

Lamar Slide Fastener Corporation, assignee: *See*—
Rabinowitz, Louis M.

Lang, Walter S.: *See*—
Robinson, Lawrence R., and K. I., Berger and Lang.

La Piana, Fred G., Forest Hills, N. Y., and H. S. Bosland, Patterson, N. J., assignors to Stein, Hall & Company, Inc., New York, N. Y Emulsion adapted for coating textiles. 2,453,752, Nov. 16.

Lapointe, Oneil, Van Buren, Maine. Vegetable harvester. 2,453,714, Nov. 16.

Lappin, Lester S., Camden, and R. P. Corporon, Haddonfield, N. J., assignors to Radio Corporation of America. High-frequency power output control. 2,453,994, Nov. 16.

Leape, Charles B., Pittsburgh, and F. A. Sattler, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Urea-formaldehyde-alkyd insulating composition. 2,454,187, Nov. 16.

Lee, Robert E., Bellflower, assignor to J. Thomas, Norwalk, Calif. Portable pneumatic drill supporting and handling rig. 2,453,995, Nov. 16.

Leder, Theodore G., Chicago, Ill. Electric socket construction. 2,454,069, Nov. 16.

Legge, William H., Winnipeg, Manitoba, Canada. Paddle means for spraying. 2,454,188, Nov. 16.

Lentjes, Gerhard, Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Fluid pressure operated circuit interrupter. 2,454,189, Nov. 16.

Leonard, Simpson C., assignee: *See*—
Clayton-Wright, Howard.

Le Page, Wynn L.: *See*—
Platt, Haviland H., and Le Page.

Le Tourneau, R. G., Inc., assignee: *See*—
Le Tourneau, Robert G.

Le Tourneau, Robert G., Peoria, Ill., assignor to R. G. Le Tourneau Inc., Stockton, Calif. Two-wheel tractor. 2,454,070, Nov. 16.

Lickteig, Albert F.: *See*—
Quigley, Herbert, and Lickteig.

Lidral, John P., and M. M., Berry, Seattle, Wash., assignors to Boeing Airplane Company. Gun control mechanism. 2,454,071, Nov. 16.

Liljegren, Lyle K., Alexandria, Va., and J. W. Moseman, Jr., Bethesda, Md. Grenade mine. 2,453,715, Nov. 16.

Lilly, Eli, and Company, assignee: *See*—
Steldt, Frank A.

Linde Air Products, The, assignee: *See*—
Thayer, Russell M.

Lipe-Roolway Corporation, assignee: *See*—
Spase, Charles B.

Livingston, Charles L.: *See*—
Livingston, Francis G., and C. L.

Livingston, Francis G. and C. L., Algona, Iowa. Facing tool. 2,453,848, Nov. 16.

Llewellyn, Frederick B., Verona, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. High-frequency tank circuits. 2,453,716, Nov. 16.

Long, Fred R., Catawissa, Pa. Combined pipe union and check valve. 2,454,072, Nov. 16.

Long, Harry R., San Pedro, Calif. Aligning bar. 2,453,717, Nov. 16.

Loosjes, Robert, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Manufacturing cathodes of electric discharge tubes. 2,453,753, Nov. 16.

Lord Manufacturing Company, assignee: *See*—
Kaemmerling, Gustav H.

Lorenz, Mynard R., and C. A. Brahm, Pittsburgh, Pa. Awning. 2,453,921, Nov. 16.

Los Angeles Paper Box Factory, assignee: *See*—
Harhay, John.

Lovering, Arthur F., Northampton, Mass. Air gun. 2,453,799, Nov. 16.

Lowell, George H., Jr., South Portland, Maine. Knife rack. 2,453,800, Nov. 16.

Ludwig, James H., Collingswood, N. J., assignor to Radio Corporation of America. Radio bomb release system. 2,453,996, Nov. 16.

Lurcott, Winfred N., Elizabeth, N. J., assignor to L. J. Wing Mfg. Co., New York, N. Y. Resistance welding apparatus and jig therefor. 2,454,190, Nov. 16.

Macdonald, Angus A., Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control circuit. 2,454,191, Nov. 16.

MacWilliam, Wallace, Lae Valhalla, assignor to Resistoflex Corporation, Belleville, N. J. Fitting for flexible hose. 2,453,997, Nov. 16.

Madore, Joseph A. E., Montreal, Quebec, Canada. Draft connector. 2,453,998, Nov. 16.

Magnetic Devices, Inc., assignee: *See*—
Price, Osborne I.

Mahnke, Kurt: *See*—
Schaelchlin, Walter, and Mahnke.

Mallory, Marion, Detroit, Mich. Air compressing system. 2,454,073, Nov. 16.

Manaster, Ben B., Chicago, Ill. Child's combination appetite-stimulating and amusement devices. 2,453,922, Nov. 16.

Marbury, Ralph E., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Critically damped capacitor. 2,454,192, Nov. 16.

Marc, Henri M., Roselawn, Ohio, assignor to The Philip Carey Manufacturing Company. Manufacture of duct turns or vanes. 2,454,074, Nov. 16.

Mares, Joseph R., Webster Groves, assignor to Monsanto Chemical Company, St. Louis, Mo. Polystyrene-chlorinated meta diphenyl benzene composition. 2,454,255, Nov. 16.

Martin, Samuel M., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for molding articles. 2,454,193, Nov. 16.

Marx, Paul, and A. Abraham, New York, N. Y. Wear accessory. 2,454,076, Nov. 16.

Mason, John E., Denver, Colo., and C. White, deceased, Capay, Calif.; V. A. White, executrix; assignors to The Stearns-Roger Manufacturing Company, Denver, Colo. Heat exchange apparatus. 2,453,718, Nov. 16.

Mastin, Robert G., Okmulgee, assignor to Cities Service Oil Company, Bartlesville, Okla. Steam turbine lubricating oils. 2,454,075, Nov. 16.

Matlack, William W.: *See*—
Hickey, George M., and Matlack.

Mattern, Raymond P., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Method and apparatus for coating by thermal evaporation. 2,453,801, Nov. 16.

Mavest, Inc., assignee: *See*—
Guckert, Leonard S.

Maxham, Daniel W., Hogansville, Ga. Spinning machine. 2,453,802, Nov. 16.

Maynard, Charles E., assignor to The Pro-Phy-Lac-Tic Brush Company, Florence, Mass. Making a holder of plastic material for pocket combs and the like. 2,454,194, Nov. 16.

Mayne, William O., assignee: *See*—
Washburn, Frank.

Mayo, Alfred M., Los Angeles, assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif. Aircraft cooling by air turbine means. 2,453,923, Nov. 16.

Mays, John T.: *See*—
Gardiner, William R., and Mays.

McCormick, James T., Topeka, Kans. Propeller blade. 2,453,803, Nov. 16.

McDearmon, George W., Baton Rouge, La. Mold for concrete weight for iron pipe lines. 2,453,804, Nov. 16.

McDonnell Aircraft Corporation, assignee: *See*—
Platt, Haviland H., and Le Page.

McDonnell & Miller, Inc., assignee: *See*—
Kmiecik, Leo J.

McEwen, Norman S., assignor to Helpy Selfy Service System, Inc., Fort Lauderdale, Fla. Valve. 2,454,077, Nov. 16.

McFadden, James B., assignor to United Dairy Equipment Company, West Chester, Pa. Cream separator and homogenizer. 2,453,924, Nov. 16.

McFarlin, John R., Philadelphia, Pa., assignor to Electric Service Manufacturing Company. Excessive potential discharge device. 2,453,719, Nov. 16.

McGrew, Frank C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Methylol melamine ethers and their manufacture. 2,454,078, Nov. 16.

Meister, Leo, Irvington, Va. Apparatus for detecting perforations in ammunition flash tubes. 2,453,720, Nov. 16.

Melhorn, Carl E., Springfield, assignor to Package Machinery Company, East Longmeadow, Mass. Gum breaking machine. 2,453,805, Nov. 16.

Mellers, Eric V.: *See*—
Fallows, Leonard, and Mellers.

Mellette, Cyril M., Middlebury, assignor to Chase Brass & Copper Co. Incorporated, Waterbury, Conn. Holder for lipsticks and the like. 2,453,754, Nov. 16.

Melling, George, Jackson, Mich. Handle bar tractor wheel drive control. 2,453,999, Nov. 16.

Mendonca, Edward E., Hayward, Calif. Electric lighting set. 2,453,925, Nov. 16.

Mercier, Pierre E., Westport, Conn. Control flap with fluid jets for aircraft. 2,453,721, Nov. 16.

Merck & Co., Inc., assignee: *See*—
Conn, John B., and van de Kamp.

Merrell, Robert E., Spartanburg, S. C. Rail fastener. 2,454,079, Nov. 16.

Merriam, John L., Yucaipa, Calif. Pipe joint. 2,453,849, Nov. 16.

Midouhas, Stephen P., assignor to Kemline Metal Products Company, Bristol, Pa. Cash register. 2,454,000, Nov. 16.

Mikeska, Louis A., and A. R. Kittleson, Westfield, N. J., and W. M. Smith, Baton Rouge, La., assignors to Standard Oil Development Company. Lubricating compositions. 2,453,850, Nov. 16.

Miller, Julian P., assignor to Penn Electric Switch Co., Goshen, Ind. Thermostatic power element. 2,453,851, Nov. 16.

Milster, Arthur N., assignor to Wagner Electric Corporation, St. Louis, Mo. Mechanism for selective operation of a plurality of master cylinders. 2,453,852, Nov. 16.

Miner, John D., Jr.: *See*—
Gerlach, Francis H., and Miner.

Miner, W. H., Inc., assignee: *See*—
Hveem, John J.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Iaserstedt, Siegfried G.
Kliever, Waldo H.
Mattern, Raymond P.
Newton, Alwin B.
Sparrow, Hubert T.
Wilson, Theodore J.

Mollier, Etienne N., Paris, France. Moving picture flashing apparatus. 2,454,080, Nov. 16.

Molloy, Eddie, Buffalo, and L. G. Raiche, Kenmore, assignors, by mesne assignments, to Curtiss-Wright Corporation, New York, N. Y. Arresting gear. 2,454,081, Nov. 16.

Monsanto Chemical Company, assignee: *See*—
Beaver, David J.
Debing, Lawrence M.
Mares, Joseph R.
Walter, Henry A.

Moody, John L., Oakland, Calif., assignor to Friden Calculating Machine Co., Inc. Revolution counter actuator. 2,453,926, Nov. 16.

Moore, Wilbert P., Worland, Wyo. Adjustable window shade bracket. 2,453,806, Nov. 16.

Moores, Aeolian E., Dallas, Tex. Circulating gas heater. 2,454,195, Nov. 16.

Morrell, Charles E., Westfield, and M. W. Swaney, Cranford, N. J., assignors to Standard Oil Development Company. Separating hydrocarbons. 2,453,853, Nov. 16.

Morse, Lawrence H., Mentor, assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio. Clamp for master sheets of printing machines. 2,453,927, Nov. 16.

Morton, Avery A., Watertown, Mass., assignor to Research Corporation, New York, N. Y. Alkenyl alkali metal compounds. 2,454,082, Nov. 16.

Moseman, John W., Jr.: *See*—
Liegren, Lyle K., and Moseman, Jr.

Moss, Jacob E., Detroit, Mich., assignor to The National Acme Company, Cleveland, Ohio. Toolholder. 2,453,722, Nov. 16.

Mossman, Clayton W., assignee: *See*—
Croskey, Earl H., and Hackman.

Mueller, Erich O.: *See*—
Atwell, Clarence A., and Mueller.

Mueller, Fritz W. H., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Control of contrast with aromatic diamine color developers. 2,454,001, Nov. 16.

Mulnix, Ersel C., Lake Bluff, Ill. Millinery box. 2,454,196, Nov. 16.

Muros, Joseph, Cambridge, assignor to Gillette Safety Razor Company, Boston, Mass. Blade handling device. 2,454,197, Nov. 16.

Murray, Joseph A., Bethesda, Md., assignor to National Blank Book Company, Holyoke, Mass. Three-prong loose-leaf binder. 2,453,807, Nov. 16.

Myers, Louis, Rockford, Ill. Juice extractor. 2,454,256, Nov. 16.

Myklestad, Nils O., Pasadena, Calif. Hydraulic brake. 2,453,808, Nov. 16.

National Acme Company, The, assignee: *See*—
Moss, Jacob E.

National Blank Book Company, assignee: *See*—
Murray, Joseph A.

National Brass Company, assignee: *See*—
Quigley, Herbert, and Lickteig.

National Steel Corporation, assignee: *See*—
Gilchrist, Lawrence B.
Wilson, Abram B.

National Supply Company, The, assignee: *See*—
Shepherd, Harold F.

Navy, United States of America, as represented by the Secretary of the, assignee: *See*—
Downs, George W., Jr.

Nemeth, Joseph J., New York, N. Y. Soap holder. 2,454,083, Nov. 16.

Newcomer, Keepers M., Pittsburgh, Pa. Liquid mixing valve. 2,453,809, Nov. 16.

Newton, Alwin B., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Refrigeration system. 2,454,263, Nov. 16.

Norton Company, assignee: *See*—
La Fleur, Elphege D.

Norway, Harold L.: *See*—
Buttner, William C., and Norway.

Oechslin, Konrad, assignor to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland. Thermal power plant. 2,453,928, Nov. 16.

O'Harah, Alvin F., Erie, Pa. Hydraulic pump. 2,453,929, Nov. 16.

Ohio Crankshaft Company, The, assignee: *See*—
Somes, Howard E.

Ohio Steel Foundry Company, The, assignee: *See*—
Jackson, Harold F.

Olcott, Charles A., West Milford, N. J. Speed responsive brake for deceleration of centrifugal machines. 2,453,854, Nov. 16.

Oliver, Wilbur C., assignor to Adel Precision Products Corp., Burbank, Calif. Hydraulic lock. 2,453,855, Nov. 16.

Opitz, Fred W., Chicago, Ill. Liquid dispensing device. 2,453,856, Nov. 16.

Orlove, Max, assignor to Smith Industries, Chicago, Ill. Photoelectric tube. 2,453,810, Nov. 16.

Owens-Corning Fiberglas Corporation, assignee: *See*—
Slayter, Games.

Package Machinery Company, assignee: *See*—
Melhorn, Carl E.

Page, Edward L., Flint, Mich. Friction disk brake for automobiles and the like. 2,454,084, Nov. 16.

Palmer, John R.: *See*—
Palmer, Robert A. and J. R., and Smit.

Palmer, Robert A. and J. R., and G. R. Smit, assignors to Western Corrugator Co., Parma, Idaho. Ditcher. 2,453,723, Nov. 16.

Paluck, Nick A., Belfield, N. Dak. Wheel scraper. 2,454,002, Nov. 16.

Pamphilon, Leon E., Yeadon, assignor to Airdesign, Incorporated, Upper Darby, Pa. Tape slitting machine. 2,454,003, Nov. 16.

Pangborn Corporation, assignee: *See*—
Gossard, Charles M.
Vedder, Walter O.

Pappas, Phillip M., Houston, Tex. Automatic control for washing machines. 2,454,198, Nov. 16.

Parke, Davis & Company, assignee: *See*—
Rieveschl, George, Jr.

Parker, Paul T.: *See*—
Vanderbilt, Byron M.; and Parker.

Parker Pen Company, The, assignee: *See*—
Randolph, Robert W.

Patrick, Joshua, Detroit, Mich. Juicer with hand reciprocated rotary reamer. 2,454,085, Nov. 16.

Paul, Richard, and G. F. Sulfrian, Newark, N. J. Shipping container. 2,453,930, Nov. 16.

Payne, Arthur W., assignor to Bundy Tubing Company, Detroit, Mich. Coiling machine. 2,453,724, Nov. 16.

Pedrick Tool & Machine Company, assignee: *See*—
Shaw, Ralph M., Jr.

Penn Electric Switch Co., assignee: *See*—
Miller, Julian P.
Rothwell, John J.

Pennington, Gordon R., Bloomfield Hills, assignor to Chrysler Corporation, Highland Park, Mich. Combination fluid coupling and friction clutch. 2,453,811, Nov. 16.

Perkins, Kenneth, Scotch Plains, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Molded impeller. 2,454,200, Nov. 16.

Perman, Horace C., Waterloo, Iowa. Load moving machine. 2,453,755, Nov. 16.

Perrin, William H., Grand Rapids, Mich. Child's toilet seat. 2,454,199, Nov. 16.

Peterson, Maurits P.: *See*—
Ames, Robert S., Peterson, and Feldscher.

Pettyjohn, Norman D., Binghamton, N. Y. Nail polish mask. 2,454,004, Nov. 16.

Petzinger, Ambrose J., Passaic, and R. V. Adams, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical measuring instrument. 2,454,201, Nov. 16.

Pfaudler Co., The, assignee: *See*—
Greene, Otto W.

Phelan, Hubert S., Berkley, assignor to Chrysler Corporation, Highland Park, Mich. Actuating valve with opposed unequal areas. 2,453,812, Nov. 16.

Philco Corporation, assignee: *See*—
Boothroyd, Wilson P.
Kinnier, Donald.

Philips Laboratories, Inc., assignee: *See*—
Kloos, Gerard.

Phillips, Clovis H., Florence, Ala. Electric vehicle direction indicator. 2,453,931, Nov. 16.

Phillips Petroleum Company, assignee: *See*—
Hepp, Harold J.

Pierik, John, Indianapolis, Ind. Folding picnic table. 2,454,202, Nov. 16.

Pinsuti, Giuseppe F., New York, N. Y. Safety razor. 2,453,756, Nov. 16.

Pitman, Richard W., Laverock-Hillcrest, Pa., assignor to Underwood Corporation. Business machine. 2,453,932, Nov. 16.

Pittsburgh Pipe Cleaner Company, assignee: *See*—
Robinson, Lawrence R. and K. I., Berger, and Lang.

Pittsburgh Plate Glass Company, assignee: *See*—
Fisher, John M., and Eakins.

Platt, Haviland H., New York, N. Y., and W. L. Le Page, Ardmore, Pa., assignors, by mesne assignments, to McDonnell Aircraft Corporation, St. Louis, Mo. Aircraft mooring device. 2,453,867, Nov. 16.

Pletch, Earnest P., Frankfort, Ind. Traction increasing device for dual wheel vehicles. 2,454,005, Nov. 16.

Plumhoff, Charles F.: *See*—
Franklin, Leslie U., and Plumhoff.

Plummer, Carl E., Tulsa, Okla. Internal-combustion rotary motor. 2,454,006, Nov. 16.

Polizzotto, Paul L., and P. S. Backlund, assignors to Union Oil Company of California, Los Angeles, Calif. Refining of wax. 2,453,933, Nov. 16.

Pollard, Elisha F.: *See*—
Porges, Nandor, Pollard, and Spadaro.

Pollard, Ernst I.: *See*—
Harder, Edwin L., and Pollard.

Porges, Nandor, Metairie, New Orleans, and E. F. Pollard and J. J. Spadaro, New Orleans, La., assignors to United States of America as represented by the Secretary of Agriculture. Obtaining rubber from goldenrod leaves. 2,453,858, Nov. 16.

Powell, Paul R., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Spinning apparatus. 2,454,203, Nov. 16.

Precision Metal Workers, assignee: *See*—
Grunwald, Albert C.

Preston, John L., Wichita Falls, Tex. Surgical appliance for treating jaw and other facial bone fractures. 2,453,934, Nov. 16.

Price Brothers & Company, Limited, assignee: *See*—
Hill, Harold S., and Beath.

Price, Osborne I., assignor to Magnetic Devices, Inc., Frederick, Md. Coil-supporting structure. 2,453,725, Nov. 16.

Prince, Warren V., Euclid, assignor to The Weatherhead Company, Cleveland, Ohio. Coupling. 2,453,813, Nov. 16.

Pro-phy-lac-tic Brush Company, The, assignee: *See*—
Maynard, Charles E.

Prouty, Robert E., R. E. Bish, Flora, and R. L. Adams, assignors, by mesne assignments, to Essex Wire Corporation, Logansport, Ind. Induction motor starting relay. 2,453,726, Nov. 16.

Pugh, Merlin L., Minneapolis, Minn. Clothes drier. 2,453,859, Nov. 16.

Pulp Reproduction Company, assignee: *See*—
Risch, Arthur H.

Pure Oil Company, The, assignee: *See*—
Bond, Donald C., and Savoy.
Schindler, Hans, and Anderson.

Quaker Oats Company, The, assignee: *See*—
Dunlop, Andrew P., and Reineck.

Quigley, Herbert, and A. F. Lickteig, assignors to National Brass Company, Grand Rapids, Mich. Cupboard catch. 2,453,935, Nov. 16.

Rabinowitz, Louis M., Brooklyn, assignor to Lamar Slide Fastener Corporation, New York, N. Y. Slider bending machine. 2,453,860, Nov. 16.

Radio Corporation of America, assignee: *See*—
Charrier, George M.
Epstein, David W.
Fredendall, Gordon L.
Haynes, Harold E.
Lappin, Lester S., and Corporon.
Ludwig, James H.
Sanders, Royden C., Jr.

Wald, Sidney.
Young, Charles J.

Radio Patents Corporation, assignee: *See*—
Guanella, Gustav.

Raiche, Louis G.: *See*—
Molloy, Eddie, and Raiche.

Raillson, Frederick W., Preston, Idaho. Toolholder for artificial arms. 2,453,936, Nov. 16.

Randolph, Robert W., Milton, assignor to The Parker Pen Company, Janesville, Wis. Ball-point writing instrument. 2,454,086, Nov. 16.

Ransome, Stafford M., assignor to Barber-Colman Company, Rockford, Ill. Internal thread milling mechanism. 2,454,087, Nov. 16.

Rapp, Mason G., Wilmette, Ill. Registration desk with mail indicating system. 2,454,088, Nov. 16.

Rasmussen, Christian O., Copenhagen, Denmark; vested in the Attorney General of the United States. Air-propelled extracting machine for laundry. 2,453,727, Nov. 16.

Rauen, John T., Gross Pointe, Mich. Carburetor. 2,453,728, Nov. 16.

Ray, James G., assignor to Southwest Airways Company, West Los Angeles, Calif. Aircraft door. 2,453,937, Nov. 16.

Raylite Electric Corp., assignee: *See*—
Barnett, Louis.

Raymond, Richard C., State College, Pa., assignor to the United States of America as represented by the Secretary of War. Cathode-ray tube. 2,454,204, Nov. 16.

Rea, Wilton T., Manhasset, and J. R. Wilkerson, Bayside, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Regenerative repeater. 2,454,089, Nov. 16.

Reading, Walter J., Buffalo, N. Y. Egg washer. 2,454,090, Nov. 16.

Reichold, Ludwig, Winsted, assignor to The Silex Company, Hartford, Conn. Filtering device. 2,454,205, Nov. 16.

Reilly, Hugh L., F. H. Scrimshaw, and A. G. Bone, Farnborough, assignors to Henry Hughes and Son Limited, Barkingside, England. Navigational instrument. 2,454,007, Nov. 16.

Reilly, Jack E., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric motor reversing control. 2,454,206, Nov. 16.

Reilly, Jack E., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric motor reversing control. 2,454,207, Nov. 16.

Reineck, Edward A.: *See*—
Dunlop, Andrew P., and Reineck.

Renzoni, Louis S., Port Colborne, Ontario, Canada, assignor to The International Nickel Company, Inc., New York, N. Y. Producing modified electronickel. 2,453,757, Nov. 16.

Research Corporation, assignee: *See*—
Morton, Avery A.
Snell, Esmond E.

Resistoflex Corporation, assignee: *See*—
MacWilliam, Wallace.

Richman, Ruth E., Cedarhurst, N. Y. Garment. 2,454,208, Nov. 16.

Rietz, George A., Schenectady, N. Y., assignor to General Electric Company. Heater for livestock watering tanks. 2,454,091, Nov. 16.

Rieveschl, George, Jr., Grosse Pointe Woods, assignor to Parke, Davis & Company, Detroit, Mich. Benzhydryl amino ethers. 2,453,729, Nov. 16.

Rieveschl, George, Jr., Grosse Pointe Woods, assignor to Parke, Davis & Company, Detroit, Mich. Benzhydryl amino ethers. 2,454,092, Nov. 16.

Risch, Arthur H., Wauwatosa, assignor to Pulp Reproduction Company, Milwaukee, Wis. Manufacturing aquatic decoys. 2,453,758, Nov. 16.

Roberts, Francis T., Detroit, Mich. Pediatric syringe. 2,453,814, Nov. 16.

Robins, Henry S., assignee: *See*—
Smith, George N.

Robinson, Albert L., South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Tapered union for concentric conductor lines. 2,453,759, Nov. 16.

Robinson, Kyle I.: *See*—
Robinson, Lawrence R. and K. L., Berger, and Lang.

Robinson, Lawrence R., Mount Lebanon, K. I. Robinson, Glenshaw, E. O. Berger, Bellevue, and W. S. Lang, assignors to Pittsburgh Pipe Cleaner Company, Pittsburgh, Pa. Sewer cleaning bucket for passing around sheaves. 2,454,008, Nov. 16.

Rodemann, Emmett P., Jamaica, assignor to Bendix Aviation Corporation, Brooklyn, N. Y. Self-synchronous system for reproducing motion or position. 2,453,815, Nov. 16.

Roebuck, Chester B., Jr.: *See*—
Hare, Willis G., and Roebuck.

Roesen, Oscar C., Scarsdale, N. Y., assignor to Wood Newspaper Machinery Corporation, Plainfield, N. J. Web splicing device. 2,454,093, Nov. 16.

Rogers, Thomas H., Jr., Akron, Ohio, and R. D. Vickers, New Rochelle, N. Y., assignors to Wingfoot Corporation, Akron, Ohio. Modifying vinyl chloride-vinylidene chloride copolymers with phenol formaldehyde resins. 2,454,209, Nov. 16.

Rosenthal, Adolph H., assignor to Scophony Corporation of America, New York, N. Y. Electron discharge device for producing electric oscillations. 2,454,094, Nov. 16.

Rotax Limited, assignee: *See*—
Heal, Henry T.

Roth, Grant V. W.: *See*—
Saari, Frank E., and Roth.

Rothwell, John J., Elkhart, assignor to Penn Electric Switch Co., Goshen, Ind. Adjusting means for control devices. 2,453,861, Nov. 16.

Rowe, Donald C., Kenmore, N. Y., assignor, by mesne assignments, to Curtiss-Wright Corporation. Arresting hook. 2,454,257, Nov. 16.

Royal Patent Corporation, assignee: *See*—
Durant, Lyndon A., and Horlick.

Ruben, Samuel, assignee: *See*—
Smith, Cleveland S., Jr.

Runk, Robert H., Pittsburgh 21, and R. D. Jerabek, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Synthetic resin and members produced therefrom. 2,454,210, Nov. 16.

Rustebakke, Homer M., and A. W. Kimball, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,454,211, Nov. 16.

Rutemiller, Oren G., St. Bernard, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Drum-operating electric drive. 2,454,212, Nov. 16.

Ryer, August I.: *See*—
Tarpley, William B., Jr., and Ryer.

Saari, Frank E., Chicago, and G. V. W. Roth, Evanston, Ill. Controlling mechanism for sand traps. 2,454,215, Nov. 16.

Sadowsky, Charles: *See*—
Armstrong, Charles W., and Sadowsky, and Hetherington.

Sager, Victor, Arcadia, assignor to Diesel Filter Co., El Monte, Calif. Apparatus for forming filter elements and the like. 2,454,213, Nov. 16.

Salisbury, Peter F., Los Angeles, Calif. Gastroscope. 2,453,862, Nov. 16.

Salisbury, Wallace S., Sharon, Wis. Cap strip gauge. 2,453,863, Nov. 16.

Sanders, Royden C., Jr., Hightstown, N. J., assignor to Radio Corporation of America. Radar control system. 2,454,009, Nov. 16.

Sandlovich, Louise K., Lincoln, Nebr. Figure base. 2,454,095, Nov. 16.

Sanford, Roy S., assignee: *See*—
Eames, James O.

Sapp, John P., Kent, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Closure. 2,454,214, Nov. 16.

Sattler, Frank A.: *See*—
Leape, Charles B., and Sattler.

Savage Arms Corporation, assignee: *See*—
Smith, Wilfred I.

Savage, John H., Welling, assignor to W. T. Henley's Telegraph Works Company Limited, Dorking, England. Spark testing apparatus for insulated electric cables and wire. 2,454,011, Nov. 16.

Savoy, Michael: *See*—
Bond, Donald C., and Savoy.

Scalfe, Charles W.: *See*—
Smith, Arthur E. W., Scalfe, and Baldock.

Schaelchlin, Walter, and K. Mahnke, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Apparatus and system for electric control purposes. 2,454,216, Nov. 16.

Schelleng, John C., Interlaken, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Cavity resonator. 2,453,760, Nov. 16.

Schering Corporation, assignee: *See*—
Tarpley, William B., Jr., and Ryer.

Schermuly, Alfred J.: *See*—
Schermuly, Conrad D., A. J., and C.

Schermuly, Charles: *See*—
Schermuly, Conrad D., A. J., and C.

Schermuly, Conrad D., A. J., and C., assignors to The Schermuly Pistol Rocket Apparatus Limited, Parkgate, Newdigate, England. Means for discharging rockets. 2,454,096, Nov. 16.

Schermuly Pistol Rocket Apparatus Limited, The, assignee: *See*—
Schermuly, Conrad D., A. J. and C.

Scherzinger, Frank F., Henderson, Nev. Shopping bag with foldable, extensible top. 2,454,013, Nov. 16.

Schindler, Hans, Evanston, and P. T. Anderson, Park Ridge, assignors to The Pure Oil Company, Chicago, Ill. Rust preventive slushing compound for cartridge clips. 2,453,816, Nov. 16.

Schlehr, Walter R., Toledo, assignor, by mesne assignments, to Glass Fibers, Inc., Waterville, Ohio. Drawing fibers. 2,453,864, Nov. 16.

Schleimer, Floyd V., San Francisco, Calif. Photographic printing easel. 2,454,097, Nov. 16.

Schmidt, David, assignor to Escher Wyss Maschinenfabriken Aktiengesellschaft, Zurich, Switzerland. Turbine thermal power plant using hot air as motivating fluid. 2,453,938, Nov. 16.

Schmidt, Elmer A., assignor to Willard Storage Battery Company, Cleveland, Ohio. Resistance unit for flashlights. 2,453,865, Nov. 16.

Schmidt, John G., assignor to A. V. Whittington, Detroit, Mich. Collet chuck. 2,454,098, Nov. 16.

Schneider, Frank H., assignor to Florence Stove Company, Gardner, Mass. Cooking oven. 2,453,939, Nov. 16.

Schnell, Steve, Kirkwood, assignor to Wagner Electric Corporation, St. Louis, Mo. Brake with two anchoring shoes and wear take-up means therefor. 2,453,866, Nov. 16.

Schnider, Otto, J. Bourqin, and A. Grüssner, Basel, Switzerland, assignors to Hoffmann-La Roche Inc., Nutley, N. J. Manufacture of a thiophan derivative. 2,454,217, Nov. 16.

Schoonmaker, Raymond B., Poughkeepsie, N. Y. Hot line jumper clamp. 2,453,761, Nov. 16.

Schroeder, Wilburn C., Calvert Hills, and A. A. Berk, Berwyn Heights, Md., assignors to United States of America as represented by the Secretary of the Interior. Water treatment to prevent embrittlement cracking. 2,454,258, Nov. 16.

Schulman, Earl L., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa Composite asbestos member. 2,454,218, Nov. 16.

Schultz, Mortimer A., Baltimore, Md., and R. E. Bertine, deceased, late of Pittsburgh, Pa., by G. L. Bertine, administratrix, Pittsburgh, Pa.; assignors, to Westinghouse Electric Corporation, East Pittsburgh, Pa. Transponder for testing radar devices. 2,454,219, Nov. 16.

Schwartz, Arthur A., assignor to Bell Aircraft Corporation, Buffalo, N. Y. Apparatus for dimpling sheet metal stock. 2,453,762, Nov. 16.

Scophony Corporation of America, assignee: *See*—
Rosenthal, Adolph H.

Scrimshaw, Frank H.: *See*—
Reilly, Hugh L., Scrimshaw, and Bone.

Seals, Fred H., Warner Robins, Ga. Electric service outlet. 2,454,221, Nov. 16.

Sears, Edward O., assignor to Colvin-Templeton, Inc., Oakland, Calif. Suspension means for cooling units. 2,454,012, Nov. 16.

Seeche, Maurice D., Lawrence, Mass. Mattress. 2,454,220, Nov. 16.

Seitz, August W.: *See*—
Greiner, Alfred, and Seitz.

Selas Corporation of America, assignee: *See*—
Kniveton, James.

Sexton, Wilfred A., Manchester, R. E. Slade, and W. G. Templeman, Bracknell, England, assignors to Imperial Chemical Industries Limited. Prevention and destruction of weeds. 2,453,983, Nov. 16.

Seybold, Frederick W., Westfield, N. J. Transmission. 2,454,014, Nov. 16.

Shadday, Rolland O., Joplin, assignor to H. Wolcott, Columbia, Mo. Self-cleaning screen structure. 2,454,259, Nov. 16.

Shalkhauser, George, El Paso, Tex. Tripod. 2,453,817, Nov. 16.

Shanley, Edward S.: *See*—
Kuoch, Robert, and Shanley.

Shatkin, Sidney, Long Branch, assignor to Crest Silver Mfg. Co. Inc., Matawan, N. J. Cosmetic holder. 2,453,867, Nov. 16.

Shaw, Julian C., assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Garment steaming and drying apparatus. 2,453,730, Nov. 16.

Shaw, Ralph M., Jr., Edgewater Park, N. J., assignor to Pedrick Tool & Machine Company, Philadelphia, Pa. Apparatus for automatically bending work such as tubing into serpentine coils. 2,453,868, Nov. 16.

Shell Development Company, assignee: *See*—
Finch, Harry de V., Ballard, and Evans.
Grenot, Leo D.
Smith, Albert E., and Beeck.

Shepherd, Harold F., Springfield, Ohio, assignor to The National Supply Company, Pittsburgh, Pa. Fuel regulating means for dual fuel engines. 2,454,222, Nov. 16.

Sheppard, Richard D., Bridgeton, N. J. Onion grading rollers. 2,454,015, Nov. 16.

Sheroff, Irving: *See*—
Green, Marty, and Sheroff.

Sheshunoff, Victor: *See*—
Whitfield, Marshall G., and Sheshunoff.

Shippee, Winsor, Fair Haven, N. J. Rotatable separable fastener. 2,454,223, Nov. 16.

Shook, Charles P., Jr., Birmingham, Ala. Belt connector. 2,454,224, Nov. 16.

Signaigo, Frank K., Brandywine Hundred, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Process for cleaving the —S—S— group in dialkyl disulfides. 2,454,099, Nov. 16.

Silcox, William D.: *See*—
Birsch, Edwin T., and Silcox.

Silex Company, The, assignee: *See*—
Reichold, Ludwig.

Sinclair Refining Company, assignee: *See*—
Kleinholz, Milton P.

Singer Manufacturing Company, The, assignee: *See*—
Perkins, Kenneth.

Skinner, Asa W., Riverdale Village, assignor to Whiting Corporation, Harvey, Ill. Apparatus for supporting bodies of railway vehicles in connection with removal and replacement of the trucks thereof. 2,454,225, Nov. 16.

Skinner, Asa W., Riverdale Village, assignor to Whiting Corporation, Harvey, Ill. Drop table apparatus for use in servicing trucks and wheels of railway vehicles. 2,454,226, Nov. 16.

Skoog, Per F., Olympia, Wash. Inlaying sheet material. 2,454,016, Nov. 16.

Slade, Roland E.: *See*—
Sexton, Wilfred A., Slade, and Templeman.

Slate, Claude C., Burbank, Calif., assignor to Hughes Tool Company, Houston, Tex. Bomb-carrying apparatus for aircraft. 2,453,869, Nov. 16.

Slate, Claude C., Burbank, Calif., assignor to Hughes Tool Company, Houston, Tex. Bombing armament for aircraft. 2,453,870, Nov. 16.

Slayter, Games, Newark, Ohio, assignor to Owens-Corning Fiberglas Corporation. Battery plate separator. 2,454,100, Nov. 16.

Slobotkin, Nathan, Brooklyn, N. Y. Flexible container with side opening. 2,453,940, Nov. 16.

Smit, Andrew, Oak Lawn, Ill. Trailer hitch. 2,453,941, Nov. 16.

Smit, George R.: *See*—
Palmer, Robert A., J. R., and G. R. Smit.

Smith, Albert E., and O. A. Beeck, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Beta-alumina catalysts. 2,454,227, Nov. 16.

Smith, Arthur E. W., Wallingford, C. W. Scalfe, Norton-on-Tees, and H. Baldock, deceased, Norton-on-Tees; by H. Baldock, Hoylake, England, legal representative, assignors to Imperial Chemical Industries Limited. Nitration of alcohols. 2,453,942, Nov. 16.

Smith, Cleveland S., Jr., West Orange, N. J., assignor to S. Ruben, New Rochelle, N. Y. Selenium rectifier and making same. 2,453,763, Nov. 16.

Smith, Delmas A.: *See*—
Fisher, Edward J., Franklin, and Smith.

Smith, Franklin S., North Haven, Conn. Method and apparatus for destroying insect life. 2,453,818, Nov. 16.

Smith, George N., near Nutwood, assignor of one-half to H. S. Robins, Warren, Ohio. Spur. 2,454,228, Nov. 16.

Smith, Herschel G.: *See*—
Hill, Mark L., and Smith.

Smith Industries, assignee: *See*—
Orlove, Max.

Smith, Stanley, Bend, Oreg. Truck loading means. 2,453,943, Nov. 16.

Smith, Warren M.: *See*—
Mikeska, Louis A., Kittleson, and Smith.

Smith, Wilfred I., Chicopee Falls, Mass., assignor to Savage Arms Corporation, Utica, N. Y. Power lawn mower and control mechanism therefor. 2,453,819, Nov. 16.

Snead, Edwin B., Austin, Tex. Dumping vehicle. 2,454,101, Nov. 16.

Snell, Esmond E., Austin, Tex., assignor to Research Corporation, New York, N. Y. Physiologically active derivative of pyridoxine and making the same. 2,453,944, Nov. 16.

Snyder, Eugene, Philadelphia, assignor to American Chemical Paint Company, Ambler, Pa. Protection of certain nonferrous metal surfaces. 2,453,764, Nov. 16.

Solar Corporation, assignee: *See*—
Fields, George C.

Somes, Howard E., Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio. Electrical connector. 2,453,731, Nov. 16.

Southwest Airways Company, assignee: *See*—
Ray, James G.

Spadaro, James J.: *See*—
Porges, Nandor, Pollard, and Spadaro.

Sparrow, Hubert T., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Thermoelectric generator with pilot burner. 2,454,229, Nov. 16.

Snase, Charles B., Nedrow, assignor to Lipe-Rollway Corporation, Syracuse, N. Y. Friction clutch. 2,453,945, Nov. 16.

Spencer, James A., Teaneck, N. J., assignor to Radio Corporation of America. Variable test transmitter. 2,453,871, Nov. 16.

Sperry Corporation, The, assignee: *See*—
Isbister, Eric J., and Dean.
Jaynes, Edwin T.

Stacy, John D., Pittsfield, Mass., assignor to General Electric Company. Electric capacitor. 2,454,102, Nov. 16.

Standard Oil Company, assignee: *See*—
Becker, Sam B.

Standard Oil Company, The, assignee: *See*—
Hughes, Everett C., and Veatch.
Stevens, Donald G.

Standard Oil Development Company, assignee: *See*—
Davis, William S., Jr., and Wright.
Fisher, Edward J., Franklin, and Smith.
Hungate, William.
Kimberlin, Charles N., Jr.
Mikeska, Louis A., Kittleson, and Smith.
Morrell, Charles E., and Swaney.
Sweetser, Sumner B.
Vanderbilt, Byron M., and Parker.
Viles, Prentiss S., and Camp.

Stauffer, Edward J., assignor to Kroehler Mfg. Co., Naperville, Ill. Upholsterer's application tool. 2,453,872, Nov. 16.

Stearns-Roger Manufacturing Company, The, assignee: *See*—
Mason, John E., and White.

Steiger, Norbert, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Preparation of metal mercaptides of amino-aryl mercaptans. 2,454,260, Nov. 16.

Stein, Hall & Company, Inc., assignee: *See*—
La Piana, Fred G., and Bosland.

Steidt, Frank A., assignor to Eli Lilly and Company, Indianapolis, Ind. Tubocurare purification. 2,453,873, Nov. 16.

Stephens, William T., assignor to Hydraulic Control Engineering Company, Cleveland, Ohio. Hydraulic cycling system. 2,453,732, Nov. 16.

Stephenson, Roy S., San Francisco, Calif. Incased drain plug. 2,453,820, Nov. 16.

Stevens, Donald G., assignor to The Standard Oil Company, Cleveland, Ohio. Alkylation process. 2,453,765, Nov. 16.

Stevens, Laverne B., Jackson, Miss. Strap tightener. 2,453,821, Nov. 16.

Stickney, Fernald S., West Caldwell, N. J. Motor brush holder connector. 2,454,230, Nov. 16.

Stigter, Willem H., Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Piezoelectric device for converting pressure variations into potential variations. 2,454,264, Nov. 16.

Stoick, Reinhold L., Missoula, Mont. Stand for Christmas trees and the like. 2,454,231, Nov. 16.

Stoltz, Glenn E., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system. 2,454,232, Nov. 16.

Stover, Harold D.: *See*—
Baker, John B., and Stover.

Strumor, Mathew A., Brooklyn, N. Y. Picture projecting pistol. 2,454,233, Nov. 16.

Sulfrian, Gerard F.: *See*—
Paul, Richard, and Sulfrian.

Sulfrian, Gerard F., assignor to Hofman Laboratories, Inc., Newark, N. J. Thermally insulated container with radiation shield and energy absorber. 2,453,946, Nov. 16.

Sun Chemical Corporation, assignee: *See*—
Wakeman, Stephen N.
Wendt, Gerald L.

Sundel, Alexander, assignee: *See*—
Sundel, Samuel.

Sundel, Samuel, Philadelphia, Pa., assignor of one-half to A. Sundel and one-half to C. Bastis, New York, N. Y. Portable alarm. 2,454,234, Nov. 16.

Swaney, Miller W.: *See*—
Morrell, Charles E., and Swaney.

Swank, Inc., assignee: *See*—
Howard, Viola T.

Swanson, Carl E., Chicago, Ill. Socket for fluorescent tubes. 2,454,017, Nov. 16.

Sweetser, Sumner B., Baton Rouge, La., assignor to Standard Oil Development Company. Hydrocarbon synthesis. 2,453,874, Nov. 16.

Swidersky, Stanley T., Houtzdale, Pa. Fastener. 2,454,103, Nov. 16.

Swift, Frank H., Portland, Oreg., assignor to Crown Zellerbach Corporation, San Francisco, Calif. Hydraulic type log debarker having plural log-rotating chucks independently revolvable about a common axis. 2,453,947, Nov. 16.

Taborski, Alfred F., Buffalo, N. Y. Necktie. 2,453,733, Nov. 16.

Tarpley, William B., Jr., Chatham, N. J., and A. I. Ryer, New York, N. Y., assignors to Schering Corporation, Bloomfield, N. J. Preparation of N¹-acyl sulfanilamides. 2,454,104, Nov. 16.

Teague, Leonard C.: *See*—
Johnson, John P., and Teague.

Teetsell, Roy J., Red Bank, N. J. Meter pedestal. 2,453,734, Nov. 16.

Templeman, William G.: *See*—
Sexton, Wilfred A., Slade, and Templeman.

Terhune, Howard, assignor, by mesne assignments, of one-half to Champion Forge Company, Cleveland, Ohio. Ram guide. 2,453,875, Nov. 16.

Thayer, Russell M., Kenmore, N. Y., assignor to The Linde Air Products Company. Process and apparatus for transferring measured quantities of liquefied gas. 2,453,766, Nov. 16.

Thomas, John, assignee: *See*—
Lee, Robert E.

Thompson, Josephus, Covington, assignor of one-third to Grossman Music Company, Cleveland, Ohio. Multitone whistle. 2,454,105, Nov. 16.

Thompson, Merle O., Seymour, Ind. Sled runner. 2,453,767, Nov. 16.

Timken Roller Bearing Company, The, assignee: *See*—
Baker, John B., and Stover.

Tinnell, Wayne, Cincinnati, Ohio. Welding electrode holder. 2,453,768, Nov. 16.

Tinnerman Products, Inc., assignee: *See*—
Hartman, Richard A.

Toland, William C., Brookline, and M. H. Hamilton, Lexington, assignors, by mesne assignments, to W. C. Toland, Brookline, Mass. Fountain solution roller. 2,453,735, Nov. 16.

Tolotti, Albert A., Reno, Nev. Skate clamp. 2,453,876, Nov. 16.

Tomek, Ernst J., Danbury, assignor to Connecticut Tool & Engineering Company, Bridgeport, Conn. Drilling machine. 2,454,235, Nov. 16.

Topp, Fred J., assignee: *See*—
Kehoe, Michael J.

Trail, Herbert H., assignor to Fuller Manufacturing Company, Kalamazoo, Mich. Hydraulic torque converter of the converter coupling type. 2,453,877, Nov. 16.

Trofimov, Lev A., Willoughby, Ohio. Automatic steering apparatus. 2,453,878, Nov. 16.

Turnepseed, Clarence, Springfield, Ohio. Mop gripping unit for mop shaking machines. 2,453,948, Nov. 16.

Ulinski, Bronislaus, Chicago, Ill., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Manually controlled power booster mechanism. 2,453,949, Nov. 16.

Underwood Corporation, assignee: *See*—
Pitman, Richard W.

Union Oil Company of California, assignee: *See*—
Polizzotto, Paul L., and Backlund.

Union Switch and Signal Company, The, assignee: *See*—
Broadbent, John H.

United Aircraft Corporation, assignee: *See*—
Cole, Gilmoure N., and Wells.

United-Carr Fastener Corporation, assignee: *See*—
Jones, Walter I.
Wagstaff, George.

United Dairy Equipment Company, assignee: *See*—
McFadden, James B.

United Lens Corporation, assignee: *See*—
Coulter, Guy H.

United Shoe Machinery Corporation, assignee: *See*—
Dixon, Paul H.

United States of America, assignee: *See*—
Whitehead, Richard H.

United States Rubber Company, assignee: *See*—
Wood, Thomas F.

Van Buren, Tracy H., Sturgis, Mich. Locking means for adjustable back chairs. 2,453,879, Nov. 16.

Van de Kamp, Jacob: *See*—
Conn, John B., and van de Kamp.

Van Den Berge, Hendrik J., and H. P. Hubee, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Welding device. 2,453,950, Nov. 16.

Vanderbilt, Byron M., Westfield, N. J., and P. T. Parker, Baton Rouge, La., assignors to Standard Oil Development Company. Container. 2,453,880, Nov. 16.

Veatch, Franklin: *See*—
Hughes, Everett C., and Veatch.

Vedder, Walter O., assignor to Pangborn Corporation, Hagerstown, Md. Dust collector. 2,453,951, Nov. 16.

Vickers, Robert D.: *See*—
Rogers, Thomas H., Jr., and Vickers.

Viles, Prentiss S., and E. Q. Camp, Goose Creek, Tex., assignors to Standard Oil Development Company. Inhibition of corrosion in wells. 2,453,881, Nov. 16.

Viles, Prentiss S., and E. Q. Camp, Goose Creek, Tex., assignors to Standard Oil Development Company. Inhibiting corrosion in wells. 2,453,882, Nov. 16.

Vineberg, Arthur M.: *See*—
Bowen, Henry B., and Vineberg.

Vitarama Corporation, The, assignee: *See*—
Waller, Fred, and Dresser.

Vitoux, Marcel, Troyes, France, assignor to American Vitos Company, Inc., New York, N. Y. Pneumatic knitting device. 2,454,236, Nov. 16.

Von Glahn, William H., Londonville, and H. A. Bergstrom, Albany, assignors to General Aniline & Film Corporation, New York, N. Y. 4-cyano-2,5-dialkoxyacetoacetanilides. 2,453,692, Nov. 16.

Van Hoorn, Fred G., Bridgeport, Conn., assignor to General Electric Company. Circuit breaker. 2,454,106, Nov. 16.

Waernhoff, Ernst T.: *See*—
Flater, Harold, Berglund, Waernhoff, and Franson.

Wagner Electric Corporation, assignee: *See*—
Milster, Arthur N.
Schnell, Steve.

Wagstaff, George, Long Eaton, England, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Holder for thermionic valves and other electrical devices. 2,454,018, Nov. 16.

Wahl, Albert G., Los Angeles, Calif. Vegetable cutter. 2,454,237, Nov. 16.

Wald, Sidney, Collingswood, N. J., assignor to Radio Corporation of America. Servo mechanism. 2,454,107, Nov. 16.

Waldron, John W., Muncie, Ind., assignor to Allied Chemical & Dye Corporation, New York, N. Y. Purification of heterocyclic nitrogen compounds. 2,454,019, Nov. 16.

Waller, Fred, Huntington, N. Y., and W. R. Dresser, Long Hill, Conn., assignors to The Vitarama Corporation, Huntington Station, N. Y. Electrically illuminated display apparatus. 2,454,238, Nov. 16.

Walling, Cheves T., Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparing organic sulfides. 2,454,108, Nov. 16.

Walter, Henry A., Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Aminotriazine and derivatives. 2,454,261, Nov. 16.

Walter, Henry A., Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Diamino thiadiazine derivatives. 2,454,262, Nov. 16.

War, United States of America, as represented by the Secretary of, assignee: *See*—
Brown, Paul F.
Raymond, Richard C.

Washburn, Frank, La Fayette, Ind., assignor of one-half to W. O. Mayne, Battle Creek, Mich. Surface covering material. 2,454,239, Nov. 16.

Waters, Harry F., New York, N. Y. Crayon holder. 2,454,109, Nov. 16.

Weatherhead Company, The, assignee: *See*—
Hufferd, George H., and Berli.
Prince, Warren V.

Weaver, Paul, Rio Vista, Calif. Lug box lifter. 2,454,110, Nov. 16.

Weitzenkorn, Lee F., Dundalk, and G. N. Goller, Baltimore, Md., assignors to Armco Steel Corporation. Ferrochrome process and product. 2,454,020, Nov. 16.

Wekeman, Stephen N., Saddle River Township, Bergen County, N. J., assignor to Sun Chemical Corporation, New York, N. Y. Photographic suction holder. 2,454,240, Nov. 16.

Wells, Chester R.: *See*—
Cole, Gilmoure N., and Wells.

Wendt, Gerald L., New York, N. Y., assignor to Sun Chemical Corporation. Preparation of photosetting coating composition. 2,453,769, Nov. 16.

Wendt, Gerald L., New York, N. Y., assignor to Sun Chemical Corporation. Preparation of photosetting coating composition. 2,453,770, Nov. 16.

Wennerberg, August, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Wire-cutting apparatus. 2,454,241, Nov. 16.

Western Carrugator Co., assignee: *See*—
Palmer, Robert A. and J. R., and Smit.

Western Electric Company, Incorporated, assignee: *See*—
Martin, Samuel M.
Powell, Paul R.
Wennerberg, August.

Western Waxed Paper Company, assignee: *See*—
Bojanower, Albert M.

Westinghouse Electric Corporation, assignee: *See*—
Ankenman, Earl B.

Stoltz, Glenn E.

Wettlaufer, John L., Toronto, Ontario, Canada. Vibratory screen. 2,453,883, Nov. 16.

Wharam, John J., Dearborn, and M. Jovanovich, Detroit, assignors to Ford Motor Company, Dearborn, Mich. Horn button construction. 2,454,242, Nov. 16.

Whipple, Leon V., Berkley, Mich., assignor to Eureka Williams Corporation. Hand signal discharger. 2,453,884, Nov. 16.

White, Albert R., Glendale, Calif. Oil-refining foldable pack. 2,453,952, Nov. 16.

White, Clarence: *See*—
Mason, John E., and White.

White, Pauline A. and P., Long Ridge, N. Y. Exerciser. 2,453,771, Nov. 16.

White, Percival: *See*—
White, Pauline A. and P.

White, Virginia A., executrix: *See*—
Mason, John E., and White.

Whitehead, Richard H., New Haven, Conn., assignor, by mesne assignments, to the United States of America. Time fuse. 2,453,822, Nov. 16.

Whitfield, Marshall G., and V. Sheshunoff, Garden City, assignors, by mesne assignments, to Fairchild Engine and Airplane Corporation, New York, N. Y. Aluminum coating process. 2,453,772, Nov. 16.

Whiting Corporation, assignee: *See*—
Skinner, Asa W.

Whittington, Arthur V., assignee: *See*—
Schmidt, John G.

Wiedenhoeft, Arthur E., Glen Ellyn, Ill. Lighting fixture. 2,454,243, Nov. 16.

Wilkerson, Jefferson R.: *See*—
Rae, Wilton T., and Wilkerson.

Willard Storage Battery Company, assignee: *See*—
Donkin, William F.
Schmidt, Elmer A.

Williams, Burdell S., Oakwood, Ohio, assignor to Chrysler Corporation, Highland Park, Mich. Multiple stage refrigeration. 2,453,823, Nov. 16.

Wilson, Abram B., Hollidays Cove, W. Va., assignor to National Steel Corporation. Apparatus for tensioning strip material. 2,454,021, Nov. 16.

Wilson, Theodore J., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Generating system. 2,453,885, Nov. 16.

Wing, L. J., Mfg. Co., assignee: *See*—
Lurcott, Winfred N.

Wingfoot Corporation, assignee: *See*—
Gardner, Charles E.
Rogers, Thomas H., Jr., and Vickers.

Wintermute, Carlton H., Newark, N. J. Moistureproof housing for piezoelectric elements. 2,454,244, Nov. 16.

Winther, Martin P., assignor to M. P. Winther, Waukegan, Ill., trustee. Universal angle drive. 2,454,111, Nov. 16.

Wolcott, Herbert, assignee: *See*—
Shadday, Rolland O.

Wood, Clifford, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Preparing sulfur-containing phthalocyanine dyestuffs. 2,453,953, Nov. 16.

Wood Newspaper Machinery Corporation, assignee: *See*—
Roesen, Oscar C.

Wood, Thomas F., Clifton, N. J., assignor to United States Rubber Company, New York, N. Y. Alpha-acetoxymethyl acrylonitrile polymers. 2,453,824, Nov. 16.

Woodberry, John H., and F. W. Hoewischer, Metuchen, N. J. Cartridge orientating hopper. 2,453,736, Nov. 16.

Woodruff, Jackson A., St. Davids, Pa., assignor to American Viscose Corporation, Wilmington, Del. Flame-retarding material and making the same. 2,454,245, Nov. 16.

Woodson, Thomas T., Bridgeport, Conn., assignor to General Electric Company. Support for spin basket for clothes-washing machines and the like. 2,454,112, Nov. 16.

Worth, Weldon, Dayton, Ohio. Oil temperature control unit. 2,453,737, Nov. 16.

Worthen, John H., Providence, R. I., assignor to Federal Products Corporation. Bore gauge. 2,454,246, Nov. 16.

Wright, Donald L.: *See*—
Davis, William S., Jr., and Wright.

Wright, Harry T., Richmond, Va. Fireplace heating system. 2,453,954, Nov. 16.

Wright, Samuel B., Coventry, England. Tailstock lathe for drilling. 2,453,825, Nov. 16.

Yale & Towne Manufacturing Company, The, assignee: *See*—
Ulinski, Bronislaus.

Yardeny, Michel N., New York, N. Y. Radio-remote control apparatus. 2,454,022, Nov. 16.

Young, Charles J., Princeton, N. J., assignor to Radio Corporation of America. Diplex transmission by combined frequency-amplitude modulation. 2,453,773, Nov. 16.

Young, Charles J., Princeton, N. J., assignor to Radio Corporation of America. Facsimile recording apparatus. 2,454,247, Nov. 16.

Younghusband, James L., Chicago, Ill. Remembrancer. 2,453,955, Nov. 16.

Zimmermann, Lewis C., Youngstown, Ohio. Conveyer. 2,454,023, Nov. 16.

LIST OF DESIGN INVENTIONS

Alphabet for forming monograms or the like. M. Chernow. 151,736–7, Nov. 16.
Automobile. G. C. Sullivan. 151,796, Nov. 16.
Bracelet or similar article. E. E. Fachon. 151,747, Nov. 16.
Brassière. L. Daché. 151,742, Nov. 16.
Brassière. L. Hunau. 151,760, Nov. 16.
Brooch or similar article. O. Blake. 151,731, Nov. 16.
Brooch or similar article. A. Katz. 151,763–5, Nov. 16.
Brooch or similar article. A. Katz. 151,767–9, Nov. 16.
Brush receptacle, Toilet bowl. M. Karagozian. 151,762, Nov. 16.
Building block, Hollow glass. J. H. Sutter. 151,797–9, Nov. 16.
Cabinet for radio-phonograph combination, Console. W. Schier and D. L. Doggett. 151,787, Nov. 16.
Cabinet, Radio. W. Schier and D. L. Doggett. 151,785, Nov. 16.
Cabinet, Radio receiver. W. Schier and D. L. Doggett. 151,786, Nov. 16.
Camera or similar article. M. N. Fairbank. 151,748–9, Nov. 16.
Camera or similar article. E. H. Land. 151,775, Nov. 16.
Camera or similar article. S. B. Whittier. 151,802–3, Nov. 16.
Camera or similar article. O. E. Wolff. 151,804, Nov. 16.
Case, Speaker. L. G. Stine. 151,795, Nov. 16.
Casing for service station dispensing apparatus. A. P. Hoppe. 151,759, Nov. 16.
Chair. H. Sebel. 151,788, Nov. 16.
Clip or similar article. M. Boucher. 151,734–5, Nov. 16.
Comb. J. Frickel. 151,753, Nov. 16.
Container for a perfume bottle or the like. G. Baud. 151,729, Nov. 16.
Container for perfume bottles or the like. G. Baud. 151,730, Nov. 16.
Dispenser, Beverage. C. W. Lloyd. 151,779, Nov. 16.
Dispenser, Toothpick. C. Koenig. 151,773, Nov. 16.
Drinking fountain or similar article. R. H. Tull. 151,800, Nov. 16.
Earring or similar article. A. Katz. 151,766, Nov. 16.
Ejector pump and strainer base plate, Combined. W. B. Harris. 151,757, Nov. 16.
Game piece set. R. R. Hart. 151,758, Nov. 16.
Gauge, Internal length comparator. W. K. Dow. 151,743, Nov. 16.
Girdle. H. M. Colby. 151,740, Nov. 16.
Handbag. C. Feigl. 151,750–2, Nov. 16.
Handbag. J. L. Friedman. 151,754, Nov. 16.
Handbag. C. N. Munn. 151,782, Nov. 16.
Holder or similar article, Scarf. M. Chernow. 151,738, Nov. 16.
Lens, Traffic signal observation. H. C. Riemann. 151,784, Nov. 16.
Lighter and writing implement or similar article, Combined. F. Kaupmann. 151,771, Nov. 16.
Link for a watch bracelet or similar article, Terminal. K. C. Augenstein. 151,728, Nov. 16.
Necklace or similar article. A. Katz. 151,770, Nov. 16.
Necklace or similar article. A. Philippe. 151,783, Nov. 16.
Ornament, Christmas. E. B. Glunz. 151,755, Nov. 16.
Photographic camera. E. H. Land. 151,774, Nov. 16.
Ring, Toe. J. Shapiro. 151,789, Nov. 16.
Ruffler attachment housing for sewing machines. V. J. Sigoda. 151,790, Nov. 16.
Scarf or the like, Decorative. S. Goldenstein. 151,756, Nov. 16.
Sharpener, Drill. R. P. Smith. 151,792, Nov. 16.
Shears, Pruning. J. L. Smith. 151,791, Nov. 16.
Spoon, Child's. R. S. Claflin. 151,739, Nov. 16.
Spoon or other article of flatware. E. J. Conroy. 151,741, Nov. 16.
Spoon or similar article. A. J. Eggleston. 151,744, Nov. 16.
Spoon or similar article. J. L. Hvale. 151,761, Nov. 16.
Sprinkler, Water. C. B. Kemp. 151,772, Nov. 16.
Stand or similar article, Display. L. B. Morrison. 151,781, Nov. 16.
Stand, Telephone. G. A. Levis. 151,778, Nov. 16.
Stocking, Lady's. W. G. Bley. 151,732–3, Nov. 16.
Sweater. S. Levine. 151,776–7, Nov. 16.
Sweater or similar article. B. Ehrenreich. 151,745, Nov. 16.
Table. S. Low. 151,780, Nov. 16.
Toy animal figure. A. von Erdberg. 151,801, Nov. 16.
Vase. G. A. Sparks and A. C. Cunningham. 151,793–4, Nov. 16.
Walking stick. E. R. Ethington. 151,746, Nov. 16.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 16TH DAY OF NOVEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive blast table. C. M. Gossard. 2,454,158, Nov. 16.
Actuating valve with opposed unequal areas. H. S Phelan. 2,453,812, Nov. 16.
Actuator, Revolution counter. J. L. Moody. 2,453,926, Nov. 16.
Adjustable window shade bracket. W. P. Moore. 2,453,806, Nov. 16.
Adjusting means for control devices. J. J. Rothwell. 2,453,861, Nov. 16.
Adjusting system, Voltage. G. L. Fredendall. 2,454,150, Nov. 16.
Air compressing system. M. Mallory. 2,454,073, Nov. 16.
Air compressor, Rotary. R. Flanagan. 2,454,048, Nov. 16.
Aircraft cooling by air turbine means. A. M. Mayo. 2,453,923, Nov. 16.
Aircraft door. J. G. Ray. 2,453,937, Nov. 16.
Aircraft propeller. W. Dalton. 2,454,040, Nov. 16.
Air gun. A. F. Lovering. 2,453,799, Nov. 16.
Air heating furnace and blower, Volute type. F. R. Higley. 2,453,912, Nov. 16.
Alarm, Portable. S. Sundel. 2,454,234, Nov. 16.
Alarm system for automobiles, Theft. A. R. Gray. 2,453,903, Nov. 16.
Aligning bar. H. R. Long. 2,453,717, Nov. 16.
Alkenyl alkali metal compounds. A. A. Morton. 2,454,082, Nov. 16.
Alkyl halides, Preparation of. D. C. Bond. 2,453,779, Nov. 16.
Alkylation process. D. G. Stevens. 2,453,765, Nov. 16.
Alpha-acetoxymethyl acrylonitrile polymers. T. F. Wood. 2,453,824, Nov. 16.
Alumina hydrosol formation by aeration. Accelerating. C. N. Kimberlin, Jr. 2,453,847, Nov. 16.
Amides, Catalytic production of. P. W. Garbo. 2,453,706, Nov. 16.
Aminotriazine and derivatives. H. A. Walter. 2,454,261, Nov. 16.
Amplifier. W. B. Ellwood. 2,454,045, Nov. 16.
Anchor, Pipe. M. S. Johnson. 2,454,064, Nov. 16.
Anchor post, Extensible. C. Hudkins. 2,454,179, Nov. 16.
Angle drive, Universal. M. P. Winther. 2,454,111, Nov. 16.
Antenna reflector system. D. Kinnier. 2,453,751, Nov. 16.
Apparatus and system for electric control purposes. W. Schaelchlin and K. Mahnke. 2,454,216, Nov. 16.
Apparatus for alkylation. E. J. Fisher, W. B. Franklin, and D. A. Smith. 2,453,837, Nov. 16.
Apparatus for automatically bending work such as tubing into serpentine coils. R. M. Shaw, Jr. 2,453,868, Nov. 16.
Apparatus for controlling centrifugal formation of sheet material. R. S. Ames, M. P. Peterson and J. C. Feldscher. 2,454,116, Nov. 16.
Apparatus for converting intermittent power to continuous power. R. R. Hays. 2,454,058, Nov. 16.
Apparatus for detecting perforations in ammunition flash tubes. L. Meister. 2,453,720, Nov. 16.
Apparatus for dimpling sheet metal stock. A. A. Schwartz. 2,453,762, Nov. 16.
Apparatus for forming filter elements and the like. V. Sager. 2,454,213, Nov. 16.
Apparatus for handling material. L. B. Gilchrist. 2,454,055, Nov. 16.
Apparatus for indicating the available seating accommodation at places of entertainment. R. A. Fletcher and L. H. Bevan. 2,453,838, Nov. 16.
Apparatus for molding articles. S. M. Martin. 2,454,193, Nov. 16.
Apparatus for shaping and forming leather. M. Green and I. Sheroff. 2,453,987, Nov. 16.
Apparatus for supporting bodies of railway vehicles in connection with removal and replacement of the trucks thereof. A. W. Skinner. 2,454,225, Nov. 16.
Apparatus for tensioning strip material. A. B. Wilson. 2,454,021, Nov. 16.
Appetite-stimulating and amusement devices, Child's combination. B. B. Manaster. 2,453,922, Nov. 16.
Aquatic decoys, Manufacturing. A. H. Risch. 2,453,758, Nov. 16.
Armament for aircraft, Bombing. C. C. Slate. 2,453,870, Nov. 16.
Arresting gear. E. Molloy and L. G. Raiche. 2,454,081, Nov. 16.
Arresting hook. D. C. Rowe. 2,454,257, Nov. 16.
Article holder for attachment to automobile visors. K. L. Hanson. 2,453,843, Nov. 16.
Artificial limb. E. C. Carter. 2,453,969, Nov. 16.
Asbestos member, Composite. E. L. Schulman. 2,454,218, Nov. 16.
Ash tray. H. M. Foddy. 2,453,790, Nov. 16.
Attachment to geometrical instrument. R. H. Buchhorn. 2,454,133, Nov. 16.
Automatic control for washing machines. P. M. Pappas. 2,454,198, Nov. 16.
Awning. M. R. Lorenz and C. A. Brahm. 2,453,921, Nov. 16.
Ball gate and elevating mechanism. L. A. Durant and G. Horlick. 2,453,976, Nov. 16.
Bar: *See*—
  Aligning bar.
Baseball playing machine, Simulated. W. A. Johnson. 2,454,065, Nov. 16.
Battery plate separator. G. Slayter. 2,454,100, Nov. 16.
Belt connector. C. P. Shook, Jr. 2,454,224, Nov. 16.
Bending machine, Slider. L. M. Rabinowitz. 2,453,860, Nov. 16.
Benzhydryl amino ethers. G. Rieveschl, Jr. 2,453,729, Nov. 16.
Benzhydryl amino ethers. G. Rieveschl, Jr. 2,454,092, Nov. 16.
Beta-alumina catalysts. A. E. Smith and O. A. Beeck. 2,454,227, Nov. 16.
Binder, Three-prong loose-leaf. J. A. Murray. 2,453,807, Nov. 16.
Binding implement. J. R. Burns. 2,454,135, Nov. 16.
Blade handling device. J. Muros. 2,454,197, Nov. 16.
Blade, Propeller. J. T. McCormick. 2,453,803, Nov. 16.
Block: *See*—
  Pulley block.
Bomb-carrying apparatus for aircraft. C. C. Slate. 2,453,869, Nov. 16.
Bomb release system, Radio. J. H. Ludwig. 2,453,996, Nov. 16.
Booster mechanism, Manually controlled power. B. Ulinski. 2,453,949, Nov. 16.
Bore gauge. J. H. Worthen. 2,454,246, Nov. 16.
Bottle carrier. J. Harhay. 2,453,908, Nov. 16.
Bottle carrier. G. W. Howell. 2,454,178, Nov. 16.
Bottle closure. S. Bloomfield. 2,454,126, Nov. 16.
Box: *See*—
  Millinery box.
Bracket: *See*—
  Adjustable window shade bracket.
Brake: *See*—
  Hydraulic brake.
Brake for automobiles and the like, Friction disk. E. L. Page. 2,454,084, Nov. 16.
Brake for deceleration of centrifugal machines, Speed responsive. C. A. Olcott. 2,453,854, Nov. 16.
Brake with two anchoring shoes and wear take-up means therefor. S. Schnell. 2,453,866, Nov. 16.
Brassière. J. Glick. 2,454,151, Nov. 16.
Brassière. J. Glick. 2,454,153, Nov. 16.
Brassière and similar garment. J. Glick. 2,454,152, Nov. 16.
Bucket for passing around sheaves, Sewer cleaning. L. R. and K. I. Robinson, E. O. Berger, and W. S. Lang. 2,454,008, Nov. 16.
Business machine. R. W. Pitman. 2,453,932, Nov. 16.
Butane, Isomerization of normal. L. U. Franklin and C. F. Plumhoff. 2,454,149, Nov. 16.
Button construction, Horn. J. J. Wharam and M. Jovanovich. 2,454,242, Nov. 16.
Cage, Self-contained roller-bearing. J. B. Baker and H. D. Stover. 2,454,028, Nov. 16.
Cap strip gauge. W. S. Salisbury. 2,453,863, Nov. 16.
Capacitor, Critically damped. R. E. Marbury. 2,454,192, Nov. 16.
Capacitor, Electric. G. H. Floyd, Jr. 2,454,049, Nov. 16.
Capacitor, Electric. J. D. Stacy. 2,454,102, Nov. 16.
Carburetor. J. T. Rauen. 2,453,728, Nov. 16.
Carrier: *See*—
  Bottle carrier.
Carton. A. E. Bentham. 2,454,029, Nov. 16.
Carton, Shipping. S. A. Blackman. 2,453,829, Nov. 16.
Cartridge feeding mechanism for automatic guns. W. Hamilton. 2,454,251, Nov. 16.
Cartridge, Mounting stylus. C. M. Chorpening. 2,453,894, Nov. 16.
Casing construction, Lock. A. Erkkila. 2,454,145, Nov. 16.
Caster mount for single-wheel trailers. O. W. Inskeep. 2,453,916, Nov. 16.
Catch, Cupboard. H. Quigley and A. F. Lickteig. 2,453,935, Nov. 16.
Cathode-ray tube. R. C. Raymond. 2,454,204, Nov. 16.

Cathode-ray tube control circuit. E. J. Isbister and W. N. Dean. 2,453,711, Nov. 16.
Cathodes of electric discharge tubes, Manufacturing. R. Loosjes. 2,453,753, Nov. 16.
Child's toilet seat. W. H. Perrin. 2,454,199, Nov. 16.
Choke, Shotgun. J. E. A. Egleson. 2,453,747, Nov. 16.
Chuck, Collet. J. G. Schmidt. 2,454,098, Nov. 16.
Circuit: *See*—
Cathode-ray tube control circuit. Facsimile recorder control circuit.
Control circuit. Timing circuit.
Counting circuit.
Circuit breaker. F. G. von Hoorn. 2,454,106, Nov. 16.
Circuit interrupter. B. F. Baker and D. C. Harker. 2,454,121, Nov. 16.
Circuit interrupter, Fluid pressure operated. G. Lentjes. 2,454,189, Nov. 16.
Circular electric lamp. A. Greiner and A. W. Seitz. 2,453,986, Nov. 16.
Circulating gas heater. A. E. Moores. 2,454,195, Nov. 16.
Clamp: *See*—
Hot line jumper clamp. Skate clamp.
Clamp for master sheets of printing machines. L. H. Morse. 2,453,927, Nov. 16.
Cleaving the —S—S— group in dialkyl disulfides. F. K. Signaigo. 2,454,099, Nov. 16.
Closure. J. P. Sapp. 2,454,214, Nov. 16.
Clothes drier. M. L. Pugh. 2,453,859, Nov. 16.
Clutch: *See*—
Friction clutch. Magnetic clutch.
Hydraulic clutch.
Coat. L. S. Guckert. 2,453,989, Nov. 16.
Coating by thermal evaporation, Method and apparatus for. R. P. Mattern. 2,453,801, Nov. 16.
Coating process, Aluminum. M. G. Whitfield and V. Sheshunoff. 2,453,772, Nov. 16.
Cock, Drain. G. H. Hufferd and N. C. Berli. 2,453,792, Nov. 16.
Coil-supporting structure. O. I. Price. 2,453,725, Nov. 16.
Coil-winding machine. H. A. Hilsinger, Jr. 2,453,749, Nov. 16.
Coiling machine. A. W. Payne. 2,453,724, Nov. 16.
Compass, Telemetric. W. H. Kliever. 2,454,184, Nov. 16.
Compensator, Printing press. W. F. Huck. 2,453,982, Nov. 16.
Conductor having a low impedance movable electrical contact device, High-frequency. H. E. Holman and E. C. Cork. 2,454,062, Nov. 16.
Connector: *See*—
Belt connector. Motor brush holder connector.
Draft connector.
Electrical connector.
Connector for bracelets, wrist watch straps, etc. J. Kreisler. 2,453,993, Nov. 16.
Contact for vacuum tube sockets. C. J. Adams. 2,453,826, Nov. 16.
Contacting equipment, Electrical. B. W. Benbow. 2,453,778, Nov. 16.
Container: *See*—
Shipping container.
Container. B. M. Vanderbilt and P. T. Parker. 2,453,880, Nov. 16.
Container with side opening, Flexible. N. Slobotkin. 2,453,940, Nov. 16.
Control circuit. A. A. Macdonald. 2,454,191, Nov. 16.
Control device for rotary blade units. G. L. Kampa. 2,454,182, Nov. 16.
Control flap with fluid jets for aircraft. P. E. Mercier. 2,453,721, Nov. 16.
Control mechanism, Gun. J. P. Lidral and M. M. Berry. 2,454,071, Nov. 16.
Control mechanism, Selective single. F. H. Barger. 2,454,122, Nov. 16.
Control of contrast with aromatic diamine color developers. F. W. H. Mueller. 2,454,001, Nov. 16.
Control system. E. L. Harder. 2,454,164, Nov. 16.
Control system. G. E. Stoltz. 2,454,232, Nov. 16.
Control system, Automatic frequency. E. T. Jaynes. 2,454,265, Nov. 16.
Control system for aircraft turbosuperchargers. F. E. Crever. 2,454,038, Nov. 16.
Control system, Radar. R. C. Sanders, Jr. 2,454,009, Nov. 16.
Control system responsive to an average value, Gain. H. E. Haynes. 2,454,169, Nov. 16.
Control unit, Oil temperature. W. Worth. 2,453,737, Nov. 16.
Controlling mechanism for sand traps. F. E. Saari and G. V. W. Roth. 2,454,215, Nov. 16.
Conversion of alicyclic aldehydes. H. D. Finch, S. A. Ballard, and T. W. Evans. 2,454,047, Nov. 16.
Conveyer. L. C. Zimmermann. 2,454,023, Nov. 16.
Corrosion in wells, Inhibiting. P. S. Viles and E. Q. Camp. 2,453,882, Nov. 16.
Corrosion in wells, Inhibition of. P. S. Viles and E. Q. Camp. 2,453,881, Nov. 16.
Corrosion preventive. W. S. Davis, Jr., and D. L. Wright. 2,453,833, Nov. 16.
Corrosion resisting valve. O. W. Greene. 2,454,160, Nov. 16.
Corrosion testing elements, Electrolytic preparation of. L. D. Grenot. 2,453,904, Nov. 16.
Corset and stocking retainer, Combination. L. M. Deegan. 2,453,834, Nov. 16.
Cosmetic holder. S. Shatkin. 2,453,867, Nov. 16.
Counting circuit. E. C. Hartwig. 2,454,167, Nov. 16.
Coupling: *See*—
Hydraulic hose coupling.
Coupling. W. V. Prince. 2,453,813, Nov. 16.
Coupling for shafts. A. Betz. 2,453,964, Nov. 16.
Cover and cushion for shampoo boards, Sanitary. F. J. Conjurske. 2,453,784, Nov. 16.
Cutter: *See*—
Vegetable cutter.
Crankshaft dressing tool. M. D. Johnson. 2,453,797, Nov. 16.
Crayon holder. H. F. Waters. 2,454,109, Nov. 16.
Cutoff wheel. F. M. Bley. 2,454,125, Nov. 16.
Cyanine dyes, Modified. A. W. Anish. 2,453,738, Nov. 16.
Cyclic ethers, Oxidation of. J. G. M. Bremner and D. G. Jones. 2,453,890, Nov. 16.
Cycling system, Hydraulic. W. T. Stephens. 2,453,732, Nov. 16.
Cylinder plug for gas-operated guns with grenade launchers. C. H. Coates. 2,453,699, Nov. 16.
Cylinders for dump trucks, Pivoting hydraulic power. H. O. Day. 2,453,975, Nov. 16.
Dental root preparation instrument. P. Brooks. 2,453,696, Nov. 16.
Desk with mail indicating system, Registration. M. G. Rapp. 2,454,088, Nov. 16.
Destroying insect life, Method and apparatus for. F. S. Smith. 2,453,818, Nov. 16.
Developing apparatus, Film. W. R. Gardiner and J. T. Mays. 2,453,900, Nov. 16.
Device for adjusting breaker units. T. J. Basista. 2,453,774, Nov. 16.
Device for mixing plaster compounds and mixtures. G. M. Hollenback. 2,453,914, Nov. 16.
Device for preserving objects requiring liquid supply. D. Hamlet. 2,453,906, Nov. 16.
Dewatering apparatus. W. F. Bankauf and H. B. Fisher. 2,453,961, Nov. 16.
Diagnostic device, Medical. L. J. B. Gluzek. 2,453,841, Nov. 16.
Diagnostic instrument for examining the eye. W. N. Allyn. 2,453,887, Nov. 16.
Diamino thiadiazine derivatives. H. A. Walter. 2,454,262, Nov. 16.
Diaphragm control, Automatic. C. W. Armstrong, C. Sadowsky, and L. S. Hetherington. 2,453,693, Nov. 16.
Die set with feeding means. A. J. England. 2,454,143, Nov. 16.
Diplex transmission by combined frequency-amplitude modulation. C. J. Young. 2,453,773, Nov. 16.
Direction signaling system for automatic vehicles. G. H. Coulter. 2,453,702, Nov. 16.
Discharge device, Excessive potential. J. R. McFarlin. 2,453,719, Nov. 16.
Discharge device for producing electric oscillations, Electron. A. H. Rosenthal. 2,454,094, Nov. 16.
Discharge device of the magnetron type, Electric. R. J. Bondley. 2,454,031, Nov. 16.
Discharging rockets. C. D., A. J. and C. Schermuly. 2,454,096, Nov. 16.
Disk, Revolving polarized. R. A. Campbell. 2,453,698, Nov. 16.
Dispenser: *See*—
Ketchup dispenser.
Dispensing device, Liquid. F. W. Opitz. 2,453,856, Nov. 16.
Dispensing system, Gas. W. C. Buttner and H. L. Norway. 2,453,968, Nov. 16.
Display apparatus, Electrically illuminated. F. Waller and W. R. Dresser. 2,454,238, Nov. 16.
Display package, Flower and candy. R. Kysela. 2,453,920, Nov. 16.
Ditcher. R. A. and J. R. Palmer, and G. R. Smit. 2,453,723, Nov. 16.
Divider and the like with measuring scales. H. Friedmann. 2,454,050, Nov. 16.
Door: *See*—
Aircraft door. Refrigerator car door.
Door check. F. P. Angell. 2,453,956, Nov. 16.
Door check. E. H. Croskey and V. M. Hackman. 2,453,831, Nov. 16.
Draft connector. J. A. E. Madore. 2,453,998, Nov. 16.
Draft regulator. H. A. Eggert. 2,454,044, Nov. 16.
Drier: *See*—
Clothes drier.
Drill supporting and handling rig, Portable pneumatic. R. E. Lee. 2,453,995, Nov. 16.
Drilling machine. E. J. Tomek. 2,454,235, Nov. 16.
Drum-operating electric drive. O. G. Rutemiller. 2,454,212, Nov. 16.
Duct turns or vanes, Manufacture of. H. M. Marc. 2,454,074, Nov. 16.
Dumping vehicle. E. B. Snead. 2,454,101, Nov. 16.
Dust collector. W. O. Vedder. 2,453,951, Nov. 16.
Dustpan. W. E. Coats. 2,453,973, Nov. 16.
Easel, Photographic printing. F. V. Schleimer. 2,454,097, Nov. 16.
Ecclesiastical equipment. N. V. Casson. 2,453,892, Nov. 16.
Egg washer. W. J. Reading. 2,454,090, Nov. 16.
Electric motor. F. H. Gerlach and J. D. Miller, Jr. 2,454,155, Nov. 16.

Electric vehicle direction indicator. C. H. Phillips. 2,453,931, Nov. 16.
Electrical apparatus. F. D. Fielder. 2,454,147, Nov. 16.
Electrical conductance heater. L. R. Beath and H. S. Hill. 2,453,776, Nov. 16.
Electrical connector. H. E. Somes. 2,453,731, Nov. 16.
Electrical system. W. P. Boothroyd. 2,454,128, Nov. 16.
Electrode structure. D. E. Elmendorf. 2,453,978, Nov. 16.
Electrolytic oxidation of quinoline to quinolinic acid. J. B. Conn and J. van de Kamp. 2,453,701, Nov. 16.
Electronickel, Producing modified. L. S. Renzoni. 2,453,757, Nov. 16.
Emulsion adapted for coating textiles. F. G. La Piana and H. S. Bosland. 2,453,752, Nov. 16.
Enamel composition. C. J. Bartholomew. 2,454,123, Nov. 16.
Engine driven pump. R. Delzer. 2,454,138, Nov. 16.
Ethyl chloride, Making. H. W. Hill and E. L. Dance. 2,453,691, Nov. 16.
Exerciser. P. A. and P. White. 2,453,771, Nov. 16.
Extracting machine for laundry, Air propelled. C. O. Rasmussen. 2,453,727, Nov. 16.
Extracting machine, Wire core. E. S. y H. de Saracho. 2,454,010, Nov. 16.
Extractor: *See*—
Juice extractor.
Facing tool. F. G. and C. L. Livingston. 2,453,848, Nov. 16.
Facsimile recorder control circuit. B. F. Grib. 2,453,905, Nov. 16.
Fan, Engine cooling. G. N. Cole and C. R. Wells. 2,454,037, Nov. 16.
Fastener: *See*—
Rail fastener.
Rotatable separable fastener.
Fastener. S. T. Swidersky. 2,454,103, Nov. 16.
Fastening device for cables, wires, or the like. R. A. Hartman. 2,453,980, Nov. 16.
Feed mechanism for rapid-fire guns. P. H. Dixon. 2,453,876, Nov. 16.
Feeding device, Cartridge. J. O. Eames. 2,453,977, Nov. 16.
Ferrochrome process and product. L. F. Weitzenkorn and G. N. Goller. 2,454,020, Nov. 16.
Fibers, Drawing. W. R. Schlehr. 2,453,864, Nov. 16.
Fibrous batting, Multilayered. R. F. Hlavaty. 2,454,175, Nov. 16.
Figure base. L. K. Sandiovich. 2,454,095, Nov. 16.
Filter: *See*—
Rotary drum filter.
Filter. J. M. Besore. 2,454,030, Nov. 16.
Filter. S. W. Briggs. 2,454,033, Nov. 16.
Filter for sediment traps. R. F. Corwin. 2,453,895, Nov. 16.
Filtering device. L. Reichold. 2,454,205, Nov. 16.
Fitting for flexible hose. W. MacWilliam. 2,453,997, Nov. 16.
Flame-retarding material and making the same. J. A. Woodruff. 2,454,245, Nov. 16.
Flashing apparatus, Moving picture. E. N. Mollier. 2,454,080, Nov. 16.
Flask, Molder's. A. B. Castaguola. 2,453,893, Nov. 16.
Flexible pocket receptacle. D. J. Broughton. 2,453,780, Nov. 16.
Fluid clutch, governor controlled. W. H. Harstick. 2,453,791, Nov. 16.
Fluid coupling and friction clutch, Combination. G. R. Pennington. 2,453,811, Nov. 16.
Fluid heater. N. G. Gorean. 2,453,985, Nov. 16.
Fluid seal for shafts. H. Clayton-Wright. 2,454,036, Nov. 16.
Folder with picture frame and easel, Advertising. T. A. Graham. 2,453,902, Nov. 16.
Folding picnic table. J. Pierik. 2,454,202, Nov. 16.
4-cyano-2,5-dialkoxyacetoacetanilides. W. H. von Glahn and H. A. Bergstrom. 2,453,692, Nov. 16.
Frame and sash, Auxiliary. J. H. Kleintop. 2,453,992, Nov. 16.
Frame structure of dynamoelectric machines. F. J. Johns. 2,454,180, Nov. 16.
Frequency control, Automatic. G. Guanella. 2,453,988, Nov. 16.
Friction clutch. C. B. Spase. 2,453,945, Nov. 16.
Fuel regulating means for dual fuel engines. H. F. Shepherd. 2,454,222, Nov. 16.
Furfuryl alcohol-phenolic resins. A. P. Dunlop and E. A. Reineck. 2,453,704, Nov. 16.
Fuse, Time. R. H. Whitehead. 2,453,822, Nov. 16.
Game. W. G. Hare and C. B. Roebuck, Jr. 2,453,907, Nov. 16.
Garment. R. E. Richman. 2,454,208, Nov. 16.
Garment hanger support. J. P. Johnson and L. C. Teague. 2,453,919, Nov. 16.
Garment stand. W. O. Fought, Jr. 2,454,148, Nov. 16.
Garment steaming and drying apparatus. J. C. Shaw. 2,453,730, Nov. 16.
Gas bomb. J. H. Hammond, Jr. 2,453,842, Nov. 16.
Gastroscope. P. F. Salisbury. 2,453,862, Nov. 16.
Gauge: *See*—
Bore gauge. Cap strip gauge.
Gear: *See*—
Arresting gear.
Gelatino-silver halide photographic elements containing higher fatty alcohols. W. H. Dimsdale and K. J. Challis. 2,454,043, Nov. 16.
Generating system. T. J. Wilson. 2,453,885, Nov. 16.
Generator: *See*—
Saw-tooth voltage generator.
Generator ventilation, Dual. C. A. Atwell and E. O. Mueller. 2,454,120, Nov. 16.
Generator with pilot burner, Thermoelectric. H. T. Sparrow. 2,454,229, Nov. 16.
Golf game and instructional apparatus. H. C. Dunfee. 2,453,745, Nov. 16.
Grenade mine. L. K. Liljegren and J. W. Moseman, Jr. 2,453,715, Nov. 16.
Grinder, Valve seat. W. A. Kuhlman. 2,454,068, Nov. 16.
Grinding machine, Crankpin. E. D. La Fleur. 2,454,186, Nov. 16.
Gripping unit for mop shaking machines, Mop. C. Turnepseed. 2,453,948, Nov. 16.
Guide, Ram. H. Terhune. 2,453,875, Nov. 16.
Gum breaking machine. C. E. Melhorn. 2,453,805, Nov. 16.
Gun sight having a plurality of illuminated reticles. L. H. Brown. 2,453,697, Nov. 16.
Handle and hold-down bracket, Battery. W. F. Donkin. 2,453,835, Nov. 16.
Harvester, Vegetable. O. Lapointe. 2,453,714, Nov. 16.
Heat exchange apparatus. J. E. Mason and C. White. 2,453,718, Nov. 16.
Heat-sealing the seams of paper bags. A. M. Bojanower. 2,453,889, Nov. 16.
Heater. *See*—
Circulating gas heater. Fluid heater.
Electrical conductance heater. Radial flow forced-air heater.
Heater for livestock watering tanks. G. A. Rietz. 2,454,091, Nov. 16.
Heating apparatus, High-frequency induction. R. E. Cox. 2,454,039, Nov. 16.
Heating stacked bodies, Method of and apparatus for. J. Kniveton. 2,454,253, Nov. 16.
Heating system, Fireplace. H. T. Wright. 2,453,954, Nov. 16.
Heterocyclic nitrogen compounds, Purification of. J. W. Waldron. 2,454,019, Nov. 16.
Hitch, Trailer. A. Smit. 2,453,941, Nov. 16.
Holder: *See*—
Cosmetic holder. Portable wire reel holder.
Crayon holder. Soap holder.
Necktie holder. Welding electrode holder.
Photographic suction holder.
Holder for fastening attaching means. W. I. Jones. 2,453,990, Nov. 16.
Holder for illuminated decorative lighting devices, Heat and light concentrating. L. Barnett. 2,453,962, Nov. 16.
Holder for lipsticks and the like. C. W. Mellette. 2,453,754, Nov. 16.
Holder for thermionic valves and other electrical devices. G. Wagstaff. 2,454,018, Nov. 16.
Holder of plastic material for pocket combs and the like, Making. C. E. Maynard. 2,454,194, Nov. 16.
Holding apparatus with piston through which pressure fluid is passed. W. P. Cousino. 2,453,785, Nov. 16.
Hook: *See*—
Arresting hook.
Hopper, Cartridge orientating. J. H. Woodberry and F. W. Hoewischer. 2,453,736, Nov. 16.
Hot line jumper clamp. R. B. Schoonmaker. 2,453,761,
Housing for piezoelectric elements, Moistureproof. C. H. Wintermute. 2,454,244, Nov. 16.
Hydraulic brake. N. O. Myklestad. 2,453,808, Nov. 16.
Hydraulic clutch. A. F. Hickman. 2,453,981, Nov. 16.
Hydraulic hose coupling. C. W. Bopp. 2,453,741, Nov. 16.
Hydraulic lock. W. C. Oliver. 2,453,855, Nov. 16.
Hydraulic pump. A. F. O'Harah. 2,453,929, Nov. 16.
Hydraulic type log debarker having plural log-rotating chucks independently revolvable about a common axis. F. H. Swift. 2,453,947, Nov. 16.
Hydrocarbon synthesis. S. B. Sweetser. 2,453,874, Nov. 16.
Hydrocarbons, Separating. C. E. Morrell and M. W. Swaney. 2,453,853, Nov. 16.
Ice glider. P. and B. Anderson. 2,454,248, Nov. 16.
Image projection system. D. W. Epstein. 2,454,144, Nov. 16.
Incased drain plug. R. S. Stephenson. 2,453,820, Nov. 16.
Indicator: *See*—
Electric vehicle direction indicator.
Insert coil setting tool. K. B. Geertsema. 2,453,840, Nov. 16.
Internal-combustion rotary motor. C. E. Plummer. 2,454,006, Nov. 16.
Interrupting device, Circuit. E. F. Kohl. 2,454,067, Nov. 16.
Iron, Chair, and seat cushion therefor. A. C. Grunwald. 2,454,057, Nov. 16.
Isomerization and hydrogenation process, Combination. H. J. Hepp. 2,454,171, Nov. 16.

Joint: *See*—
Pipe joint. Tubing tool joint.
Joint for composite structural element. J. P. Jansen. 2,453,918, Nov. 16.
Juice extractor. L. Myers. 2,454,256, Nov. 16.
Juicer with hand reciprocated rotary reamer. J. Patrick. 2,454,085, Nov. 16.
Ketchup dispenser. P. Colaluca. 2,453,974, Nov. 16.
Knife rack. G. H. Lowell, Jr. 2,453,800, Nov. 16.
Knitting device, Pneumatic. M. Vitoux. 2,454,236, Nov. 16.
Lamp: *See*—
Circular electric lamp.
Lamp support. S. R. Browne. 2,453,967, Nov. 16.
Lathe. H. D. Chambliss. 2,453,744, Nov. 16.
Lathe for drilling, Tailstock. S. B. Wright. 2,453,825, Nov. 16.
Lawn mower and control mechanism therefor, Power. W. I. Smith. 2,453,819, Nov. 16.
Life jacket. R. E. Coombs and R. C. Hale. 2,453,700, Nov. 16.
Lifter: *See*—
Lug box lifter.
Lighter, Novelty. J. P. Kohut. 2,453,713, Nov. 16.
Lighting fixture. A. E. Wiedenhoeft. 2,454,243, Nov. 16.
Lighting set. B. A. Belling. 2,453,695, Nov. 16.
Lighting set, Electric. E. E. Mendonca. 2,453,925, Nov. 16.
Limiting system, Signal amplitude. G. J. C. Andresen. 2,453,958, Nov. 16.
Liquid controlling device, Thermostatic. H. B. Drapeau. 2,454,141, Nov. 16.
Liquid mixing valve. K. M. Newcomer. 2,453,809, Nov. 16.
Load moving machine. H. C. Perman. 2,453,755, Nov. 16.
Loading means, Truck. S. Smith. 2,453,943, Nov. 16.
Lock: *See*—
Hydraulic lock.
Locking means for adjustable back chairs. T. H. Van Buren. 2,453,879, Nov. 16.
Locomotive drive. W. A. Brecht. 2,454,131, Nov. 16.
Louver means for controlling air flow in refrigerators. C. P. De Carlo, Sr. 2,453,703, Nov. 16.
Lubricating compositions. L. A. Mikeska, A. R. Kittleson, and W. M. Smith. 2,453,850, Nov. 16.
Lubricating oils, Steam turbine. R. G. Mastin. 2,454,075, Nov. 16.
Lubricator head construction. L. R. Helm. 2,454,252, Nov. 16.
Lug box lifter. P. Weaver. 2,454,110, Nov. 16.
Machine for forming containers from flexible material. P. C. Elliott. 2,453,836, Nov. 16.
Machine gun. G. A. Chadwick and P. W. Burk. 2,453,830, Nov. 16.
Machines for cutting and polishing nonspherical or conical surfaces by means of abrasive band tools. S. and M. Clavé. 2,453,972, Nov. 16.
Magnetic clutch. J. E. Allen. 2,453,957, Nov. 16.
Magneto, Ignition. H. T. Heal. 2,453,910, Nov. 16.
Mask with adjustable supporting means for profile projectors. H. Boardman. 2,454,127, Nov. 16.
Mattress. M. D. Seeche. 2,454,220, Nov. 16.
Measuring apparatus, Standing-wave. D. Dettinger. 2,454,042, Nov. 16.
Measuring instrument, Electrical. A. J. Petzinger and R. V. Adams. 2,454,201, Nov. 16.
Mechanism for selective operation of a plurality of master cylinders. A. N. Milster. 2,453,852, Nov. 16.
Metal mercaptides of amino-aryl mercaptans, Preparation of. N. Stelger. 2,454,260, Nov. 16.
Metal surfaces, Protection of certain nonferrous. E. Snyder. 2,453,764, Nov. 16.
Meter pedestal. R. J. Teetsell. 2,453,734, Nov. 16.
Methylol melamine ethers and their manufacture. F. C. McGrew. 2,454,078, Nov. 16.
Millinery box. E. C. Mulnix. 2,454,196, Nov. 16.
Mold for concrete weight for iron pipe lines. G. W. McDearmon. 2,453,804, Nov. 16.
Mold for the manufacture of storage batteries. C. D. Galloway. 2,454,051, Nov. 16.
Molded impeller. K. Perkins. 2,454,200, Nov. 16.
Molding composition of polyvinyl aromatic compound. L. M. Debing. 2,454,250, Nov. 16.
Mooring device, Aircraft. H. H. Platt and W. L. Le Page. 2,453,857, Nov. 16.
Motor: *See*—
Electric motor. Two-speed single-phase motor.
Internal-combustion rotary motor.
Synchronous electric motor.
Motor brush holder connector. F. S. Stickney. 2,454,230, Nov. 16.
Motor control apparatus, Electric. S. G. Isserstedt. 2,453,917, Nov. 16.
Motor control system. A. F. Kenyon. 2,454,183, Nov. 16.
Motor control system, Plural electric. W. R. Harding. 2,454,166, Nov. 16.
Motor reversing control, Electric. J. E. Reilly. 2,454,206–7, Nov. 16.
Mounting: *See*—
Panel and trim mounting. Rubber mounting.
N'-acyl sulfanilamides, Preparation of. W. B. Tarpley, Jr., and A. I. Ryer. 2,454,104, Nov. 16.
Nail polish mask. N. D. Pettyjohn. 2,454,004, Nov. 16.
Navigational instrument. H. L. Reilly, F. H. Scrimshaw, and A. G. Bone. 2,454,007, Nov. 16.
Necktie. A. F. Taborski. 2,453,733, Nov. 16.
Necktie holder. V. T. Howard. 2,454,177, Nov. 16.
Nitration of alcohols. A. E. W. Smith, C. W. Scaife, and H. Baldock. 2,453,942, Nov. 16.
Oil composition, Grinding. E. C. Hughes and F. Veatch. 2,453,708–10, Nov. 16.
Oil-refining foldable pack. A. R. White. 2,453,952, Nov. 16.
Olefinic compounds, Polymerization of. L. Fallows and E. V. Mellers. 2,453,788, Nov. 16.
Operating mechanism for embossing machine keyboards, Record controlled. C. Chisholm. 2,453,781, Nov. 16.
Optical instrument for examining and measuring characteristics of the eye. W. N. Allyn. 2,453,888, Nov. 16.
Organic compounds and manufacture of phthalic anhydride, Oxidation of. S. B. Becker. 2,453,740, Nov. 16.
Organic peroxides, Stabilized. R. Kuoch and E. S. Shanley. 2,454,254, Nov. 16.
Organic sulfides, Preparing. C. T. Walling. 2,454,108, Nov. 16.
Oscillating system. P. F. Brown. 2,454,132, Nov. 16.
Oven, Cooking. F. H. Schneider. 2,453,939, Nov. 16.
Package opener and cigarette ejector, Improved cigarette. L. V. Bell. 2,453,777, Nov. 16.
Paddle means for spraying. W. H. Legge. 2,454,188, Nov. 16.
Panel and trim mounting. W. F. Johnson. 2,454,066, Nov. 16.
Peanut picker. D. F. Good. 2,454,156, Nov. 16.
Phosphate binder and preparing the same, Aluminum. H. H. Greger. 2,454,056, Nov. 16.
Photoelectric tube. M. Orlove. 2,453,810, Nov. 16.
Photographic border device. W. A. Boulais, Jr. 2,454,032, Nov. 16.
Photographic suction holder. S. N. Wekeman. 2,454,240, Nov. 16.
Photosetting coating composition, Preparation of. G. L. Wendt. 2,453,769–70, Nov. 16.
Physiologically active derivative of pyridoxine, and making the same. E. E. Snell. 2,453,944, Nov. 16.
Picture projecting pistol. M. A. Strumor. 2,454,233, Nov. 16.
Piezoelectric device for converting pressure variations into potential variations. W. H. Stigter. 2,454,264, Nov. 16.
Pipe joint. J. L. Merriam. 2,453,849, Nov. 16.
Pipe stand and container for smoking tobacco, Combined. R. Chemlinski. 2,453,971, Nov. 16.
Pipe union and check valve, Combined. F. R. Long. 2,454,072, Nov. 16.
Plastic-coated knitting needles, Producing. W. C. Bates. 2,453,739, Nov. 16.
Plate assembly, Storage battery. C. D. Galloway. 2,454,052, Nov. 16.
Platinum ruthenium alloy cannulae, Making seamless. G. M. Hickey and W. W. Matlack. 2,454,172, Nov. 16.
Pleating device. W. J. Houser. 2,454,176, Nov. 16.
Plug: *See*—
Incased drain plug.
Poacher, Egg. D. I. Gibb. 2,454,054, Nov. 16.
Polystyrene-chlorinated meta diphenyl benzene composition. J. R. Mares. 2,454,255, Nov. 16.
Polyvalent-metal hydrocarbon sulfonate, Producing. U. B. Bray. 2,453,690, Nov. 16.
Portable wire reel holder. L. Frontz. 2,453,979, Nov. 16.
Power element, Thermostatic. J. P. Miller. 2,453,851, Nov. 16.
Power input of electrical conductance heaters, Controlling. H. S. Hill and L. R. Beath. 2,454,174, Nov. 16.
Power output control, High-frequency. L. S. Lappin and R. P. Corporon. 2,453,994, Nov. 16.
Power plant and its working medium, with operation, Thermal. J. Ackeret. 2,453,886, Nov. 16.
Power plant, Thermal. K. Oechslin. 2,453,928, Nov. 16.
Power plant using hot air as motivating fluid, Turbine thermal. D. Schmidt. 2,453,938, Nov. 16.
Power transmission. T. Iavelli. 2,453,794, Nov. 16.
Pressure dressing, First-aid. J. L. Gallagher. 2,453,705, Nov. 16.
Pressure release. C. E. Burt. 2,453,891, Nov. 16.
Printing plate, Stereotype cylinder. G. A. Hiester. 2,454,170, Nov. 16.
Pulley block. H. B. Bercaw. 2,453,963, Nov. 16.
Pump: *See*—
Engine driven pump. Hydraulic pump.
Rack: *See*—
Knife rack.
Radial flow forced-air heater. F. R. Higley. 2,453,913, Nov. 16.
Rail fastener. R. E. Merrell. 2,454,079, Nov. 16.
Railway vehicle truck, Model. H. R. Howard. 2,453,915, Nov. 16.
Razor, Safety. G. F. Pinsuti. 2,453,756, Nov. 16.
Receptacle: *See*—
Flexible pocket receptacle.
Receptacle and fuse, Combination electric. P. Alemaghides. 2,454,024, Nov. 16.

Recognition system for pulse echo radio locators. G. M. Charrier. 2,453,970, Nov. 16.
Recorder, Job elapsed time. A. Amend, Jr., and G. C. Engel. 2,454,025, Nov. 16.
Recording apparatus, Facsimile. C. J. Young. 2,454,247, Nov. 16.
Reel and rake apparatus for combines. H. N. Irvine. 2,454,063, Nov. 16.
Refrigeration system. A. B. Newton. 2,454,263, Nov. 16.
Refrigerator car door. J. J. Hveem. 2,453,793, Nov. 16.
Regenerative repeater. W. T. Rea and J. R. Wilkerson. 2,454,089, Nov. 16.
Register, Cash. S. P. Midouhas. 2,454,000, Nov. 16.
Regulating system. E. L. Harder and E. I. Pollard. 2,454,165, Nov. 16.
Regulating system. H. M. Rustebakke and A. W. Kimball. 2,454,211, Nov. 16.
Regulator: *See*—
Draft regulator.
Relay. L. Hegy. 2,454,060, Nov. 16.
Relay system, Electrical. S. B. Hall. 2,454,161, Nov. 16.
Relaying system, Protective. E. L. Harder. 2,454,163, Nov. 16.
Remembrancer. J. L. Younghusband. 2,453,955, Nov. 16.
Remote-control apparatus, Radio. M. N. Yardeny. 2,454,022, Nov. 16.
Remote control for electric transmission systems. W. A. Derr. 2,454,140, Nov. 16.
Resistance unit for flashlights. E. A. Schmidt. 2,453,865, Nov. 16.
Resistance welding apparatus and jig therefor. W. N. Lurcott. 2,454,190, Nov. 16.
Resonator, Cavity. J. C. Schelleng. 2,453,760, Nov. 16.
Ring lock, cutter chain structure. C. J. Forbes. 2,453,898, Nov. 16.
Road map holder, including a rotatable roller. L. J. De Muth. 2,454,139, Nov. 16.
Rollers, Onion grading. R. D. Sheppard. 2,454,015, Nov. 16.
Rotary drum filter. A. L. Burleson. 2,454,134, Nov. 16.
Rotatable separable fastener. W. Shippee. 2,454,223, Nov. 16.
Rubber from goldenrod leaves, Obtaining. N. Porges, E. F. Pollard, and J. J. Spadaro. 2,453,858, Nov. 16.
Rubber mounting. G. H. Kaemmerling. 2,453,991, Nov. 16.
Rubber with dixanthic sulfides, Vulcanizing synthetic. D. J. Beaver. 2,453,689, Nov. 16.
Safety for self-loading firearms. H. E. Eklund. 2,453,897, Nov. 16.
Saw-tooth voltage generator. G. W. Downs, Jr. 2,453,787, Nov. 16.
Sawing machine, Swiveling reciprocating-saw. C. Gaines. 2,453,899, Nov. 16.
Scarfing machine. G. N. Albree. 2,454,114, Nov. 16.
Scooter, Motor. G. C. Fields. 2,454,046, Nov. 16.
Screen: *See*—
Vibratory screen.
Screen structure, Self-cleaning. R. O. Shadday. 2,454,259, Nov. 16.
Seat: *See*—
Child's toilet seat.
Securing means in a frame for interchangeable hand mirrors, Reinforced plastic. A. De Meo. 2,454,041, Nov. 16.
Selector mechanism. D. L. Herr. 2,453,911, Nov. 16.
Selenium rectifier and making same. C. S. Smith, Jr. 2,453,763, Nov. 16.
Self-synchronous system for reproducing motion or position. E. P. Rodemann. 2,453,815, Nov. 16.
Separator: *See*—
Battery plate separator.
Separator and homogenizer, Cream. J. B. McFadden. 2,453,924, Nov. 16.
Series filtration. E. T. Birsch and W. D. Silcox. 2,454,124, Nov. 16.
Service outlet, Electric. F. H. Seals. 2,454,221, Nov. 16.
Servo mechanism. S. Wald. 2,454,107, Nov. 16.
Sewing machine needles, Cooling and lubricating. A. Albero. 2,453,827, Nov. 16.
Sharpening device, Knife and scissors. E. W. Clark. 2,454,035, Nov. 16.
Sheet material, Inlaying. P. F. Skoog. 2,454,016, Nov. 16.
Shipping container. R. Paul and G. F. Sulfrian. 2,453,930, Nov. 16.
Shock absorber, Double-acting. L. Brown and L. Lacey. 2,453,966, Nov. 16.
Shoe with instep guard, Sandal type. E. L. Jordan. 2,454,181, Nov. 16.
Shopping bag with foldable, extensible top. F. F. Scherzinger. 2,454,013, Nov. 16.
Shutoff for tractors, Automatic. D. H. Claypool. 2,453,783, Nov. 16.
Sign: *See*—
Traffic or display sign.
Signal discharger, Hand. L. V. Whipple. 2,453,884, Nov. 16.

Whistle, Multitone. J. Thompson. 2,454,105, Nov. 16.
Wire-cutting apparatus. A. Wennerberg. 2,454,241, Nov. 16.
Wrench and screw-driver, Compound. R. R. and F. R. Gonsett. 2,453,901, Nov. 16.
Wrench for flanges, Double-acting. D. Baeza. 2,454,027, Nov. 16.
Writing instrument, Ball-point. R. W. Randolph. 2,454,086, Nov. 16.
X-ray apparatus. G. Kloos. 2,453,798, Nov. 16.
Zinc, Electrolytic recovery of. J. T. Ellsworth. 2,454,142, Nov. 16.

CLASSIFICATION OF PATENTS

ISSUED NOVEMBER 16, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

13: 2,453,970
346— 82: 2,454,025
139: 2,454,247

This list shows the correct classification of those patents wherein the classification given in the patent head has been changed.

2,453,690: 252— 33
2,453,697: 88—2 6
2,453,729: 260—247
2,453,741: 284— 19
2,453,744: 74— 22
2,453,753: 316— 4
2,453,756: 30— 70
2,453,767: 240— 22
2,453,769: 117— 93
2,453,770: 117— 93
2,453,803: 170—160.1
2,453,810: 250—172
2,453,813: 285—122
2,453,817: 248—161
2,453,818: 21— 61
2,453,831: 16— 65
2,453,838: 312— 35
2,453,849: 285—161
2,453,856: 222—340
2,453,857: 244—17.17
2,453,863: 29—288
2,453,880: 220—3.5
2,453,883: 209—334
2,453,884: 42— 34
2,453,894: 274— 23
2,453,897: 89—148
2,453,901: 7— 1
2,453,904: 204— 15
2,453,906: 47— 41
2,453,908: 229— 16
2,453,914: 259— 7
2,453,921: 189— 34
2,453,930: 220— 9
2,453,941: 280—33.4
2,453,967: 248—122
2,453,980: 24— 81
2,453,990: 218— 5
2,453,991: 248—358
2,453,994: 173—324
2,454,001: 95— 2
2,454,025: 346— 82
2,454,028: 308—235
2,454,040: 170—135.4
2,454,041: 88—102
2,454,059: 135— 24
2,454,064: 248— 74
2,454,068: 51—241
2,454,092: 260—247
2,454,095: 248—346
2,454,126: 215— 40
2,454,141: 236— 93
2,454,158: 51— 15
2,454,159: 33—178
2,454,165: 322— 25
2,454,171: 260—683.1
2,454,179: 287— 58
2,454,216: 318—391
2,454,231: 248— 48
2,454,235: 77— 33
2,454,246: 33—178
2,454,247: 346—139
2,454,261: 260—243

PATENT SUITS

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

2,069,893. (See Re. 21,053.)

2,107,347, Sloane & Sloane, Reversible handbag covers, D. C., S. D. N. Y., Doc. 24/385, *Sloane Bros.* v. *W. Resnick.* Stipulation discontinuing action Oct. 2, 1944.

2,159,832. (See Re. 20,818.)

2,159,833. (See Re. 20,818.)

2,177,545, J. H. Wright, Apparatus for making metal tubes, D. C., S. D. N. Y., Doc. 16/219, *J. H. Wright* v. *Jackson Tube Co., Inc.* Stipulation and order settling action Oct. 5, 1942.

2,191,883, H. Fleisher, Knitted fabric, D. C., S. D. N. Y., Doc. 14/83, *Princeton Knitting Mills, Inc.*, v. *Beaunit Mills, Inc.* Stipulation and order discontinuing action Feb. 5, 1945.

2,195,582. (See 2,255,274.)

2,230,486. (See Re. 20,818.)

2,255,274, 2,195,582, B. Schoenberg, Lamp switch operator, filed Oct. 8, 1948, D. C., E. D. N. Y., Doc. C9397, *Nu-Way Electric Mfg. Co.* v. *Eagle Electric Mfg. Co., Inc.*

2,261,930, E. J. Abbe, Load elevating mechanism for an industrial truck, filed Sept. 30, 1948, D. C., N. D. Ohio (Cleveland), Doc. 25911, *The Elwell-Parker Electric Co.* v. *Clark Equipment Co. et al.*

2,270,152, E. Themak, Tube sealing, D. C., S. D. N. Y., Doc. 19/423, *E. Themak* v. *Popper & Klein, Inc., et al.* Stipulation and order dismissing action Oct. 14, 1944.

2,278,868, A. J. Deyrup, Glass colors of high alkali resistance, D. C., S. D. N. Y., Doc. 28/745, *E. I. du Pont de Nemours & Co.* v. *B. F. Drakenfeld & Co., Inc.* Consent order dismissing action without prejudice Feb. 21, 1945.

2,279,693. (See 2,282,490.)

2,282,490, 2,331,562, O. C. Martin, Valve construction; 2,317,627, 2,317,628, Re. 22,429 (of 2,279,693), same, Valve; 2,345,349, same, Method of reaming valve seats; 2,364,864, same, Method of manufacturing valve bodies, filed Sept. 30, 1948, D. C., S. D. Calif., C. Div., Doc. 8707–Y, *M. E. Martin* v. *Adel Precision Products Corp.*

2,285,996, A. D. McKelvy, Soap cake retainers for shaving mugs, D. C., S. D. N. Y., Doc. 19/547, *A. D. McKelvy Co.* v. *Artfield Creations, Inc., et al.* Stipulation and judgment discontinuing action against Bernart, Inc., and A. Baum without prejudice; injunction against Artfield Creations, Inc., and Irene Blake Cosmetics, Inc., Mar. 22, 1943.

2,317,627. (See 2,282,490.) 2,317,628. (See 2,282,490.)

2,322,045, A. Miller, Lamp shade, D. C., S. D. N. Y., Doc. 39/633, *A. Miller et al.* v. *A. & S. Specialty Co.* Stipulation and order dismissing complaint and counterclaim June 25, 1948.

2, 331,562. (See 2,282,490.) 2,345,349. (See 2,282,490.)

2,351,492, E. Cowles, Method and apparatus for treating paper stock, D. C., S. D. N. Y., Doc. 37/67, *The Cowles Co. et al.* v. *San-Nap-Pak Mfg. Co., Inc.* Consent judgment for plaintiffs, holding infringement, and granting injunction Jan. 10, 1947.

2,364,864. (See 2,282,490.)

2,389,327. (See Re. 20,818.)

2,390,913. (See 2,423,574.)

2,390,636, 2,397,229, L. J. Biro, Writing instrument, D. C., S. D. N. Y., Doc. 37/328, *Eversharp, Inc., et al.* v. *Fieldston Pen Corp. et al.* Order dismissing complaint without prejudice, and dismissing counterclaim with prejudice (notice Oct. 5, 1948). Doc. 36/446, *Eversharp, Inc., et al.* v. *Fieldston Pen Corp. et al.* Consent order of discontinuance as to Gimbel Bros., Inc., dismissing complaint without prejudice and dismissing counterclaim with prejudice Oct. 5, 1948.

2,390,913. (See 2,423,574.) 2,397,229. (See 2,390,636.)

2,404,435, Cooper and Hohmann, Cigarette lighter, D. C., S. D. N. Y., Doc. 38/431, *Taller & Cooper* v. *Dorsey-Walker Corp.* Consent and order of discontinuance without prejudice Apr. 16, 1947.

2,423,574, E. C. Magdeburger, Exhaust manifold for four-cycle internal combustion engines; 2,423,602, same, Manifold for internal combustion engines; 2,390,913, C. G. Barrett, Inlet and exhaust connections for internal combustion engines, filed Oct. 5, 1948, D. C., E. D. Wis. (Milwaukee), Doc. 4594, *E. C. Magdeburger* v. *Nordberg Mfg. Co.*

2,423,602. (See 2,423,574.)

2,446,968, G. E. Toner, Grain trimmer, filed Oct. 5, 1948, D. C., E. D. Pa., Doc. 8924, *B. H. Sobelman* v. *Dugan & McNamara, Inc., et al.*

Re. 20,818, P. H. Smyth, Jr., Selective phonographic playing machine; 2,159,832, 2,159,833, same, Phonograph; 2,230,486, L. A. Durant, Selector mechanism; 2,389,327, D. C. Rockola et al., Phonograph, filed Oct. 6, 1948, D. C. Colo. (Denver), Doc. 2547, *Rock-Ola Mfg. Corp.* v. *Blackwell Distributing Co.*

Re. 21,053, 2,069,893, A. T. Matthews, Awning, filed Sept. 28, 1948, D. C., S. D. Calif. (Los Angeles), Doc. 8702–W, *National Ventilated Awning Co. et al.* v. *The National Ventilated Awning Co. of Southern California et al.*

Re. 22,429. (See 2,282,490.)

Des. 97,242, H. Rubenstein, Souvenir key, D. C., S. D. N. Y., Doc. 10/347, *Goldfarb Novelty Co.* v. *North American Products.* Dismissed for lack of prosecution June 21, 1943.

Des. 109,126, P. Carlson, Truck, D. C., S. D. N. Y., Doc. 10/471, *The Metropolitan Body Co.* v. *Yellow Truck & Coach Mfg. Co.* Stipulation dismissing action Feb. 10, 1943.

Des. 131,035, E. R. Popper, Knitted textile fabric, D. C., S. D. N. Y., Doc. 21/515, *Beldoch-Popper, Inc.*, v. *Concord Chenille Co., Inc.* Stipulation discontinuing action Sept. 4, 1943.

Des. 131,392, S. Kuznetz, Dress ensemble, D. C., S. D. N. Y., Doc. 22/523, *Lipman Bros.* v. *Peerless Tailored Dresses, Inc.* Stipulation discontinuing action Mar. 22, 1944. Doc. 19/589, *Lipman Bros.* v. *Gladdy Colleen, Inc.* Decree as above Jan. 24, 1944.

Des. 133,242, M. McCoy, Dress, D. C., S. D. N. Y., Doc. 19/517, *Carlye Dress Corp.* v. *Sam Edelman, Inc.* Dismissed for lack of prosecution June 7, 1944.

Vol. 616 • No. 3 Tuesday, November 16, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

NOTICES

Change in Subscription Rates for Official Gazette

Notice is hereby given that effective January 1, 1949, the Superintendent of Documents, Government Printing Office, will increase the subscription rates for the OFFICIAL GAZETTE to the following prices:

Annual subscription, domestic	$17.50
Annual subscription, foreign	26.50
Annual subscription with Indexes of Patents and Trade-Marks	
Paper bound	
Domestic	$21.00
Foreign	31.00
Cloth bound	
Domestic	$24.50
Foreign	34.50

The price of individual copies of the OFFICIAL GAZETTE will remain unchanged at 35 cents each.

C. E. HAGLUND,
October 22, 1948. *Executive Officer.*

Adjudicated Patents

(C. C. A. III.) Gillies patent, No. 1,903,106, for waterproof heat insulating tape, claim 8 *Held* invalid and not infringed. *Union Asbestos & Rubber Co.* v. *Gustin-Bacon Mfg. Co.*, 169 F.2d 686; 78 USPQ 238.

(C. C. A. III.) Gillies patent, No. 2,070,861, for waterproof insulating material, claim 4 *Held* invalid. *Id.*

(C. C. A. III.) Gossen patent, No. 2,158,963, for weatherstrip and sash balance, claims 1 and 2 *Held* invalid. *Master Metal Strip Service* v. *Protex Weatherstrip Mfg. Co.*, 169 F.2d 700; 78 USPQ 119.

(D. C. III.) Falkenberg patent, No. 2,409,425, for drapery mounting, claims 14 and 15 *Held* invalid. *Falkenberg* v. *Bernard Edward Co.*, 79 F. Supp. 417; 79 USPQ 28.

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,410,536, Anton Vonnegut, Expansible wheel, decided Oct. 15, 1948, claim 2.

Pat. 2,412,797, Martin Berliner, Method of machining metal, decided Oct. 21, 1948, claims 1, 2, and 3.

Disclaimers

Re. No. 22,399.—*Martin E. Fonken*, Beloit, Wis. APPARATUS FOR MAKING CINNAMON ROLLS OR THE LIKE. Patent dated Dec. 7, 1943. Disclaimer filed Oct. 16, 1948, by the assignee, *Interstate Bakeries Corporation.*

Hereby enters this disclaimer to claims 1 to 12 of said patent.

2,194,585.—*Karl Brenkert*, Detroit, Mich. MOTION PICTURE PROJECTOR. Patent dated Mar. 26, 1940. Disclaimer filed Oct. 21, 1948, by the assignee, *American Pattern & Manufacturing Co.*

Hereby enters this disclaimer of claims 1 and 2 of said patent.

2,383,774.—*Morris Cohen*, Kansas City, Mo., and *Duard W. Enoch*, *George Hasty*, and *Gerald A. Jorgenson*, Chicago, Ill. MEANS FOR TREATING DOUGH. Patent dated Aug. 28, 1945. Disclaimer filed Oct. 16, 1948, by the assignee, *Interstate Bakeries Corporation.*

Hereby enters this disclaimer to claim 7 of said patent.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

General Aniline & Film Corporation has placed more than 3,000 patents on the Register of Patents as being available for licensing. The patents are grouped in five sections. The following patents (Reg. Nos. 11,955 through 12,502) are the balance of Section 1, relating to Dyestuffs and Intermediates, Group 28—22—82—89, and Section 2, relating to Textile Assistants, Detergents, Water-Softeners and Other Surface-Active Agents, Group 28—81—89. Inquiries concerning these patents should be addressed to the Patent Department, General Aniline & Film Corporation, 247 Park Ave., New York 17, N. Y.

SECTION 1—Continued

Pat. 2,155,328. Condensation Products and a Process of Preparing Them. Apr. 18, 1939.

Pat. 2,155,447. Polymethine Dyestuffs and a Process of Making Same. Apr. 25, 1939.

Pat. 2,155,459. Polymethine Dyestuffs and a Process of Making Same. Apr. 25, 1939.

Pat. 2,156,069. Process of Dyeing Artificial Textile Materials from Cellulose Derivatives. Apr. 25, 1939.

Pat. 2,156,446. Production of Azo Dyestuffs. May 2, 1939.

Pat. 2,156,731. Azo Dyestuffs Insoluble in Water and Fiber Dyed Therewith. May 2, 1939.

Pat. 2,156,887. Dyestuffs of the Anthraquinone Series. May 2, 1939.

Pat. 2,157,725. Azo Dyestuffs. May 9, 1939.

Pat. 2,157,796. Intermediates for Water-Insoluble Azo Dyestuffs. May 9, 1939.

Pat. 2,157,797. Intermediates for Water-Insoluble Azo Dyestuffs. May 9, 1939.

Pat. 2,157,876. Polyazo Dyestuffs. May 9, 1939.

Pat. 2,157,877. Polyazo Dyestuffs. May 9, 1939.

Pat. 2,157,991. Preparation of Vat Dyestuffs of the Anthraquinone Series. May 9, 1939.

Pat. 2,158,296. Condensation Products of the Perylene Series. May 16, 1939.

Pat. 2,158,526. Partially Hydrogenated Heterocyclic Nitrogen Compounds Substituted by the Aldehyde Group and a Process of Making Same. May 16, 1939.

Pat. 2,158,648. Nitro Derivatives of Para Alkyl Sulphoxides of Diphenylamines. May 16, 1939.

Pat. 2,158,843. Azo Dyestuffs. May 16, 1939.

Pat. 2,159,381. Washing Composition. May 23, 1939.

Pat. 2,159,506. Anthraquinone Dyestuffs Capable of Being Chromed. May 23, 1939.

Pat. 2,159,605. Monoarylides of Aromatic Dicarboxylic Acid Halides. May 23, 1939.

Pat. 2,160,119. Pigment Pastes. May 30, 1939.

Pat. 2,161,400. Vat Dyestuffs of the 2-Naphthalene-2'-Indolindigo Series and Process of Making Same. June 6, 1939.

Pat. 2,161,524. Dihydrobenzocarbazole Compounds. June 6, 1939.

Pat. 2,161,622. Water-Insoluble Azo Dyestuffs. June 6, 1939.

Pat. 2,161,697. Hydroxybenzocarbazole Compounds. June 6, 1939.

Pat. 2,163,073. Azo Dyestuffs Insoluble in Water and Fiber Dyed Therewith. June 20, 1939.

Pat. 2,163,074. Azo Dyestuffs Insoluble in Water and Fiber Dyed Therewith. June 20, 1939.

Pat. 2,163,251. Azo Dyestuffs. June 20, 1939.

Pat. 2,163,950. Aza Compounds of High Molecular Weight. June 27, 1939.

Pat. 2,164,008. Monoazo Dyestuffs Soluble in Water. June 27, 1939.

Pat. 2,164,767. Chromiferous Dyestuffs and Processes of Preparing Them. July 4, 1939.

Pat. 2,164,781. Amino-Carboxylic Acids and a Process of Preparing Them. July 4, 1939.

Pat. 2,164,793. Polymethine Dyestuffs. July 4, 1939.

Pat. 2,168,174. Vat Dyestuffs of the Anthraquinone Series. Aug. 1, 1939.

Pat. 2,168,571. Metal Containing Trisazo Dyes. Aug. 8, 1939.

Pat. 2,168,576. Process of Coloring Plastic Masses. Aug. 8, 1939.

Pat. 2,168,800. Diazoamino Compounds Soluble in Water and Process of Preparing Them. Aug. 8, 1939.

Pat. 2,168,947. Dyestuffs of the Anthraquinone Series. Aug. 8, 1939.

Pat. 2,169,970. Disazo Dyestuffs. Aug. 15, 1939.

Pat. 2,172,572. 3-Hydroxy-Diphenylene Oxides and Process of Preparing Them. Sept. 12, 1939.

Pat. 2,172,691. Azo Dyestuffs. Sept. 12, 1939.

Pat. 2,172,712. Azo Dyestuffs. Sept. 12, 1939.

Pat. 2,173,324. Diazoamino Compound. Sept. 19, 1939.

Pat. 2,174,072. Dyestuffs of the Anthraquinoneoxazole Series. Sept. 26, 1939.

Pat. 2,174,182. Vat Dyestuffs of the Phthaloyl-Carbazole Series Containing Trifluoromethyl Groups. Sept. 26, 1939.

Pat. 2,174,245. Compounds of the Anthraquinone Series. Sept. 26, 1939.

Pat. 2,174,751. Naphthindenones. Oct. 3, 1939.

Pat. 2,174,823. Valuable Chromiferous Dyestuffs and a Process of Preparing Them. Oct. 3, 1939.

Pat. 2,175,168. Chromable Dyestuffs of the Triarylmethane Series. Oct. 10, 1939.

Pat. 2,175,187. Azo Dyestuffs Containing a Heavy Metal in a Complex Form. Oct. 10, 1939.

Pat. 2,175,552. Copper Complex Compounds of Polyazo Dyestuffs of the Stilbene Series. Oct. 10, 1939.

Pat. 2,175,716. Chromable Dyestuffs of the Triarylmethane Series and Process of Preparing Them. Oct. 10, 1939.

Pat. 2,175,794. Azo Dyestuffs Soluble in Water. Oct. 10, 1939.

Pat. 2,175,795. Monoazo Dyestuffs Soluble in Water. Oct. 10, 1939.

Pat. 2,175,796. Monoazo Dyestuffs Soluble in Water. Oct. 10, 1939.

Pat. 2,175,803. Vat Dyestuffs of the Anthraquinone Series. Oct. 10, 1939.

Pat. 2,175,806. Process of Producing Water-Insoluble Azo Dyestuffs on the Fiber and Dyeing Preparations Therefor. Oct. 10, 1939.

Pat. 2,175,807. Solid Diazonium Salts. Oct. 10, 1939.

Pat. 2,175,815. Copper Complex Compounds of Disazo Dyestuffs of the Stilbene Series. Oct. 10, 1939.

Pat. 2,176,413. 1.3-Diazo-Anthraquinones. Oct. 17, 1939.

Pat. 2,176,420. Nitrodyestuff of the Azine Series. Oct. 17, 1939.

Pat. 2,176,421. Compounds of the Coeranthrene and Coerbianthrene Series. Oct. 17, 1939.

Pat. 2,176,430. Vat-Dyestuffs of the Anthraquinone Series. Oct. 17, 1939.

Pat. 2,176,437. Dyestuffs of the Anthraquinone Series. Oct. 17, 1939.

Pat. 2,176,443. Vat Dyestuffs of the Dipyrazolanthrone Series. Oct. 17, 1939.

Pat. 2,176,853. Azo Dyestuffs Soluble in Water. Oct. 17, 1939.

Pat. 2,177,113. Dyestuffs of the Diphenylamine Series. Oct. 24, 1939.

Pat. 2,178,521. Process of Producing Compounds of the Perylene Series. Oct. 31, 1939.

Pat. 2,178,793. Dyestuffs of the Naphthophenosafranine Series. Nov. 7, 1939.

Pat. 2,179,895. Dyestuffs of the Methine Series. Nov. 14, 1939.

Pat. 2,180,297. Water-Insoluble Azo Dyestuffs and Fiber Dyed Therewith. Nov. 14, 1939.

Pat. 2,180,419. Vat Dyestuffs of the Anthraquinone-Acridone Series. Nov. 21, 1939.

Pat. 2,180,772. Trifluoromethyl Benzaldehydes. Nov. 21, 1939.

Pat. 2,181,051. Monoazo Dyestuffs. Nov. 21, 1939.

Pat. 2,181,057. Azo Dyestuffs. Nov. 21, 1939.

Pat. 2,181,554. Benzenecarboxylic Acid Fluorides Containing Trifluoromethyl Groups and Process of Preparing Them. Nov. 28, 1939.

Pat. 2,182,055. Azo Dyestuff Heavy Metal Complex Compounds. Dec. 5, 1939.

Pat. 2,182,763. Process of Producing Phthalocyanine Dyestuffs. Dec. 5, 1939.

Pat. 2,183,237. Chromable Dyestuffs of the Triarylmethane Series. Dec. 12, 1939.

Pat. 2,183,489. Monoazo Dyestuffs. Dec. 12, 1939.

Pat. 2,183,856. Condensation Products of Hydrolized Protein Material and Their Manufacture. Dec. 19, 1939.

Pat. 2,183,870. Dyestuffs of the Naphthalene Series. Dec. 19, 1939.

Pat. 2,183,871. Dyestuffs of the Naphthalene Series. Dec. 19, 1939.

Pat. 2,183,873. Vat Dyestuffs of the Anthraquinone Series. Dec. 19, 1939.

Pat. 2,184,948. Acid Wool Dyestuffs. Dec. 26, 1939.

Pat. 2,185,140. Dyestuffs of the Anthraquinone Benzacridone Series. Dec. 26, 1939.

Pat. 2,185,661. Substituted 3-Aminopyrenes and Process of Preparing Them. Jan. 2, 1940.

Pat. 2,186,226. Azo Dyestuffs Insoluble in Water. Jan. 9, 1940.

Pat. 2,186,274. Acyl-Acetic Arylides Having Substantive Properties. Jan. 9, 1940.

Pat. 2,186,389. Vat Dyestuffs and Their Leuco Esters. Jan. 9, 1940.

Pat. 2,186,894. Treating Fibrous Materials. Jan. 9, 1940.

Pat. 2,187,328. Para-Secondary Alkylaminobenzaldehydes and Process of Making Them. Jan. 16, 1940.

Pat. 2,187,812. Vat Dyestuff of the Quinazoline Series. Jan. 23, 1940.

Pat. 2,187,813. Vat Dyestuff of the Phthaloyl Quinazoline Series. Jan. 23, 1940.

Pat. 2,187,815. Process for Effecting Carbazole Ring Formation of Compounds of the Anthraquinone Series. Jan. 23, 1940.

Pat. 2,187,816. Salt of Phthalocyanine Sulphonic Acid. Jan. 23, 1940.

Pat. 2,187,819. High-Molecular Organic Compound. Jan. 23, 1940.

Pat. 2,187,853. Dyestuff-Sulphonic Acids of the Dioxazine Series. Jan. 23, 1940.

Pat. 2,188,102. Sulphur Dyestuffs. Jan. 23, 1940.

Pat. 2,188,103. Condensation Products of the Anthraquinone Series. Jan. 23, 1940.

Pat. 2,188,104. Condensation Products of the Anthraquinone Series. Jan. 23, 1940.

Pat. 2,188,287. Wetting Agent for Alkaline Mercerizing Solutions. Jan. 23, 1940.

Pat. 2,188,774. Leather Dyed with Monoazo Dyestuffs. Jan. 30, 1940.

Pat. 2,189,262. Azo Dyestuffs. Feb. 6, 1940.

Pat. 2,189,367. Ortho-Hydroxycarboxylic Acids of the Diphenylene Series. Feb. 6, 1940.

Pat. 2,189,509. Acid Wool Dyestuffs of the Anthraquinone Series. Feb. 6, 1940.

Pat. 2,190,172. Azo Dyestuffs. Feb. 13, 1940.

Pat. 2,190,732. Manufacture of Diaminodiarylketones and Product Thereof. Feb. 20, 1940.

Pat. 2,190,746. Water Soluble Naphthol Compounds and the Process of Preparing Same. Feb. 20, 1940.

Pat. 2,190,747. Water Soluble Naphthol Compounds and the Process of Preparing Same. Feb. 20, 1940.

Pat. 2,190,750. Polyazo Dyestuffs. Feb. 20, 1940.

Pat. 2,190,751. Vat Dyestuffs of the Anthraquinone Series. Feb. 20, 1940.

Pat. 2,190,848. Dyeings. Feb. 20, 1940.

Pat. 2,191,062. Ortho- and Para-Nitrophenyl-Trifluoromethyl-sulphoxides, Oxidation Products Thereof, and Process of Preparing the Same. Feb. 20, 1940.

Pat. 2,191,103. Azo Dyestuffs Insoluble in Water. Feb. 20, 1940.

Pat. 2,191,114. Condensation Product of the Perylene Series. Feb. 20, 1940.

Pat. 2,191,674. Basic Triarylmethane Dyes. Feb. 27, 1940.

Pat. 2,191,685. Process for Producing Nitrogenous Condensation Products of the Anthrone Series. Feb. 27, 1940.

Pat. 2,191,823. Azo Dyestuffs. Feb. 27, 1940.

Pat. 2,191,824. Manufacturing of Azo Dyestuffs and Process of Dyeing Textile Materials Therewith. Feb. 27, 1940.

Pat. 2,191,855. N-Dihydro-Azine Compounds of the Anthraquinone Series and a Process of Preparing Them. Feb. 27, 1940.

Pat. 2,192,118. Acid Diamino-Triphenyl-Methane Dyestuffs. Feb. 27, 1940.

Pat. 2,192,127. Process of Producing Fast Dyeings. Feb. 27, 1940.

Pat. 2,192,153. Azo Dyestuffs. Feb. 27, 1940.

Pat. 2,193,151. Acid Wool Dyestuffs of the Anthraquinone Series. Mar. 12, 1940.

Pat. 2,193,173. Bleaching of Cellulose Fibers in Peroxide Baths. Mar. 12, 1940.

Pat. 2,193,228. Copper Containing Azo Dyestuffs. Mar. 12, 1940.

Pat. 2,193,438. Azo Dyestuffs. Mar. 12, 1940.

Pat. 2,193,676. Water-Insoluble Azo Dyestuffs. Mar. 12, 1940.

Pat. 2,193,677. Ortho-Hydroxy Carboxylic Acids. Mar. 12, 1940.

Pat. 2,193,678. Arylamide. Mar. 12, 1940.

Pat. 2,194,399. Tetrahydroquinoline Derivative. Mar. 19, 1940.

Pat. 2,194,857. Polyazo Dyestuffs Containing Metal. Mar. 26, 1940.

Pat. 2,195,067. Wool Dyestuffs of the Anthraquinone Series. Mar. 26, 1940.

Pat. 2,195,076. Process of Replacing Halogen in Cyclic Halogen Compounds and Product Thereof. Mar. 26, 1940.

Pat. 2,195,089. Polyazo Dyestuffs. Mar. 26, 1940.

Pat. 2,195,440. After-Chromable Acid Dyestuffs of the Triphenylmethane Series. Apr. 2, 1940.

Pat. 2,195,443. Disazo Dyes. Apr. 2, 1940.

Pat. 2,195,462. Compounds of the Anthraquinone Series. Apr. 2, 1940.

Pat. 2,195,463. Compounds of the Anthraquinone Series. Apr. 2, 1940.

Pat. 2,196,015. Azo Dyestuffs Insoluble in Water and Fiber Dyed Therewith. Apr. 2, 1940.

Pat. 2,196,028. Azo Dyestuffs. Apr. 2, 1940.

Pat. 2,196,162. Polymethane Dyestuffs. Apr. 2, 1940.

Pat. 2,197,044. Vat Dyestuffs. Apr. 16, 1940.

Pat. 2,197,045. Vat Dyestuffs. Apr. 16, 1940.

Pat. 2,197,350. Copper Complex Compounds of Polyazo Dyestuffs. Apr. 16, 1940.

Pat. 2,197,846. Acid Pyronine Dyestuffs. Apr. 23, 1940.

Pat. 2,197,860. Phthalocyanine Dyestuffs. Apr. 23, 1940.

Pat. 2,198,050. Conversion Products of Pyrene. Apr. 23, 1940.

Pat. 2,198,298. Acid Dyestuffs and a Process of Preparing Them. Apr. 23, 1940.

Pat. 2,198,468. Triarylmethane Dyestuffs Capable of Being Chromed. Apr. 23, 1940.

Pat. 2,198,701. Production of New Azo Dyestuffs Containing Chromium. Apr. 30, 1940.

Pat. 2,198,967. Condensation Products of Pyrene. Apr. 30, 1940.

Pat. 2,199,566. Vat Dyestuffs of the Naphthindenone Series. May 7, 1940.

Pat. 2,199,567. Vat Dyestuffs of the Peri-Naphthindenone Series. May 7, 1940.

Pat. 2,199,568. Manufacture of 1-Methyl-4-Chloro-5-Hydroxynaphthalene-1'-Sulfonic Acid. May 7, 1940.

Pat. 2,199,575. Benzanthrone Derivatives. May 7, 1940.

Pat. 2,199,577. Triarylmethane Dyestuffs. May 7, 1940.

Pat. 2,199,813. Aminoanthraquinones. May 7, 1940.

Pat. 2,199,814. Azo Dyestuffs Insoluble in Water and Fiber Dyed Therewith. May 7, 1940.

Pat. 2,200,040. Azo Dyestuffs. May 7, 1940.

Pat. 2,200,324. Vat Dyestuffs of the Anthraquinone Series. May 14, 1940.

Pat. 2,200,343. Process for the Dyeing and Printing of Acetate Artificial Silk. May 14, 1940.

Pat. 2,200,445. Azo Dyestuffs Containing a Heavy Metal in a Complex Form. May 14, 1940.

Pat. 2,200,689. Dyestuffs of the Pyrazinocyanine Series and Process of Making Them. May 14, 1940.

Pat. 2,200,938. Dyestuffs of the Triarylmethane Series. May 14, 1940.

Pat. 2,200,957. Anthrachrysone-2, 6-Dialdehyde and a Process of Preparing the Same. May 14, 1940.

Pat. 2,201,648. Monoazo Dyestuffs Insoluble in Water. May 21, 1940.

Pat. 2,202,037. Acid Indolyldiphenylmethane Dyestuff. May 28, 1940.

Pat. 2,202,038. Acid Green Indolyldiphenylmethane Dyestuff. May 28, 1940.

Pat. 2,202,040. Sulphur Dyestuff Derived from Indophenols. May 28, 1940.

Pat. 2,202,057. Producing Transparent Colors in Lacquers. May 28, 1940.

Pat. 2,203,038. Water-Insoluble Azo Dyestuffs and Fiber Dyed Therewith. June 4, 1940.

Pat. 2,203,305. Process of Dyeing. June 4, 1940.

Pat. 2,203,818. Azo Dyestuffs. June 11, 1940.

Pat. 2,204,201. Acid Dyestuffs of the Indolyldiphenyl-Methane Series. June 11, 1940.

Pat. 2,204,232. Vat Dyestuffs of the Anthraquinone-Acridone Series. June 11, 1940.

Pat. 2,204,958. Monoazo Dyestuffs Insoluble in Water. June 18, 1940.

Pat. 2,204,960. 3'-Halogen-Benzoyl-2-Benzoic Acid-4'-Sulphonic Acids and Process of Making the Same. June 18, 1940.

Pat. 2,205,408. Fluorescent Hydrocarbon Oil. June 25, 1940.

Pat. 2,205,481. Monoazo Dyestuffs. June 25, 1940.

Pat. 2,205,763. Polynuclear Condensation Products and Their Production. June 25, 1940.

Pat. 2,205,848. Monoazo Dyestuffs Soluble in Water. June 25, 1940.

Pat. 2,205,849. Azo Dyestuffs Soluble in Water. June 25, 1940.

Pat. 2,205,855. Vat Dyestuffs of the Anthraquinone Series. June 25, 1940.

Pat. 2,206,108. Dyestuffs of the Methine Series. July 2, 1940.

Pat. 2,206,127. Vat Dyestuffs of the Anthraquinone Series. July 2, 1940.

Pat. 2,206,128. Vat Dyestuffs of the Anthraquinone Series. July 2, 1940.

Pat. 2,206,249. Agents of Capillary Action from Alkyl-Amino-Carboxylic Acids with Tertiary or Quaternary Bound Nitrogen. July 2, 1940.

Pat. 2,206,510. Halogenating Nitroaminobenzene Sulphonic Acid. July 2, 1940.

Pat. 2,206,610. Oxazines of the Anthraquinone Series and Process of Preparing Them. July 2, 1940.

Pat. 2,207,233. Process and Composition for Printing Textile Fabrics. July 9, 1940.

Pat. 2,208,363. Monoazo Dyestuffs Insoluble in Water. July 16, 1940.

Pat. 2,208,624. Carboxylic Acids of Cyclic Ketones and Process of Producing Them. July 23, 1940.

Pat. 2,208,925. Monoazo Dyestuffs Insoluble in Water. July 23, 1940.

Pat. 2,208,932. Process of Producing Fast Dyeings and the Dyed Fiber Obtained Thereby. July 23, 1940.

Pat. 2,209,749. Water-Insoluble Azo Dyestuffs. July 30, 1940.

Pat. 2,210,041. Vat Dyestuffs and Method of Producing Them. Aug. 6, 1940.

Pat. 2,210,072. Monoazo Dyestuffs Insoluble in Water. Aug. 6, 1940.

Pat. 2,211,149. Process for the Production of Azo Dyestuffs on the Fiber. Aug. 13, 1940.

Pat. 2,212,590. Azo Dyestuffs. Aug. 27, 1940.

Pat. 2,212,608. Process of Dyeing Pelts, Hairs, or Feathers. Aug. 27, 1940.

Pat. 2,212,628. Dyeing Mixed Fabrics. Aug. 27, 1940.

Pat. 2,212,816. Copper Complex Compound of Polyazo Dyestuffs. Aug. 27, 1940.

Pat. 2,212,924. Production of Phthalocyanine Pigments. Aug. 27, 1940.

Pat. 2,212,928. Production of Meta-Diaza Compounds. Aug. 27, 1940.

Pat. 2,212,965. Process for Effecting Carbazole Ring Formation of Compounds of the Anthraquinone Series. Aug. 27, 1940.

Pat. 2,213,188. Dyestuffs of the Anthraquinone Series. Sept. 3, 1940.

Pat. 2,213,193. Process of Producing Fast Dyeings. Sept. 3, 1940.

Pat. 2,213,194. Manufacture of 1-Methyl-4-Hydroxy-5-Amino- and 1-Methyl-4-Amino-5-Hydroxy-Naphthalene-1'-Sulphonic Acid. Sept. 3, 1940.

Pat. 2,213,460. Chromable Dyestuffs of the Triarylmethane Series. Sept. 3, 1940.

Pat. 2,213,517. Phthalocyanine Dyestuff. Sept. 3, 1940.

Pat. 2,213,608. Acid Wool Dyestuffs. Sept. 3, 1940.

Pat. 2,213,697. Monoazo Dyestuffs. Sept. 3, 1940.

Pat. 2,214,067. Process for Improving the Fastness of Dyeings. Sept. 10, 1940.

Pat. 2,214,337. Manufacture of Disazo Dyes. Sept. 10, 1940.

Pat. 2,215,083. Sulphonic Acids of Aromatic Sulphonic Acid Halides and Process of Making the Same. Sept. 17, 1940.

Pat. 2,215,087. Azo Dyestuffs. Sept. 17, 1940.

Pat. 2,215,105. Coloring Matters from Azo Dyestuffs. Sept. 17, 1940.

Pat. 2,215,196. Process of Producing Color on Textile Materials. Sept. 17, 1940.

Pat. 2,215,859. Acid Wool Dyestuffs of the Quinoxaline Series. Sept. 24, 1940.

Pat. 2,216,258. Anthraquinone Dyestuffs. Oct. 1, 1940.

Pat. 2,218,587. Process for Producing Aliphatic Ketone Anils. Oct. 22, 1940.

Pat. 2,218,801. Leuco Sulphuric Acid Esters of Vat Dyestuffs of the Anthanthrone Series. Oct. 22, 1940.

Pat. 2,218,920. Water-Insoluble Azo Dyestuffs. Oct. 22, 1940.

Pat. 2,218,924. Aftertreatment of Dyed Textile Fibers. Oct. 22, 1940.

Pat. 2,218,986. Ortho-Hydroxy Azo Dye. Oct. 22, 1940.

Pat. 2,219,009. Triarylmethane Dyestuffs. Oct. 22, 1940.

Pat. 2,219,010. Manufacture of Indophenol-Like Compounds of the Naphthocarbazole Series. Oct. 22, 1940.

Pat. 2,219,330. Phthalocyanine Sulphonic Acid Chloride. Oct. 29, 1940.

Pat. 2,219,748. Thioxane Sulphur Trioxide Addition Compound. Oct. 29, 1940.

Pat. 2,220,598. Monoazo-dyestuffs Insoluble in Water. Nov. 5, 1940.

Pat. 2,221,131. Nitro-Dyestuffs and Process of Preparing Them. Nov. 12, 1940.

Pat. 2,221,965. Chromable Dyestuffs of the Triaryl-Methane Series and Process of Preparing Them. Nov. 19, 1940.

Pat. 2,222,285. Agents for Aftertreating Dyeings of Insoluble Azo Dyestuffs. Nov. 19, 1940.

Pat. 2,222,482. Sulphur Dyes. Nov. 19, 1940.

Pat. 2,222,763. Monoazo Dyestuffs Insoluble in Water. Nov. 26, 1940.

Pat. 2,222,775. Azo Dyestuffs Insoluble in Water. Nov. 26, 1940.

Pat. 2,223,453. Esters of Perylene-Carboxylic Acids and a Process of Producing Them. Dec. 3, 1940.

Pat. 2,224,112. Water-Soluble Dyestuffs. Dec. 3, 1940.

Pat. 2,224,317. Azo Dyestuffs Insoluble in Water and Fiber Dyed Therewith. Dec. 10, 1940.

Pat. 2,225,120. Azo Dyestuffs Insoluble in Water and Fiber Dyed Therewith. Dec. 17, 1940.

Pat. 2,225,441. Dyestuffs of the Phthalocyanine Series. Dec. 17, 1940.

Pat. 2,225,443. Azo Dyestuffs. Dec. 17, 1940.

Pat. 2,225,476. Water Soluble Oxazine Dyestuff. Dec. 17, 1940.

Pat. 2,226,835. Mixed Ureas. Dec. 31, 1940.

Pat. 2,227,504. Disazo Dyestuffs Capable of Being Converted into Complex Chromium Compounds. Jan. 7, 1941.

Pat. 2,227,664. Carbazole Derivatives. Jan. 7, 1941.

Pat. 2,227,834. Mixtures of Vat Dyestuffs and Process of Producing Green Dyeings Therewith. Jan. 7, 1941.

Pat. 2,228,233. Process for the Manufacture of Vat Dyestuffs of the Naphthophenazine Series. Jan. 7, 1941.

Pat. 2,228,288. Diazotizable Azo Dyestuffs. Jan. 14, 1941.

Pat. 2,228,289. Diazotizable Azo Dyestuffs. Jan. 14, 1941.

Pat. 2,228,290. Diazotizable Azo Dyestuffs. Jan. 14, 1941.

Pat. 2,228,303. Monoazo Dyestuffs Insoluble in Water. Jan. 14, 1941.

Pat. 2,228,317. Process of Producing Dyeings Fast to Washing on Cellulose Esters and Ethers and the Dyed Fiber Obtained Thereby. Jan. 14, 1941.

Pat. 2,228,321. Azo Dyestuffs. Jan. 14, 1941.

Pat. 2,228,369. Dyeing Animal Fibrous Materials. Jan. 14, 1941.

Pat. 2,228,374. Azo Dyestuffs. Jan. 14, 1941.

Pat. 2,228,455. Vat Dyestuffs. Jan. 14, 1941.

Pat. 2,228,920. Process of Preparing 5-Hydroxytrimellitic Acid. Jan. 14, 1941.

Pat. 2,228,924. Manufacture of 4-Chloro-5-Nitro-1-Naphthomethylchloride. Jan. 14, 1941.

Pat. 2,229,099. Amino-Alkoxy-1.4-Benzoquinones and Their Derivatives and a Process of Preparing Them. Jan. 21, 1941.

Pat. 2,229,650. Green Sulphur Dyes and Process for Manufacturing the Same. Jan. 28, 1941.

Pat. 2,230,574. Dyestuffs of the Anthraquinone Series. Feb. 4, 1941.

Pat. 2,230,587. Disulphonium Compounds of High Molecular Weight. Feb. 4, 1941.

Pat. 2,230,686. Method of Preparing Azo Dyestuffs Containing Metal. Feb. 4, 1941.

Pat. 2,230,696. Azo Dyestuffs. Feb. 4, 1941.

Pat. 2,230,789. Polymethine Dyestuffs. Feb. 4, 1941.

Pat. 2,230,791. Manufacture of 2-Hydroxynaphthalene-4-Sulphonic Acid and Substitution Products Thereof. Feb. 4, 1941.

Pat. 2,231,495. Vat-Dyestuffs of the Naphthalimide Series and a Process of Preparing Them. Feb. 11, 1941.

Pat. 2,232,067. Dyestuffs of the Naphthophenosafranine Series. Feb. 18, 1941.

Pat. 2,232,078. Azo Dyestuffs of the Stilbene Series. Feb. 18, 1941.

Pat. 2,232,405. Process and Preparation for the Manufacture of Azo Dyestuffs. Feb. 18, 1941.

Pat. 2,232,406. Process and Preparation for the Manufacture of Azo Dyestuffs. Feb. 18, 1941.

Pat. 2,232,870. Azo Dyestuffs. Feb. 25, 1941.

Pat. 2,232,871. Coloring of Hydrocarbons. Feb. 25, 1941.

Pat. 2,232,892. Process of Dyeing Nitrogenous Compounds of High Molecular Weight and the Products Thus Obtained. Feb. 25, 1941.

Pat. 2,233,391. Acid Wool Dyestuffs of the Anthraquinone Series and a Process of Preparing Them. Mar. 4, 1941.

Pat. 2,233,940. Dioxazines and Process of Making the Same. Mar. 4, 1941.

Pat. 2,234,031. Water-Soluble Dyestuffs. Mar. 4, 1941.

Pat. 2,234,036. Process of Producing Fast Dyeings. Mar. 4, 1941.

Pat. 2,234,580. Substantive Azo Dyestuffs. Mar. 11, 1941.

Pat. 2,235,511. Diaryl-Monoindolyl-Methane Dyestuffs. Mar. 18, 1941.

Pat. 2,238,209. Anthraquinone-Benzacridone Vat Dyestuffs. Apr. 15, 1941.

Pat. 2,238,215. Chromable Triaryl-Methane Dyes. Apr. 15, 1941.

Pat. 2,239,290. Azomethine Dyestuffs Containing a Heavy Metal. Apr. 22, 1941.

Pat. 2,241,774. Monoazodyestuffs. May 13, 1941.

Pat. 2,241,795. Acid Azo Dyestuffs. May 13, 1941.

Pat. 2,241,796. Azo Dyestuffs. May 13, 1941.

Pat. 2,242,411. Vat Dyestuffs of the Anthraquinone Series and Process of Making the Same. May 20, 1941.

Pat. 2,242,446. Vat Dyestuffs of the Anthraquinone-Acridone-Carbazole Series. May 20, 1941.

Pat. 2,242,449. Preparation of Naphthoquinone Carbazoles. May 20, 1941.

Pat. 2,242,456. Polyazodyestuffs. May 20, 1941.

Pat. 2,242,469. Dyestuffs of the Phthalocyanine Series. May 20, 1941.

Pat. 2,242,474. Water-Soluble Basic Dyestuffs. May 20, 1941.

Pat. 2,242,572. Chromable Dyestuffs of the Triarylmethane Series and a Process of Preparing Them. May 20, 1941.

Pat. 2,242,585. Dibenzo-Acridines. May 20, 1941.

Pat. 2,242,760. Organic Dyestuffs and Process of Producing Same. May 20, 1941.

Pat. 2,243,213. Process of Producing Fast Dyeings on Cellulose Esters and Ethers and the Dyed Fiber Obtained Thereby. May 27, 1941.

Pat. 2,244,294. Dyestuff-Sulphonic Acids of the Dioxazine Series. June 3, 1941.

Pat. 2,244,655. Vat Dyestuffs of the Anthraquinone Series. June 3, 1941.

Pat. 2,245,172. Process for Producing 4-Hydroxy-1-Aminonaphthalene-8-Carboxylic Acid and 4-Hydroxynaphthostyril. June 10, 1941.

Pat. 2,245,173. Water-Insoluble Azo Dye. June 10, 1941.

Pat. 2,245,517. Polyazo Dyestuffs. June 10, 1941.

Pat. 2,245,520. Dyestuffs of the Anthraquinone Series. June 10, 1941.

Pat. 2,245,521. Dyestuffs of the Anthraquinone Series. June 10, 1941.

Pat. 2,245,780. Acid Wool Dyestuffs. June 17, 1941.

Pat. 2,246,071. Water-Soluble Condensation Products. June 17, 1941.

Pat. 2,248,074. Trisazo Dyestuffs. July 8, 1941.

Pat. 2,248,091. Process of Producing Fast Dyeings and the Dyed Fiber Obtained Thereby. July 8, 1941.

Pat. 2,248,151. Production of Substantive Azo Dyestuffs. July 8, 1941.

Pat. 2,249,956. Double Salts of Water-Soluble Derivatives of Insoluble Azo Dyestuffs. July 22, 1941.

Pat. 2,249,973. Production of Stable Leuco Compounds of Anthraquinone Vat Dyestuffs. July 22, 1941.

Pat. 2,250,098. Process of Preparing Water-Containing Dyestuff Preparations of High Concentration. July 22, 1941.

Pat. 2,252,824. Production of Trisazo Dyestuffs. Aug. 19, 1941.

Pat. 2,252,843. Mono-Azo Dyestuffs Insoluble in Water. Aug. 19, 1941.

Pat. 2,252,844. Azo Dyestuffs Insoluble in Water. Aug. 19, 1941.

Pat. 2,254,602. Orthodihydroxy Azo Dyestuffs. Sept. 2, 1941.

Pat. 2,255,385. Dyestuffs of the Para-Rosaniline Series. Sept. 9, 1941.

Pat. 2,257,165. Azo Dyestuffs Containing Chromium in Complex Union. Sept. 30, 1941.

Pat. 2,257,190. Azo Dye Compositions. Sept. 30, 1941.

Pat. 2,257,216. Water-Insoluble Azo Dyestuffs. Sept. 30, 1941.

Pat. 2,263,559. Process of Producing Fast Dyeings and the Dyed Fiber Obtained Thereby. Nov. 25, 1941.

Pat. 2,264,123. Acyl-Acetic Arylides Having Substantive Properties. Nov. 25, 1941.

Pat. 2,265,140. Vat Dyestuffs of the Dibenzanthrone Series and Process of Producing Same. Dec. 9, 1941.

Pat. 2,265,153. Process of Preparing Chromable Dyestuffs of the Tri-Arylmethane Series. Dec. 9, 1941.

Pat. 2,265,425. Disazo Dyestuffs. Dec. 9, 1941.

Pat. 2,266,228. Process of Manufacturing Aminohalogen-Nitrobenzene Sulphonic Acids. Dec. 16, 1941.

Pat. 2,266,404. Dyestuffs of the Phthalocyanine Series. Dec. 16, 1941.

Pat. 2,267,139. Vat Dyestuffs of the Anthraquinone Series and Process of Preparing Them. Dec. 23, 1941.

Pat. 2,267,741. Diamino-1.4-Benzoquinones. Dec. 30, 1941.

Pat. 2,267,770. Process for the Production of Dyeings. Dec. 30, 1941.

Pat. 2,268,274. Azo Dyestuffs. Dec. 30, 1941.

Pat. 2,269,531. Process of Preparing Dyestuffs of the Dioxazine Series. Jan. 13, 1942.

Pat. 2,270,168. Vat Dyestuffs of the Anthraquinone Series. Jan. 13, 1942.

Pat. 2,270,170. Process for Preparing Tetrabromoindigo. Jan. 13, 1942.

Pat. 2,270,675. Polyazo Dyestuffs. Jan. 20, 1942.

Pat. 2,270,678. Monoazo Dyestuffs Insoluble in Water. Jan. 20, 1942.

Pat. 2,271,707. Wetting Agent. Feb. 3, 1942.

Pat. 2,272,498. Process for Producing Compounds of the Diaryl Series. Feb. 10, 1942.

Pat. 2,273,094. Disazo Dyestuffs Soluble in Water. Feb. 17, 1942.

Pat. 2,273,115. Process of Producing Fast Dyeings and the Dyed Fiber Obtained Thereby. Feb. 17, 1942.

Pat. 2,273,116. Azo Dyestuffs Insoluble in Water and Fiber Dyed Therewith. Feb. 17, 1942.

Pat. 2,273,117. Process of Producing Fast Dyeings and the Dyed Fiber Obtained Thereby. Feb. 17, 1942.

Pat. 2,273,444. Process of Producing Sulphamides of Ortho-Dicarboxylic Acid Imides. Feb. 17, 1942.

Pat. 2,273,517. Azo Dyestuffs Soluble in Water. Feb. 17, 1942.

Pat. 2,273,974. Sulphonating Process. Feb. 24, 1942.

Pat. 2,276,174. Azo Dyestuffs. Mar. 10, 1942.

Pat. 2,276,602. Process of Dyeing and the Products Thus Obtained. Mar. 17, 1942.

Pat. 2,276,637. 5.6.7.8-Tetrahydroanthraquinone Derivatives Containing Nitrogen and a Process of Preparing Them. Mar. 17, 1942.

Pat. 2,276,704. Thickening Agent for Printing and Discharging Pastes. Mar. 17, 1942.

Pat. 2,276,860. Dyestuff of the Phthalocyanine Series. Mar. 17, 1942.

Pat. 2,276,918. Dyestuffs of the Phthalocyanine Series. Mar. 17, 1942.

Pat. 2,277,230. Azo Dyestuffs. Mar. 24, 1942.

Pat. 2,277,243. Azo Dyestuffs. Mar. 24, 1942.

Pat. 2,277,262. Azo Dyetuffs. Mar. 24, 1942.

Pat. 2,277,527. Process of Producing Fast Dyeings on Vulcanized Fiber and the Dyed Fiber Obtained Thereby. Mar. 24, 1942.

Pat. 2,277,544. Process of Producing Fast Dyeings and the Dyed Fiber Obtained Thereby. Mar. 24, 1942.

Pat. 2,277,551. Process of Producing Fast Dyeings and the Dyed Fiber Obtained Thereby. Mar. 24, 1942.

Pat. 2,278,202. Manufacture of 3-Aryl-Aminotetrahydrofuranes. Mar. 31, 1942.

Pat. 2,278,260. Dioxazine Dyestuffs. Mar. 31, 1942.

Pat. 2,278,961. Triarylmethane Dyestuffs and Process of Preparing Them. Apr. 7, 1942.

Pat. 2,279,725. Vat Dyestuff of the Dibenzanthrone Series and Process of Making Same. Apr. 14, 1942.

Pat. 2,280,253. Dyestuffs of the Methine Series. Apr. 21, 1942.

Pat. 2,280,504. Process for Producing Compounds of the Diaryl Series. Apr. 21, 1942.

Pat. 2,280,507. Phthalocyanine Dyestuffs. Apr. 21, 1942.

Pat. 2,281,583. Substituted Anthraquinones and the Corresponding Aroyl-Benzoic Acids and Process of Preparing the Same. May 5, 1942.

Pat. 2,281,968. Sulphur Dyestuffs. May 5, 1942.

Pat. 2,282,250. Valuable Vat Dyestuffs of the Dibenzanthrone and Isodibenzanthrone Series. May 5, 1942.

Pat. 2,282,724. Process of Dyeing with Substantive Colors. May 12, 1942.

Pat. 2,283,823. Monoazo Dyestuffs Soluble in Water. May 19, 1942.

Pat. 2,283,829. Diazotizable Azodyestuffs. May 19, 1942.

Pat. 2,284,062. Vat Dyestuffs of the Phthaloyl Carbazole Series. May 26, 1942.

Pat. 2,285,359. Phthalocyanine Sulphonic Acids. June 2, 1942.

Pat. 2,288,198. Ethers of Mono-Hydroxy-Halogen-1.4-Benzoquinones and a Process of Preparing Them. June 30, 1942.

Pat. 2,288,219. Wool Dyestuffs of the Anthraquinone Series. June 30, 1942.

Pat. 2,288,282. Process for Producing Polyhydroxyarylsulphones. June 30, 1942.

Pat. 2,288,422. Mixed Ureas. June 30, 1942.

Pat. 2,288,478. Phthalocyanine Sulphonic Acid Chloride. June 30, 1942.

Pat. 2,288,518. Azo Dyestuffs Capable of Being Metallized. June 30, 1942.

Pat. 2,288,522. Dyestuffs of the Dioxazine Series and Process of Preparing Them. June 30, 1942.

Pat. 2,289,025. Derivative of 2.5-Diamino-1.4-Benzoquinone. July 7, 1942.

Pat. 2,289,280. Vat Dyestuff. July 7, 1942.

Pat. 2,289,293. Manufacture of Azo Dyes. July 7, 1942.

Pat. 2,295,649. Benzanthrones and a Process of Preparing Them. Sept. 15, 1942.

Pat. 2,295,963. Condensation Products of the Pyrene Series. Sept. 15, 1942.

Pat. 2,296,153. Chromable Dyestuffs of the Triarylmethane Series and Process of Preparing Them. Sept. 15, 1942.

Pat. 2,296,214. New Derivative of 2.5-Diamino-1.4-Benzoquinone. Sept. 15, 1942.

Pat. 2,299,240. Process of Making an Amino Phenyl Anthraquinone. Oct. 20, 1942.

Pat. 2,300,572. Phthalocyanine Sulphonic Acid Amides. Nov. 3, 1942.

Pat. 2,300,636. Tetrakisazo Dyestuffs Soluble in Water. Nov. 3, 1942.

Pat. 2,301,002. Derivatives of Metal Complex Compounds of Sulphurized Phenols. Nov. 3, 1942.

Pat. 2,306,681. Water-Insoluble Dyestuffs. Dec. 29, 1942.

Pat. 2,307,893. Process for the Manufacture of Leuco Esters. Jan. 12, 1943.

Pat. 2,307,973. Dyeings. Jan. 12, 1943.

Pat. 2,308,021. Dye Bath for the Dyeing of Textile Goods. Jan. 12, 1943.

Pat. 2,309,196. Substitution Products of Anthraquinone and the Corresponding Aroyl-Benzoic Acid and Process of Preparing the Same. Jan. 26, 1943.

Pat. 2,313,155. Chloranthraquinones and a Process of Making Them. Mar. 9, 1943.

Pat. 2,314,379. Process for Producing Para-Hydroxyarylsulphones. Mar. 23, 1943.

Pat. 2,314,440. Azo Dyestuffs and Process for Coloring Therewith. Mar. 23, 1943.

Pat. 2,315,232. Water-Insoluble Disazo Dyes. Mar. 30, 1943.

Pat. 2,315,375. Sulpho-Tricarboxylic Acid Compounds and Process of Preparing Same. Mar. 30, 1943.

Pat. 2,315,834. 1-Aminoaryl-5-Pyrazolone-4-Sulphonic Acids. Apr. 6, 1943.

Pat. 2,315,835. Condensation Products of 1-Amino-Aryl-5-Pyrazolone-4-Sulphonic Acids. Apr. 6, 1943.

Pat. 2,315,836. 5-Pyrazolone-4-Sulphonic Acids. Apr. 6, 1943.

Pat. 2,315,870. Isoalkylamine Salts of Organic Sulphonic or Carboxylic Acids. Apr. 6, 1943.

Pat. 2,316,758. Leuco Sulphuric Acid Esters of the Anthraquinone Series. Apr. 20, 1943.

Pat. 2,317,965. Process of Coloring Fibrous Materials and the Materials Obtained Thereby. Apr. 27, 1943.

Pat. 2,319,719. New Vat Dyestuffs. May 18, 1943.

Pat. 2,320,694. Vat Dyestuff of the Anthanthrone Series. June 1, 1943.

Pat. 2,321,787. Sulphur Dyestuffs. June 15, 1943.

Pat. 2,321,816. Process of Producing Fast Dyeings on Fibrous Materials. June 15, 1943.

Pat. 2,321,963. Quaternary Ammonium Compounds. June 15, 1943.

Pat. 2,322,907. 1-Acylaminoaryl-5-Pyrazolones. June 29, 1943.

Pat. 2,325,803. Condensation Products. Aug. 3, 1943.

Pat. 2,325,972. Process of Dyeing Mixed Fibrous Material. Aug. 3, 1943.

Pat. 2,328,759. Removing Odor of Nigrosines and Indulines. Sept. 7, 1943.

Pat. 2,331,415. Water-Soluble Compounds. Oct. 12, 1943.

Pat. 2,333,137. Acid Wool Dyestuffs. Nov. 2, 1943.

Pat. 2,335,193. Sulphonic Acid and Process for Producing It. Nov. 23, 1943.

Pat. 2,335,273. 3,3-Dihalogenoxindoles. Nov. 30, 1943.

Pat. 2,337,845. 1-Diazoaryl-5-Pyrazolone-4-Sulphonic Acids. Dec. 28, 1943.

Pat. 2,337,882. Process for the Manufacture of Thiourea. Dec. 28, 1943.

Pat. 2,345,485. Dyestuff Salts. Mar. 28, 1944.

Pat. 2,347,027. Leuco Sulphuric Acid Esters of the Anthraquinone Series. Apr. 18, 1944.

Pat. 2,347,042. 1-Arylamino-5-Hydroxynaphthalene-7-Sulphonic Acid. Apr. 18, 1944.

Pat. 2,347,846. Anthraquinones Containing Trifluoromethyl Groups and a Process of Preparing Them. May 2, 1944.

Pat. 2,349,899. Production of Azo Dyestuffs. May 30, 1944.

Pat. 2,350,393. Basic Water-Soluble Dyestuffs. June 6, 1944.

Pat. 2,352,387. Process for the Production of Condensation Products. June 27, 1944.

Pat. 2,352,701. Process of Producing Fast Dyeings and the Dyed Fiber Obtained Thereby. July 4, 1944.

Pat. 2,352,752. Acid Wool Dyestuffs. July 4, 1944.

Pat. 2,366,452. Process of Preparing Condensation Products. Jan. 2, 1945.

Pat. 2,381,145. Stable Diazo Salt Preparation. Aug. 7, 1945.

Pat. 2,384,419. Azo Dyestuffs. Sept. 4, 1945.

Pat. 2,385,698. Disazo Dyestuffs. Sept. 25, 1945.

Pat. 2,385,747. Polymethine Dyestuffs and Process of Preparing Them. Sept. 25, 1945.

Pat. 2,392,794. Vat Dyestuffs of the Anthraquinone Series. Jan. 8, 1946.

Pat. 2,394,114. Trisazo Diphenyl Dyestuffs. Feb. 5, 1946.

SECTION 2

Textile Assistants, Detergents, Water-Softeners and Other Surface-Active Agents

Pat. 1,843,316. Detergent. Feb. 2, 1932.

Pat. 1,843,420. Emulsifying Agent. Feb. 2, 1932.

Pat. 1,871,087. Production of Effects on Textiles. Aug. 9, 1932.

Pat. 1,872,736. Sulphonated Condensation Products of Polyhydric Alcohols and Aromatic Hydrocarbons and Process of Producing Same. Aug. 23, 1932.

Pat. 1,880,566. Condensation Product from a Non-Hydroxylated Benzyl Alcohol. Oct. 4, 1932.

Pat. 1,881,172. Ester-Like Constituted Wetting Agents, Foaming Agents, and Dispersing Agents and Process of Preparing Them. Oct. 4, 1932.

Pat. 1,897,795. Production of C-Alkyl and C-Aralkyl Derivatives of Aromatic Compounds. Feb. 14, 1933.

Pat. 1,903,864. Textile Pest Proofing Media. Apr. 18, 1933.

Pat. 1,906,484. Soap Preparation. May 2, 1933.

Pat. 1,906,890. Condensation Product from Halogenated Phenols and Aldehydes. May 2, 1933.

Pat. 1,910,488. New Hydroxy-Alkyl-Triphenylmethane Derivatives. May 23, 1933.

Pat. 1,910,938. Insect Pests Proof Article and a Process of Preparing Same. May 23, 1933.

Pat. 1,914,321. Production of Assistants for the Textile and Related Industries. June 13, 1933.

Pat. 1,916,776. Sulphonated Fatty Acid Esters and Their Production. July 4, 1933.

Pat. 1,921,364. Media for Protecting Furs, Hairs, Feathers, and Animal Textile Products Against the Attack of Animal and Plant Pests. Aug. 8, 1933.

Pat. 1,922,459. Ethers of Polyhydric Alcohols and Their Production. Aug. 15, 1933.

Pat. 1,923,223. Mothproofing Substances. Aug. 22, 1933.

Pat. 1,926,442. Production of Sulfonic Acids of Aliphatic and Hydroaromatic Carboxylic Acids. Sept. 12, 1933.

Pat. 1,927,910. Treatment of Tanned or Nontanned Animal Hides. Sept. 26, 1933.

Pat. 1,929,654. Mercerizing Liquor. Oct. 10, 1933.

Pat. 1,930,853. Production of Dispersions. Oct. 17, 1933.

Pat. 1,931,491. Production of Sulphonic Acids. Oct. 24, 1933.

Pat. 1,931,540. Sulphocarboxylic Acid Amide. Oct. 24, 1933.

Pat. 1,931,806. Process for the Production of Sulphuric Esters of Nitrogen-Containing Organic Compounds. Oct. 24, 1933.

Pat. 1,932,176. Sulphuric Acid Derivatives and Amides. Oct. 24, 1933.

Pat. 1,932,177. Sulphonated Carboxylic Amide. Oct. 24, 1933.

Pat. 1,932,178. Sulphonated Carboxylic Acid Amides and Their Preparation. Oct. 24, 1933.

Pat. 1,932,179. Sulphuric Acid Derivatives of Carboxylic Arylides. Oct. 24, 1933.

Pat. 1,932,180. Sulphuric Acid Derivatives of Amides. Oct. 24, 1933.

Pat. 1,938,022. Tanning Agent. Dec. 5, 1933.

Pat. 1,944,300. Aliphatic Amine Sulphonic Acid Containing Eight or More Carbon Atoms. Jan. 23, 1934.

Pat. 1,948,894. New Condensation Products. Feb. 27, 1934.

Pat. 1,951,718. Production of Sols and Highly Dispersed Suspensions Comprising Oxygen-Containing Metal Compounds. Mar. 20, 1934.

Pat. 1,955,207. Mothproofing Agent. Apr. 17, 1934.

Pat. 1,962,276. Moth-Protecting Media. June 12, 1934.

Pat. 1,970,578. Assistants for the Textile and Related Industries. Aug. 21, 1934.

Pat. 1,971,436. Compound of the Polyarylmethyl Series and the Process for Preparing the Same. Aug. 28, 1934.

Pat. 1,973,860. Amides of N-Beta-Hydroxyalkyl Amino-Carboxylic Acids and Process of Preparing Same. Sept. 18, 1934.

Pat. 1,975,408. Mothproofing Media. Oct. 2, 1934.

Pat. 1,976,678. Production of Polymerization Products. Oct. 9, 1934.

Pat. 1,985,687. Oiling and Dressing Fibers. Dec. 25, 1934.

Pat. 2,008,649. Aliphatic Poly-Amides and Process for Their Preparation. July 16, 1935.

Pat. 2,031,929. Impregnation of Materials. Feb. 25, 1936.

Pat. 2,036,161. Producing Synthetic Tanning Agents. Mar. 31, 1936.

Pat. 2,037,229. Production of Sulphonic Acids. Apr. 14, 1936.

Pat. 2,038,529. Synthetic Tanning Agent. Apr. 28, 1936.

Pat. 2,041,265. Acylated Polypeptides. May 19, 1936.

Pat. 2,042,747. Sulphonated Oxygenated Compounds Obtained by Catalytic Hydrogenation of Oxides of Carbon. June 2, 1936.

Pat. 2,043,476. Carboxylates of Aliphatic Alcohols with Non-Aromatic Sulphonic Carboxylic Acids. June 9, 1936.

Pat. 2,045,015. Production of Sulphuric Derivatives of Fatty Acid Compounds. June 23, 1936.

Pat. 2,047,398. Artificial Resins and Process of Making Them. July 14, 1936.

Pat. 2,051,389. Fulling Fabrics. Aug. 18, 1936.

Pat. 2,053,610. Protecting Animal Fibers from Textile Pests. Sept. 8, 1936.

Pat. 2,070,207. New Condensation Products and a Process for Preparing Same. Feb. 9, 1937.

Pat. 2,081,528. Wetting Agents for Use in Mercerising Lyes. May 25, 1937.

Pat. 2,083,482. Carbocyclic Compounds Containing Acid Salt-Forming Groups. June 8, 1937.

Pat. 2,085,706. Derivatives of Carboxylic Acid Amides. June 29, 1937.

Pat. 2,089,348. Process for the Manufacture of Amino Sulphonic Acids. Aug. 10, 1937.

Pat. 2,091,683. Chrome Tanning. Aug. 31, 1937.

Pat. 2,094,451. Production of Hydroxy-Sulfonic Acids. Sept. 28, 1937.

Pat. 2,103,872. High Molecular Nitrogenous Organic Compounds Containing Carboxylic Groups. Dec. 28, 1937.

Pat. 2,108,901. Production of Assistants for the Textile and Related Industries. Feb. 22, 1938.

Pat. 2,120,557. Sulphonic Acids of Carboxylic Acid Amides and Process for the Production Thereof. June 14, 1938.

Pat. 2,129,709. Production of New High Molecular Sulphur-Containing Condensation Products. Sept. 13, 1938.

Pat. 2,130,505. Polyamino Carboxylic Acids and Process of Making Same. Sept. 20, 1938.

Pat. 2,130,668. Wetting, Cleansing, and Emulsifying Agent. Sept. 20, 1938.

Pat. 2,133,480. Production of Ethers Suitable as Dispersing Agents and of Preparations Therefrom. Oct. 18, 1938.

Pat. 2,134,346. Washing and Cleansing Compositions. Oct. 25, 1938.

Pat. 2,149,709. Textile Assistants. Mar. 7, 1939.

Pat. 2,160,375. Water-Repellent Textile Material and Process of Manufacturing It. May 30, 1939.

Pat. 2,164,431. Production of Ethers Suitable as Dispensing Agents and of Preparations Therefrom. July 4, 1939.

Pat. 2,167,825. Agents of Capillary Activity. July 25, 1939.

Pat. 2,167,326. Agents of Capillary Activity. July 25, 1939.

Pat. 2,168,534. Process of Waterproofing Textile Material and the Material Thus Obtained. Aug. 8, 1939.

Pat. 2,168,535. Textile Material and a Process of Preparing It. Aug. 8, 1939.

Pat. 2,169,998. Sulpho-Carboxylic Esters Suitable as Assistants for the Textile and Related Industries. Aug. 22, 1939.

Pat. 2,174,760. Condensation Products Derived from Carboxylic Acids and Method of Producing Them. Oct. 3, 1939.

Pat. 2,174,761. Condensation Products Derived from Hydroxy Compounds and Method of Producing Them. Oct. 3, 1939.

Pat. 2,174,762. Condensation Products Derived from Amines and Method of Producing Them. Oct. 3, 1939.

Pat. 2,183,853. Polyoxyalkylene Ether Acid Compounds Containing a Higher Aliphatic Group. Dec. 19, 1939.

Pat. 2,185,427. Treatment of Fibrous Materials. Jan. 2, 1940.

Pat. 2,187,823. Condensation Products of Ethers of Alkylol Amines. Jan. 23, 1940.

Pat. 2,189,648. Production of Nitrogen-Containing Condensation Products Useful in the Textile and Related Industries. Feb. 6, 1940.

Pat. 2,193,717. Process for Preventing the Congealing of Blood. Mar. 12, 1940.

Pat. 2,195,194. Treatment of Fibrous Materials. Mar. 26, 1940.

Pat. 2,197,464. Treating Artificial Fabrics. Apr. 16, 1940.

Pat. 2,203,883. Sulphuric Acid Esters of Alcohol Ethers Containing a Carbocyclic Group. June 11, 1940.

Pat. 2,205,995. Production of Amino Carboxylic Acid Nitriles. June 25, 1940.

Pat. 2,206,928. Production of Condensation Products. July 9, 1940.

Pat. 2,211,976. Process of Imparting Hydrophobic Properties to Cellulose Fibers. Aug. 20, 1940.

Pat. 2,213,477. Glycol and Polyglycol Ethers of Isocyclic Hydroxyl Compounds. Sept. 3, 1940.

Pat. 2,214,352. Process for the Production of Condensation Products Containing Onium Groups. Sept. 10, 1940.

Pat. 2,220,099. Sulphonic Acids. Nov. 5, 1940.

Pat. 2,225,083. Treatment of Chrome Leather. Dec. 17, 1940.

Pat. 2,225,960. Condensation Products and a Process of Preparing Them. Dec. 24, 1940.

Pat. 2,240,957. Process for Avoiding and Rendering Harmless the Precipitates of Water Insoluble Metal Salts. May 6, 1941.

Pat. 2,257,183. Wetting Agent Useful for Alkaline Mercerizing Solutions. Sept. 30, 1941.

Pat. 2,257,186. Process of Removing Metal Oxides and Preparations Suitable in This Process. Sept. 30, 1941.

Pat. 2,266,448. Process and Products for Deliming Limed Pelts. Dec. 16, 1941.

Pat. 2,267,731. Process for the Production of Capillary-Active Agents. Dec. 30, 1941.

Pat. 2,267,756. Water-Soluble Mothproofing Agent. Dec. 30, 1941.

Pat. 2,268,140. Alkylated Aromatic Sulphonic Acids. Dec. 30, 1941.

Pat. 2,281,624. Water-Soluble Mothproofing Agents. May 5, 1942.

Pat. 2,302,805. Composition for Mothproofing. Nov. 24, 1942.

Pat. 2,316,057. Textile Material. Apr. 6, 1943.

Pat. 2,328,431. Process for Rendering Textile Materials Water Repellent. Aug. 31, 1943.

Pat. 2,333,203. Cellulose Fibers and Process of Treating Them. Nov. 2, 1943.

Pat. 2,340,977. Process of Removing Tar and Pitch Tips from Wool. Feb. 8, 1944.

Pat. 2,353,964. Phosphonium Compounds. July 18, 1944.

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the Official Gazette, November 2, 1948. Abstracts of the patents are being published in the Official Gazette beginning November 9, 1948. The following patents (Reg. Nos. 12,503 through 12,719) are the balance of Schedule 1, Group 28, and part of Schedule 2, Groups 28; 32.

Detailed information concerning specific abstracts should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

SCHEDULE 1—Continued

Patents Relating to Acrylic Compounds and Resins Therefrom

Pat. 2,013,648. Production of Unsaturated Aliphatic Acid Esters. Sept. 10, 1935. Producing esters of methacrylic acid by refluxing alpha-chloro-isobutyric acid ester in the presence of ferric chloride.

Pat. 2,020,685. Process for the Preparation of the Esters of Unsaturated Acids. Nov. 12, 1935. In the preparation of alkyl esters of methacrylic acid the step which comprises reacting an alkyl halogenated formate with propylene.

Pat. 2,028,012. Process for the Preparation of Esters of Unsaturated Acids. Jan. 14, 1936. Preparation of an alkyl ester of methacrylic acid by a process which includes the step of passing phosgene and propylene into beta-chloro-isobutyryl chloride containing a catalyst.

Pat. 2,043,670. Production of Monochlorisobutyric Acid. June 9, 1936. Chlorination of isobutyric acid in the presence of sulfur.

Pat. 2,063,078. Finishing System. Dec. 8, 1936. An article of manufacture having an enameled surface with a clear finish coat of polymerized methyl methacrylate.

Pat. 2,069,983. Coating Composition. Feb. 9, 1937. A coating composition comprising methyl methacrylate polymer and a resin of the class consisting of polyhydric alcohol-polybasic acid resins, cumarone resins, and phenol-aldehyde resins.

Pat. 2,072,904. Polymerization of Organic Compounds. Mar. 9, 1937. Polymerization of methyl methacrylate dissolved in a solvent comprising water and methanol, the water being present in amount just short of that necessary to give a cloudy solution.

Pat. 2,101,820. Process for the Preparation of Polymerizable Unsaturated Compounds. Dec. 7, 1937. Preparation of methacrylic esters by a process which includes the step of dehydrogenating a compound selected from the group consisting of isobutyraldehyde, isobutyric acid, and its esters.

Pat. 2,109,877. Ester Interchange Process. Mar. 1, 1938. Alcoholysis of a polymeric ester of acrylic or alkacrylic acids by means of an alcohol boiling higher than the alcohol whose radical forms a part of the polymeric ester.

Pat. 2,111,509. Production of Esters of Methacrylic Acid. Mar. 15, 1938. Preparation of methacrylic esters by halogenating isobutyric acid and subsequently dehydrohalogenating the esterified halogenated acid.

Pat. 2,111,510. Preparation of Methacrylic Acid and Esters. Mar. 15, 1938. Preparation of methacrylic esters by halogenating isobutyric acid, catalytically dehydrohalogenating the resulting halogenated acid to form methacrylic acid and esterifying the methacrylic acid.

Pat. 2,120,933. Dispersing Agent. June 14, 1938. Preparation of a dispersing agent by heating an acrylic ester with aqueous ammonia and subsequently polymerizing the product in aqueous solution.

Pat. 2,121,839. Process of Manufacturing Polymerization Products. June 28, 1938. Polymerizing methyl methacrylate in a water miscible alcohol solvent medium in which the polymer is insoluble.

Pat. 2,128,208. Alkoxy Derivatives of Methacrylic Acid Esters and Method of Producing Them. Aug. 23, 1938. Preparing alkoxy derivatives of methacrylic esters by reacting an alcohol with a methacrylic ester in the presence of an alkali metal and a compound of the class consisting of oxidized pinene, aged paraldehyde and ascaridole.

Pat. 2,129,662. Esters of Methacrylic Acid. Sept. 13, 1938. A mixture of methacrylic esters of alcohols obtained by catalytic hydrogenation of carbon oxides.

Pat. 2,129,663. Esters of Methacrylic Acid. Sept. 13, 1938. Polymerizing secondary alcohol methacrylic esters in methanol containing benzoyl peroxide and water at a temperature of about 65° C.

Pat. 2,129,664. Esters of Methacrylic Acid. Sept. 13, 1938. Polymeric methacrylic esters of aliphatic monohydric saturated tertiary alcohols.

Pat. 2,129,666. Esters of Methacrylic Acid. Sept. 13, 1938. Polymeric methacrylic esters of alicyclic alcohol or tetrahydrofurfuryl alcohol.

Pat. 2,129,667. Esters of Methacrylic Acid. Sept. 13, 1938. A methacrylic acid ester of an aralkyl alcohol.

Pat. 2,129,668. Ester of Methacrylic Acid. Sept. 13, 1938. Polymerizing isobutyl methacrylate at a temperature between 60 and 100° C.

Pat. 2,129,685. Esters of Methacrylic Acid. Sept. 13, 1938. Polymeric phenyl methacrylate.

Pat. 2,129,694. Esters of Methacrylic Acid. Sept. 13, 1938. Polymeric methacrylic esters of polyhydric alcohol ethers.

Pat. 2,135,443. Process of Manufacturing Polymerization Products. Nov. 1, 1938. Polymerizing acrylic compounds while dissolved in a quantity of solvent medium sufficient to maintain the monomer in solution but insufficient to dissolve the polymer.

Pat. 2,138,031. Amino Alcohol Acrylates. Nov. 29, 1938. Polymeric beta-diethyl aminoethyl acrylate.

Pat. 2,163,305. Process of Polymerizing Acrylic and Alkacrylic Compounds. June 20, 1939. Polymerization of methyl methacrylate while dispersed in water in the presence of methyl starch as the dispersing agent.

Pat. 2,173,005. Resinous Products from Aldehydes and Acrylic Amides. Sept. 12, 1939. Reaction between polymeric acrylic amides and aliphatic aldehydes.

Pat. 2,175,810. Preparation of Unsaturated Nitriles. Oct. 10, 1939. Preparation of methacrylonitrile by dehydrochlorinating alpha-chloroisobutyronitrile in the presence of ferric chloride.

Pat. 2,191,654. Leather Finish. Feb. 27, 1940. A leather finishing composition comprising a polymeric alpha-substituted acrylic acid ester of an alcohol containing from 3 to 8 carbon atoms, and albuminous material, shellac and wax.

Pat. 2,195,712. Halogenation of Unsaturated Carboxylic Acid Esters. Apr. 2, 1940. The acidified saponification product of the trichlorodimer of methyl methacrylate.

Pat. 2,199,774. Dehydrohalogenation of Alpha-Chloroisobutyric Esters with Zinc and Zinc Halides. May 7, 1940. Dehydrohalogenation of alpha-halogenated substituted propionic esters in the presence of zinc or zinc halides as catalysts.

Pat. 2,199,799. Addition Products of Thiophenols and Acrylic Acid Esters. May 7, 1940. Reacting thiophenol with an acrylic ester in the presence of actinic light.

Pat. 2,211,689. Hot Melt. Aug. 13, 1940. Hot melt containing n-butyl methacrylate and damar gum.

Pat. 2,232,595. Coating and Film Forming Compositions. Feb. 18, 1941. A blend of polymeric butyl methacrylate and paraffin wax.

Pat. 2,244,645. Process of Dimerization. June 3, 1941. Dimerizing methacrylic esters in the vapor phase in the presence of a dehydration type catalyst.

Pat. 2,244,703. Water Soluble Salts of Interpolymers Containing Methacrylic Acid. June 10, 1941. Preparation of a water-soluble interpolymer salt by polymerizing methacrylic acid with a nitrile, amide or ester of methacrylic acid and subsequently converting the interpolymer to a water-soluble salt.

Pat. 2,265,937. Treatment of Methacrylic Acid Esters. Dec. 9, 1941. Removing taste and odor from polymeric n-butyl methacrylate by treatment with aqueous sodium hydroxide containing methylated starch.

Pat. 2,268,185. Process of Preparing Methyl Alpha-Methyl-Beta-Mercaptopropionate. Dec. 30, 1941. Preparation of methyl alpha-methyl-beta-mercaptopropionate from MMA and H_2S.

Pat. 2,273,780. Wax Acrylate Ester Blends. Feb. 17, 1942. A blend of hydrogenated castor oil and a polymeric compound of the group consisting of acrylic acid and methacrylic acid esters of aliphatic alcohols containing more than two carbon atoms.

Pat. 2,289,540. Polymerization of Water Soluble Polymers. July 14, 1942. Polymerization of methacrylic acid in aqueous solution containing a compound of the group consisting of salts of per sulfuric, per carbonic, per phosphoric and sulfo-per-acids, or the corresponding free acids.

Pat. 2,327,302. Soap Composition. Aug. 17, 1943. Hard water having incorporated therein an alkali metal salt of a halogen substituted polyacrylic acid.

Pat. 2,373,464. Process for Inhibiting Polymerization. Apr. 10, 1945. Preparation of methyl methacrylate by refluxing a mixture of acetone cyanhydrin and methanol in the presence of hydroquinone while continuously passing air through the mixture and thereafter distilling methyl methacrylate from the mixture while maintaining direct contact between the vapors of the ester and air.

Miscellaneous Patents Relating to Sundry Nitrogen Compounds, Catalytic Oxidations, Dimethyl Ether Manufacture, Manufacture of HCN, Etc.

Pat. 1,895,516. Catalytic Process of Producing Ketones. Jan. 31, 1933. Dehydrogenating secondary alcohols with catalyst of difficultly reducible metal oxide of dehydrogenating metal and an oxide of a metal of Group 6 of periodic table.

Pat. 1,895,528. Catalytic Dehydration and Dehydrogenation Process. Jan. 31, 1933. Dehydrogenating O_2-containing compounds with dehydrogenating-dehydrating catalyst containing a basic alkali metal compound to repress dehydrating effect.

Pat. 1,895,529. Process of Catalytic Dehydration. Jan. 31, 1933. Dehydrating secondary alcohols with dehydrogenating-dehydrating catalytic oxide containing a more strongly acidic oxide to repress dehydrogenating effect.

Pat. 1,909,183. Acetic Acid Manufacture from Glycerol Fermentation Residues. May 16, 1933. Preparation of acetic acid by heating spent fermentation residues in presence of alkali and alkaline earth oxides, hydroxides, and carbonates.

Pat. 1,926,002. Manufacture of Wood Pulp. Sept. 5, 1933. Manufacture of paper pulp by digesting wood with ammonium bisulfite solution having a pH of about 1 to 1.7 and in an ammonia concentration of about 0.5 to 1%.

Pat. 1,943,345. Recovery of Ammonia from Cook Liquor. Jan. 16, 1934. In the recovery of ammonia from bisulfite cook liquor, the step which comprises making the hot cook liquor alkaline and recovering ammonia by bringing the liquor into contact with air, cooling the resulting gas and adsorbing the condensible ammonia in the condensed liquid while recovering the uncondensed ammonia by a scrubbing operation.

Pat. 1,948,441. Manufacture of Oxalic Acid. Feb. 20, 1934. In a process for the manufacture of oxalic acid from sodium oxalate by treatment with an ionizable mineral acid the step which comprises effecting the treatment in methanol solution.

Pat. 1,949,344. Process for the Preparation of Methyl Ether. Feb. 27, 1934. Manufacture of methyl ether by catalytically dehydrating methanol in the presence of aluminum phosphate.

Pat. 1,949,425. Catalytic Dehydrogenation Process for Producing Esters. Mar. 6, 1934. Catalytic dehydrogenation of polyhydric alcohols to esters with a catalyst such as a heavy metal chromite.

Pat. 1,975,853. Catalytic Dehydrogenation of Primary Alcohols. Oct. 9, 1934. Catalytic dehydrogenation of primary alcohols to esters, etc., using catalyst comprising metallic copper and a difficultly reducible metal oxide.

Pat. 1,980,118. Process for Resolving Emulsions. Nov. 6, 1934. Resolving emulsions by adding thereto a mixture of alcohols boiling at about 100° to 210° C., said alcohols having been obtained by hydrogenation of carbon monoxide.

Pat. 1,981,634. Process for the Prevention of Foam. Nov. 20, 1934. The process of decreasing foaming in liquids by adding an HTP alcohol boiling above 200° thereto.

Pat. 1,981,635. Foam Reduction. Nov. 20, 1934. The process of decreasing foaming in aqueous liquids by adding thereto an HTP alcohol boiling within the range of 133° to 210° C.

Pat. 1,981,758. Process for Dewaxing Petroleum Oil. Nov. 20, 1934. HTP alcohols as dewaxing agents.

Pat. 1,986,320. Phenol Recovery Process. Jan. 1, 1935. Extracting phenol from a phenol-bearing liquor by means of water miscible compounds obtained by hydrogenation of carbon oxides.

Pat. 1,988,455. Preparation of Glyoxal. Jan. 22, 1935. Making glyoxal from acetylene and oxygen in presence of nitric acid or nitric oxide catalyst.

Pat. 1,989,700. Manufacture of Aldehydic Compounds. Feb. 5, 1935. Subjecting carbon monoxide and a cyclic hydrocarbon to reacting conditions in the presence of an aldehyde-aluminum chloride complex obtainable by reaction of said hydrocarbon with carbon monoxide and aluminum chloride.

Pat. 1,995,915. Flotation of Minerals. Mar. 26, 1935. Concentration of minerals by froth flotation using a small amount of an HTP alcohol added to the mineral pulp.

Pat. 1,996,088. Recovery of Acetylene from Gases. Apr. 2, 1935. Recovering acetylene from vapors by scrubbing with a liquid comprising an ester of an aliphatic polybasic acid and a C_4–C_8 monohydric alcohol.

Pat. 1,999,196. Process for the Preparation of Condensation Products. Apr. 30, 1935. Preparation of condensation products by subjecting a secondary alcohol to the action of a dehydrogenation catalyst of the group consisting of chromium oxide and an oxide from the group consisting of manganese oxide and zinc oxide.

Pat. 2,003,477. Process for Effecting Organic Vapor Phase Reactions. June 4, 1935. In a process for the synthesis of organic compounds in the vapor phase in which carbon monoxide is one of the reacting constituents, the step which comprises activating the carbon monoxide and subsequently reacting it with the other reacting constituents.

Pat. 2,004,799. Process for Preparing Ammonium Sulphite or Bisulphite Solutions. June 11, 1935. Making ammonium sulphite or bisulphite solution by contacting ammonia and sulfur dioxide with water while controlling the temperature by introducing the ammonia at a plurality of levels.

Pat. 2,010,005. Motor Fuel. Aug. 6, 1935. Motor fuel containing methanol, gasoline, castor oil and HTP alcohols.

Pat. 2,012,945. Motor Fuel. Sept. 3, 1935. A motor fuel comprising methanol, paraffin hydrocarbons and borneol or isoborneol.

Pat. 2,014,374. Ammonia Recovery. Sept. 17, 1935. Alkalizing the hot cook liquor obtained in ammonium bisulfite treatment of pulp, exhausting ammonia therefrom, condensing the resulting gases containing some ammonia, and introducing the condensate containing water and ammonia into an absorption solvent through which sulfur dioxide is being passed and introducing uncondensed air-ammonia-gas from the condensing operation into the said tower at a point about one-sixth of the distance from the top of the absorption tower.

Pat. 2,014,408. Process for the Preparation of Methyl Ether. Sept. 17, 1935. Preparation of methyl ether by dehydrating methanol, separating the unreacted methanol and water from the dimethyl ether by distillation at conversion pressure, and condensing the thus separated methyl ether.

Pat. 2,014,717. Flotation Process. Sept. 17, 1935. Froth flotation process employing the sulfites of oxygenated organic compounds obtained by hydrogenation of carbon oxides.

Pat. 2,014,740. Hydration of Olefines. Sept. 17, 1935. Hydration of olefines to alcohols in the presence of a volatile halide and an absorbent material.

Pat. 2,027,389. Packing Fluid Seals. Jan. 14, 1936. A fluid-sealing material comprising a fibrous material comprising a fibrous base impregnated with a hydrogenated castor oil.

Pat. 2,027,390. Oil- and Water-Proof Product. Jan. 14, 1936. Container for lubricating oils, comprising fibrous organic sheet material impregnated with "Opalwax."

Pat. 2,035,386. Process of Producing Condensation Products of Halogenated Aliphatic Ethers. Mar. 24, 1936. Preparation of condensation products by dehalogenation of a halogenated alkyl monoether.

Pat. 2,036,380. Adsorbent Carbon. Apr. 7, 1936. Making ash-free carbon by heating sucrose in concentrated HCl, and igniting the resulting hard carbon mass.

Pat. 2,036,410. Process of Making Styrene Condensation Products of High Molecular Weight. Apr. 7, 1936. Making styrenes by heating aromatic hydrocarbons such as ethylbenzene in presence of a dehydrogenation catalyst.

Pat. 2,041,702. Polyhydric Alcohols and Processes for Making the Same. May 26, 1936. Condensation products of higher polyhydric alcohols and their preparation by heating said alcohols in presence of dehydrating oxides or hydroxides.

Pat. 2,046,145. Ketone Condensation Products. June 30, 1936. Dehydrogenation of secondary methyl carbinols and cyclic secondary alcohols to ketones with a catalyst also capable of simultaneously hydrogenating olefin bonds.

Pat. 2,047,606. Preparation of Alkyl Sulphates from Liquid Olefines. July 14, 1936. Making alkyl sulfates from liquefied olefin and 75–100% sulfuric acid.

Pat. 2,052,889. Addition Compounds of Methyl Ether and a Process for Their Preparation. Sept. 1, 1936. Preparation of dimethyl ether-aluminum halide addition compound.

Pat. 2,053,233. Catalyst and Catalytic Process. Sept. 1, 1936. In a process for the synthesis of organic compounds in which carbon monoxide is a reactant, the step of conducting the reaction in the presence of a hydrogen halide and active carbon.

Pat. 2,062,950. Esters. Dec. 1, 1936. Coconut alcohol esters of carbocyclic monocarboxylic acids (abietic).

Pat. 2,065,400. Chlorination of Methyl Ether and the Products Obtained Therefrom. Dec. 22, 1936. Unsymmetrical dichloromethyl ether.

Pat. 2,069,547. Product and Process of Sulphation of Compounds Obtained by Hydrogenation of Carbon Oxides. Feb. 2, 1937. Producing wetting agents by reacting oleum with the oily products obtained by catalytic reduction of oxides of carbon, and neutralizing the product with an alkali.

Pat. 2,072,739. Esters. Mar. 2, 1937. An ester of phthalyl-glycolic acid or other phthalyl-oxaliphatic acid, such as butyl-phthalyl vinyl-glycolate.

Pat. 2,072,806. Process for the Separation of Primary from Secondary Alcohols. Mar. 2, 1937. Esterification of the easily esterified portion of the mixture of compounds obtained by hydrogenation of carbon oxides by treatment with an organic dibasic acid anhydride, separating the resulting ester by distillation and by thermal decomposition of the unesterified portion.

Pat. 2,075,035. Process for Preparing Carboxylic Anhydrides. Mar. 30, 1937. Making anhydrides of carboxylic acids from alkyl esters of the acids, the anhydride of another acid, and an esterification catalyst.

Pat. 2,075,295. Organic Sulphides and a Method for Their Preparation. Mar. 30, 1937. Preparation of mercaptans by treating esters of HTP alcohols with alkali metal or alkaline earth metal sulfides.

Pat. 2,076,557. Process for the Separation of Hydrocarbons. Apr. 13, 1937. Fractional distillation of a mixture of gaseous hydrocarbons with isolation of a C_3 fraction.

Pat. 2,086,507. Preparation of Hydrocyanic Acid. July 6, 1937. Synthesis of hydrocyanic acid by catalytic dehydrogenation of formamide in the presence of fused manganese oxide.

Pat. 2,090,592. Process for Producing Alkali Metal Ureas. Aug. 17, 1937. Producing sodium urea by reacting metallic sodium with urea in anhydrous liquid ammonia.

Pat. 2,091,241. Process for the Preparation of Dicarboxylic Acid Esters. Aug. 24, 1937. Esterifying HTP alcohols or cyclohexanol with dicarboxylic acid anhydrides in the presence of an inert solvent.

Pat. 2,094,128. Chemical Process. Sept. 28, 1937. Pyrolysis of hydrocarbons under specified conditions in presence of chromium or cobalt sulfomolybdate.

Pat. 2,097,750. Synthesis of Alkyl Halides. Nov. 2, 1937. Preparation of alkyl halides from olefin hydrocarbons and hydrogen halides of Group II–B metal halides ($ZnCl_2$) as catalysts.

Pat. 2,099,814. Preparation of Isopropyl Sulphates. Nov. 23, 1937. Preparing mono-isopropyl sulfates from liquid propylene and 87.5–93% sulfuric acid.

Pat. 2,101,823. Process of Preparing Cyanhydrins. Dec. 7, 1937. Preparation of aldehyde or ketone cyanhydrins by a process which includes the step of initiating the reaction by dissolving at least a portion of the catalyst in the product of the reaction and adding the resulting solution to the reactants.

Pat. 2,102,370. Flotation Process. Dec. 14, 1937. Froth flotation process employing a sulfuric acid derivative of a mixture of oxygenated organic compounds boiling above 100° C. obtained by hydrogenation of carbon oxides.

Pat. 2,110,073. Coating Composition. Mar. 1, 1938. Oil-type varnishes containing rosin/glycerol/hydrogenated phenol-formaldehyde resins.

Pat. 2,113,588. Separating Gasoline from Gases. Apr. 12, 1938. Process and apparatus for separating the gasoline fraction from gaseous cracked petroleum products by successive compression, cooling, separation, and rectification.

Pat. 2,116,867. Glue, Adhesive, and the Like. May 10, 1938. Preparation of pastes by reaction between dialkyl sulfate and starch in the presence of alkali added at such a rate that no large excess of unreacted alkali is present at any time.

Pat. 2,123,520. Process of Making Aldehydes. July 12, 1938. Catalytic oxidation of long chain primary alcohols to aldehydes.

Pat. 2,126,113. Cellulose Derivative Composition. Aug. 9, 1938. Carbamates of HTP alcohols as plasticizers for cellulose esters.

Pat. 2,130,664. Lubricant. Sept. 20, 1938. A motor fuel combustion lubricant containing castor oil and higher alcohols obtained by hydrogenation of oxides of carbon, said alcohols boiling at about 200° to 275° C.

Pat. 2,135,641. Esters of C-Dialkylglycines. Nov. 8, 1938. Long chain esters of C-dialkylglycines.

Pat. 2,135,709. Acetic-Pyruvic Anhydride. Nov. 8, 1938. Acetic pyruvic anhydride and its preparation from ketene and pyruvic acid.

Pat. 2,137,830. Dye Stain. Nov. 22, 1938. Dye stain solvent comprising methanol and formamide or ammonium formate.

Pat. 2,137,871. Dye Stain Composition. Nov. 22, 1938. Dye stain solvent comprising methanol, urea, and in some instances toluene, ethylene glycol, etc.

Pat. 2,139,679. Diamides of Unsaturated Carboxylic Acids and Process of Making the Same. Dec. 13, 1938. Diamides from long chain diamines and unsaturated monocarboxylic acids.

Pat. 2,143,816. Dithiohydantoins. Jan. 10, 1939. A reaction product of carbon disulfide and a secondary alpha-amino-mononitrile; a 2,4-dithiohydantoin.

Pat. 2,159,926. Method of Softening Plastic Sheets. May 23, 1939. Softening nitrocellulose plastic compositions by means of a solution containing water, methanol and diisopropyl ketone.

Pat. 2,163,284. Alkyl Cyclohexanones and Process for Producing Same. June 20, 1939. Dehydrogenation of alicyclic secondary alcohols to ketones.

Pat. 2,166,140. Dialkyl Formamides as Selective Solvents for Refining Mineral Oils. July 18, 1939. Separating non-paraffinic hydrocarbons from paraffinic hydrocarbons by means of an N-dialiphatic formamide.

Pat. 2,173,114. Process for the Dehydrogenation of Secondary Hydroxy Compounds and Products Obtained Therefrom. Sept. 19, 1939. Catalytic dehydration of long chain secondary alcohols to ketones.

Pat. 2,173,187. Process for Hydrating Olefins. Sept. 19, 1939. Hydration of olefins to alcohols with heteropoly acid catalysts.

Pat. 2,174,985. Process for the Esterification of Olefins. Oct. 3, 1939. Contact esterification of olefins in the presence of a heteropoly acid catalyst (Reaction with acids).

Pat. 2,175,805. Stabilized Organic Nitrile and Process of Making. Oct. 10, 1939. Distillation of formaldehyde cyanhydrin at a pH below 6.

Pat. 2,175,811. Manufacture of Ketenes. Oct. 10, 1939. Pyrolysis of lower alkyl esters to ketenes.

Pat. 2,178,760. Process for the Dehydrogenation of Hydroxy Carboxylic Acids and Esters Thereof. Nov. 7, 1939. Dehydrogenation of long chain hydroxy acids and esters to ketones.

Pat. 2,178,761. Catalytic Formation of Long-Chain Aldehydes. Nov. 7, 1939. Catalytic dehydrogenation of long chain primary alcohols to aldehydes.

Pat. 2,179,215. Amino Ketones and Method of Making. Nov. 7, 1939. Preparation of amino ketones by reaction between ketones, formaldehyde and amino compounds.

Pat. 2,183,503. Polymerization of Olefins. Dec. 12, 1939. Polymerization of olefins in the presence of hydrated boron fluoride.

Pat. 2,183,852. Solvent Extraction. Dec. 19, 1939. Separating liquid hydrocarbons into fractions by means of a solvent containing a substituted aliphatic amide and an alcohol.

Pat. 2,191,555. Process for Making Porous Structures. Feb. 27, 1940. Inflation of plaster with nitrogen formed in situ from urea, sodium nitrate, and sulfuric acid.

Pat. 2,201,170. Secondary Thioamides and Process of Preparing Them. May 21, 1940. Preparation of thioamides from hydrogen sulfide, nitriles, and primary amines.

Pat. 2,201,171. Monomeric Polar-Substituted Thioamides and Their Preparation. May 21, 1940. Monomeric, polar-substituted, surface-active thioamides.

Pat. 2,201,200. Process of Preparing Thiolactams. May 21, 1940. Preparation of thiolactams from hydrogen sulfide and short-chain aminonitriles.

Pat. 2,211,626. Alcoholysis of beta-Alkoxy Methyl Ethers. Aug. 13, 1940. Preparation of glycerol by reacting an alcohol with glycerol beta-alkoxy alkyl ether in the presence of a hydrolyzing catalyst.

Pat. 2,212,141. Esters and Their Preparation. Aug. 20, 1940. Preparation of esters of beta-substituted ethanthiols from ethylene sulfide and anhydrides.

Pat. 2,214,790. Process and Apparatus for Separating Gases. Sept. 17, 1940. Use of ammonia as a refrigerant in recovery of ethylene from mixtures of gaseous hydrocarbons.

Pat. 2,215,950. Chemical Process. Sept. 24, 1940. Steam pretreatment of chrome alloy tubes in oil cracking.

Pat. 2,217,354. Manufacture of Methyl Borate. Oct. 8, 1940. Preparation of methyl borate by heating boric acid with methanol and separating from the mixture by fractional distillation a substantially anhydrous azeotrope of methyl borate and methanol.

Pat. 2,222,275. Process for the Separation of Hydrocarbons. Nov. 19, 1940. Separation of normally gaseous hydrocarbon mixtures from oil cracking.

Pat. 2,222,276. Apparatus and a Process for the Recovery of Gasoline from Cracked Petroleum Hydrocarbons. Nov. 19, 1940. Apparatus and method for gasoline recovery in oil cracking.

Pat. 2,223,303. Process for the Catalytic Hydrogenation of Carboxylic Acid Substances to Amines. Nov. 26, 1940. Preparation of amines by ammoniacal hydrogenation of higher carboxylic acids.

Pat. 2,229,651. Process of Alcoholysis. Jan. 28, 1941. Preparation of alkyl orthoformates from alkyl orthotrithioformates and alkanols.

Pat. 2,229,665. Preparation of Alkyl Ketals from Mercaptoles and Alcohols. Jan. 28, 1941. Preparation of alkyl ketals from mercaptoles and alkanols.

Pat. 2,230,390. Process for the Production of Thiols. Feb. 4, 1941. Hydrogenation of nitriles in the presence of sulfur to thiols.

Pat. 2,232,761. Process for the Treatment of Petroleum Distillates. Feb. 25, 1941. Process for producing pure aromatics and solvent naphthas from petroleum distillates.

Pat. 2,238,671. Method of Treating Wells. Apr. 15, 1941. Treating an oil well to increase production thereof by introducing a readily hydrolysable amide ester or salt of lower aliphatic acid.

Pat. 2,250,925. Process for the Separation of Acetylene from Admixture with Ethylene. July 29, 1941. Process for separating acetylene from admixture with ethylene.

Pat. 2,251,216. Sulphur Removal from Gases. July 29, 1941. Removal of hydrogen sulphide from gaseous mixtures of an absorbent agent of the class consisting of normally liquid mono- and dialkyl N-substituted aliphatic acid amides.

Pat. 2,251,217. Ore Flotation. July 29, 1941. Concentrating mineral ores by a froth flotation process employing a glycolic ester.

Pat. 2,251,225. Synthetic Wax Composition and Process of Preparing the Same. July 29, 1941. A homogeneous wax product comprising more than 50% 12-hydroxystearin and a minor proportion of abietyl alcohol.

Pat. 2,257,800. Alloy Skeleton Catalyst. Oct. 7, 1941. Easily suspensible cobalt catalysts.

Pat. 2,265,949. Recovery of Potassium Alkoxide Condensing Agents. Dec. 9, 1941. Introducing carbon dioxide into a reaction product containing a potassium alkoxide condensing agent, separating the resulting precipitate, hydrolyzing it and subsequently heating the hydrolysed product and leaching the heated product with an alcohol to obtain the potassium alkoxide.

Pat. 2,278,550. Preparation of Alkali Metal Alkoxides. Apr. 7, 1942. Preparation of an alkali metal alkoxide by reacting an alkali metal salt of a weak acid with an alcohol in which it is soluble.

Pat. 2,283,683. Chemical Process. May 19, 1942. Purification of aliphatic aminoacyl compounds through conversion to organic acid salts.

Pat. 2,286,034. Preparation of Substituted Aldehydes. June 9, 1942. Dehydrogenation of monomethyl ether of ethylene glycol to methoxy acetaldehyde in the presence of a catalyst containing copper oxide, silicon dioxide and chromium oxide.

Pat. 2,286,037. Process for the Preparation of Substituted Glyceric Aldehydes. June 9, 1942. Preparation of alpha-methyl ether of glyceric aldehyde by reaction between formaldehyde and methoxyacetaldehyde in the presence of an alkaline catalyst.

Pat. 2,298,187. Baking Powder Composition. Oct. 6, 1942. A baking powder containing a carbonate and an aliphatic organic acid amide.

Pat. 2,302,598. Detergent. Nov. 17, 1942. Treating hard water with disodium hydroxynitrilodisulfonate or related compounds.

Pat. 2,302,611. Treatment of Wood. Nov. 17, 1942. In the seasoning of wood the step which comprises coating the outer surface of the wood with a saturated monoammonium phosphate solution, the wood being at a temperature at least 5° below that of the monoammonium phosphate solution.

Pat. 2,307,929. Preparation of Hydroxylamine. Jan. 12, 1943. Preparation of a hydroxyl amine salt by pyrolysis of an organic nitrile, and collecting the reaction products in the presence of a mineral acid to form the hydroxyl amine salt of the acid.

Pat. 2,307,937. Removal of Formaldehyde from Mixtures Containing the Same. Jan. 12, 1943. Removing formaldehyde from hydroxy aldehydes and ketones by acetalization with methanol.

Pat. 2,316,215. Production of Amino Acids from Their Hydrohalides. Apr. 13, 1943. Liberation of amino acids from their hydrochlorides by means of pinene.

Pat. 2,316,604. Oxidation of Organic Compounds. Apr. 13, 1943. Oxidation of allyl chloride or related compounds to the corresponding hydroxylated compounds in the presence of an initiator and an organic solvent for the allyl chloride.

Pat. 2,316,636. (Re. 22,352). Polycarboxylic Acids. Apr. 13, 1943. Preparation of polycarboxylic acids by reacting sodium chloroacetate with water and ethanol amine in the presence of sodium carbonate and acidifying the resulting solution.

Pat. 2,321,552. Latex Coagulation. June 8, 1943. Glycolic acid as a latex coagulant.

Pat. 2,327,323. Water-Treating Agent. Aug. 17, 1943. Hard water having incorporated therein a precipitate-inhibiting amount of pyrimidine as a water-softening agent.

Pat. 2,328,940. Preparation of Amino Acids. Sept. 7, 1943. Preparation of alpha-aminopropionic acids from esters of alpha-hydroxypropionate and ammonia or amines.

Pat. 2,334,476. Unsaturated Isocyanate. Nov. 16, 1943. Isopropenyl isocyanate.

Pat. 2,334,782. Process for the Preparation of Disecondary Diamines. Nov. 23, 1943. Preparation of disecondary diamines from primary amines and dihalides.

Pat. 2,335,608. Product and Process. Nov. 30, 1943. Synthetic lubricants obtained by interpolymerization of monoolefin hydrocarbon and halogen-containing monoolefin.

Pat. 2,340,745. Isomerization of Ricinoleic Compounds. Feb. 1, 1944. Isomerization of ricinoleyl to 12-keto-stearyl compounds with specially prepared Co and Ni catalyst.

Pat. 2,346,642. Process for the Production of Olefines and Aromatic Hydrocarbons. Apr. 18, 1944. Improvements in cracking oil to ethylene and aromatics; adding C_4–C_7 hydrocarbons.

Pat. 2,347,494. N-Substituted Amide and Method for Preparing the Same. Apr. 25, 1944. N-(beta-hydroxyethyl) hydroxyacetamide and related compounds as compositions of matter.

Pat. 2,357,283. Process for the Production of N Alkylol Amides. Sept. 5, 1944. Preparation of N alkylol amides by reaction between a carboxylic acid amide and an alkylene oxide.

Pat. 2,362,511. Modified Glycolide Resins. Nov. 14, 1944. Preparation of a lactic acid-modified polyglycolide.

Pat. 2,364,377. Process for the Preparation of Butadiene. Dec. 5, 1944. Preparation of butadiene by pyrolysis of cyclohexane followed by absorption of butadiene in a liquid hydrocarbon.

Pat. 2,373,627. Organic Phosphorus Compounds. Apr. 10, 1945. A phosphite of a compound selected from the group consisting of esters and amides of hydroxyacetic acid.

Pat. 2,375,301. Preparation of Esters. May 8, 1945. Preparation of esters from primary amides and primary alkyl halides.

Pat. 2,382,865. Bright Dip. Aug. 14, 1945. Bright dipping of copper in an aqueous glycolic acid bath.

Pat. 2,384,726. Ether Esters. Sept. 11, 1945. 1-Acyl-oxyethyl ethers of alpha-hydroxyacid esters.

Pat. 2,384,731. Vulcanized Isobutylene-Monovinylacetylene Synthetic Rubber. Sept. 11, 1945. Selected MVA/isobutylene copolymers and preparation at low temperature with BF_3 catalyst.

Pat. 2,385,661. Polymers from Dioxane. Sept. 25, 1945. Polymerization of 1,3-dioxanes after cleavage with acid catalyst.

Pat. 2,388,189. Amino Acid Synthesis. Oct. 30, 1945. Preparation of aminoacetic acid by high pressure carbonation of an alkaline earth metal salt of aminoacetic acid.

Pat. 2,391,267. Amides. Dec. 18, 1945. Long chain N,N'-thiobisamides, RCO—NH—S—NH—COR.

Pat. 2,395,307. Preparation of Organic Salts. Feb. 19, 1946. Preparation of heavy metal soaps of fatty acids by passing a fatty acid and air into a reaction zone charged with a heavy metal.

Pat. 2,399,625. Methyl Ethenyloxyacetate. May 7, 1946. Methyl ethenyloxyacetate.

Pat. 2,402,456. Chemical Process. June 18, 1946. Process for sulfurization of normally gaseous monoolefins.

Pat. 2,402,586. Chemical Processes. June 25, 1946. Preparation of thiols from ethylenic compounds H_2S, and H_2.

Pat. 2,402,639. Lactones of Mercapto Carboxylic Acids and Process of Preparing Them. June 25, 1946. Preparation of mercaptocarboxylic acids by hydrogenation of aldehydo- or keto-acids (or derivatives) in the presence of S, H_2S, etc.

Pat. 2,406,410. Production of Organic Sulphides. Aug. 27, 1946. Preparation of sulfides by hydrogenation of carbonyl compounds in presence of thiols and sulfactive catalysts.

SCHEDULE 2

Patents Relating to Ceramics

Pat. 1,948,461. Production of Opaque Glasses and Enamels. Feb. 20, 1934. Addition of gas-producing constituents to enamel frits.

Pat. 1,954,353. Materials for Decorating Surfaces. Apr. 10, 1934. Mixture of palladium and gold suspensions or solutions of compounds such as resinates in an essential oil, etc. is applied to a ceramic article and burned to give a brilliant, gray-white decorative coating.

Pat. 1,977,625. Process of Decorating Glass. Oct. 23, 1934. A silver decoration is applied to glassware by spraying a suspension of silver oxide in an oil-resin mixture upon hot glass.

Pat. 1,983,151. Coloring Agents for Glass Batches. Dec. 4, 1934. A cadmium sulfo-selenide composition for coloring glass and process for making ruby glass.

Pat. 2,102,630. Clouded Vitreous Enamel. Dec. 21, 1937. Enamel slip containing a gas-evolving substance.

Pat. 2,103,228. White Clouded Vitreous Enamel. Dec. 21, 1937. Enamel slip containing clay and a gas-evolving substance.

Pat. 2,103,229. Process for Making White Clouded Vitreous Enamel. Dec. 21, 1937. Incorporating into enamel slip, clay, a gas-evolving substance and a glossing agent.

Pat. 2,118,047. White Clouded Vitreous Enamel. May 24, 1938. Enamel frit containing cryolite, B_2O_3 and added Al_2O_3.

Pat. 2,130,215. Transparent Glass Color. Sept. 13, 1938. Transparent ceramic color consisting of a lead borosilicate base and cadmium sulfide and/or cadmium sulfo-selenide.

Pat. 2,147,202. Opaque Vitreous Enamel and Process of Making the Same. Feb. 14, 1939. Enamel frit containing cryolite, clay and gas-evolving material.

Pat. 2,165,554. White Opaque Vitreous Enamel Frit. July 11, 1939. Enamel frit containing silicate, borate and fluorine compound.

Pat. 2,174,517. Manufacture of Glass. Oct. 3, 1939. Use of cyanogen compounds, e. g. cyanides, cyanates and cyanamides, in glass manufacture.

Pat. 2,207,723. Glaze for Ceramic Decoration. July 16, 1940. Acid and alkali resistant ceramic glaze containing bismuth oxide, lead oxide, and silica.

Pat. 2,225,159. Acid-Resisting Glass Flux. Dec. 17, 1940. Low-melting lead borosilicate fluxes containing titanium dioxide for use as acid-resistant decorative glazes for glass.

Pat. 2,225,160. Opaque White Glaze for Decorating Glassware. Dec. 17, 1940. Titanium oxide milled with a flux containing not more than 75% PbO nor less than 15% SiO_2 affords a stable opaque white glaze for glass.

Pat. 2,225,161. Glaze for Decorating Glassware. Dec. 17, 1940. Low-melting, boric oxide-free, acid-resistant glaze for glass. Contains lead oxide, silica, titanium oxide and sodium monoxide.

Pat. 2,225,162. Vitrifiable Enamel. Dec. 17, 1940. Sulfide-resistant vitrifiable lead silicate and borosilicate enamels containing both titanium and lithium oxides as melted-in ingredients.

Pat. 2,236,852. Process for Producing Enamel. Apr. 1, 1941. Enamel slip containing polybasic acid or salt thereof.

Pat. 2,248,021. Ceramic Coloring Agents. July 1, 1941. Copper-chrome black enamel pigment for enamels is improved by chromic oxide or acid to copper chromate, followed by calcining the product.

Pat. 2,255,044. Low-Melting Decorative Glazes of Increased Resistance to Chemical Agents. Sept. 9, 1941. Low-melting (e. g. Pb silicate or borosilicate) enamels or glazes for decorating glassware which contain a metal chloride, bromide or iodide as a melted-in ingredient.

Pat. 2,264,749. Ceramic Pigments for Graining. Dec. 2, 1941. Copper-chrome graining pigment for enamels prepared by adding a metal cyanide, e. g. Co, Cd, Cu or Zn cyanide.

Pat. 2,267,928. Process for Making White Clouded Enamel. Dec. 30, 1941. Enamel coating containing cerium.

Pat. 2,278,868. Glass Colors of High Alkali Resistance. Apr. 7, 1942. Low-melting, alkali-resistant glazes prepared by melting zirconium dioxide into a low-melting, high lead content glaze containing both boric oxide and alkali metal oxide.

Pat. 2,304,750. Ceramic Pigments. Dec. 8, 1942. Black ceramic pigment for graining comprising copper-chrome black pigment to which has been added as a mill addition not over 10% of zinc sulfide.

Pat. 2,305,313. Process for Making White Clouded Enamel. Dec. 15, 1942. Enamel slip containing a gas clouding agent and an antimony compound.

Pat. 2,316,745. Ceramic Decorating Compositions. Apr. 13, 1943. Methyl cellulose in vehicles for applying ceramic colors to glassware.

Pat. 2,338,099. Alkali-Resistant Glazes. Jan. 4, 1944. An alkali-resistant glaze of high lead content comprising lead oxide, silica, zirconium dioxide, and an alkali metal fluoride. The zirconium dioxide content ranges from 1 to 9% by weight and is melted into the glaze composition.

Pat. 2,351,252. Enamels. June 13, 1944. Enamel compositions characterized by a high content of dissolved iron oxides. These compositions also contain lead oxide, silica, boric oxide, alkali metal oxide, and may contain other metal oxides.

Pat. 2,359,462. Decalcomania. Oct. 3, 1944. Production of a ceramic decalcomania transfer having great freedom from blistering and other firing defects, utilizing a series of vitrifiable colors compounded in different fluxes, each color being in a different flux composition.

Pat. 2,383,704. Burnish Gold. Aug. 28, 1945. A burnish gold preparation for decorating ceramicware containing metallic gold and, as solid diluent constituent, powdered elementary sulfur.

Pat. 2,394,591. Electrical Resistor. Feb. 12, 1946. An electrical resistor is produced by applying a thin slip of clay to the wire wound core, drying and coating the whole with a vitreous enamel slip containing 28–55% lead oxide, 5–20% zinc oxide, 10–30% boric oxide, 4–10% alumina, and 11–32% silica and firing. A second coat of enamel may then be applied.

Pat. 2,398,686. Electrical Resistor and Method of Making Same. Apr. 16, 1946. Method of making wire wound electrical resistors by applying a coating of aqueous suspension of clay to a core wound with resistance wire, drying, applying vitreous enamel slip, again drying and firing.

Pat. 2,411,031. Manufacture of Optical Glass. Nov. 12, 1946. A method for homogenizing glass (to render it suitable for optical use) which involves splitting a mass of molten glass into a plurality of separate streams, and recombining the streams in an order different from that in which they were originally present in the glass mass, the recombination serving to eliminate bubbles of gas entrapped therein. Apparatus for carrying out this fining is also disclosed.

Pat. 2,416,804. Method of Coating Wire-Wound Electrical Resistors. Mar. 4, 1947. Coating wire-wound electrical resistors with a slip comprising an aqueous suspension of 98–50% clay and 2–50% bentonite, drying the coating; applying vitreous enamel slip, drying and firing.

Pat. 2,418,684. Selenium Ruby Glass. Apr. 8, 1947. A selenium ruby glass of increased depth of color for the amount of selenium compound used in which part of the sodium carbonate of the batch is replaced by sodium peroxide.

Pat. 2,425,032. Enamels for Resistors. Aug. 5, 1947. An insulated electrical resistor unit comprising a ceramic base, a resistance wire wound thereon, and on them an insulating vitreous enamel comprising lead oxide, zinc oxide, alumina and boric oxide in specified proportions.

TRADE-MARKS

OFFICIAL GAZETTE, NOVEMBER 16, 1948

[VOL 616. No. 3]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 495,768. THE SPONGE RUBBER PRODUCTS COMPANY, Shelton, Conn. Filed Jan. 31, 1946.

Texlite

FOR RESILIENT HIGHLY COMPRESSIBLE MATERIAL COMPRISING MUTUALLY ENTANGLED SPOT JOINED FLEXIBLE FILAMENTS IN THE FORM OF LONG NATURAL OR SYNTHETIC, ANIMAL, VEGETABLE OR MINERAL FIBERS FORMING A SPRINGY MASS PERMEATED BY VOIDS.

Claims use since Oct. 16, 1945.

Ser. No. 507,435. SOCIÉTÉ DE PRODUITS CHIMIQUES DES TERRES RARES, Paris, France. Filed Aug. 14, 1946.

S.T.R.

FOR RARE EARTHS, CHEMICAL ELEMENTS HAVING THE ATOMIC NUMBERS 39 AND 57 TO 71 IN MENDELEIEFF'S CLASSIFICATION, AND THE RARE EARTH OXIDES.

Claims use since Oct. 20, 1919.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 523,712. SNO-FLAKE PRODUCTS CO., Detroit, Mich. Filed June 6, 1947.

SNO-FLAKE

FOR HAND RUBBING COMPOUND FOR NEWLY SPRAYED LACQUERED SURFACES, WHEEL POLISHING PASTE AND RUBBER DRESSING.

Claims use since June 15, 1914.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 512,008. LUZIERS, INC., Kansas City, Mo. Filed Nov. 4, 1946.

Faithfully Yours

FOR PERFUME.

Claims use since Oct. 21, 1946.

Ser. No. 514,248. BASSETT COMPANY, Columbus, Ohio. Filed Dec. 14, 1946.

441,328. AUTOMOBILE RADIO RECEIVING ANTENNAE, TELEVISION RECEIVING ANTENNAE, FREQUENCY MODULATION RECEIVING ANTENNAE, ROOF TOP RECEIVING ANTENNAE, WINDOW TYPE RECEIVING ANTENNAE. H. L. DALIS, INC., New York, N. Y.
Filed December 2, 1946. Serial No. 513,557. PUBLISHED AUGUST 17, 1948. Class 21.

441,329. DUSTING POWDER, TALC, BUBBLE BATH, AND TOILET WATER. SPORTLINE, INC., New York, N. Y.
Filed December 12, 1946. Serial No. 514,143. PUBLISHED MARCH 11, 1947. Class 6.

441,330. REBUILT ELECTRIC GENERATORS, ARMATURES, STARTER DRIVES AND FUEL PUMPS FOR INTERNAL COMBUSTION ENGINES, AND STORAGE BATTERIES. GENERATOR-IGNITION SALES CO., Oakland, Calif.
Filed December 24, 1946. Serial No. 514,757. PUBLISHED JULY 27, 1948. Class 21.

441,331. ELECTRIC HAND IRON. PIONEER PRODUCTS, INCORPORATED, Baltimore, Md.
Filed December 26, 1946. Serial No. 514,841. PUBLISHED AUGUST 3, 1948. Class 21.

441,332. ELECTRICAL WARNING DEVICE FOR MOTOR VEHICLES IN FORM OF PERIODIC LIGHT INTERRUPTOR. UNITED ACCESSORIES CORP., New York, N. Y.
Filed January 15, 1947. Serial No. 515,808. PUBLISHED AUGUST 17, 1948. Class 21.

441,333. WATCHES AND CLOCKS OF ALL KINDS AND PARTS THEREOF. THOMMENS UHRENFABRIKEN A. G., Waldenburg, Switzerland.
Filed January 22, 1947. Serial No. 516,155. PUBLISHED JULY 27, 1948. Class 27.

441,334. LIQUID SOLVENTS FOR CARBON, PAINT, ANILINE DYES, VARNISH, GUMMY RESIDUES, FOR USE IN THE CLEANING OF AUTOMOTIVE PARTS AND OTHER METAL PIECES. PRACTICAL PRODUCTS COMPANY, Minneapolis, Minn.
Filed January 25, 1947. Serial No. 516,375. PUBLISHED AUGUST 17, 1948. Class 4.

441,335. FUEL TANKS, COMBINED FUEL TANKS AND TOOL CHESTS AND JACK WELLS, AND MOUNTING BRACKETS AND FUEL CONNECTIONS THEREFOR. PRIOR PRODUCTS, INC., Middletown, Ohio.
Filed January 28, 1947. Serial No. 516,506. PUBLISHED AUGUST 3, 1948. Class 19.

441,336. WOOLEN PIECE GOODS. FORSTMANN WOOLEN CO., Passaic, N. J.
Filed February 10, 1947. Serial No. 517,246. PUBLISHED OCTOBER 14, 1947. Class 42.

441,337. AXIAL FLOW FANS HAVING CASINGS AND STATIONARY VANES FOR MOVING AIR FOR DOMESTIC AND INDUSTRIAL PURPOSES. JOY MANUFACTURING COMPANY, Pittsburgh, Pa.
Filed February 14, 1947. Serial No. 517,487. PUBLISHED AUGUST 17, 1948. Class 34.

441,338. WATCHES AND CLOCKS. RAYMOND DODANE, Besancon (Doubs), France.
Filed February 15, 1947. Serial No. 517,562. PUBLISHED JULY 27, 1948. Class 27.

441,339. GLASS NIPPLE JARS AND FUNNELS. SANIT-ALL PRODUCTS CORPORATION, Greenwich, Ohio.
Filed February 24, 1947. Serial No. 518,048. PUBLISHED AUGUST 3, 1948. Class 38.

441,340. MAP HOLDERS OR JACKETS ADAPTED FOR APPLICATION TO SUN VISORS FOR AUTOMOBILES. ARTHUR J. FELTAULT, doing business as Visor-Ads, West Hartford, Conn.
Filed March 12, 1947. Serial No. 518,882. PUBLISHED AUGUST 10, 1948. Class 19.

441,341. ELECTRO-MECHANICAL INSTRUMENTS FOR THE STUDY OF THE FLOW CHARACTERISTICS OF THE FLUIDS IN AN OIL FIELD BY MEASURING THE ELECTROMOTIVE POTENTIALS IN A SOLUTION OF AN ELECTROLYTE IN A MODEL OF THE OIL FIELD. THE TEXAS COMPANY, New York, N. Y.
Filed March 7, 1947. Serial No. 519,146. PUBLISHED AUGUST 24, 1948. Class 26.

441,342. ELECTRO-MECHANICAL INSTRUMENTS FOR THE STUDY OF THE FLOW CHARACTERISTICS OF THE FLUIDS IN AN OIL FIELD. THE TEXAS COMPANY, New York, N. Y.
Filed March 17, 1947. Serial No. 519,147. PUBLISHED AUGUST 24, 1948. Class 26.

441,343. PRINTED MENU CARDS SOLD AS SUCH. REUBEN NOEL PERLEY, Omaha, Nebr.
Filed March 18, 1947. Serial No. 519,218. PUBLISHED AUGUST 24, 1948. Class 38.

441,344. DRAPERIES; VALANCES; AND COATED AND UNCOATED UPHOLSTERY AND DECORATIVE FABRICS, SOLD BY THE PIECE, YARD, AND BOLT, OF COTTON, WOOL, RAYON, SILK, AND COMBINATIONS THEREOF. EDWIN RAPHAEL COMPANY, INC., Chicago, Ill.
Filed March 19, 1947. Serial No. 519,294. PUBLISHED AUGUST 17, 1948. Class 42.

441,345. APPARATUS FOR PROVIDING AUDIBLE INDICATION TO TRACE ELECTRONIC SIGNALS IN RADIO APPARATUS AND THE LIKE, AND ELECTRONIC SOUND AMPLIFIERS. PRECISION ELECTRONICS, INC., Chicago, Ill.
Filed March 27, 1947. Serial No. 519,693. PUBLISHED AUGUST 10, 1948. Class 21.

441,346. HOLDERS FOR MAPS AND THE LIKE ADAPTED FOR DETACHABLE APPLICATION TO SUN VISORS FOR AUTOMOBILES. ARTHUR J. FELTAULT, doing business as Visor-Ads, West Hartford, Conn.
Filed April 4, 1947. Serial No. 520,156. PUBLISHED JULY 20, 1948. Class 19.

441,347. PERFUMES. JEAN-PASCAL LORRIAUX & CIE., Paris, Seine, France.
Filed April 9, 1947. Serial No. 520,401. PUBLISHED AUGUST 17, 1948. Class 6.

441,348. CANES WHICH MAY BE TRANSPOSED INTO A STAND FOR HOLDING CAMERAS. LINUS L. BLANCHARD, Hillside, N. J.
Filed April 18, 1947. Serial No. 520,927. PUBLISHED AUGUST 24, 1948. Class 26.

441,349. A HOUSE ORGAN ISSUED PERIODICALLY. SAFEWAY STORES, INCORPORATED, Oakland, Calif.
Filed April 25, 1947. Serial No. 521,362. PUBLISHED AUGUST 10, 1948. Class 38.

441,350. A PERIODICAL PUBLICATION PERTAINING TO THE LUMBER INDUSTRY. GEORGIA HARDWOOD LUMBER COMPANY, Augusta, Ga.
Filed June 9, 1947. Serial No. 523,835. PUBLISHED AUGUST 10, 1948. Class 38.

441,351. FURNACES, BOILERS, FUEL PREHEATERS USING COAL OR OIL FOR FUEL. CROTTY MANUFACTURING CORPORATION, New York, N. Y.
Filed June 11, 1947. Serial No. 523,947. PUBLISHED JULY 27, 1948. Class 34.

441,352. WATCHES AND WATCH MOVEMENTS. ELGIN NATIONAL WATCH COMPANY, Elgin, Ill.
Filed June 11, 1947. Serial No. 523,950. PUBLISHED AUGUST 17, 1948. Class 27.

441,353. PHARMACEUTICAL PREPARATION IN THE FORM OF CAPSULES TO BE GIVEN ORALLY FOR RELIEF OF NERVOUSNESS AND INDUCING SLEEP, AND TO BE USED ONLY BY OR DISPENSED UPON THE PRESCRIPTION OF A PHYSICIAN. FIRST TEXAS CHEMICAL MFG. CO., Dallas, Tex.
Filed June 11, 1947. Serial No. 523,951. PUBLISHED AUGUST 10, 1948. Class 6.

441,354. AIRPLANES AND STRUCTURAL PARTS THEREOF. PIPER AIRCRAFT CORPORATION, Lock Haven, Pa.
Filed June 12, 1947. Serial No. 524,080. PUBLISHED AUGUST 3, 1948. Class 19.

441,355. HAIR DRESSINGS, PRE-SHAVE LOTION, SHAVE LOTION, TALCUM POWDER, BODY POWDER AND DUSTING POWDER, COLOGNE, DEODORANTS, MATERIAL HAVING WATER SOFTENING PROPERTY FOR ADDITION TO BATH TO PRODUCE BUBBLE BATH, PERFUMES, AND TOILET WATER AND SHAMPOO. COURTLEY, LTD., New York, N. Y.
Filed June 17, 1947. Serial No. 524,304. PUBLISHED AUGUST 24, 1948. Class 6.

441,356. AUTOMATIC ELECTRIC IRONS, ELECTRIC HEATING PADS FOR GENERAL USE, AND TOASTERS. SON-CHIEF ELECTRICS, INCORPORATED, Winsted, Conn.
Filed June 20, 1947. Serial No. 524,578. PUBLISHED AUGUST 3, 1948. Class 21.

441,357. SELF-DISPENSING ROUGE AND POWDER PUFFS. DERMETICS, INC., New York, N. Y.
Filed June 21, 1947. Serial No. 524,599. PUBLISHED AUGUST 3, 1948. Class 29.

Filed July 4, 1947. Serial No. 526,238. PUBLISHED AUGUST 24, 1948. Class 38.

ACT OF 1920

These registrations are not subject to opposition.

441,362. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) FARRAND OPTICAL CO., INC., New York, N. Y. Filed Aug. 14, 1945. Serial No. 487,121.

FARRAND

FOR OPTICAL INSTRUMENTS—NAMELY, OPTICAL FILTERS, OPTICAL LENS ARRAYS, TELESCOPES, RANGE FINDERS, SPECTROMETERS, PRISMS, ELECTRON MICROSCOPES.

Claims use since May 1, 1945.

441,363. (CLASS 21. ELECTRICAL APPARATUS, MACHINES AND SUPPLIES.) EDWIN L. WIEGAND COMPANY, Pittsburgh, Pa. Filed July 2, 1947. Serial No. 525,730.

TRIANGULAR

FOR ELECTRIC RANGE UNITS AND IMMERSION HEATERS, AND PARTS THEREOF.

Claims use since June 1946.

ACT OF 1946, PRINCIPAL REGISTER

503,842. ELECTRIC RANGES AND COOKERS. ALLEN E. RAU, doing business as Rau's Chicken Dinner Inns, Union, Wash., assignor to Rau Electric Manufacturing Company, Inc., Union, Wash.
Filed September 15, 1947. Serial No. 501,007. PUBLISHED AUGUST 17, 1948. Class 21.

503,843. POWER DRIVEN, ROW, AND SAIL BOATS. ROBERT S. BOLES, Humarock, Mass.
Filed October 27, 1947. Serial No. 501,306. PUBLISHED AUGUST 17, 1948. Class 19.

503,844. PERIODICALLY AND INTERMITTENTLY APPEARING PRINTED PROGRAMS, MAGAZINES, AND LABOR UNION DIRECTORIES. CHICAGO FEDERATION OF LABOR, Chicago, Ill.
Filed December 2, 1947. Serial No. 502,488. PUBLISHED AUGUST 24, 1948. Class 38.

503,845. PERIODICALLY AND INTERMITTENTLY APPEARING PRINTED PROGRAMS, MAGAZINES, AND LABOR UNION DIRECTORIES. CHICAGO FEDERATION OF LABOR, Chicago, Ill.
Filed December 2, 1947. Serial No. 502,490. PUBLISHED AUGUST 24, 1948. Class 38.

503,846. ELECTRICAL HEATING MANTLES AND HEATERS FOR USE ON APPARATUS AND ARTICLES MADE OF GLASS, METAL OR OTHER MATERIALS, SAID MANTLES AND HEATERS COMPRISING ELECTRICAL RESISTANCE ELEMENTS SEWED INTO A FIREPROOF FABRIC JACKET OR ENVELOPE. GLAS-COL APPARATUS COMPANY, Terre Haute, Ind., assignor to Glas-Col Apparatus Company, Inc., Terre Haute, Ind.
Filed August 1, 1947. Serial No. 503,898. PUBLISHED JULY 27, 1948. Class 21.

503,847. SHAMPOO. HELENE CURTIS INDUSTRIES, A DIVISION OF NATIONAL INDUSTRIES, INC., Chicago, Ill.; said National Industries, Inc., now by change of name Helene Curtis Industries, Inc.
Filed October 18, 1947. Serial No. 505,892. PUBLISHED AUGUST 24, 1948. Class 6.

503,848. NONWOVEN FABRICS IN ROLLS AND CUT TO SIZE PIECES AND MADE OF UNSPUN SYNTHETIC FIBERS, COTTON, OR MIXTURES THEREOF AND UNIFIED BY BONDING THE FIBERS IN PLACE. THE VISKING CORPORATION, Chicago, Ill.
Filed July 5, 1947. Serial No. 506,147. PUBLISHED JULY 20, 1948. Class 42.

503,849. SLIDE FASTENERS MADE OF OR PLATED WITH PRECIOUS METAL. TALON, INC., Meadville, Pa.
Filed July 5, 1947. Serial No. 508,875. PUBLISHED AUGUST 10, 1948. Class 28.

503,850. ELECTRICAL PANEL BOARDS, COMPOSITE PANELS FOR ELECTRICAL USES, SWITCHBOARD PANELS, RADIO PANELS. MASONITE CORPORATION, Chicago, Ill., and Laurel, Miss.
Filed August 28, 1947. Serial No. 511,565. PUBLISHED AUGUST 17, 1948. Class 21.

503,851. WINDOW CURTAINS. STONE-CLINE CURTAIN CO., INC., Fitchburg, Mass.
Filed October 24, 1947. Serial No. 511,769. PUBLISHED AUGUST 17, 1948. Class 42.

503,852. SMOKING PIPES. JOHN HUDSON MOORE, INC., New York, N. Y.
Filed August 5, 1947. Serial No. 512,072. PUBLISHED AUGUST 17, 1948. Class 8.

503,853. HAIR BRUSHES, SHAVING BRUSHES, HAND BRUSHES, BATH BRUSHES, SHAMPOO BRUSHES, TOOTH BRUSHES, AND TOILET BRUSHES. JOHN HUDSON MOORE, INC., New York, N. Y.
Filed August 6, 1947. Serial No. 512,076. PUBLISHED JULY 27, 1948. Class 29.

503,854. REFLECTORS FOR ELECTRIC LIGHTS. FRED A. METLEN, Seattle, Wash.
Filed September 15, 1947. Serial No. 512,918. PUBLISHED AUGUST 17, 1948. Class 21.

503,855. WHEAT FLOUR. TEXAS STAR FLOUR MILLS, Galveston, Tex.
Filed November 28, 1947. Serial No. 513,002. PUBLISHED AUGUST 10, 1948. Class 46.

503,856. SMALL BOATS ADAPTED FOR USE WITH OUTBOARD MOTORS. SOUTHWEST MANUFACTURING COMPANY, Little Rock, Ark., assignee of Southwest Manufacturing Company.
Filed August 1, 1947. Serial No. 513,220. PUBLISHED JULY 20, 1948. Class 19.

503,857. FLAT SASH BRUSHES FOR APPLYING PAINT OR OTHER LIQUID TO SASHES, WINDOW FRAMES AND THE LIKE. WHITING ADAMS COMPANY, INC., Boston, Mass.
Filed August 23, 1947. Serial No. 513,354. PUBLISHED AUGUST 3, 1948. Class 29.

503,858. ELECTRIC FOOD ROASTERS. THE SWARTZBAUGH MANUFACTURING COMPANY, Toledo, Ohio.
Filed September 4, 1947. Serial No. 516,328. PUBLISHED JULY 27, 1948. Class 21.

503,859. PERIODICAL PUBLISHED MONTHLY. ROYAL PLASTICS CORPORATION, Cincinnati, Ohio.
Filed July 29, 1947. Serial No. 517,327. PUBLISHED AUGUST 17, 1948. Class 38.

503,860. COMPOSITION FOR TREATMENT OF FUEL OILS TO PREVENT AND ELIMINATE SLUDGE. METROPOLITAN REFINING CO., INC., New York, N. Y.
Filed September 10, 1947. Serial No. 517,918. PUBLISHED AUGUST 24, 1948. Class 6.

503,861. AUTOMOTIVE AND GAS ENGINE SPARK PLUGS AND PARTS THEREFOR. STITT IGNITION COMPANY, Columbus, Ohio.
Filed September 16, 1947. Serial No. 518,111. PUBLISHED AUGUST 17, 1948. Class 21.

503,862. CLEANER IN POWDER FORM FOR USE IN CLEANING DAIRY UTENSILS AND MACHINERY. THE DIVERSEY CORPORATION, Chicago, Ill.
Filed August 2, 1947. Serial No. 518,285. PUBLISHED AUGUST 17, 1948. Class 4.

503,863. OIL BURNERS AND OIL BURNING EQUIPMENT FOR DOMESTIC AND COMMERCIAL PURPOSES—NAMELY, STORAGE WATER HEATERS AND AUXILIARY WATER HEATERS, COMMERCIAL AND DOMESTIC SPACE HEATERS, FLOOR FURNACES, AND BASEMENT FURNACES. KRESKY MFG. CO., INC., Petaluma, Calif.
Filed August 11, 1947. Serial No. 518,896. PUBLISHED AUGUST 10, 1948. Class 34.

503,864. ELECTRICALLY OPERATED PORTABLE TOOLS—NAMELY, GRINDERS, SANDERS, DRILLS, SCREW DRIVERS, BUFFERS, POLISHERS, WIRE BRUSHES, AND NUT RUNNERS. BUCKEYE TOOLS CORPORATION, Dayton, Ohio.
Filed September 29, 1947. Serial No. 519,623. PUBLISHED JULY 27, 1948. Class 21.

503,865. ELECTRICAL HEATING UNITS OF THE RESISTANCE WIRE COIL TYPE FOR ELECTRIC RANGES. TUTTLE & KIFT, INC., Chicago, Ill.
Filed October 1, 1947. Serial No. 520,481. PUBLISHED JULY 27, 1948. Class 21.

503,866. METAL POLISH IN LIQUID FORM. THE DIVERSEY CORPORATION, Chicago, Ill.
Filed August 2, 1947. Serial No. 521,248. PUBLISHED AUGUST 17, 1948. Class 4.

503,867. CLEANSER IN POWDERED FORM HAVING INCIDENTAL WATER-SOFTENING PROPERTIES, FOR CLEANING AND SOAKING MILKING MACHINE TUBES AND FOR CLEANING VACUUM LINES AND THE LIKE. THE DIVERSEY CORPORATION, Chicago, Ill.
Filed August 2, 1947. Serial No. 522,734. PUBLISHED AUGUST 17, 1948. Class 4.

503,868. METAL WORKING LATHES. THE R. K. LEBLOND MACHINE TOOL CO., Cincinnati, Ohio.

The representation of the carton is disclaimed apart from the mark as shown. The drawing is lined for the colors red, yellow, and black.
FOR SOAP..
Claims use since April 1935.

Reg. No. 347,643. Registered June 29, 1937. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

NACCOLENE

FOR CHEMICAL COMPOSITIONS USED IN THE DRY CLEANING OF TEXTILES.
Claims use since Dec. 21, 1935.

Reg. No. 355,860. Registered Apr. 5, 1938. GENERAL CHEMICAL COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

FOR SODIUM PHOSPHATE DETERGENTS, PARTICULARLY TRISODIUM PHOSPHATE DETERGENTS, AND SODIUM SILICATE DETERGENTS, PARTICULARLY SODIUM META-SILICATE DETERGENTS.
Claims use since August 1934.

Reg. No. 355,861. Registered Apr. 5, 1938. GENERAL CHEMICAL COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

FOR SODIUM PHOSPHATE DETERGENTS, PARTICULARLY TRISODIUM PHOSPHATE DETERGENTS, AND SODIUM SILICATE DETERGENTS, PARTICULARLY SODIUM META-SILICATE DETERGENTS.
Claims use since August 1934.

Reg. No. 388,788. Registered July 8, 1941. THE OHIO MATCH COMPANY, Wadsworth, Ohio, a corporation of Delaware. Republished by registrant.

MIDGET MAID

FOR STEEL WOOL AND SOAP CLEANING PADS.
Claims use since Feb. 25, 1941.

CLASS 5

ADHESIVES

Reg. No. 382,945. Registered Nov. 19, 1940. ESTATE OF H. B. FRED KUHLS, doing business as H. B. Fred Kuhls, Brooklyn, N. Y. Republished by registrant.

AVIO

FOR LIQUID MARINE GLUE.
Claims use since January 1937.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 122,324. Registered July 23, 1918. JULIUS R. JONES, Richmond, Va. Republished by Owens & Minor Drug Co., Inc., Richmond, Va., a corporation of Virginia.

TONO SCALPA

FOR SCALP PREPARATION.
Claims use since August 1912.

Reg. No. 126,949. Registered Oct. 14, 1919. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

FOR COAL-TAR DYESTUFFS.
Claims use since the Fall of 1918.

Reg. No. 127,769. Registered Dec. 2, 1919. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

PERIGEE

FOR FOOD-COLORS.
Claims use since May 17, 1919.

Reg. No. 129,511. Registered Feb. 24, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

RAJAH

FOR FOOD-COLORS.
Claims use since July 11, 1918.

Reg. No. 131,349. Registered May 11, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

CEYLENE

FOR FOOD-COLORS.
Claims use since May 17, 1919.

Reg. No. 131,351. Registered May 11, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

NOKA

FOR FOOD-COLORS.
Claims use since May 17, 1919.

Reg. No. 131,352. Registered May 11, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

RANA

FOR FOOD-COLORS.
Claims use since May 17, 1919.

Reg. No. 131,353. Registered May 11, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

BURNO

FOR FOOD-COLORS.
Claims use since May 17, 1919.

Reg. No. 131,354. Registered May 11, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

TOKI

FOR FOOD-COLORS.
Claims use since May 17, 1919.

Reg. No. 131,355. Registered May 11, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

BORDORINE

FOR FOOD-COLORS.
Claims use since May 17, 1919.

Reg. No. 131,356. Registered May 11, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

SOLONA

FOR FOOD-COLORS.
Claims use since May 17, 1919.

Reg. No. 131,558. Registered May 18, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

YOLCONE

FOR FOOD-COLORS.
Claims use since Sept. 17, 1918.

Reg. No. 131,559. Registered May 18, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

RUBALINE

FOR FOOD-COLORS.
Claims use since July 18, 1918.

Reg. No. 131,560. Registered May 18, 1920. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

MYRTINE

FOR FOOD-COLORS.
Claims use since July 8, 1918.

Reg. No. 153,804. Registered Mar. 28, 1922. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

NACCO

FOR COAL-TAR DYESTUFFS.
Claims use since Sept. 1, 1906.

Reg. No. 155,543. Registered May 30, 1922. TRAGER MANUFACTURING COMPANY, Scranton, Pa., a corporation of Pennsylvania. Republished by registrant.

Dead Shot

FOR INSECTICIDES.
Claims use since about Jan. 1, 1892.

Reg. No. 160,928. Registered Oct. 31, 1922. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

SERICHROME

The word "Chrome" is disclaimed apart from the mark as shown.
FOR DYES, DYESTUFFS, AND COLORS.
Claims use since Feb. 4, 1911.

Reg. No. 161,242. Registered Nov. 7, 1922. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

SUPERCHROME

The word "Chrome" is disclaimed apart from the mark as shown.
FOR DYES, DYESTUFFS, AND COLORS.
Claims use since Feb. 19, 1918.

Reg. No. 164,690. Registered Feb. 27, 1923. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

NATIONAL

FOR COAL-TAR CRUDES, INTERMEDIATES, DYESTUFFS, DYES, COAL-TAR COLORS, LAKES FOR PAPER AND CLOTH, DYES AND STAINS FOR BIOLOGICAL, BACTERIOLOGICAL AND HISTOLOGICAL PURPOSES; TINTS DERIVED FROM COAL-TAR COLORS, PIGMENTS FOR GENERAL USE, MORDANTS, ACCELERATORS FOR VULCANIZING PURPOSES, CHEMICALS DESIGNATED AS INDICATORS AND USED IN MAKING CHEMICAL ANALYSES, DEVELOPERS USED IN DYEING AND FOR PHOTOGRAPHY; COAL-TAR DERIVATIVES USED AS DYES, INTERMEDIATES, ACCESSORIES, PRESERVATIVES, AND PHARMACEUTICALS; AND DYES USED IN TANNING.
Claims use since about 1906.

Reg. No. 165,706. Registered Mar. 20, 1923. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

ORADO

FOR DYESTUFFS—NAMELY, CERTIFIED FOOD-COLORS.
Claims use since July 12, 1922.

Reg. No. 173,271. Registered Sept. 18, 1923. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

FOR COAL-TAR CRUDES, INTERMEDIATES, DYESTUFFS, DYES, COAL-TAR COLORS, LAKES FOR PAPER AND CLOTH, DYES AND STAINS FOR BIOLOGICAL, BACTERIOLOGICAL, AND HISTOLOGICAL PURPOSES; TINTS DERIVED FROM COAL-TAR COLORS, PIGMENTS FOR GENERAL USE, MORDANTS, ACCELERATORS FOR VULCANIZING PURPOSES, CHEMICALS DESIGNATED AS INDICATORS AND USED IN MAKING CHEMICAL ANALYSES, DEVELOPERS USED IN DYEING AND FOR PHOTOGRAPHY; COAL-TAR DERIVATIVES USED AS DYES, INTERMEDIATES, ACCESSORIES, PRESERVATIVES, AND PHARMACEUTICALS; AND DYES USED IN TANNING.
Claims use since Jan. 15, 1923.

Reg. No. 186,016. Registered July 1, 1924. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

ACRIVIOLET

FOR COAL-TAR DYESTUFFS, PRINCIPALLY FOR MEDICINAL USE AS A DISINFECTANT AND ANTISEPTIC.
Claims use since Dec. 3, 1923.

Reg. No. 187,553. Registered Aug. 5, 1924. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

BERGUNDA

FOR DYESTUFFS—NAMELY, CERTIFIED FOOD-COLORS.
Claims use since Nov. 8, 1922.

Reg. No. 193,390. Registered Dec. 30, 1924. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

LIMECONE

FOR CERTIFIED FOOD COLORS.
Claims use since June 4, 1924.

Reg. No. 194,837. Registered Feb. 10, 1925. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

POINSETINE

FOR CERTIFIED FOOD COLORS.
Claims use since Oct. 3, 1924.

Reg. No. 195,765. Registered Mar. 3, 1925. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

SOLANTINE

FOR DYES, DYESTUFFS, AND COLORS.
Claims use since Aug. 5, 1924.

Reg. No. 221,023. Registered Nov. 23, 1926. NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

TETRADOL

FOR COAL TAR PRODUCT USED PRINCIPALLY FOR MEDICINAL PURPOSES.
Claims use since Mar. 2, 1926.

Reg. No. 241,388. Registered Apr. 24, 1928. GEOFFREY PEPLOW, Pasadena, Calif. Republished by The Harrower Laboratory, Inc., Glendale, Calif., a corporation of Delaware.

PANCOLATE

FOR LAXATIVE DIGESTIVE TABLETS.
Claims use since Oct. 21, 1927.

Reg. No. 242,870. Registered June 5, 1928. THE HARROWER LABORATORY, INC., Wilmington, Del., and Glendale, Calif., a corporation of Delaware. Republished by registrant, present address Glendale, Calif.

LYDIN

FOR SOLUTION CONTAINING AN ACTIVE PRINCIPLE SECURED FROM THE INTERSTITIAL CELLS OF LEYDIG, A MEDICINAL PREPARATION FOR STIMULATING THE ENDOCRINE FUNCTIONING OF THE GONADS AND DEPENDENT ENDOCRINE ORGANS.
Claims use since Nov. 1, 1927.

Reg. No. 244,653. Registered July 24, 1928. VANADIUM CORPORATION OF AMERICA, Bridgeville, Pa., a corporation of Delaware. Republished by registrant, present address New York, N. Y.

VANCORAM

FOR METALLIC OXIDES AND SALTS, AND ESPECIALLY OXIDES AND SALTS OF VANADIUM MOLYBDENUM, TUNGSTEN, CHROMIUM, TITANIUM, ZIRCONIUM, CADMIUM, URANIUM, COBALT, NICKEL, AND MANGANESE.
Claims use since Jan. 30, 1928.

Reg. No. 270,213. Registered Apr. 29, 1930. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

TOXILIC

FOR ORGANIC ACIDS FOR USE IN THE MANUFACTURE OF SYNTHETIC RESINS, RESIN PLASTICIZERS, SOLVENTS, AND MALIC ACID.
Claims use since Aug. 13, 1929.

Reg. No. 272,288. Registered July 1, 1930. TRAGER MANUFACTURING COMPANY, INC., Scranton, Pa., a corporation of Pennsylvania. Republished by registrant.

DR. TRAGER'S HARTSHORN

FOR AMMONIA.
Claims use since 1889.

Reg. No. 284,944. Registered July 14, 1931. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

NACCOSOL

FOR WETTING OUT AGENTS, EMULSIFYING AGENTS, AND DYE ASSISTANTS.
Claims use since Feb. 26, 1930.

Reg. No. 305,814. Registered Aug. 22, 1933. L. N. RENAULT & SONS, INC., Egg Harbor City, N. J., a corporation of New Jersey. Republished by registrant.

Ren-nemia

FOR MEDICAMENT USED IN THE TREATMENT OF SECONDARY ANEMIA.
Claims use since 1928.

Reg. No. 306,262. Registered Sept. 12, 1933. L. N. RENAULT & SONS, INC., Egg Harbor City, N. J., a corporation of New Jersey. Republished by registrant.

OLD BARON

FOR GENERAL TONIC HAVING A WINE BASE.
Claims use since Apr. 4, 1933.

Reg. No. 306,263. Registered Sept. 12, 1933. L. N. RENAULT & SONS, INC., Egg Harbor City, N. J., a corporation of New Jersey. Republished by registrant.

BLACK (BE) EAGLE

FOR GENERAL TONIC, HAVING A WINE BASE.
Claims use since Apr. 4, 1933.

Reg. No. 311,905. Registered Apr. 10, 1934. CHAMBERLIN LABORATORIES, Des Moines, Iowa., a corporation of Iowa. Republished by registrant.

The word "Lotion" and the representation of the container are disclaimed apart from the mark as shown.
FOR LOTION FOR HANDS AND SKIN.
Claims use since October 1932.

Reg. No. 319,693. Registered Dec. 4, 1934. NORTHERN RESEARCH LABORATORIES, INC., Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

DEBACTEROL

FOR GERMICIDE FOR TREATMENT OF DISEASES OF THE MOUTH.
Claims use since Jan. 1, 1931.

Reg. No. 336,901. Registered July 21, 1936. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

Nacconol

FOR CHEMICAL DYEING AIDS, FIBER TREATING, MOISTENING, PROTECTING AND PENETRATING PREPARATIONS, AND DISPERSING AGENTS OF GENERAL APPLICATION.
Claims use since Oct. 5, 1932.

Reg. No. 350,436. Registered Sept. 28, 1937. POLK MILLER PRODUCTS CORP., Richmond, Va., a corporation of Virginia. Republished by registrant.

FOR LAXATIVE CAPSULES, WORM MEDICINE, CONDITION PILLS FOR DOGS, WORM CAPSULES AND LIQUID WORM MEDICINE, SPECIAL MEDICINE FOR REDUCTION OF FEVER IN DOGS AND PUPPIES, PEPSIN TABLETS, ARSENIC AND IRON PILLS, TAPE WORM MEDICINE, DIURETIC PILLS, NERVE SEDATIVE MEDICINE, INTESTINAL ASTRINGENT FOR DOGS, CANKER WASH, EXPECTORANT MEDICINE, EYE WASH FOR DOGS, MOUTH WASH FOR DOGS, LINIMENT FOR SPRAINS, STRAINS, AND SORE MUSCLES FOR DOGS AND HUMANS, MANGE MEDICINE FOR SARCOPTIC MANGE.
Claims use since April 1935.

Reg. No. 354,571. Registered Feb. 15, 1938. GENERAL CHEMICAL COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

FOR HEAVY CHEMICALS, PARTICULARLY SODIUM SULPHIDE, SALT CAKE, SODIUM BISULPHITE, ACETIC ACID, FERRIC SULPHATE, FERRIC NITRATE, STANNOUS CHLORIDE, IRON SULPHIDE, LEAD ACETATE, NITRE CAKE, ALUMINUM SULPHATE, SULPHUR, OXALIC ACID, AMMONIA ALUM, POTASH ALUM, SODIUM HYPOSULFITE, EPSOM SALT, GLAUBER'S SALT, SODIUM METASILICATE, SODIUM ALUMINUM SULPHATE, SODIUM FLUORIDE, DISODIUM PHOSPHATE, TRISODIUM PHOSPHATE, AND SODIUM SULPHITE, AND FOR FUNGICIDES AND INSECTICIDES.
Claims use since June 1929.

Reg. No. 354,572. Registered Feb. 15, 1938. GENERAL CHEMICAL COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

FOR HEAVY CHEMICALS, PARTICULARLY SODIUM SULPHIDE, SALT CAKE, SODIUM BISULPHITE, ACETIC ACID, FERRIC SULPHATE, FERRIC NITRATE, STANNOUS CHLORIDE, IRON SULPHIDE, LEAD ACETATE, NITRE CAKE, ALUMINUM SULPHATE, SULPHUR, OXALIC ACID, AMMONIA ALUM, POTASH ALUM, SODIUM HYPOSULFITE, EPSOM SALT, GLAUBER'S SALT, SODIUM METASILICATE, SODIUM ALUMINUM SULPHATE, SODIUM FLUORIDE, DISODIUM PHOSPHATE, TRISODIUM PHOSPHATE, AND SODIUM SULPHITE, AND FOR FUNGICIDES AND INSECTICIDES.
Claims use since June 1929.

Reg. No. 358,198. Registered June 28, 1938. JAMES A. HAINES, doing business as Haines Products Company, Carey, Ohio. Republished by James A. Haines, Carey, Ohio.

BANISHEE

FOR DEODORANTS.
Claims use since February 1934.

Reg. No. 362,307. Registered Nov. 15, 1938. NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

NACAN

FOR PROTECTIVE OXIDIZING AGENT AND KIER-BOILING ASSISTANT FOR DYED AND PRINTED MATERIALS.
Claims use since Mar. 7, 1933.

Reg. No. 363,078. Registered Dec. 13, 1938. THE NORTH AMERICAN FIBRE PRODUCTS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Mogul

FOR LIQUID COMPOUND FOR THE ELIMINATION AND PREVENTION OF RUST, SCALE, CORROSION, AND CONGESTION IN BOILERS, HOT AND COLD WATER SUPPLY SYSTEMS, PASTEURIZERS, STERILIZERS, BOTTLE WASHERS, HUMIDIFIERS, AIR-CONDITIONERS, COOLING SYSTEMS, REFRIGERATION SYSTEMS, BRINE TANKS, PIPES AND COILS, AND ALL OTHER EQUIPMENT IN WHICH WATER AND/OR STEAM ARE UTILIZED.
Claims use since Jan. 1, 1937.

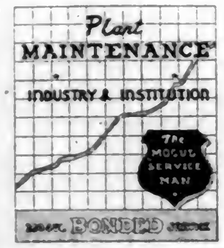
Reg. No. 366,256. Registered Apr. 4, 1939. MARTHA P. MINTER, doing business as Totus Mfg. Co., Philadelphia, Pa. Republished by Totus Manufacturing Company, Inc., Philadelphia, Pa., a corporation of Pennsylvania.

Van-X

FOR MEDICATED GREASELESS OINTMENT FOR THE TREATMENT OF ECZEMA, MANGE, AND SIMILAR DISEASES OF ANIMALS.
Claims use since May 1936.

Ser. No. 373,831. Registered Dec. 26, 1939. NATIONAL INSTITUTE OF NUTRITION, Los Angeles, Calif. Republished by Nion Corporation, Los Angeles, Calif., a corporation of California.

CEVITABS



FOR TABLETS CONTAINING VITAMIN C TO BE USED IN VITAMIN C DEFICIENCY.
Claims use since Jan. 30, 1939.

Reg. No. 396,680. Registered July 28, 1942. THE VIAVI COMPANY, San Francisco, Calif., a corporation of California. Republished by registrant.

LAMINETS

FOR CONCENTRATED VITAMINS USED AS A FOOD SUPPLEMENT AND HAVING USE AS A THERAPEUTIC VITAMIN PREPARATION PER SE.
Claims use since Feb. 12, 1942.

Reg. No. 404,093. Registered Nov. 2, 1943. THE NORTH AMERICAN FIBRE PRODUCTS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

All notations except "Mogul" are disclaimed apart from the mark as shown.
FOR CHEMICAL COMPOSITIONS IN VARIOUS APPLICATIONS—NAMELY, RUST ERADICATOR, BOILER CLEANER, AND SCALE REMOVER, WATERPROOFING, AND FOR CORROSION PREVENTION IN HEATING SYSTEMS AND IN WATER SYSTEMS.
Claims use since Feb. 26, 1943.

Reg. No. 412,134. Registered Feb. 20, 1945. PRATT & GRAY COMPANY, INC., Norwalk, Conn., assignor to Diebold, Incorporated. Republished by Diebold, Incorporated, Canton, Ohio, a corporation of Ohio.

DENSITROL

FOR DEVELOPERS, FIXERS, HARDENERS, AND OTHER CHEMICALS USED IN PROCESSING OF FILMS AND OTHER SILVER HALIDE EMULSIONS.
Claims use since May 1943.

Reg. No. 414,206. Registered May 29, 1945. M. DE TUVACHÉ, New York, N. Y. Republished by Tuvaché, Inc., New York, N. Y., a corporation of New York.

ZEZAN

FOR PERFUME AND COLOGNE.
Claims use since October 1938.

Reg. No. 433,394. Registered Oct. 14, 1947. I. F. LAUCKS, INC., Seattle, Wash., assignor to Monsanto Chemical Company. Republished by Monsanto Chemical Company, Seattle, Wash., a corporation of Delaware.

LAUXIDE

FOR INSECTICIDE IN POWDERED AND LIQUID FORM.
Claims use since June 19, 1945.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 397,406. Registered Sept. 8, 1942. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

CHASE

FOR PYROPHORIC CIGAR LIGHTERS, CANDLESTICKS, CONDENSER TUBES.
Claims use since Oct. 11, 1932.

Reg. No. 416,980. Registered Oct. 9, 1945. KIRSTEN PIPE COMPANY, Seattle, Wash., a corporation of Washington. Republished by registrant.

"RADIATOR"

FOR SMOKING PIPES AND CIGARETTE HOLDERS.
Claims use since on or about Jan. 1, 1940.

Reg. No. 417,466. Registered Oct. 30, 1945. KIRSTEN PIPE COMPANY, Seattle, Wash., a corporation of Washington. Republished by registrant.

Kirsten

FOR SMOKING PIPES AND CIGARETTE HOLDERS.
Claims use since on or about Jan. 1, 1937.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Reg. No. 355,761. Registered Mar. 29, 1938. THE OHIO MATCH COMPANY, Wadsworth, Ohio, a corporation of Delaware. Republished by registrant.

The words "Ohio Safety Matches" are disclaimed apart from the mark as shown.
FOR MATCHES.
Claims use since Nov. 1, 1937.

Reg. No. 386,558. Registered Apr. 15, 1941. A. B. T. MANUFACTURING CORP., Chicago, Ill., a corporation of Illinois. Republished by registrant.

ARROW-MATIC

FOR AIR RIFLES.
Claims use since Sept. 27, 1940.

Reg. No. 390,137. Registered Sept. 9, 1941. A. B. T. MANUFACTURING CORP., Chicago, Ill., a corporation of Illinois. Republished by registrant.

AIR-O-MATIC

FOR AIR RIFLES.
Claims use since Mar. 1, 1941.

CLASS 10

FERTILIZERS

Reg. No. 349,383. Registered Aug. 24, 1937. RELIANCE FERTILIZER COMPANY, Savannah, Ga. Republished by The Reliance Fertilizer Company, Savannah, Ga., a corporation of Georgia.

RELIANCE

FOR FERTILIZER.
Claims use since 1910.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 70,578. Registered Sept. 15, 1908. NORTHWESTERN STATES PORTLAND CEMENT CO., Mason City, Iowa. Republished by Northwestern States Portland Cement Company, Mason City, Iowa, a corporation of Iowa.

The annular band, small disk in center, and the lines are colored blue; and the words "North Western Portland Cement" and the dashes at the outer ends of the words "North" and "Western' are colored red.
FOR PORTLAND CEMENT.
Claims use since Jan. 1, 1908.

Reg. No. 135,591. Registered Oct. 19, 1920. ANDERSEN LUMBER COMPANY, Hudson, Wis., and South Stillwater, Minn. Republished by Andersen Corporation, Bayport, Minn., a corporation of Minnesota.

The words "White Pine Frames," "Andersen," and the representation of a white pine-window-frame, are disclaimed apart from the mark as shown. The drawing is lined for the colors blue, red, and white.

FOR WOODEN WINDOW AND DOOR FRAMES.

Claims use since July 1, 1917.

Reg. No. 136,745. Registered Nov. 9, 1920. ANDERSEN LUMBER COMPANY, Hudson, Wis., and South Stillwater, Minn. Republished by Andersen Corporation, Bayport, Minn., a corporation of Minnesota.

The surname "Andersen" is disclaimed apart from the mark as shown. The drawing is lined for the colors blue, red, and white.

FOR WOODEN WINDOW AND DOOR FRAMES

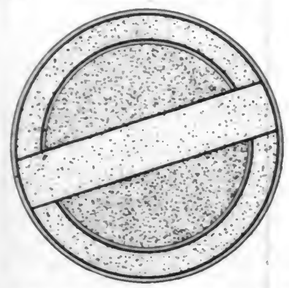
Claims use since July 1, 1917.

Reg. No. 160,415. Registered Oct. 24, 1922. THE CLEVELAND BUILDERS SUPPLY & BRICK COMPANY, Cleveland, Ohio. Republished by The Cleveland Builders Supply Company, Cleveland, Ohio, a corporation of Ohio.

Masons Myx

FOR PREPARED MIXTURE OF WHICH THE CHIEF INGREDIENTS ARE SAND, CEMENT, AND HYDRATED LIME, FOR USE IN MAKING MORTAR FOR LAYING UP ALL KINDS OF MASONRY.

Claims use since about Sept. 13, 1919.



Reg. No. 243,656. Registered June 26, 1928. BREEN STONE & MARBLE COMPANY, Kasota, Minn., a corporation of Minnesota. Republished by registrant.

FOR BLOCKS OF STONE SAWED AND POLISHED AND FINISHED BLOCKS OF MATERIAL SOLD AS MARBLE.

Claims use since Sept. 1, 1926.

Reg. No. 260,699. Registered Aug. 27, 1929. ANDERSEN LUMBER COMPANY, Bayport, Minn. Republished by Andersen Corporation, Bayport, Minn., a corporation of Minnesota.

FOR WOODEN WINDOW AND DOOR FRAMES.

Claims use since on or about July 1, 1917.

Reg. No. 275,556. Registered Sept. 23, 1930. THE METROPOLITAN PAVING BRICK COMPANY, Canton and Minerva, Ohio, and Bessemer, Pa., a corporation of Ohio. Republished by registrant, present address Canton, Ohio.

BESSEMER

FOR BUILDING AND PAVING BRICKS AND BLOCKS.

Claims use since about Jan. 12, 1888.

Reg. No. 275,557. Registered Sept. 23, 1930. THE METROPOLITAN PAVING BRICK COMPANY, Canton and Minerva, Ohio, and Bessemer, Pa., a corporation of Ohio. Republished by registrant, present address Canton, Ohio.

METRO

FOR BUILDING AND PAVING BRICKS AND BLOCKS.

Claims use since on or about June 1, 1925.

Reg. No. 345,225. Registered Apr. 20, 1937. CONSOLIDATED CEMENT CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

The words "Fredonia Portland Cement" and "Fredonia, Kansas" are disclaimed apart from the mark as shown. The drawing is lined for the color orange.

FOR PORTLAND CEMENT.

Claims use since 1925.

Reg. No. 345,226. Registered Apr. 20, 1937. FLORIDA PORTLAND CEMENT COMPANY, Chicago, Ill. Republished by General Portland Cement Company, Chicago, Ill., a corporation of Delaware.

The words "Florida Portland Cement" are disclaimed apart from the mark as shown. The drawing is lined for the colors red and green.

FOR PORTLAND CEMENT.

Claims use since 1927.

Reg. No. 345,227. Registered Apr. 20, 1937. SIGNAL MOUNTAIN PORTLAND CEMENT COMPANY, Chicago, Ill. Republished by General Portland Cement Company, Chicago, Ill., a corporation of Delaware.

The words "Portland Cement" are disclaimed apart from the mark as shown. The drawing is lined for the colors red and blue.

FOR PORTLAND CEMENT.

Claims use since 1923.

Reg. No. 345,228. Registered Apr. 20, 1937. TRINITY PORTLAND CEMENT COMPANY, Chicago, Ill. Republished by General Portland Cement Company, Chicago, Ill., a corporation of Delaware.

The shade lines in the drawing indicate the colors red and blue.

FOR PORTLAND CEMENT.

Claims use since 1901.

Reg. No. 345,632. Registered May 4, 1937. CONSOLIDATED CEMENT CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

The words "Portland Cement" and "Cement City, Michigan." are disclaimed apart from the mark as shown. The shade lines on the drawing indicate an orange color.

FOR PORTLAND CEMENT.

Claims use since 1925.

Reg. No. 345,633. Registered May 4, 1937. CONSOLIDATED CEMENT CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

The words "Portland Cement" and "Fredonia, Kansas" are disclaimed apart from the mark as shown. The shade lines on the drawing indicate the color orange.

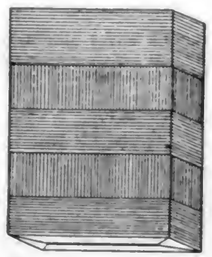
FOR PORTLAND CEMENT.

Claims use since 1925.

Reg. No. 348,237. Registered July 20, 1937. TRINITY PORTLAND CEMENT COMPANY, Chicago, Ill. Republished by General Portland Cement Company, Chicago, Ill., a corporation of Delaware.

FOR PORTLAND CEMENT PARTICULARLY USED FOR OIL WELLS.

Claims use since Nov. 24, 1936.



Reg. No. 353,560. Registered Jan. 11, 1938. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

COP-O-TOP

FOR COMPOSITE SHEET WEATHER-PROOFING MATERIAL — NAMELY, SIDING, ROOFING AND OTHER BUILDING LININGS.

Claims use since July 20, 1937.

Reg. No. 358,842. Registered July 26, 1938. TRINITY PORTLAND CEMENT COMPANY, Chicago, Ill. Republished by General Portland Cement Company, Chicago, Ill., a corporation of Delaware.

The representation of the container is disclaimed apart from the mark as shown. The drawing is lined for the colors red and blue.

FOR PORTLAND CEMENT.

Claims use since Oct. 1, 1936.

Reg. No. 359,256. Registered Aug. 9, 1939. FLORIDA PORTLAND CEMENT COMPANY, Chicago, Ill. Republished by General Portland Cement Company, Chicago, Ill., a corporation of Delaware.

All the wording on the drawing is disclaimed apart from the mark as shown. The drawing is lined for the colors, red, green, silver or gray.

FOR BUILDING AND MASONRY CEMENT.

Claims use since July 15, 1937.

Reg. No. 359,394. Registered Aug. 16, 1938. TRINITY PORTLAND CEMENT COMPANY, Chicago, Ill. Republished by General Portland Cement Company, Chicago, Ill., a corporation of Delaware.

The word "Mix" is disclaimed apart from the mark as shown. The shade lines on the drawing indicate the colors red and blue.

FOR BUILDING AND MASONRY CEMENT.

Claims use since Mar. 1, 1931.

Reg. No. 393,720. Registered Mar. 3, 1942. UNITED CO-OPERATIVES, INC., Indianapolis, Ind., a corporation of Indiana. Republished by registrant, present address Alliance, Ohio.

The words "Quality Steel" and "Roofing" are disclaimed apart from the mark as shown.

FOR METAL ROOFING, METAL STALLS, AND STANCHIONS, COMPOSITION ROOFING AND SHINGLES.

Claims use since June 15, 1939.

Reg. No. 397,783. Registered Sept. 22, 1942. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

CHASE

FOR COPPER AND COPPER ALLOY DOWNSPOUTS; COPPER AND COPPER ALLOY GUTTERS; COPPER AND COPPER ALLOY FITTINGS FOR DOWNSPOUTS, INCLUDING DOWNSPOUT SHOES, DOWNSPOUT ELBOWS, DOWNSPOUT STRAPS, AND DOWNSPOUT HEADS; COPPER AND COPPER ALLOY FITTINGS FOR GUTTERS, INCLUDING GUTTER HANGERS, GUTTER MITRE JOINTS, GUTTER END CAPS, GUTTER END PIECES AND GUTTER OUTLETS; COPPER AND COPPER ALLOY HAND RAILING; COPPER AND COPPER ALLOY FITTINGS FOR HAND RAILING; COPPER AND COPPER ALLOY RIDGE ROLLS; COPPER ROOFING SHEET; COPPER ALLOY STAIR TREADS; COPPER AND COPPER ALLOY EXTRUDED ARCHITECTURAL SHAPES FOR STORE-FRONT, ETC., CONSTRUCTION; COPPER ALLOY STAIR NOSINGS; COPPER AND COPPER ALLOY WEATHER STRIP MOLDING; COPPER THROUGH-WALL FLASHING; COMPOSITE SHEET WEATHERPROOFING MATERIAL—NAMELY, SIDING, ROOFING, AND OTHER BUILDING LININGS; AND COPPER AND COPPER ALLOY SASH CHAIN.

Claims use since Jan. 31, 1930.

Reg. No. 398,429. Registered Oct. 27, 1942. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

CHASE

FOR RELISH AND JAM SETS HAVING A BASE-METAL TRAY; COMPRESSION FITTINGS FOR AUTOMOBILE FUEL LINES; BRASS AND COPPER TUBING FOR AUTOMOBILE FUEL LINES; PARTS FOR RADIATOR VALVES; WIRE SCREEN CLOTH; DOOR PULLS; KICK PLATES; DOOR PUSH BARS; FLOOR DIVIDING STRIPS; DOOR SADDLES; DOOR PUSH PLATES; RIDGE ROLL CLIPS; TUBULAR HEADERS OR PIPE MANIFOLDS; FINNED TUBING FOR HEAT EXCHANGERS; OIL-BURNER TUBING; AND FLARED FITTINGS FOR OIL-BURNER TUBING—NAMELY, ADAPTERS, BUSHINGS, CAPS, CROSSES, ELBOWS, PLUGS, RETURN-BENDS, SLEEVE-NUTS, T'S, AND UNIONS.

Claims use since Jan. 10, 1930.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 78,698. Registered July 5, 1910. THE FISHER GOVERNOR COMPANY, Marshalltown, Iowa, a corporation of Iowa. Republished by registrant.

FISHER

FOR VALVES.

Claims use since 1894.

Reg. No. 229,399. Registered June 28, 1927. ALUMINUM GOODS MANUFACTURING CO., Manitowoc, Wis., a corporation of New Jersey. Republished by registrant.

COMET
ALUMINUM

The word "Aluminum" is disclaimed apart from the mark as shown.

FOR ALUMINUM-WARE—NAMELY, BAKING DISHES, BOILERS FOR COOKING FOODS, CAKE PANS, COFFEE PERCOLATORS, COFFEE POTS, COLANDERS, COMBINATION COOKERS, COMBINATION POACHERS, STEAMER AND FRY PANS, COMBINATION ROASTERS, CONVEX KETTLES, CONVEX SAUCE PANS, CONVEX SAUCE POTS, COOKERS, COOKING KETTLES, COVERS, DISH PANS, DISH DRIERS, DOUBLE BOILERS, FRY PANS, KETTLES, LAYER-CAKE PANS, LIPPED FRY PANS, LIPPED PRESERVING KETTLES, LIPPED SAUCEPANS, LIPPED SAUCEPAN SETS, LIPPED STEWPAN SETS, MIXING BOWLS, MIXING BOWL SETS, PANS, PIE PLATES, PITCHERS, PRESERVING KETTLES, PUDDING PANS, PUDDING-PAN SETS, ROASTERS, SAUCEPANS, SAUCEPOTS, SKILLETS, SINK STRAINERS, STEAMERS, STEWPANS, STRAINERS, STRAINER KETTLES, STRAINER PANS, TEAKETTLES, TUBED CAKE PANS, WASHBASINS, WATER PITCHERS, AND WINDSOR KETTLES.

Claims use since Feb. 18, 1927.

Reg. No. 238,084. Registered Jan. 24, 1928. THE FISHER GOVERNOR COMPANY, Marshalltown, Iowa, a corporation of Iowa. Republished by registrant.

FISHER

FOR LIQUID LEVEL CONTROLLERS, STEAM AND AIR PRESSURE REGULATORS, VACUUM REGULATORS, VALVES, VALVE PARTS, REDUCING VALVES, STEAM TRAPS, DRIP-POCKET SEDIMENT STRAINERS.

Claims use since 1894.

Reg. No. 258,136. Registered June 25, 1929. DARLING VALVE & MANUFACTURING COMPANY, Williamsport, Pa., a corporation of Pennsylvania. Republished by registrant.

DAR-A-LOY

FOR HYDRANTS, FLOOR STANDS, INDICATOR POSTS, GATE VALVES FOR WATER, STEAM, GAS, OIL, AIR, ACIDS AND OTHER PURPOSES; CHECK VALVES, BALL CHECK VALVES, HOSE VALVES, BY-PASS VALVES, AND NEEDLE VALVES.

Claims use since Jan. 24, 1929.

Reg. No. 398,429. Registered Oct. 27, 1942. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

CHASE

FOR RELISH AND JAM SETS HAVING A BASE-METAL TRAY; COMPRESSION FITTINGS FOR AUTOMOBILE FUEL LINES; BRASS AND COPPER TUBING FOR AUTOMOBILE FUEL LINES; PARTS FOR RADIATOR VALVES; WIRE SCREEN CLOTH; DOOR PULLS; KICK PLATES; DOOR PUSH BARS; FLOOR DIVIDING STRIPS; DOOR SADDLES; DOOR PUSH PLATES; RIDGE ROLL CLIPS; TUBULAR HEADERS OR PIPE MANIFOLDS; FINNED TUBING FOR HEAT EXCHANGERS; OIL-BURNER TUBING; AND FLARED FITTINGS FOR OIL-BURNER TUBING—NAMELY, ADAPTERS, BUSHINGS, CAPS, CROSSES, ELBOWS, PLUGS, RETURN-BENDS, SLEEVE-NUTS, T'S, AND UNIONS.

Claims use since Jan. 10, 1930.

Reg. No 408,334. Registered Aug. 8, 1944. G. G. GREENE MANUFACTURING CORPORATION, Warren, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR METAL STAMPINGS AND HARDWARE—NAMELY, FURNITURE LEG ADJUSTERS, BED RAIL AND BEDSTEAD FASTENERS, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.

Claims use since January 1939.

Reg. No. 418,665. Registered Jan. 8, 1946. IMPERIAL MOLDED PRODUCTS CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

IMPC

FOR PLASTIC MOLDED KNOBS, HANDLES, PULLS, PUSH AND FACE PLATES, AND TURN BUTTONS FOR LIDS, DOORS, DRAWERS, FURNITURE, AND GENERAL USE, AND FURNITURE CASTER WHEELS.
Claims use since April 1926.

Reg. No. 423,582. Registered Sept. 3, 1946. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

PHOSNIC

FOR COPPER-BASE TUBES.
Claims use since Aug. 23, 1945.

Reg. No. 424,370. Registered Oct. 1, 1946. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

"SPRING-FLO"

The word "Flo" is disclaimed apart from the mark as shown
FOR WATER AERATORS FOR ATTACHMENT TO FAUCETS AND OTHER WATER OUTLETS.
Claims use since Nov. 18, 1945.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 87,141. Registered July 2, 1912. AMERICAN BRAKE SHOE & FOUNDRY COMPANY, Wilmington, Del. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

FOR CASTINGS MADE FROM METAL.
Claims use since July 1, 1911.

Reg. No. 288,568. Registered Nov. 3, 1931. RAMAPO AJAX CORPORATION, New York, N. Y. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

"SAMSON"

FOR RAIL SWITCHES.
Claims use since April 1931.

Reg. No. 379,755. Registered July 23, 1940. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

CHAMET

FOR NON-FERROUS METAL SHEETS, RODS, WIRE, AND WELDING RODS.
Claims use since Mar. 21, 1930.

Reg. No. 403,889. Registered Oct. 19, 1943. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

TELNIC

FOR RODS OF COPPER-BASE ALLOYS.
Claims use since May 13, 1943.

The term "American" is disclaimed apart from the mark as shown.
FOR ROLLER SKATES, ICE SKATES, BASEBALLS, BASEBALL GLOVES, SOFTBALLS, SOFTBALL GLOVES, BASKET BALLS, SKIS, BOXING GLOVES, STRIKING BAGS, FOOTBALLS, FOOTBALL HELMETS, FOOTBALL SHOULDER PADS, VOLLEY BALLS, AND TENNIS RACKETS.
Claims use since September 1935.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 64,696. Registered Aug. 20, 1907. COES WRENCH COMPANY, Worcester, Mass. Republished by The Billings & Spencer Company, Hartford, Conn., a corporation of Connecticut.

COES

FOR WRENCHES.
Claims use since 1873.

Reg. No. 80,117. Registered Nov. 8, 1910. THE FISHER GOVERNOR COMPANY, Marshalltown, Iowa, a corporation of Iowa. Republished by registrant.

FISHER

FOR GOVERNORS FOR AIR-COMPRESSORS, FIRE-PUMPS, BOILER FEED-PUMPS, WATERWORKS-PUMPS, HYDRAULIC ELEVATORS, MINE-PUMPS, BEER-PUMPS, RAILROAD-WASHOUT PUMPS, RAILROAD-WATER-SERVICE PUMPS, GRAVITY OPEN-TANK ELEVATOR PUMPS, VACUUM-PUMPS, AND STEAM-ENGINES.
Claims use since 1894.

Reg. No. 126,549. Registered Sept. 16, 1919. HUGHES TOOL COMPANY, Houston, Tex. Republished by Hughes Tool Company, Houston, Tex., a corporation of Delaware.

FOR ROTARY EARTH-BORING DRILLS AND DRILL-COLLARS.
Claims use since Jan. 1, 1918.

Reg. No. 169,822. Registered July 3, 1923. THE CLEVELAND TWIST DRILL COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

CLE-FORGE

FOR METAL WORKING SMALL TOOLS—NAMELY, BORING DRILLS AND COUNTERSINKS.
Claims use since Aug. 1, 1922.

Reg. No. 208,281. Registered Jan. 26, 1926. THE CLEVELAND TWIST DRILL COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

CLEVELAND

FOR METAL WORKING SMALL TOOLS—NAMELY, BITS OF ALL KINDS, REAMERS, SOCKETS, MILLS AND COUNTERSINKS.
Claims use since Sept. 15, 1893.

Reg. No. 225,836. Registered Mar. 29, 1927. THE CLEVELAND TWIST DRILL COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Spirex

FOR METAL WORKING SMALL TOOLS—NAMELY, REAMERS.
Claims use since about Sept. 5, 1925.

Reg. No. 233,245. Registered Sept. 27, 1927. J. L. FERGUSON COMPANY, Joliet, Ill., a corporation of Illinois. Republished by registrant.

FOR PACKAGING MACHINERY—NAMELY, CARTON-SEALING MACHINES, MACHINES FOR AUTOMATICALLY FILLING PREDETERMINED AMOUNT OF PRODUCTS INTO RECEPTACLES, CARTON-FORMING MACHINES, CONTAINER-SEALING MACHINES, PACKING AND WRAPPING TABLES, SPECIAL MACHINERY MADE TO ORDER, DIES, AND REPAIR PARTS THEREFOR.
Claims use since January 1922.

Reg. No. 244,174. Registered July 17, 1928. THE P. A. GEIER COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

ROYAL

FOR SPRAY ATTACHMENTS FOR SUCTION CLEANERS AND THE LIKE.
Claims use since Dec. 27, 1927.

Reg No. 267,248. Registered Feb. 18, 1930. THE DETROIT BORING BAR COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

FOR EXPANSION-CUTTER BORING BARS, REAMER BARS, COUNTERBORES, BARS FOR CORE DRILLING, MULTIPLE-CUTTER MILLING HEADS, AND CUTTERS FOR FACING.
Claims use since about Mar. 26, 1929.

Reg. No. 269,292. Registered Apr. 1, 1930. GLOBE MACHINERY & SUPPLY COMPANY, Des Moines, Iowa. Republished by Globe Hoist Company, Des Moines, Iowa, a corporation of Iowa.

GLOBE Auto HOIST

The words "Auto Hoist" are disclaimed apart from the mark as shown.
FOR AUTOMOBILE HOIST.
Claims use since on or about Aug. 31, 1929.

Reg. No 281,766. Registered Mar. 31, 1931. BLACKHAWK MFG. CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

Treasure Chest

FOR SETS OF TOOLS CONSISTING OF WRENCHES AND PARTS THEREOF WHICH INCLUDE SOCKETS, OBSTRUCTION OFFSET, GRIP HANDLES, EXTENSION BARS, RATCHETS, SPEEDER, HANDLE BARS, EXTENSION T'S, HINGED OFFSET, UNIVERSAL JOINTS, DRAG LINKS, SLIDING OFFSET, RELEASE TOOL, BRACES, SCREW DRIVERS, AND SHORT BOX WRENCHES.
Claims use since Mar. 31, 1930.

Reg. No. 326,570. Registered July 30, 1935. PROPORTIONEERS, INC., Providence, R. I., a corporation of Rhode Island. Republished by registrant.

TRĒT-O-METER

The word "Meter" is disclaimed apart from the mark as shown
FOR PROPORTIONING APPARATUS FOR FEEDING LIQUIDS SUCH AS REAGENTS, OR TREATING SUBSTANCES.
Claims use since Mar. 22, 1932.

Reg. No. 332,182. Registered Feb. 4, 1936. CLUB RAZOR & BLADE MFG. CORP., Newark, N. J., a corporation of New Jersey. Republished by registrants.

FOR RAZOR BLADES.
Claims use since Aug. 15, 1935.

Reg. No 348,419. Registered July 27, 1937. BLACKHAWK MFG. CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

Flex-Head

The word "Head" is disclaimed apart from the mark as shown.
FOR HEADS FOR MECHANICAL AND HYDRAULIC JACKS.
Claims use since Oct. 28, 1936.

Reg. No. 356,075. Registered Apr. 12, 1938. NATIONAL BROACH & MACHINE CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

The drawing is lined for the color red.
FOR GEAR MANUFACTURING EQUIPMENT—NAMELY, MACHINES FOR FINISHING, SHAVING, LAPPING, AND CHECKING GEARS; BROACHING TOOLS AND MACHINES, SPLINE GRINDERS; FLAT SEAL FACE GRINDING MACHINES; GEAR TOOTH FORM GRINDERS; GEAR TOOTH SHAPER CUTTERS, FORM AND SHAVING TOOLS FOR GEARS, LAPPING TOOLS, AND HOLDERS THEREFOR.
Claims use since on or about Apr. 26, 1924.

Reg. No. 357,833. Registered June 14, 1938. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

NOERA

FOR HAND-OPERATED OILERS, OIL GUNS, GREASE GUNS, AND TIRE PUMPS.
Claims use since 1874.

Reg. No. 385,917. Registered Mar. 25, 1941. GLOBE HOIST COMPANY, Des Moines, Iowa, a corporation of Iowa. Republished by registrant.

GLOBE GEARED

The word "Geared" is disclaimed apart from the mark as shown.
FOR AUTOMOBILE HOISTS OF THE CLASS OPERATED FOR LIFTING ENTIRE AUTOMOBILES FOR PURPOSE OF SERVICING THEM FROM A FLOOR LEVEL OPERATED HYDRAULICALLY AND ELECTRICALLY.
Claims use since Apr. 15, 1936.

Reg. No. 391,635. Registered Nov. 18, 1941. GLOBE HOIST COMPANY, Des Moines, Iowa, a corporation of Iowa. Republished by registrant.

LUBRICATING ACTIONIZER

The word "Lubricating" is disclaimed apart from the mark as shown.
FOR HYDRAULIC LIFTS OF THE TYPE USED IN THE RAISING OF AUTOMOBILES FOR LUBRICATION AND SERVICING PURPOSES.
Claims use since May 12, 1941.

Reg. No. 397,446. Registered Sept. 8, 1942. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

CHASE

FOR BRONZE AND BRASS BUSHINGS, COPPER HAMMER HEADS, COPPER SOLDERING TOOLS, ICE TONGS FOR HOUSEHOLD USE, BASE METAL CHEESE KNIVES, BASE METAL SERVING FORKS AND SPOONS, BOTTLE OPENERS, BRONZE BOAT SHAFTING, NUT CRACKERS, HAND-OPERATED OILERS, HAND-OPERATED OIL GUNS, GREASE GUNS, TIRE PUMPS, FOOTBALL INFLATORS, AND HACK SAW BLADES.

CHEMCO

FOR STRIP-FILM CAMERAS, STRIPPING CABINETS, ETCHING MACHINES, STOVE COOLERS, AUTOMATIC WHIRLERS, DEVELOPMENT TANKS, SCALING DEVICES, VIEWING LIGHT BOXES, THERMOSTATIC CONTROL SETS FOR DARK ROOMS, WET PLATE COOLERS, DRY PLATE COOLERS, AND POWDER BOXES.
Claims use since Jan. 1, 1920.

Reg. No. 356,075. Registered Apr. 12, 1938. NATIONAL BROACH & MACHINE CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

The drawing is lined for the color red.
FOR GEAR MANUFACTURING EQUIPMENT—NAMELY, MACHINES FOR FINISHING, SHAVING, LAPPING, AND CHECKING GEARS; BROACHING TOOLS AND MACHINES, SPLINE GRINDERS; FLAT SEAL FACE GRINDING MACHINES; GEAR TOOTH FORM GRINDERS; GEAR TOOTH SHAPER CUTTERS, FORM AND SHAVING TOOLS FOR GEARS, LAPPING TOOLS, AND HOLDERS THEREFOR.
Claims use since on or about Apr. 26, 1924.

Reg. No. 360,099. Registered Sept. 6, 1938. BUILDERS IRON FOUNDRY, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

The word "Builders" is disclaimed apart from the mark as shown.
FOR FLUID FLOW METERING NOZZLES.
Claims use since Apr. 5, 1938.

Reg. No. 396,990. Registered Aug. 11, 1942. BENDIX AVIATION CORPORATION, Bendix, N. J., a corporation of Delaware. Republished by registrant, present address Teterboro, N. J.

MAGNESYN

FOR REMOTE INDICATING MAGNETIC COMPASSES, AND OTHER REMOTE INDICATING INSTRUMENTS OF THE TELEMETRIC TYPE BY MEANS OF WHICH A FUNCTION IS MEASURED AT ONE POINT AND TRANSMITTED TO AND INDICATED AT ANOTHER AND REMOTE POINT—NAMELY, REMOTE INDICATING ACCELEROMETERS, AIRSPEED INDICATORS, ALTIMETERS, RATE OF CLIMB INDICATORS, FLOW METERS, FUEL LEVEL GAUGES, FUEL PRESSURE GAUGES, LANDING WHEEL AND FLAP POSITION INDICATORS, MANIFOLD PRESSURE GAUGES, OIL PRESSURE GAUGES, SUCTION GAUGES, TACHOMETERS, AND TURN OR RATE OF TURN INDICATORS.
Claims use since Jan. 15, 1941.

Reg. No. 398,779. Registered Nov. 24, 1942. BENDIX AVIATION CORPORATION, Bendix, N. J., a corporation of Delaware. Republished by registrant, present address Teterboro, N. J.

GYRO FLUX GATE

The word "Gyro" is disclaimed apart from the mark as shown.
FOR GYROSCOPICALLY STABILIZED EARTH INDUCTOR COMPASSES.
Claims use since Nov. 21, 1941.

Reg. No. 400,946. Registered Apr. 13, 1943. INDUSTRIAL ELECTRONICS CORPORATION, Newark, N. J., a corporation of New Jersey. Republished by registrant.

The words "Industrial" and "Electronic" are disclaimed apart from the mark as shown.
FOR INCANDESCENT, FLUORESCENT, SHORT WAVE, AND ULTRA VIOLET LAMPS FOR USE IN AIRPLANE DETECTION, MEAT TENDERIZING, AND ILLUMINATION, AND FOR THE ASSOCIATED CONTROL EQUIPMENT INCLUDING ELECTRICALLY AND MANUALLY OPERATED BALLAST, RHEOSTAT, AND TRANSFORMER.
Claims use since July 8, 1942.

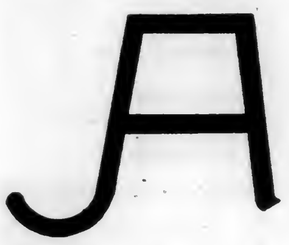
Reg. No. 402,424. Registered July 20, 1943. MACALASTER BICKNELL COMPANY, Cambridge, Mass., a corporation of Massachusetts. Republished by registrant.

FOR LABORATORY, EXPERIMENTAL, HOSPITAL, CLINICAL, CHEMICAL, AND SCIENTIFIC GLASSWARE.
Claims use since on or about Dec. 14, 1942.

Reg. No. 416,408. Registered Sept. 11, 1945. PROPORTIONEERS, INC., Providence, R. I., a corporation of Rhode Island. Republished by registrant.

FOR PROPORTIONING PUMPS, PARTS THEREOF, AND BASES THEREFOR.
Claims use since March 1944.

Reg. No. 433,318. Registered Oct. 7, 1947. BELL & HOWELL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.



Tru-Pan

The word "Tru-" is disclaimed apart from the mark as shown.
FOR TRIPODS FOR PHOTOGRAPHIC CAMERAS.
Claims use since July 7, 1939.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 240,017. Registered Mar. 20, 1928. JUERGENS & ANDERSEN COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR MANUFACTURED JEWELRY FOR PERSONAL WEAR OTHER THAN WATCHES.
Claims use since 1907.

Reg. No. 422,947. Registered Aug. 20, 1946. R. M. JORDAN AND COMPANY, Providence, R. I. Republished by R. M. Jordan and Company, Inc., Providence, R. I., a corporation of Rhode Island.

FOR JEWELRY FOR PERSONAL ADORNMENT, NOT INCLUDING WATCHES.
Claims use since December 1944.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Reg. No. 124,146. Registered Jan. 14, 1919. ABRAHAM D. RADINSKY, Denver, Colo. Republished by A. D. Radinsky & Sons, Denver, Colo., a firm.

FOR WIPING RAGS FOR MACHINERY AND THE LIKE.
Claims use since June 1, 1914.

Reg. No. 124,147. Registered Jan. 14, 1919. ABRAHAM D. RADINSKY, Denver, Colo. Republished by A. D. Radinsky & Sons, Denver, Colo., a firm.

RED STAR

FOR WIPING RAGS FOR MACHINERY AND THE LIKE.
Claims use since June 1, 1914.

Reg. No. 395,235. Registered May 19, 1942. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

CHASE

FOR WHISK BROOMS, CLOTHES, AND HAIR BRUSHES.
Claims use since Aug. 17, 1939.

CLASS 31

FILTERS AND REFRIGERATORS

Reg. No. 366,730. Registered Apr. 25, 1939. COLVIN-TEMPLETON, INC., San Francisco, Calif., a corporation of California. Republished by registrant.

COL TEMP

FOR REFRIGERATING APPARATUS.
Claims use since Feb. 1, 1936.

Reg. No. 404,753. Registered Dec. 21, 1943. AMERICAN BRAKE SHOE COMPANY, New York, N. Y., a corporation of Delaware. Republished by registrant.

Brake Shoe

FOR COMPOSITION BEARINGS, MACHINERY SHAFT COUPLINGS; SLIDES FOR USE WITH RECIPROCATING PARTS OF MACHINERY, ON ELEVATORS AND THE LIKE; FLANGED AND TAPERED AXLES; DREDGING AND INDUSTRIAL MATERIAL HANDLING PUMPS; PLACER DREDGE BUCKETS; POWER SHOVEL DIPPERS; BAR, CRANE, GEAR, SHEAVE AND SPROCKET WHEELS; ELEVATOR AND CONVEYOR CHAINS; GEARS; AIR COMPRESSORS; MOTOR DRIVEN AIR COMPRESSOR UNITS; AIR CONTROLLED LIFTS; AIR COMPRESSOR UNLOADERS; SPRAY AND WASHING GUNS; REGULATING VALVES AND AIR FILTERS FOR USE WITH SPRAY GUNS; ROTARY SHAFT SEALS; CAR WASHERS; RAILROAD SWITCHES; RAIL LUBRICATORS; SWITCH STANDS; AND SWITCH POINT LOCKS.
Claims use since on or about Apr. 22, 1943.

CLASS 32

FURNITURE AND UPHOLSTERY

Reg. No. 241,344. Registered Apr. 24, 1928. JOHN SCHROEDER LUMBER CO., Milwaukee, Wis. Republished by Playskool Manufacturing Company, Chicago, Ill., a corporation of Illinois.

PLAYSKOOL

FOR FOLDING DESK TABLES.
Claims use since Nov. 17, 1927.

Reg. No. 321,428. Registered Feb. 5, 1935. SAMUEL S. BERNSTEIN, Los Angeles, Calif. Republished by registrant.

CABLE-EZE

FOR BOTTOM REENFORCING STRUCTURE FOR UPHOLSTERED FURNITURE, AND FOR UPHOLSTERED FURNITURE EQUIPPED WITH SUCH REENFORCING STRUCTURE—NAMELY, CHAIRS, DAVENPORTS, AND BEDS.
Claims use since Oct. 5, 1934.

FOR SCOTCH WHISKY.
Claims use since Nov. 30, 1891.

Reg. No. 303,999. Registered June 13, 1933. WILLIAM SANDERSON & SON, LIMITED, Leith, Scotland. Republished by William Sanderson & Son Limited, Leith, Edinburgh, Scotland, a limited liability company of Great Britain.

VAT
69

No claim is made to the words "Liqueur Scotch Whisky" and "Leith."
FOR SCOTCH WHISKY.
Claims use since Dec. 21, 1912.

Reg. No. 315,907. Registered Aug. 14, 1934. CONTINENTAL DISTILLING CORPORATION, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

Old Andy

FOR WHISKEY.
Claims use since Nov. 17, 1933.

Reg. No. 317,940. Registered Oct. 9, 1934. LEROUX AND COMPANY, INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

CLARISTINE

FOR ALCOHOLIC CORDIALS.
Claims use since on or about Dec. 19, 1933.

Reg. No. 317,951. Registered Oct. 9, 1934. AMERICAN SPIRITS, INC., New York, N. Y. Republished by Gordon-O'Neill Company, Jersey City, N. J., a firm.

GOLD CUP

FOR WHISKEY.
Claims use since Mar. 15, 1934.

Reg. No. 318,155. Registered Oct. 16, 1934. THE OLD QUAKER COMPANY, Lawrenceburg, Ind. Republished by The Rum Company (Jamaica) Ltd., Coruba House, Kingston, Jamaica, a corporation of Jamaica.

SALUTE

FOR WHISKEY, BRANDY, GIN, RUM, AND ALCOHOLIC CORDIALS.
Claims use since June 8, 1934.

Reg. No. 321,215. Registered Jan. 22, 1935. CONTINENTAL DISTILLING CORPORATION, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

EDGETON

FOR WHISKEY.
Claims use since Sept. 7, 1934.

Reg. No. 326,424.. Registered July 23, 1935. COUNTRY CLUB SODA COMPANY, INC., Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

Elm Park

FOR WHISKEY, GIN, BRANDY, RUM, AND ALCOHOLIC CORDIALS.
Claims use since on or about Feb. 11, 1935.

Reg. No. 360,729. Registered Sept. 27, 1938. WM. SANDERSON & SON, Leith, Scotland. Republished by Wm. Sanderson & Son Limited, Leith, Edinburgh, Scotland, a limited liability company of Great Britain.

Sandersons

FOR SCOTCH WHISKY.
Claims use since about 1863.

Reg. No. 370,331. Registered Aug. 22, 1939. JAS. E. PEPPER AND COMPANY, Lexington, Ky., and New York, N. Y., a corporation of Kentucky. Republished by registrant, present address New York, N. Y.

BORN WITH THE REPUBLIC

FOR WHISKEY.
Claims use since 1914.

Reg. No. 387,878. Registered June 3, 1941. AMERICAN SPIRITS, INC., New York, N. Y., a corporation of Maryland. Republished by registrant.

BALZAC

FOR APRICOT LIQUEUR.
Claims use since Jan. 2, 1941.

Reg. No. 390,932. Registered Oct. 14, 1941. MANY, BLANC & CO., INC., Chicago, Ill. Republished by Many, Blanc & Co., Inc., New York, N. Y., a corporation of Maryland.

J. Bavet

The name "J. Bavet" is disclaimed apart from the mark as shown.
FOR BRANDIES.
Claims use since July 1, 1939.

Reg. No. 394,668. Registered Apr. 21, 1942. GLENMORE DISTILLERIES CO., Owensboro, Ky. Republished by Glenmore Distilleries Company, Louisville, Ky., a corporation of Delaware.

CABIN BROOK

FOR WHISKEY.
Claims use since 1904.

Reg. No. 398,964. Registered Dec. 8, 1942. JOHN DEWAR & SONS LIMITED, Perth, Scotland, and London, England, a limited liability company of Great Britain. Republished by registrant.

"White Label"
FINEST SCOTCH WHISKY
OF GREAT AGE.
John Dewar & Sons Ltd
DISTILLERS.
PERTH SCOTLAND

All the wording except the words "White Label" and the representation of a white label are disclaimed apart from the mark as shown.
FOR WHISKY.
Claims use since 1913.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 203,613. Registered Sept. 22, 1925. THE COLUMBUS-UNION OIL CLOTH CO., Columbus, Ohio. Republished by Columbus Coated Fabrics Corporation, Columbus, Ohio, a corporation of Ohio.

LEATHER-TEX

The word "Leather" is disclaimed apart from the mark as shown.
FOR LEATHER SIMULATING CLOTH FOR USE IN CONNECTION WITH THE UPHOLSTERING OF MOTOR VEHICLES, VEHICLE TOP COVERINGS, AND CARRIAGE CLOTH.
Claims use since Nov. 1, 1924.

Reg. No. 384,686. Registered Jan. 28, 1941. HOLMES BROTHERS, also doing business as Holmes Bros. Bear Creek Orchards, Medford, Oreg. Republished by Harry and David, Medford, Oreg., a corporation of Oregon.

CHARMSTRING

FOR NOVELTIES — NAMELY, STRINGS OF FIR CONES FOR DECORATIVE PURPOSES.
Claims use since Nov. 1, 1939.

PATENTS

GRANTED NOVEMBER 16, 1948

2,453,689
VULCANIZING SYNTHETIC RUBBER WITH DIXANTHIC SULFIDES

David J. Beaver, St. Albans, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application September 13, 1943, Serial No. 502,191
12 Claims. (Cl. 260—79)

1. The process of vulcanizing a synthetic sulfur vulcanizable rubber like material comprising a copolymer of butadiene-1,3 and styrene which comprises adding to the rubber in the absence of elemental sulfur a di-xanthic sulfide containing the nucleus

where n is an integer at least two but less than five and heating the mixture.

2,453,690
PROCESS OF PRODUCING POLYVALENT-METAL HYDROCARBON SULFONATE

Ulric B. Bray, Pasadena, Calif.

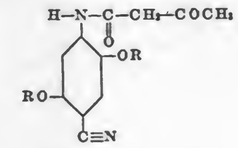
No Drawing. Application October 23, 1944, Serial No. 560,030
21 Claims. (Cl. 260—504)

1. In a process of producing water-insoluble, oil-soluble polyvalent-metal hydrocarbon sulfonate, the steps which comprise: forming a mixture containing water, said polyvalent metal sulfonate and an emulsion-breaking, oil-soluble liquid compound consisting of carbon, hydrogen and oxygen and containing four to about eight carbon atoms per molecule to facilitate separation of a water-insoluble sulfonate-containing phase from an aqueous phase; and recovering the sulfonate phase.

2,453,691
METHOD OF MAKING ETHYL CHLORIDE

Howard W. Hill, Concord, and Eldred L. Dance, Berkeley, Calif., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Application May 17, 1944, Serial No. 536,032
4 Claims. (Cl. 204—163)



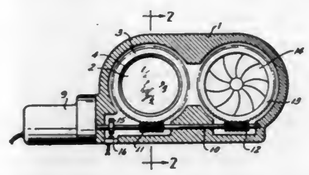
2. The method of making ethyl chloride which comprises adding chlorine to a mixture of ethane and methane in which the ratio of CH_4/C_2H_6 is from 3/1 to 1/3, the chlorine being in amount such that the molar ratio of Cl_2/C_2H_6 is from 0.6 to 1.2, causing reaction between ethane and chlorine by exposing the gaseous mixture to a source of actinic light, while removing heat from the reacting gases to maintain the temperature thereof between 100° and 200° C., and separating ethyl chloride from the reaction product.

2,453,692
4-CYANO-2,5-DIALKOXYACETO-ACETANILIDES

William H. von Glahn, Loudonville, and Herman A. Bergstrom, Albany, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

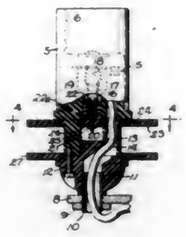
No Drawing. Application August 22, 1947, Serial No. 770,190
3 Claims. (Cl. 260—465)

1. Compounds of the following general formula:



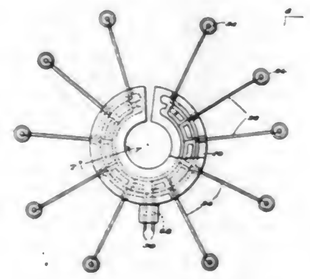
wherein R is alkyl.

2,453,693
AUTOMATIC DIAPHRAGM CONTROL



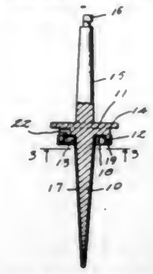
Charles W. Armstrong, Milford, Charles Sadowsky, New York, and Lionel S. Hetherington, Rockville Centre, N. Y.

Application September 3, 1946, Serial No. 694,444
4 Claims. (Cl. 95—64)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



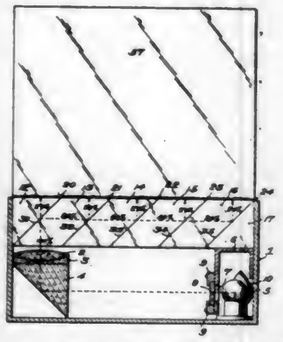
4. In a control for automatically varying the light aperture of a camera, power actuated means for controlling light admission to the camera, a photoelectric cell, a second power actuated means for controlling light admission to the photoelectric cell, a power source, reversing means for said power source, power transmitting means connecting said power source to said power actuated means to rotate them in unison, an ammeter electrically connected to the output circuit of said photoelectric cell and adapted to asume a medial position at a preselected output of said photoelectric cell, means adapted by actuation of said ammeter away from said medial position to operate said reversing means, an electromagnet, a control switch closable by actuation of said power transmitting means to periodically energize said electromagnet, and linkage movable by energization of said electromagnet to intermittently reset said ammeter to its medial position.

2,453,694
LAMP SUPPORT AND SWITCH
Edward F. Arntzen, Rockford, Ill.
Application February 8, 1946, Serial No. 646,381
10 Claims. (Cl. 200—51.14)



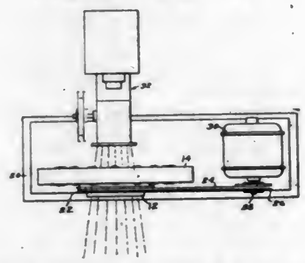
1. The combination of a housing for a switch having a lamp socket at one end and adapted to be supported from the other end on a standard, the latter end portion having a recess in the side thereof, an annular abutment surrounding said recess and facing axially and downwardly, a ring loosely surrounding said abutment and bearing against and projecting radially and outwardly beyond said abutment so as to rock about a point on the outer edge of said abutment in response to the application of manual pressure to said ring on the side thereof diametrically opposite from such point, a member rigid with said ring and projecting into said recess, and an actuating element for said switch movable axially of said housing and connected to said member within said recess.

2,453,695
LIGHTING SET
Bernard A. Belling, Beaver Dam, Wis.
Application March 21, 1946, Serial No. 655,919
1 Claim. (Cl. 240—10)



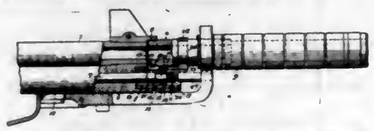
A device of the character described, comprising a split collar formed of flexible material, said collar being formed of complementary mating sections which are in face to face relation to each other, one of said sections being provided with a pair of spaced annular grooves on the mating face thereof, conductor wires in said grooves, electric lamp sockets, lead wires for connecting said sockets in parallel with said conductor wires and attaching means carried by said sockets.

2,453,696
DENTAL ROOT PREPARATION INSTRUMENT
Phillips Brooks, Brooklyn, N. Y.
Application January 13, 1947, Serial No. 721,737
9 Claims. (Cl. 32—59)



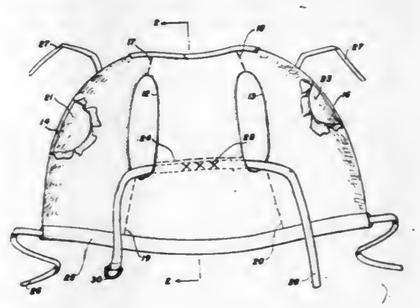
1. A reamer for preparing a tooth root for receiving a crown tooth comprising a tapered shank, a cap at the upper end of said shank including a depending annular flange, an abrasive on the lower inner side of said cap and about the inner and outer sides and lower edge of said flange, an outwardly extending annular flange carried by said cap constituting a stop, and a chuck engaging stem extending from the upper end of said cap.

2,453,697
GUN SIGHT HAVING A PLURALITY OF ILLUMINATED RETICLES
Leo H. Brown, Glenville, Conn.
Application March 17, 1944, Serial No. 526,956
2 Claims. (Cl. 88—2.3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a gun sight, a reticle, collimating means for rays of light from said reticle, a plurality of prisms arranged in a row in abutting relationship to provide a plurality of pairs of abutting surfaces inclined at substantially forty-five degrees to the longitudinal axis of the row, a mirror surface which partially transmits and partially reflects light positioned between each of said pairs of abutting surfaces, said collimating means being so disposed with relation to the first of said mirror surfaces that axial light rays passing from said collimating means are incident upon the first of said mirror surfaces at substantially forty-five degrees; a second plurality of prisms arranged in a row in abutting relationship also to provide a plurality of pairs of abutting surfaces inclined at substantially forty-five degrees to the longitudinal axis of the row, a mirror surface which partially transmits light and partially reflects light between each of said pairs of abutting surfaces, said second row of prisms being so positioned with respect to said first row of prisms that the mirror surfaces in said second row will receive at an angle of incidence a substantially forty-five degrees axial light rays from said collimating means reflected by the mirror surfaces in said first row of prisms.

2,453,698
REVOLVING POLARIZED DISK
Robert A. Campbell, Oak Park, Ill.
Application December 28, 1945, Serial No. 637,536
2 Claims. (Cl. 88—16.6)

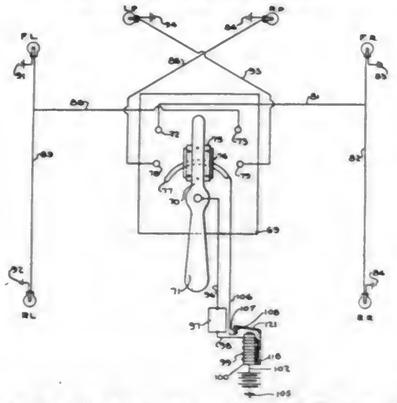


1. In an apparatus for observing an object, the combination of a support adapted to be placed in front of the object, a cylindrical sleeve, a ball bearing means encompassing said sleeve, said support receiving said ball bearing means whereby said sleeve is rotatably mounted in said support in front of the object for rotation, a disc of light-polarizing material in said sleeve and secured to the internal walls thereof, said light-polarizing material being adapted to polarize light therethrough in parallel planes extending parallel to the axis of rotation of said sleeve, means drivingly connected to said sleeve for continuously rotating the same whereby rotation of said light-polarizing disc causes the planes of polarized light to revolve on and about the axis of said sleeve, and a viewer adapted to be worn by an observer for receiving the polarized light from said disc, said viewer having a pair of spaced lenses of light-polarizing material, the light-polarizing planes of said lenses, respectively, being mutually perpendicular to each other, whereby light through said disc will pass through a lens when the plane of polarization of said rotating disc is in alignment with the polarizing plane of the respective lens thereby causing the visibility through one lens to be progressively increased and in the other lens to be correspondingly progressively decreased.

2,453,699
CYLINDER PLUG FOR GAS-OPERATED GUNS WITH GRENADE LAUNCHERS
Charles H. Coates, Baton Rouge, La.
Application January 31, 1945, Serial No. 575,530
5 Claims. (Cl. 42—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

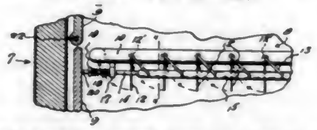
1. In a gas operated weapon having a barrel means, means therein forming a gas passage, a gas cylinder means on said barrel means having a gas port in register with said gas passage and a piston rod slidably associated with the gas cylinder means, the combination therewith of a piston mounted in the gas cylinder means for sliding movement therein to cover the gas port when adjacent the piston rod and to uncover the gas port when spaced from said piston rod, a grenade launcher on the barrel means, and means on the grenade launcher engaging said piston to move the same adjacent the piston rod to cover the gas port whereby said piston rod is rendered inoperative.

2,453,700
LIFE JACKET
Robert E. Coombs and Roger C. Hale, United States Coast Guard
Application May 26, 1945, Serial No. 596,069
4 Claims. (Cl. 9—20)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A life preserver comprising a vest, there being a pair of arm holes in said vest, a belt attached to the back of said vest and extending from arm hole to arm hole and extending into said arm holes, the free ends of said belt adapted to be drawn through said arm holes whereby the said belt may be fastened around the outside of the vest regardless of which side is outermost.

2,453,701
PROCESS FOR ELECTROLYTIC OXIDATION OF QUINOLINE TO QUINOLINIC ACID
John B. Conn and Jacob van de Kamp, Westfield, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application January 5, 1946, Serial No. 639,424
3 Claims. (Cl. 204—78)

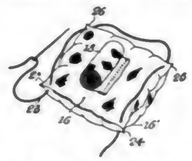


1. The process of preparing quinolinic acid that comprises reacting an amount of quinoline with about four times its weight of 20% oleum; diluting the resulting mixture of sulfuric acid and sulfonated quinoline to about twice its volume with water and charging to the anode compartment of a two-compartment electrolytic cell having a lead dioxide coated lead anode, oxidizing the sulfonated quinoline by electrolysis at a current density of about 1.5 amperes per square decimeter of anode surface until about 370 ampere hours per mole of sulfonated quinoline have been consumed, then reducing the current density to about 0.75 ampere per square decimeter of anode surface and continuing electrolysis for about 220 ampere hours per mole, and recovering quinolinic acid from the anolyte.

2,453,702
DIRECTION SIGNALING SYSTEM FOR AUTOMOTIVE VEHICLES
Guy H. Coulter, Detroit, Mich., assignor to United Lens Corporation, Detroit, Mich., a corporation of Delaware
Application July 27, 1942, Serial No. 452,521
3 Claims. (Cl. 177—311)

1. A directional signal system including a plurality of spaced directional electrical illuminating signals, one at the front of the vehicle and the other at the rear, both on the same side of the vehicle; a source of electrical energy; a main circuit having a common lead in part between said source of energy and each of said signals; a flashing device interpolated in said main circuit for periodically interrupting the circuit to said directional signals; a manually settable and automatically releasable switching mechanism whereby the operator may indicate the direction of turning of the vehicle by said directional signals; a single pilot light for both of said signals adapted to be located on the dash of the vehicle, a secondary circuit for said pilot light connected to said source of energy through said common lead, an automatically operated switch in said pilot light circuit; and electromagnetic means for controlling said pilot switch, the operating winding of said electromagnet interpolated in said main directional signal circuit and arranged to close said switch upon the passage of current sufficient to energize both of said directional signals and to open said switch when one only of said directional lights becomes non-energizable.

2,453,703
LOUVER MEANS FOR CONTROLLING AIR FLOW IN REFRIGERATORS
Caesar P. De Carlo, Sr., Ceiba, P. R.
Application July 31, 1945, Serial No. 608,076
5 Claims. (Cl. 62—89)

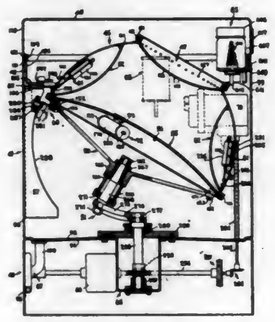


1. A refrigerator comprising a cabinet including a main door opening and a main door therefor affording access to the interior of the cabinet as a whole, and at least one shelf dividing said interior into compartments above and below the shelf, said shelf comprising horizontally pivoted louvers supported across the interior of the cabinet, means connecting all of the louvers for pivotal movement together toward and away from closed position in which the louvers define a substantially imperforate partition across the interior of the cabinet reaching to said main door opening, operating means for urging the louvers toward closed position, and a compartment door hinged on the cabinet in said main door opening in a position to operatively engage said operating means as the compartment door is moved from open toward closed position whereby the louvers of the shelf are opened as the compartment door reaches its closed position.

2,453,704
FURFURYL ALCOHOL-PHENOLIC RESINS
Andrew P. Dunlop, Riverside, Ill., and Edward A. Reineck, Appleton, Wis., assignors to The Quaker Oats Company, Chicago, Ill., a corporation of New Jersey
No Drawing. Application August 21, 1944, Serial No. 550,490
3 Claims. (Cl. 260—47)

3. The process of making artificial resins which consists in condensing one mol of an hydroxybenzene having a plurality of unsubstituted reactive nuclear positions and having no other reactive group than the phenolic hydroxy group with from 1 to 8 mols of furfuryl alcohol at a temperature of 100° C. to 220° C.

2,453,705
FIRST-AID PRESSURE DRESSING
John L. Gallagher, United States Army, Santa Ana, Calif.
Application June 30, 1944, Serial No. 542,996
3 Claims. (Cl. 128—156)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A pressure dressing comprising an oblong gauze cover piece folded centrally upon itself to form a square front and rear panel, a plurality of gauze squares of equal dimensions stitched to three adjacent edges of said folded cover piece and the cover piece turned inside-out to form an envelope enclosing said squares, mechanics' waste inserted within said envelope intermediate said gauze squares and said front panel and retained therein by stitches along the fourth edge of said squares to form a dressing for large surface wounds, a rolled bandage attached at one end to the central portion of said rear panel, and a draw string threaded through the corners of said squares adapted to retain them centrally adjacent the attachment of said bandage to form a square pressure dressing of smaller wound coverage area than that of said front panel.

2,453,706
CATALYTIC PRODUCTION OF AMIDES
Paul W. Garbo, Freeport, N. Y.
No Drawing. Application April 18, 1947, Serial No. 742,461
17 Claims. (Cl. 260—295.5)

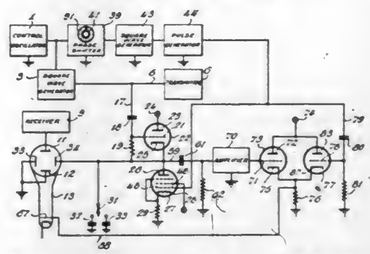
1. The catalytic process for the amidization of pyridine monocarboxylic acid compounds, which comprises reacting a said compound with ammonia in the presence of a catalyst containing an element selected from groups V and VI of the Mendelieff Periodic System and having an atomic number between 15 and 92, inclusive, and recovering thus produced amide from the resulting reaction mass.

2,453,707
AUTOMATIC WASHING MACHINE
George C. Graham, Ridgewood, N. J., assignor, by mesne assignments, to Graham & Barker, Ridgewood, N. J., a limited partnership
Continuation of application Serial No. 286,303, July 25, 1939. This application July 26, 1944, Serial No. 546,596
39 Claims. (Cl. 68—12)

15. A washing machine wherein articles are washed, the articles are rinsed in newly supplied fluid and afterwards are dried, these actions occurring in sequence automatically, comprising a tub for containing the articles, means operable to supply washing liquid to said tub, motor operated means for effecting a washing action in said tub, openings in at least the upper portion of said tub arranged for draining liquids therefrom, controlled valve means operable to admit liquid to said tub for rinsing the washed articles, fluid operated expansible and contractable means for flushing at least a portion of the washing and rinsing liquids through said upper openings and for drying the articles, and motor operated control means comprising a plurality of elements connected to said valve means and to said expansible and contractable means for effecting said flushing, rinsing and drying.

2,453,708
GRINDING OIL COMPOSITION
Everett C. Hughes, Cleveland Heights, and Franklin Veatch, Cleveland, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application October, 15, 1946, Serial No. 703,288
2 Claims. (Cl. 196—151)

1. A grinding oil composition at least 90 weight per cent of which is composed of a mixture of an amount of an unrefined naturally occurring mineral oil having a viscosity of not over 100 SUS at 100° F. within the range of 53 to 78 weight per cent and an amount of an unrefined naturally occuring mineral oil having a viscosity of 2000 to 6000 SUS at 100° F. within the range of 47 to 22 weight per cent to provide a mixture having a viscosity in the range of 150 to 300 SUS at 100° F.



2,453,709
GRINDING OIL COMPOSITION
Everett C. Hughes, Cleveland Heights, and Franklin Veatch, Cleveland, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application November 13, 1945, Serial No. 628,352
2 Claims. (Cl. 51—281)

1. A method of grinding which comprises grinding steel with a bonded abrasive in the presence of an oil at least 90 weight per cent of which is composed of a mixture of an amount of a mineral oil of 50 to 100 SUS at 100° F. within the range of 53 to 78 weight per cent and an amount of a mineral oil of 2000 to 6000 SUS at 100° F. within the range of 47 to 22 weight per cent to provide a mixture having a viscosity in the range of 150 to 300 SUS at 100° F.

2,453,710
GRINDING OIL COMPOSITION
Everett C. Hughes, Cleveland Heights, and Franklin Veatch, Cleveland, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application September 17, 1946, Serial No. 697,596
8 Claims. (Cl. 51—281)

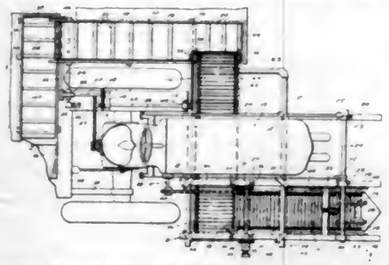
4. A method of grinding which comprises grinding metal with an abrasive in the presence of a grinding oil comprising at least 90 weight per cent of a base oil which is composed of a mixture of an amount of a mineral oil of not over 100 SUS at 100° F. within the range of 53 to 78 weight per cent and an amount of a mineral oil of 2000 to 6000 SUS at 100° F. within the range of 47 to 22 weight per cent to provide a viscosity in the range of 150 to 300 SUS at 100° F., and from 0.5 to 10% of an oil soluble phosphorus compound containing a fatty acid radical having at least ten carbon atoms.

2,453,711
CATHODE-RAY TUBE CONTROL CIRCUIT
Eric J. Isbister, Forest Hills, and Walter N. Dean, Larchmont, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Original application July 30, 1942, Serial No. 452,818. Divided and this application October 4, 1943, Serial No. 504,872
8 Claims (Cl. 315—22)

1. A control circuit for a cathode ray tube having beam deflecting electrodes and a beam intensity control grid, comprising means for applying a varying sweep voltage of predetermined direction to said electrodes, means for changing the rate of variation but not the direction of said sweep voltage for a predetermined interval, and means actuated by said last-named means for controlling said grid to alter the brightness of the beam trace during said interval.

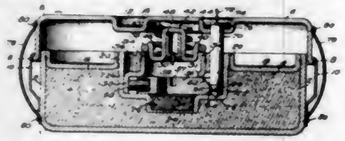
2,453,712
PURIFICATION OF TURPENTINE
Milton P. Kleinholz, East Chicago, Ind., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 6, 1946, Serial No. 674,932
2 Claims. (Cl. 260—675.5)

1. A process which comprises heating turpentine with an alcoholate from the group consisting of sodium and potassium alcoholates to remove or inactivate oxygen impurities contained in the turpentine.



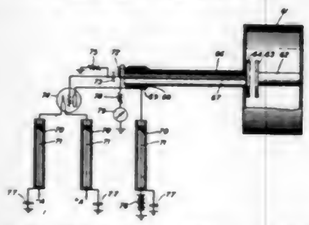
2,453,713
NOVELTY LIGHTER
Joseph P. Kohut, United States Navy
Application February 21, 1946, Serial No. 649,430
2 Claims. (Cl. 67—7.1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a cigarette lighter simulating a complete round of ammunition in the form of a projectile and cartridge case, a pair of hinged chambers movable side by side into operating position, a wick protruding from one chamber, sparking means in the other chamber and being disposed a predetermined distance from the wick, and a detachable sleeve secured to the peripheries of both chambers, the several chambers projecting from opposite ends of the sleeve when it is in secured position, the chamber containing the sparking means simulating the projectile, and the sleeve with the chamber containing the wick simulating the cartridge case of the complete round.



2,453,714
VEGETABLE HARVESTER
Oneil Lapointe, Van Buren, Maine
Application July 14, 1945, Serial No. 605,147
3 Claims. (Cl. 55—51)

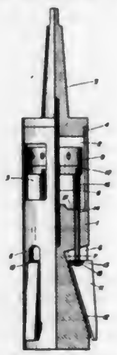
1. A root vegetable digger and cleaner comprising a first conveyor mounted on one side of a vehicle adjacent its forward end in parallel relation to its longitudinal axis, a digger blade at the forward end of the first conveyor, a second conveyor extending perpendicular to the first conveyor intermediate the ends of the vehicle and adapted to receive vegetables discharged from the first conveyor, a third conveyor extending parallel with the first conveyor on the side of the vehicle opposite the first conveyor and adapted to receive vegetables from the discharge end of the second conveyor and deliver them to a picking table which extends across the rear of the vehicle parallel with the second conveyor, means on the vehicles to raise or lower the forward end of the first conveyor out of or into



digging position and a yielding support carried adjacent the forward end of the vehicle for supporting the forward end of the first conveyor.

2,453,715
GRENADE MINE
Lyle K. Liljegren, Alexandria, Va., and John W. Moseman, Jr., Bethesda, Md.
Application August 28, 1944, Serial No. 551,590
7 Claims. (Cl. 102—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

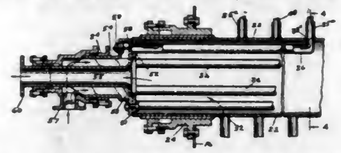
4. A mine comprising a movable detonator carrier, a spring urging said carrier to armed position, a bolt comprising cam locking means for said carrier, yieldable against the resilience of the spring for withdrawal from the mine, and spring means for ejection of the locking means, said locking means having a portion for continued blocking of the carrier short of deenergization of the spring means.



2,453,716
HIGH-FREQUENCY TANK CIRCUITS
Frederick B. Llewellyn, Verona, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original application January 15, 1938, Serial No. 185,139. Divided and this application April 2, 1941, Serial No. 386,461
3 Claims. (Cl. 178—44)

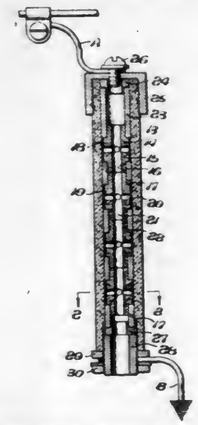
1. A high frequency oscillatory circuit comprising a substantially closed cylinder, a capacitor comprising two separated plates near one end of said cylinder, means for connecting the inner surface of said near end of said cylinder to an external circuit, two metallic supporting rods one of said rods directly connecting the more central

capacitor plate to the far end of said cylinder, the other of said rods supporting the other of said capacitor plates and extending through but insulated from the near end of said cylinder, said second capacitor plate being supported in such proximity to the said near end of said cylinder that its capacity therewith greatly exceeds its capacity to the first of said capacitor plates, its capacities with respect to the first of said capacitor plates and the said near end of said cylinder being such that said capacities will be electrically resonant with the combined inductance of the first of said supporting rods and that of the internal surface of said cylinder at a predetermined high frequency.



2,453,717
ALIGNING BAR
Harry R. Long, San Pedro, Calif.
Application January 28, 1946, Serial No. 643,953
2 Claims. (Cl. 279—2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

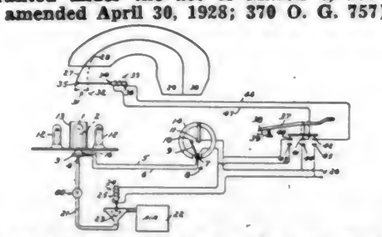
1. An aligning bar comprising a cylindrical support having a hollow portion adjacent one end thereof, an access opening in a side wall adjacent said hollow portion, a plurality of inclined, parallel slots formed longitudinally about the periphery of said support along a portion adjacent the other end thereof, said slots being inclined upwardly toward said second mentioned end, and a plurality of longitudinal, parallel bores, extending between said hollow portion and midportions of the adjacent ends of said slots; a screw element axially mounted within said support and extending through the hollow portion thereof; a nut threaded on said screw; a wedge slidably mounted within each of said slots and having its thicker end positioned at the deeper end of the slot; and rods slidably mounted within said bores, one end of each said rods being slidably mounted within the thicker end of an adjacent wedge, and the other end of each rod being in controlled relationship to the said nut.



2,453,718
HEAT EXCHANGE APPARATUS
John E. Mason, Denver, Colo., and Clarence White, Capay, Calif.; Virginia A. White, executrix of Clarence White, deceased, and said Mason assignors to The Stearns-Roger Manufacturing Company, Denver, Colo., a corporation of Colorado
Application July 20, 1942, Serial No. 451,530
3 Claims. (Cl. 257—79)

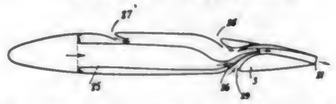
1. Heat exchange apparatus comprising a stationary cylindrical tank closed at its ends and supported in a horizontal position, a hollow rotary drum journaled in the ends of said tank, means exteriorly of the tank for rotating said drum, a series of hollow heat-exchange members held on the drum for conjoint rotation in groups and in fluid-tight connection therewith, adjoining members in said series having their lengthwise axes

joining the drum at intervals lengthwise of the drum, valve-controlled means in said drum for continuously delivering separate streams of fresh heat-exchange medium separately under individual regulation to each group in the series, and means exteriorly of the tank for delivering heat-exchange medium to the medium-delivery means.



2,453,719
EXCESSIVE POTENTIAL DISCHARGE DEVICE
John Robert McFarlin, Philadelphia, Pa., assignor to Electric Service Manufacturing Company, a corporation of Pennsylvania
Application August 12, 1942, Serial No. 454,594
13 Claims. (Cl. 175—30)

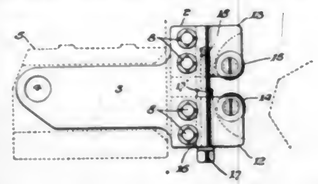
1. An arc interrupter comprising non-conducting means including a tubular element having end sections of smaller diameter than an intermediate section thereof, electrode rings sleeved on said reduced end sections and having peripheral surfaces projecting beyond the peripheral surface of said intermediate section, and a housing for said electrodes and element and having a wall complementary with said intermediate section of the latter and forming therewith an arc slot between said electrodes.



2. An arc interrupter comprising non-conducting means having complementary inner and outer concentric walls forming a curved arc slot, and gap electrodes positioned to form an arc in said slot, said means containing communicating pressure-discharge passages one of which extends substantially parallel with said arc slot and forms a continuous passage from end to end of said means without intersecting said slot and the other of which extends through said inner wall and communicates with said arc slot.

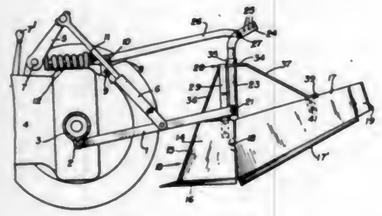
2,453,720
APPARATUS FOR DETECTING PERFORATIONS IN AMMUNITION FLASH TUBES
Leo Meister, Irvington, Va.
Application October 30, 1944, Serial No. 561,144
8 Claims. (Cl. 209—111)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An inspection device for discovering defective ammunition flash tubes containing holes, comprising a source of light; means for projecting said light through said holes; a photoelectric cell having a light sensitive surface; means for gathering any projected light and for directing said gathered light onto said light sensitive surface, said last mentioned means being formed of methyl methacrylate and comprising a frusto-conical portion, a cylindrical extension integral and coaxial with said conical portion and extending from the smaller end of the frusto-conical portion, said extension being receivable in said flash tubes being tested and the larger base of said conical portion being arranged for directing said gathered light onto said light sensitive surface; and means actuated by said photoelectric cell responsive to said gathered directed light for ejecting from the device any flash tubes having holes.



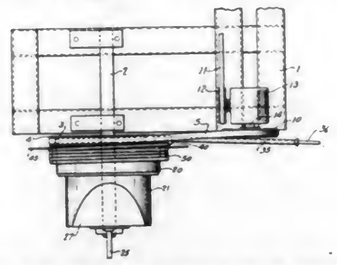
2,453,721
CONTROL FLAP WITH FLUID JETS FOR AIRCRAFT
Pierre Ernest Mercier, Westport, Conn.
Application October 7, 1941, Serial No. 413,942
In France November 22, 1940
8 Claims. (Cl. 244—15)

8. In combination with an airfoil having a pivoted flap at the trailing edge thereof, rearwardly directed propulsive nozzles carried by and movable with the pivoted flap and being of unchanged cross-section in all positions of said flap, said nozzles being further disposed in contiguous relation to one another along the length of said flap, and means associated with said airfoil for establishing an accelerated flow of boundary air along an exterior surface of said airfoil and for discharging same at said nozzles, said means including means for conducting a gas under pressure to and through said nozzles and thereby to exert an aspirating effect on said boundary air.



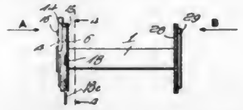
2,453,722
TOOLHOLDER
Jacob E. Moss, Detroit, Mich., assignor to The National Acme Company, Cleveland, Ohio, a corporation of Ohio
Application May 26, 1944, Serial No. 537,434
3 Claims. (Cl. 29—105)

1. A device for holding self-centering operating tools on a machine, said device comprising, a first clamp member having a clamp portion defining a guide surface, a supporting shank fastened to said first clamp member and having means for pivotal connection to said machine, a second clamp member also having a clamp portion defining a guide surface facing the guide surface of the first clamp member, first tool holder means having a guide portion thereof slidable along said guide surfaces and clampable between said clamp portions, second tool holder means also having a guide portion thereof clampable between the



clamp portions and slidable along the guide surfaces toward and away from the first tool holder means, adjusting means interconnecting both the tool holder means for adjustably sliding at least one of the tool holder means along said guide surfaces to position both tool holder means in a spaced position relative to each other along the guide surfaces, and lock means interconnecting the clamping members for drawing the clamp portions tightly against the guide portions of both tool holder means to lock said tool holder means in said spaced position on the guide surfaces.

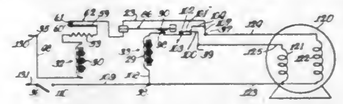
2,453,723
DITCHER
Robert A. Palmer, John R. Palmer, and George R. Smit, Parma, Idaho, assignors to Western Corrugator Co., Parma, Idaho
Application December 9, 1946, Serial No. 714,940
4 Claims. (Cl. 37—98)



1. A ditch digging unit for use on a tractor having a pair of vertically swingable power lift side arms, and a vertically swingable compression link above said arms, said unit comprising a drawbar adapted to be journaled at the ends thereof in said side arms and provided with an upstanding central post adapted to be pivotally connected to said compression link, an upstanding yoke vertically slidable on said post into different set positions, a plow fast on the lower ends of said yoke, and a pair of elongated spreader panels pivotally mounted at ends thereof on said plow to extend endwise from opposite sides thereof in divergent relation, the pivotal mounting for said panels providing for swinging adjustment of the panels vertically and laterally, out-turned deflector extensions on the other ends of said panels, and means for attaching said panels to said yoke in adjusted positions thereof.

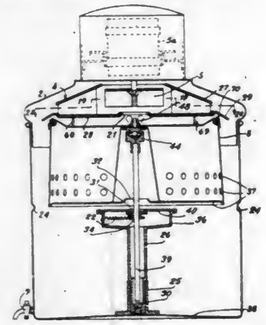
2,453,724
COILING MACHINE
Arthur W. Payne, Detroit, Mich., assignor to Bundy Tubing Company, Detroit, Mich., a corporation of Michigan
Application July 26, 1945, Serial No. 607,216
6 Claims. (Cl. 153—64)

1. An apparatus for forming work pieces such as lengths of tubing or the like into coils which comprises, the combination of a rotary forming pulley, a second pulley spaced from the forming pulley, a belt operating over the pulleys, means for guiding a work piece into the confluence of the belt and the forming pulley, and guiding means positioned adjacent the periphery of the forming pulley in a location between separation of and the confluence of the forming pulley and the belt for engaging the work piece and shifting it axially out of the confluence of the belt and the pulley.



2,453,725
COIL-SUPPORTING STRUCTURE
Osborne I. Price, Frederick, Md., assignor to Magnetic Devices, Inc., Frederick, Md., a corporation of Maryland
Application February 14, 1946, Serial No. 647,464
12 Claims. (Cl. 175—21)

1. A coil-supporting structure comprising a magnetic core, an envelope of insulation material extending over said core, a metallic and plate secured to said core, said metallic end plate being perforated adjacent one edge thereof and a head of insulation material interposed between said envelope and said metallic end plate, and a projection of insulation material extending from said head of insulation material disposed from said magnetic core and extending through the perforation in said metallic end plate for keying said head of insulation material with said metallic end plate.

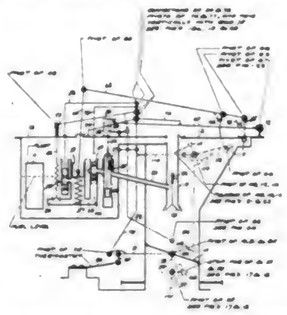


2,453,726
INDUCTION MOTOR STARTING RELAY
Robert E. Prouty, Logansport, Ralph E. Bish, Flora, and Richard L. Adams, Logansport, Ind., assignors, by mesne assignments, to Essex Wire Corporation, Logansport, Ind., a corporation of Michigan
Application April 4, 1945, Serial No. 586,596
17 Claims. (Cl. 318—221)

1. A device for use with an electric motor having a running winding and a starting winding comprising contact means adapted to be connected in circuit with said starting winding, electromagnetic means including a tuned reed armature, said tuned reed armature being adapted to vibrate responsive to vibration of said motor at a predetermined speed of rotation thereof, said tuned reed armature upon vibration thereof effecting

energization of said electromagnetic means, said electromagnetic means when energized being adapted to attract said tuned reed armature, and said tuned reed armature in its attracted position providing for opening said normally closed contacts.

2,453,727
AIR-PROPELLED EXTRACTING MACHINE FOR LAUNDRY
Christian Oskar Rasmussen, Copenhagen, Denmark; vested in the Attorney General of the United States
Application April 27, 1942, Serial No. 440,704
In Denmark June 4, 1941
3 Claims. (Cl. 210—66)



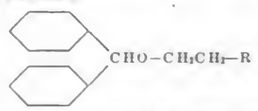
1. A laundering machine having in combination a casing provided with an open end and a closed end; a cover removably mounted on said casing; vane means rotatably mounted within the cover for causing air current flow within said casing when said vane means are rotated; a rotatable drum in said casing; second vane means seated on the end of said drum adjacent said cover and said first vane means; securing means for connecting said second vane means and said drum to each other; means for mounting said drum and second vane means for movement relative to said first vane means in a direction transversely of the axis of rotation of the drum, said drum mounting means including pivot means axially positioned within said casing, and a shaft pivotally supported by said pivot means, rotatably supporting said drum; and brake means jointly carried by said second vane means and said cover for braking the rotation of said second vane means and associated drum.

2,453,728
CARBURETOR
John T. Rauen, Grosse Pointe, Mich.
Application October 7, 1940, Serial No. 360,046
67 Claims. (Cl. 123—119)

1. In a carburetor, a mixing chamber, a pump for delivering fuel to said mixing chamber, varia-

bly opening valve means for automatically varying the amount of fuel delivered to said pump in response to engine operation, said valve means opening and closing in response to operation of

said pump as effected by engine operation under conditions which cause variations in pressure or velocity of flow in the induction system of the engine.



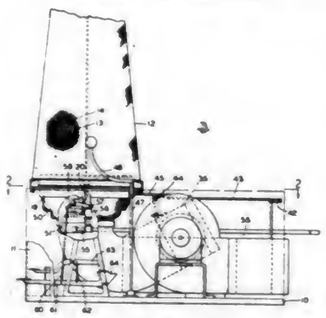
2,453,729

BENZHYDRYL AMINO ETHERS

George Rieveschl, Jr., Grosse Pointe Woods, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan

No Drawing. Application August 5, 1946, Serial No. 688,424
7 Claims. (Cl. 260—243)

1. A compound of the class consisting of a free base and its acid addition salts, said free base having the formula



where R is a member of the class consisting of piperidino, morpholino, thiomorpholino and pyrrolidino radicals.

2,453,730

GARMENT STEAMING AND DRYING APPARATUS

Julian C. Shaw, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio

Application May 20, 1946, Serial No. 670,866
7 Claims. (Cl. 223—70)

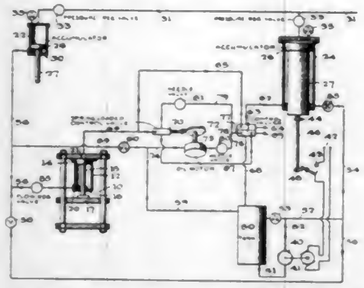
1. Garment finishing apparatus of the character described, comprising a base, a hollow, foraminous garment supporting form mounted upon said base and provided with partition means dividing the space within said form into a plurality of chambers, each open at its bottom, means for producing air flow through said chambers by way of their bottom openings, and means effective while said air flow producing means is in operation for obstructing flow through all but one of said chambers.

2,453,731

ELECTRICAL CONNECTOR

Howard E. Somes, Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio

Application January 11, 1945, Serial No. 572,317
6 Claims. (Cl. 173—324)



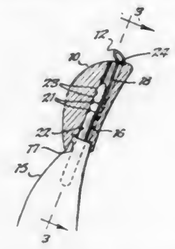
1. An electrical connector comprising inner and outer concentric electrical conductors, each having an arm, said arms lying in a common plane and disposed at an angle relative to each other, a body of electrical insulation insulating said conductors and arms from each other, a mounting block of electrical insulating material abutting said arms, and means securing said block to said arms, said block having openings therethrough and said arms having openings therethrough aligned with said block openings for connection with spaced terminals of an electrical device.

2,453,732

HYDRAULIC CYCLING SYSTEM

William T. Stephens, Cleveland, Ohio, assignor to Hydraulic Control Engineering Company, Cleveland, Ohio, a corporation of Ohio

Application May 22, 1944, Serial No. 536,781
10 Claims. (Cl. 60—51)



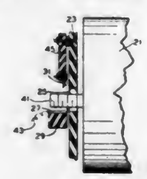
1. In a system of the type described, in combination, a double acting hydraulic cylinder and piston, a source of low pressure fluid continuously connected to the cylinder to urge said piston in one direction, a source of high pressure fluid of substantially constant pressure having a connection to the opposite end of said cylinder, a valve in said last mentioned connection adapted to be positioned only to connect said source to said cylinder or to connect the cylinder to waste, mechanism for periodically moving said valve alternately to its two positions including a fluid actuated continuously running rotary motor, means connecting said motor to said source of high pressure fluid and a cam driven by said motor to actuate said valve, a manual valve jointly controlling the flow of fluid to said first valve and to the said motor, said last mentioned valve also controlling the discharge from the first valve and an independent valve for determining the fixed speed of the motor to thereby regulate the length of stroke of the piston.

2,453,733

NECKTIE

Alfred F. Taborski, Buffalo, N. Y.

Application May 11, 1946, Serial No. 669,150
10 Claims. (Cl. 2—150)



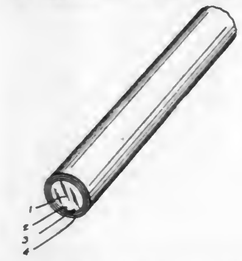
1. A necktie comprising a knot portion having a passage from top to bottom, an element disposed in said passage and having arms extending laterally in opposite directions therefrom at the top of said passage and formed for attachment to a neck band, a drape, and a member secured to one end of said drape, extending upwardly into and along said passage from the lower end of the passage, and over-running and detachably engaging with said element by relative crosswise displacement movement of the engaging parts of said member and element, to hold said drape to the knot portion and said element within said passage.

2,453,734

METER PEDESTAL

Roy J. Teetsell, Red Bank, N. J.

Application March 10, 1944, Serial No. 525,961
3 Claims. (Cl. 175—183)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



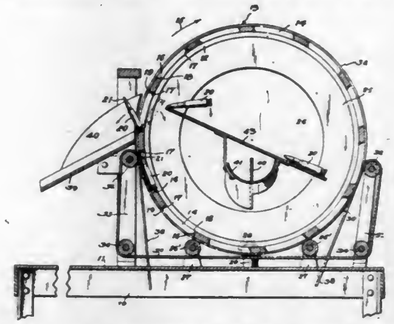
1. A meter pedestal for meters having two spaced terminals comprising a base, an enclosed box of nonconducting material mounted upon said base, one wall of said box having two elongated apertures, two elongated knife-edge contacts within said box and respectively disposed behind said apertures, a bar of insulating material carrying two elongated flat contacts within said box and respectively disposed behind said apertures and respectively opposing said knife-edge contacts, a rod extending through a wall of said box and provided with a knob outside said box and attached to the bar aforesaid inside said box, spring means urging the flat contacts toward the knife-edge contacts respectively, two electrical leads extending from outside the box respectively to each pair of opposing contacts, the flat contacts being movable away from the knife-edge contacts upon movement of the knob whereby meter terminals of various spacings may be mechanically and electrically gripped by said contacts.

2,453,735

FOUNTAIN SOLUTION ROLLER

William Craig Toland, Brookline, and Munroe H. Hamilton, Lexington, Mass., assignors, by mesne assignments, to William Craig Toland, Brookline, Mass.

Application January 18, 1945, Serial No. 573,384
8 Claims. (Cl. 101—148)



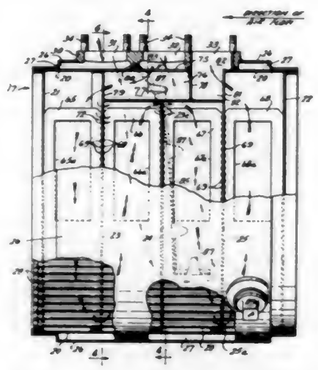
1. As an article of manufacture a roller for use in planographic printing, said roller being covered with a water-swellable material which includes a water-soluble dibasic acid.

2,453,736

CARTRIDGE ORIENTATING HOPPER

John H. Woodberry and Frederick W. Hoewischer, Metuchen, N. J.

Original application July 24, 1942, Serial No. 452,174. Divided and this application May 26, 1945, Serial No. 596,072
4 Claims. (Cl. 209—72)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



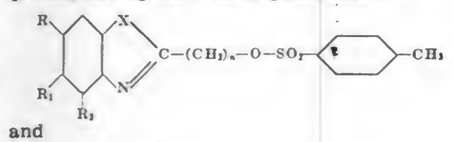
1. An ordering means for cartridges comprising a cylinder, means to rotate the cylinder, said

cylinder having a multiplicity of slots formed in the wall thereof, the dimensions of which slots measured circumferentially equal at least the longitudinal dimension of the cartridges and the dimensions of the slots transversely equal the corresponding dimensions of the cartridges, means without and concentric with the cylinder to confine cartridges to the cylinder in the lower part at least and at the ascending side to a level near but not higher than a horizontal radius of the cylinder, and a cartridge-base-supporting edge element at the trailing end of each slot spaced from said cartridge confining means more than one-half the diameter of the base of the cartridge, each said slot including a support surface at its trailing end inclining outwardly of said supporting edge element and opposite the direction of motion of said cylinder.

2,453,737
OIL TEMPERATURE CONTROL UNIT

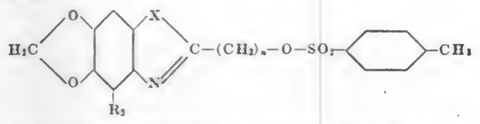
Weldon Worth, Dayton, Ohio

Application December 11, 1944, Serial No. 567,764
3 Claims. (Cl. 257—128)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an oil cooler of the type having a body provided with an inlet and an outlet for the oil, both the inlet and the outlet being at the top of the body, and also having a multiplicity of cooling tubes within the body, each open end to end for the passage of cooling air and each being parallel to the longitudinal axis of the body and all being below said inlet and outlet, so that oil from the inlet may pass down over the outer surfaces of the tubes and may be cooled thereby; a plurality of header plates arranged transversely of the longitudinal axis of the cooler body, said cooling tubes passing through the header plates, said header plates providing a plurality of passes for directing flow of oil downwardly from the inlet to the bottom of the cooler and upwardly to the outlet of the cooler; and a plurality of heat-conducting members made of thin metal of good conductivity, each heat-conducting member being located between and in edgewise contact with two of the header plates and having an edge reduced in its plate-contacting area to reduce heat loss to the plate, and all the heat-conducting members lying in substantially the same plane though separated by the header plates; each heat-conducting member extending from a point near the top of the cooler to a point near the bottom thereof.

2,453,738
MODIFIED CYANINE DYES

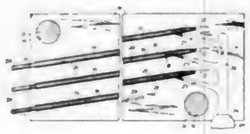


Alfred W. Anish, Vestal, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application September 7, 1946, Serial No. 695,559
10 Claims. (Cl. 260—304)

1. A compound of the class consisting of compounds having the following formulae:

and

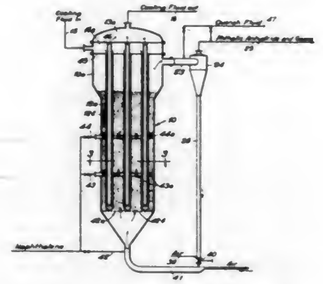


wherein R represents a member selected from the class consisting of hydrogen, halogen, aliphatic, and anilino groups, R_1 represents a member selected from the class consisting of hydrogen, halogen, and aliphatic groups, R_2 represents a member selected from the class consisting of hydrogen and aliphatic groups, X represents a member selected from the class consisting of oxygen, sulfur, and selenium, and n represents a numeral ranging from 1 to 2.

2,453,739
METHOD FOR PRODUCING PLASTIC-COATED KNITTING NEEDLES

Wells C. Bates, Chester, Conn., assignor to C. J. Bates & Son, Chester, Conn., a partnership composed of Hamilton C. Bates, Sr., Wells C. Bates, and Hamilton C. Bates, Jr.

Application February 18, 1947, Serial No. 729,269
4 Claims. (Cl. 18—59)

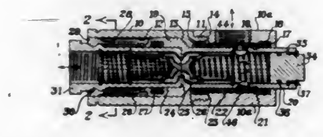


1. The method for producing plastic-coated knitting needles which includes the steps of: movably supporting a rod-like core-member of relatively-small diameter in an elongated molding-cavity of relatively-large diameter throughout the major portion of its length and which cavity is formed at one end with a tapering tip-forming portion; forcing an end of the said core-member into engagement with the tapering tip-forming portion of the said cavity to hold the portion of the core-member adjacent its said end out of engagement with the walls of the cavity proper; injecting a plastic coating material around the said core-member while the same is thus centered; and subsequently slightly axially retiring the said core-member out of engagement with the tapering tip-forming portion of the said cavity before said coating material loses its plasticity and forcing the said coating material to fill the said tip-forming portion and thus provide the now-coated core with a unitary tapering tip of plastic material.

2,453,740
OXIDATION OF ORGANIC COMPOUNDS AND MANUFACTURE OF PHTHALIC ANHYDRIDE

Sam B. Becker, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application February 16, 1945, Serial No. 578,310
6 Claims. (Cl. 260—342)

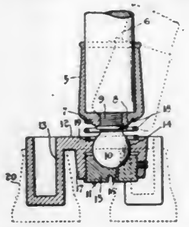


6. The method of converting naphthalene hydrocarbons into phthalic anhydride which comprises introducing said hydrocarbons at at least one low point into an oxidation zone containing a deep mass of solid oxidation catalyst particles comprising vanadium oxide and having a particle size chiefly within the range of 10 to 100 microns, introducing an air stream at the base of said zone at such a rate as to maintain therein an upward gasiform stream velocity in the range of .5 to 5 feet per second and sufficiently low to maintain the catalyst as a suspended dense turbulent phase superimposed by a light dispersed catalyst phase in a catalyst disengaging space which extends upwardly a substantial distance above the dense phase level, operating said oxidation zone under pressure of about 15 to 20 pounds per square inch at a temperature of about 700° F., introducing about 5 to 30 pounds of air per pound of naphthalene hydrocarbons introduced, maintaining a substantially constant temperature in the oxidation zone by removing heat in situ directly from the dense phase above the point at which air is introduced into said zone, separating catalyst particles from the gasiform stream withdrawn from the upper part of the disengaging space, returning said separated particles to said dense phase and recovering phthalic anhydride from said withdrawn stream after catalyst particles have been separated therefrom.

2,453,741
HYDRAULIC HOSE COUPLING

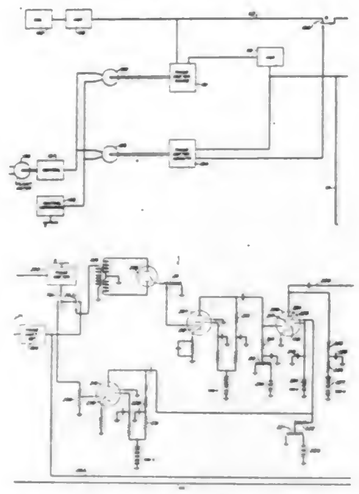
Cecil W. Bopp, Waterloo, Iowa

Application February 24, 1947, Serial No. 730,325
4 Claims. (Cl. 284—18)



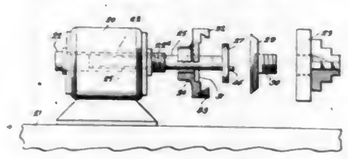
1. A hose coupling comprising, a tubular body having axial openings of different diameters extending inwardly from opposite ends, the larger opening terminating in an annular shoulder, a tubular clamping sleeve mounted in the body for relative longitudinal movement, the sleeve having two sections of unequal outside diameters adapted to fit the correspondingly sized openings in the body, the wall of the opening of smaller diameter in the body having an enlarged section, an inlet port opening in communication therewith, the wall of the clamping sleeve having an opening in communication with the enlarged section, the outer end of the axial opening in the smaller end of the clamping sleeve having a removable plug closure, the inner end of the last named opening terminating in an inwardly extending flange forming a valve seat, a valve slidable in the opening, means comprising a spring for urging the valve to closed position, means comprising a spring for urging the clamping sleeve in the direction of its smaller end relative to the body, the end of the clamping sleeve having the larger outside diameter terminating in a plurality of resilient fingers whose ends are provided on the inside with convex surfaces lying in a plane perpendicular to the axis of the clamping sleeve, and on the outside with arcuate surfaces, and a tubular hose adapter of a size to fit the opening in the larger end of the clamping sleeve, in abutting relation with the flange, the inner end of the hose adapter having an inwardly directed flange forming a valve seat, a valve positioned in the adapter, movable into sealing relation with said valve seat, a spring urging the valve towards the seat, the outer surface of the adapter having a concave groove adapted to receive the convex inner surfaces of the fingers to hold it in operative position when the clamping sleeve is positioned entirely within the body.

2,453,742
TERMINAL ATTACHMENT FOR CRUTCHES AND THE LIKE



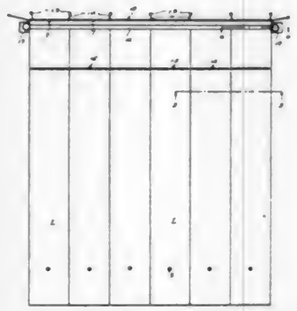
Henry B. Bowen and Arthur M. Vineberg, Montreal, Quebec, Canada

Application March 23, 1945, Serial No. 584,462
1 Claim. (Cl. 135—53)



A terminal attachment of the character described, comprising a plate provided with a central vertical opening having its defining wall spherically curved to provide a ball seat, a socket-forming wall extending downwardly from a portion of the plate encircling said opening, ground-engaging members extending downwardly from portions of the plate located outwardly of said wall, a ball member fitted against said ball seat so that the major portion of the ball member is disposed below the upper surface of the plate with a substantial portion of the ball member lying below the bottom surface of the plate and within the socket formed by said wall, a ball-retaining plug removably secured in said socket and provided with an upwardly facing, spherically curved seat engaging the portion of the ball disposed within said socket, a ferrule having its lower end secured to a part of the ball projecting above said plate and resilient biasing means arranged to act against said plate and said ferrule.

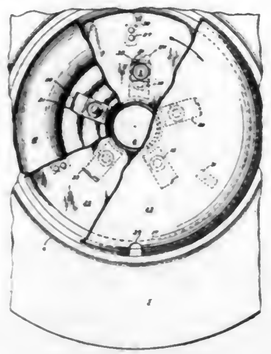
2,453,743
SIGNALING SYSTEM AND TRAINING DEVICE FOR TARGET TRACKING
Orfeo Cesareo, Washington Township, Bergen County, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 6, 1943, Serial No. 513,043
6 Claims. (Cl. 35—10)



1. In an apparatus for training students in the art of locating moving objects the combination of a source of alternating waves of base phase, a screen, means for utilizing a wave from said source to form visible images on said screen, a phase shifter, means for applying to said phase shifter a second wave from said source, means for operating said phase shifter to vary the phase of said second wave in accordance with the changing angular relation, with respect to a reference point, of an imaginary object moving along a given course in space, means for utilizing said second wave of shifted phase to vary the relationship of said images in accordance with said changing angular relation, a second phase shifter operated by the student for introducing another variation of phase in said second wave, and means effective when the phase variation introduced by the student bears a definite relationship to that introduced by said first phase shifter for maintaining a desired relationship between said images.

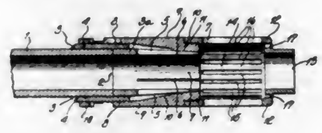
2,453,744
LATHE
Hiriam Darden Chambliss, Oak Ridge, Tenn.
Application May 1, 1946, Serial No. 666,346
10 Claims. (Cl. 279—6)

4. In combination with a lathe head having a hollow drive shaft, a member connected to said shaft for rotation therewith, a stationary shaft extended through said hollow drive shaft and said member, said member having a recess, said stationary shaft carrying a block seated in said recess and having a diametrically arranged outwardly facing groove, a pin mounted in said groove for adjustment longitudinally thereof, adjusting means for varying the position of said pin and locking it in such position, and a driven element connected to said member to rotate therewith and to reciprocate radially with respect to the axis of rotation, said element having a radially arranged groove for slidable reception of the free end of said pin.



2,453,745
GOLF GAME AND INSTRUCTIONAL APPARATUS
Hod Clarence Dunfee, Miami, Fla.
Application March 22, 1945, Serial No. 584,160
1 Claim. (Cl. 273—35)

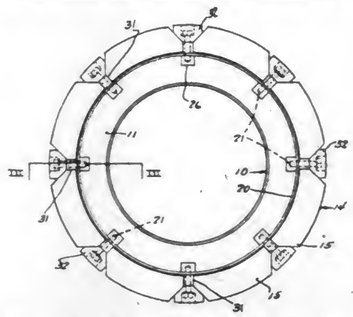
A game apparatus comprising a field of play, divided into a plurality of lanes of play which lanes extend lengthwise of said field, a flexible net extending across the rear ends of said lanes and suspended to yield rearwardly over all points of its surface, a plurality of targets carried by said net, one for each lane of play, and each target comprising a plurality of spaced concentric lines of material flexible enough to also yield with the net, a row of putting wickets across each of the lanes of play, said wickets being spaced from the bottom edge of said net, and a ball return trough extending across all of the lanes of play and located close enough to the bottom of the net to receive balls which fall directly downwardly from said net and also located to receive the balls which pass through said wickets.



2,453,746
WHEEL AND TIRE LOCKING DEVICE
George H. Duvall, Jr., Los Angeles, Calif.
Application March 30, 1945, Serial No. 585,779
11 Claims. (Cl. 70—259)

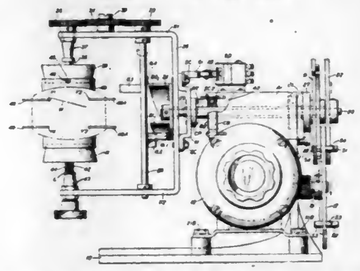
1. A locking hubcap for a vehicle wheel comprising a hubcap of a size to enclose the wheel bolts and valve stem of an automobile wheel, an inner supporting plate for said hubcap, a plurality of fastening members extending outwardly from said wheel bolts, said plate having a corresponding plurality of openings therein for providing entrance of the ends of said fastening members through said plate in one position of said hubcap with respect to said fastening members, each of said openings having a narrower width to prevent withdrawal of the ends of said fastening members from said plate in other positions of said hubcap with respect to said fastening members, and means to control the positioning of said hubcap with respect to said fastening members, said last mentioned means including a lock having a stepped bolt for maintaining said

hubcap in said other positions to prevent withdrawal of the ends of said members from said plate, and to permit a predetermined amount of rotation of said plate with respect to said members to expose said valve stem through said hubcap.



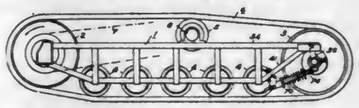
2,453,747
SHOTGUN CHOKE
James E. A. Egleson, Essex Fells, N. J.
Application October 31, 1947, Serial No. 783,285
14 Claims. (Cl. 42—79)

1. Choke mechanism for a shotgun comprising a constrictable split muzzle extension, a coaxial annular member provided with a plurality of openings laterally adjacent the mouth of said split muzzle extension that present inclined faces effective to rotate said annular member responsive to expansion of gases discharged from said split muzzle extension, and means for constricting said split muzzle extension responsive to said rotation of said annular member.



2,453,748
SURFACING RUNNER
John M. Fisher and Merle M. Eakins, Ford City, Pa., assignors to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
Application April 5, 1947, Serial No. 739,720
6 Claims. (Cl. 51—209)

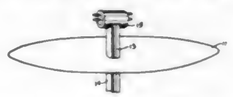
1. In a runner assembly for surfacing apparatus, a runner cap of plate form, a ring connected edgewise upon the bottom of the cap, additional rings disposed in coaxial relation to the first ring, adjacent rings having rim portions overlapping in axial directions and having their wall surfaces substantially flush with one another, bonded abrasive material defining an annular contour and arranged in coaxial relation to the rings, each ring having a series of connections spaced at intervals circumferentially of the ring



and securing the ring and abrasive material in rigid relation.

2,453,749
COIL-WINDING MACHINE
Harry A. Hilsinger, Jr., East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 7, 1946, Serial No. 675,203
5 Claims. (Cl. 140—92.2)

1. In a machine for winding rectangularly-shaped coils two opposite sides of which are curved and the other sides straight, said machine comprising a rotatable frame, a mandrel for the coils mounted on said frame having tangentially disposed pins at its periphery, a rotatable cam, a shaft rotatably mounted on said frame actuated by the operation of said cam, and a mechanism for successively intermittently actuating said cam and said frame, said cam imparting rotation to said mandrel for winding the curved sides of the coil as determined by the angular spaced relation of said pins on said mandrel and the rotation of said frame winding the straight sides of the coil.



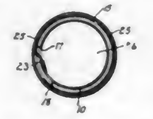
2,453,750
ENDLESS TRACK MECHANISM
Igor A. Kamlookhine, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application May 1, 1944, Serial No. 533,485
12 Claims. (Cl. 305—9)

1. In a self-laying track mechanism of the type in which a structure for operatively mount-

ing an endless track belt comprises a frame and a track engaging wheel mounted on said frame for movement relative thereto in track tensioning and track releasing directions, and in which said track belt is operative to determine a normal track tensioning limit position of said wheel, the combination of first resilient means associated in thrust transmitting relation with said frame, second resilient means having a yielding characteristic different from that of said first resilient means, and means mounting said second resilient means for movement with said wheel relative to said frame and in tandem relation with said first resilient means.

2,453,751
ANTENNA REFLECTOR SYSTEM
Donald Kinnier, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 26, 1944, Serial No. 551,340
14 Claims. (Cl. 250—33.65)

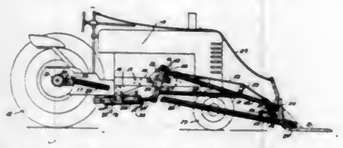
3. An ultra-high frequency antenna system comprising a reflector; di-poles for radiating energy to said reflector and a feeding system for propagating energy to said di-poles including a cavity resonator, said di-poles being insulatedly mounted in said cavity resonator and protruding therefrom.



2,453,752
EMULSION ADAPTED FOR COATING TEXTILES
Fred G. La Piana, Forest Hills, N. Y., and Herman S. Bosland, Paterson, N. J., assignors to Stein, Hall & Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application November 2, 1940, Serial No. 364,036
3 Claims. (Cl. 260—6)

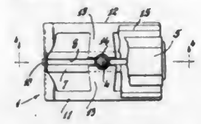
1. A composition adapted to be used in textile coloring comprising a pigment dispersed in an emulsion in which the inner phase comprises a dispersion of a vulcanized vegetable oil in a water-immiscible organic liquid, and the outer phase comprises an aqueous dispersion of material comprising the product obtained by adding urea and an aldehyde to a protein dispersion, said material being capable of being formed into a water-insoluble resin.

2,453,753
METHOD OF MANUFACTURING CATHODES OF ELECTRIC DISCHARGE TUBES
Robert Loosjes, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
No Drawing. Application February 8, 1947, Serial No. 727,303. In Belgium November 4, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires November 4, 1964
3 Claims. (Cl. 250—27.5)



1. A method of manufacturing a cathode of an electric discharge tube, which comprises treating a cathode core with an alkaline earth material in an evacuated space to provide a layer of an alkaline earth metal oxide, covering the layer with a film of a metal selected from the group consisting of copper, silver, and gold, removing the cathode thus formed from that space and disposing the cathode in the tube in which it is to be used, sealing the tube and removing the metal film from the cathode by volatilization of the metal.

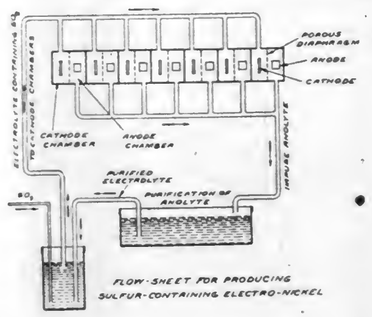
2,453,754
HOLDER FOR LIPSTICKS AND THE LIKE
Cyril W. Mellette, Middlebury, Conn., assignor to Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation
Application May 30, 1945, Serial No. 596,660
1 Claim. (Cl. 206—56)



In a rotary lipstick-holder of the type having a shell-member, a body-member rotatable within the said shell-member, a lipstick-carrier movable lengthwise within the said body-member, advancing-and-retracting means to advance and retire the said carrier by a relative rotary movement between the said body-member and shell-member, and a removable closure-cap telescopically fitting over the exterior of the said shell-member; the improvement which includes: a flexible guard-member carried by the shell-member adjacent its outer end and movable laterally with respect to the said body-member and shell-member into and out of the path of the said telescoping closure-cap, the said flexible guard-member being springset to normally lie inwardly out of the path of movement of the said closure-cap, the said body-member being formed adjacent its outer end with a clearance-opening receiving the said guard-member when the said carrier-member is in its retired position; and actuating-means adjacent the edge of the said clearance-opening and having camming engagement with the said guard-member to project the latter laterally outwardly into the path of the said closure-cap when the body- and shell-members are relatively turned in the direction serving to cause the said advancing-and-retracting means to advance the said carrier, to thereby hinder the inadvertent telescoping of the said cap over the said shell-member.

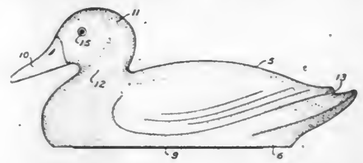
2,453,755
LOAD MOVING MACHINE
Horace C. Perman, Waterloo, Iowa
Application May 15, 1946, Serial No. 669,838
4 Claims. (Cl. 214—140)

1. A tractor mounted load moving machine comprising a wheel supported tractor body, aligned bearings secured to opposite sides of the tractor body, a U-shaped rocker positioned with its base underneath the tractor body, the upper ends of the limbs having pivots journaled in the bearings, a hydraulic cylinder positioned underneath the tractor body with one end pivotally connected therewith, a piston and piston rod operatively associated with the cylinder, the outer end of the piston rod being pivoted to the base of the U-shaped rocker, a lifting arm removably connected with each limb of the U-shaped rocker, projecting forwardly from the latter, a load moving means comprising a rigid beam on each side of the tractor body positioned below the lifting arms, the rear ends of the beams being pivotally connected with the tractor body adjacent the rear axle, means comprising a load carrying element interconnecting the front ends of the beams, and a tension element connecting the front end of each lifting arm with the corresponding beam, whereby when the piston rod is moved forwardly the load carrying element will be raised.



2,453,756
SAFETY RAZOR
Giuseppe F. Pinsuti, New York, N. Y.
Application November 12, 1946, Serial No. 709,375
5 Claims. (Cl. 30—74.1)

1. In a safety razor, the combination of a retainer cap having thin longitudinal side portions and a thick center portion from whose lower side extends a pin adapted to be screwed into the upper extremity of a handle, with a longitudinal center bar having an aperture through which said pin is loosely extended, and a guard plate being longitudinally divided into two members which are hinged to the extremities of said center bar and provided with inwardly extended tongues adapted to be pressed between said center bar and a razor blade which is inserted beneath said retainer cap, so as to keep said members in a substantially horizontal position when said handle is screwed tightly upon said pin, but to allow said members to be brought into a substantially vertical position when said handle is loosened on said pin thus rendering both surfaces of the edge portions of said razor blade unobstructed for sharpening the blade without taking it off from the razor.

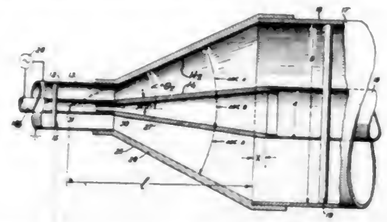


2,453,757
PROCESS FOR PRODUCING MODIFIED ELECTRONICKEL
Louis Secondo Renzoni, Port Colborne, Ontario, Canada, assignor to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware
Application August 6, 1943, Serial No. 497,601
In Canada June 12, 1943
4 Claims. (Cl. 204—37)

1. A process for producing electro-nickel having good activity as anode up to pH 5.5 (Q.) in nickel electro-plating baths and corroding as anode at pH up to 5.5 (Q.) without the production of undesirable amounts of loose nickel and sludge, which comprises purifying an electrolyte containing nickel and at least one of the group of impurities consisting of copper, iron, arsenic and lead to obtain a purified electrolyte substantially devoid of said impurities, positively introducing an effective amount of an electrolyte-soluble sulfur-bearing compound selected from the group consisting of sulfur dioxide and sulfites and acid sulfites of the alkali metals and alkaline earth metals into said purified electrolyte, electro-depositing nickel from said purified electrolyte to obtain electro-nickel containing about 0.005% sulfur to about 0.03% sulfur, and subjecting said

electro-nickel to heat treatment at temperatures of about 1500° F. to about 1800° F. in a non-oxidizing atmosphere.

2,453,758
ART OF MANUFACTURING AQUATIC DECOYS
Arthur H. Risch, Wauwatosa, Wis., assignor to Pulp Reproduction Company, Milwaukee, Wis., a corporation of Wisconsin
Application April 20, 1945, Serial No. 589,285
2 Claims. (Cl. 43—3)

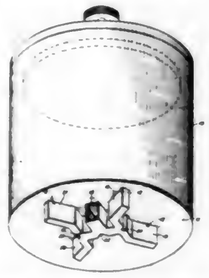


1. A molded pulp aquatic decoy comprising, a hollow molded fibrous shell having a continuous wall of substantially uniform thickness throughout and having an opening therein through which the fibrous material is admitted during molding, said wall forming the main body portion having weakened local portions projecting therefrom, asphalt coatings thickly applied to the interior surface of said shell at the local areas of weakness of said projecting portions to reinforce and waterproof the same, said asphalt being introduced to the shell interior through said opening, and means for sealing said opening.

2,453,759
TAPERED UNION FOR CONCENTRIC CONDUCTOR LINES
Albert L. Robinson, South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 20, 1943, Serial No. 514,948
1 Claim. (Cl. 178—44)

A microwave transmission line comprising two sections of coaxial conductor line having different physical sizes and arranged to have the same ratio of the inside diameter of the outer conductor to the outside diameter of the inner conductor for both said sections, and a tapered union for connecting said two sections, comprising conically tapered outer and inner conductors extending coaxially in the same direction and proportioned

so that the inside surface of the tapered outer conductor and the outside surface of the tapered inner conductor have a common apex, said tapered conductors being further proportioned so that the ratio of the angle formed between the axis of said union and the inside surface of said



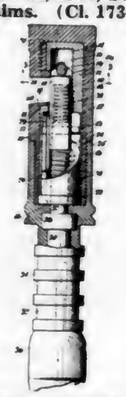
tapered outer conductor to the angle formed between said axis and the outside surface of said tapered inner conductor is substantially equal to said diametrical ratio of the two coaxial sections being connected, the length of said tapered union being comparable with the wavelength of the microwaves transmitted therethrough.

2,453,760

CAVITY RESONATOR

John C. Schelleng, Interlaken, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application March 2, 1945, Serial No. 580,517
5 Claims. (Cl. 178—44)



1. An electrical resonator comprising a hollow substantially closed cylindrical chamber adapted for sustaining within its interior space electromagnetic oscillations of a natural resonance frequency of the chamber and of a TE_{01n} mode, said chamber having plane circular end walls and having its interior space between said end walls substantially free of energy absorbing material or electrical conducting material, one of said end walls having a plurality of spaced apertures at points which are in phase agreement for oscillations of said resonance frequency and mode, and an oscillation path comprising a wave guide conduit respectively coupled to the field within said chamber at each of said apertures, said conduits each having equal rectangular cross-section with their greater transverse dimension arranged perpendicular to the plane of the apertured end wall, said conduits being all connected together at their ends remote from the respective aperture couplings to form a common rectangular transmission guide of the same major transverse dimension but of a greater dimension perpendicular to said transverse dimension.

2,453,761

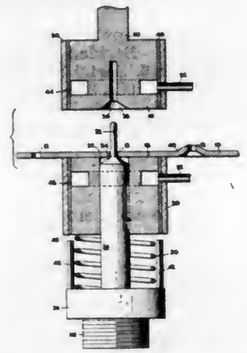
HOT LINE JUMPER CLAMP

Raymond B. Schoonmaker, Poughkeepsie, N. Y.

Application June 21, 1947, Serial No. 756,134
11 Claims. (Cl. 173—273)

1. A jumper clamp, comprising a fixed, electrically conductive jaw adapted to be placed over a conductor in electrical connection therewith; an open-ended, electrically conductive cylindrical structure extending from said jaw; a handle member mounted for axial and rotatable movement with respect to said cylindrical structure, said handle member having an electrically conductive core extending within said cylindrical structure and axially movable therein; a pressure plunger slidably mounted on said core and extending toward said fixed jaw to provide a movable jaw member for clamping said conductor against said fixed jaw; a spring for propelling said handle member and therewith associated pressure plunger toward said fixed jaw; a second spring disposed internally of said pressure plunger for exerting a thrust thereon; a sleeve fixed within said cylindrical structure in electrically conductive relation therewith, a wall of said sleeve being formed with a detent notch communicating with an upwardly extending wall opening; and a pin extending radially from said handle core and engageable with said detent to hold the handle in retracted position, with the first-named spring under compression and to disengage from said notch and enter said wall opening upon rotation of said handle to release said handle for propulsion toward said fixed jaw by action of said first-named spring, the extent of travel of said handle being such that the end of said pressure plunger will clamp said conductor against said fixed jaw; a cam track provided at the upper end of said sleeve in communication with said wall opening for engagement by said pin, said cam track and pin being effective, upon further rotation of said handle to move said handle additionally in the direction of said fixed jaw to place the second-named spring under compression to increase the said clamping pressure; and means for electrically connecting a lead wire to said jumper clamp in conductive relationship with said fixed jaw member.

2,453,762



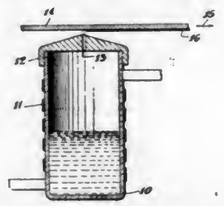
APPARATUS FOR DIMPLING SHEET METAL STOCK

Arthur A. Schwartz, Buffalo, N. Y., assignor to Bell Aircraft Corporation, Buffalo, N. Y.

Application January 27, 1945, Serial No. 574,862
2 Claims. (Cl. 153—21)

1. An apparatus for dimpling preperforated sheet metal stock, comprising an upper die formed

with a counterbore and an associated countersunk portion, a punch member having a pilot for successive engagement with the apertures of the stock, said punch member also having a conically surfaced portion for cooperation with the countersunk portion of the upper die, means for moving said die and said punch member toward each other to perform a dimpling operation on the interposed stock around the engaged aperture thereof, a workpiece supporting member slidably carried by said punch member, said upper die and said supporting member each being formed with an external annular groove, an annular metallic sleeve permanently secured to said upper



die, an annular metallic sleeve permanently secured to said member, said sleeves serving to enclose the annular grooves in said die and said member to form circulating channels for heated compressed air, an inlet conduit and an outlet conduit carried by said upper die and said member for conducting heating medium to the grooves thereof, an inlet manifold connecting said inlet conduits, an outlet manifold connecting said outlet conduits, means for heating compressed air supplied to said inlet manifold, and a jacket connected to said outlet manifold, said inlet manifold passing through said jacket to preheat the air supplied to the heating means.

2,453,763

SELENIUM RECTIFIER AND PROCESS FOR MAKING SAME

Cleveland Scudder Smith, Jr., West Orange, N. J., assignor to Samuel Ruben, New Rochelle, N. Y.

Application July 7, 1945, Serial No. 603,707
8 Claims. (Cl. 175—366)

1. A selenium rectifier unit comprising, in combination, a base plate and a layer of selenium containing a selenium halide and an alkali metal compound selected from the group consisting of alkali metal selenides and alkali metal halides, the portion of said selenium layer adjacent the outer surface thereof having a substantially higher amount of alkali metal compound therein than the portion adjacent said base plate, the outer portion of said selenium layer being substantially free from selenium halide.

2,453,764

PROTECTION OF CERTAIN NONFERROUS METAL SURFACES

Eugene Snyder, Philadelphia, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware

No Drawing. Application August 28, 1944, Serial No. 551,633
12 Claims. (Cl. 148—6.20)

1. For metallic surfaces having as a major constituent a metal chosen from the group consisting of copper, zinc and cadmium, a process for increasing resistance to corrosive influences which comprises the steps of treating the metal surface with an aqueous solution the essential active ingredients of which, per 100 ml. of solution, consist of an alkali chromate equivalent to at least 5 grams of sodium chromate and an alkali cyanide equivalent to from ½ to 10 grams of sodium cyanide, and thereafter washing the surface with a water rinse.

2,453,765

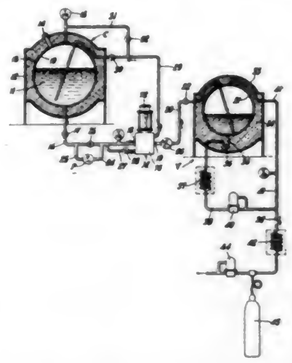
ALKYLATION PROCESS

Donald G. Stevens, Cleveland, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application April 25, 1945, Serial No. 590,310
2 Claims. (Cl. 260—683.4)

1. The process of producing a high rich mixture rating motor fuel, a very high percentage of which consists of trimethyl pentanes, which process comprises continuously treating isobutane with a butene in the presence of a liquid acid alkylation catalyst under alkylating conditions while continuously recycling a relatively large part of the isobutane in an isobutane-acid emulsion so that it re-enters the reaction zone near the entry of the butene and isobutane feed, the rate of recycling of the reaction mixture being such that the sum of the volume of the isobutane in the feed per unit time plus the volume of isobutane being recycled per unit time divided by the volume of the butene feed to the reaction zone per unit time is continuously at least 1500.

2,453,766



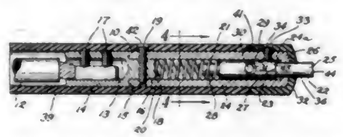
PROCESS AND APPARATUS FOR TRANSFERRING MEASURED QUANTITIES OF LIQUEFIED GAS

Russell M. Thayer, Kenmore, N. Y., assignor to The Linde Air Products Company, a corporation of Ohio

Application October 29, 1943, Serial No. 508,270
8 Claims. (Cl. 62—1)

1. A process of measuring accurately a quantity of liquefied gas of the type having a boiling point at atmospheric pressure below 233° K. when transferred from a supply container wherein it is transported at low temperature and substantially atmospheric pressure to a receiver located at a place of use, which process comprises precooling the metering elements of a volumetric liquid meter adapted to register the amount of a liquid passed therethrough to a temperature substantially equal to that of the liquid in the supply container; increasing the pressure of the liquefied gas; then forcing said quantity of liquefied gas from said supply container through the precooled

metering elements to the receiver while maintaining the pressure on said quantity of liquefied gas during such passage at a value higher than its



vapor pressure at the temperature of the liquefied gas in said supply container, whereby only the quantity of said liquid entering said receiver is measured.

2,453,767
SLED RUNNER
Merle O. Thompson, Seymour, Ind.
Application August 14, 1946, Serial No. 690,407
6 Claims. (Cl. 280—12)

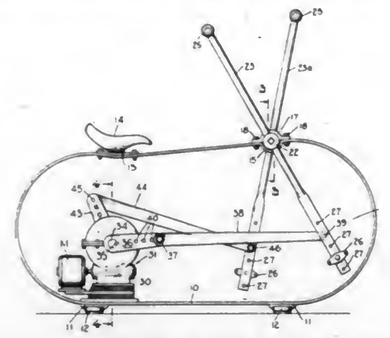
5. A sheet-metal sled runner having a laterally extended base and two flanges projecting upwardly from said base in parallel relation, said flanges having portions which are in contact with each other and secured together and other portions which are spaced apart to form pockets for the receipt of members by which the runner may be attached to a sled-body.

2,453,768
WELDING ELECTRODE HOLDER
Wayne Tinnell, Cincinnati, Ohio
Application October 18, 1946, Serial No. 704,025
12 Claims. (Cl. 219—8)

8. A welding electrode holder comprising in combination, an interior metallic cage of tubular sleeve formation having a forward end portion and a rear end portion, said cage being transversely channeled near the forward end portion to provide a seat for a welding electrode, a transversely bored clamp shaft having a free end of insulating material projecting beyond the forward end portion of the cage, said shaft being reciprocable within the bore of said forward end portion, with the bore thereof registrable with the seat aforesaid, a socket member having means for attaching an electric conductor, one end of the socket member being fixed to the rear end portion of the cage, a spring compressed between the end portion of the socket member and the opposite end of the clamp shaft, to constantly urge the free end of the shaft forwardly of the cage, and a handle of insulating material surrounding the cage.

2,453,769
PREPARATION OF PHOTOSETTING COATING COMPOSITION
Gerald L. Wendt, New York, N. Y., assignor to Sun Chemical Corporation, a corporation of Delaware
No Drawing. Original application April 27, 1944, Serial No. 533,060. Divided and this application August 21, 1946, Serial No. 692,150
8 Claims. (Cl. 204—161)

8. Method of causing rapid setting of a coating composition which comprises applying a coating composition containing a photosetting promoter and, as an essential ingredient, not less than 20 per cent of a compound having in its molecule at least two radicals of the group consisting of eleostearate and keto eleostearate radicals and from which compound a substantial amount of substances having a vapor pressure greater than that of eleostearin have been removed and subjecting such applied composition to radiation controlled to contain essentially not less than approximately 50 per cent within the wave length band 2800–3500 Å., and to exclude any substantial proportion of a wave length of a band 2450–2600 Å.



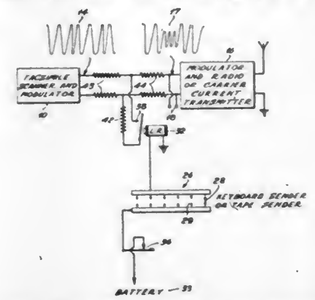
2,453,770
PREPARATION OF PHOTOSETTING COATING COMPOSITION
Gerald L. Wendt, New York, N. Y., assignor to Sun Chemical Corporation, a corporation of Delaware
No Drawing. Original application April 27, 1944, Serial No. 533,060. Divided and this application August 21, 1946, Serial No. 692,151
8 Claims. (Cl. 204—161)

8. Method of causing rapid setting of a coating composition which comprises applying a coating composition containing a photosetting promoter and, as essential ingredients not less than 20 per cent of a compound having in its molecule at least two radicals of the group consisting of the eleostearate radical and the keto eleostearate radical, and from which compound a substantial amount of substances having vapor pressure above that of eleostearin have been removed and subjecting such applied composition to radiation controlled to contain essentially not less than approximately 50 per cent within the wave length band 2450–2600 Å., and to exclude any substantial proportion of any wave length of the band 2800–3500 Å.

2,453,771
EXERCISER
Pauline Arnold White and Percival White, Long Ridge, N. Y.
Application November 29, 1946, Serial No. 712,934
13 Claims. (Cl. 128—25)

1. In a machine of the class described, motor means, a pair of limb exercising members, means mounting each of said limb exercising members for movement, motion transmitting means whereby said motor means moves each of said limb exercising members, and means whereby

said motion transmitting means varies continuously the movement of said limb exercising mem-



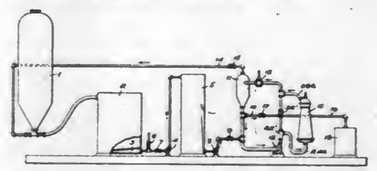
bers relatively to one another while moving each of said limb exercising members.

2,453,772
ALUMINUM COATING PROCESS
Marshall G. Whitfield and Victor Sheshunoff, Garden City, N. Y., assignors, by mesne assignments, to Fairchild Engine and Airplane Corporation, New York, N. Y., a corporation of Maryland
No Drawing. Application March 6, 1945, Serial No. 581,326
1 Claim. (Cl. 22—204)

The method of coating a copper-base article with aluminum-base metal, which consists in applying to the surface of the copper-base article to be coated a thin barrier layer of at least one of the metals of the class consisting of nickel, iron, cobalt, manganese and chromium, heating said article under non-oxidizing conditions to about 1400° F. to cause the barrier layer metal to at least partially diffuse into the underlying surface of said article, applying an aluminum-base metal in the molten state to said barrier layer while the latter is heated to at least the melting point of the aluminum base metal to form a film of said aluminum-base metal on said barrier layer, and then casting an additional coating of aluminum-base metal in the molten state upon said aluminum base film while the latter is molten, whereby the aluminum-base metal forms a continuous bonded coating of the desired thickness on said article when the former has congealed.

2,453,773
DIPLEX TRANSMISSION BY COMBINED FREQUENCY-AMPLITUDE MODULATION
Charles J. Young, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 29, 1943, Serial No. 512,175
2 Claims. (Cl. 178—5.6)

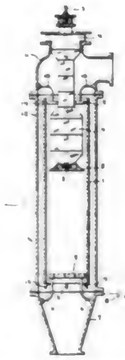
2. A facsimile signal receiving system comprising means to recover facsimile image signals, other intelligence signals and control signals from a carrier, a relay responsive to control signals, another relay responsive to control signals and said other intelligence signals, a control circuit connected to the contacts of said first named relay, an intelligence translating circuit connected to the contacts of said second named relay, said control circuit being operative to exercise a control function in response to a control signal, said intelligence translating circuit being operative also in response to control signals, and means for preventing operation of said intelligence translating



circuit when said first named relay operates initially.

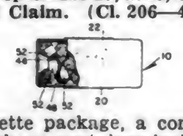
2,453,774
DEVICE FOR ADJUSTING BREAKER UNITS
Theodore J. Basista, Westfield, Mass.
Application January 24, 1947, Serial No. 724,052
1 Claim. (Cl. 33—181)

An auxiliary cam member for association with the breaker cam of the breaker unit of the ignition system of an internal combustion motor in the adjusting of the spacing of the breaker contacts thereof, which comprises a member insertable between the breaker cam and follower of the breaker unit, said member having an inner face engaging the breaker cam between two high points thereof, the outer face of said member being cylindrical and having a radius equal to the radius of the high points of the breaker cam, the circumferential extent of said cylindrical face being equal to the circumferential distance between adjacent high points of the breaker cam.



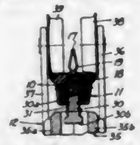
2,453,775
METHOD OF CONCENTRATING WASTE SULFITE LIQUOR WITH RECOVERY OF SULFUR DIOXIDE
Laurence R. Beath and Harold S. Hill, Kenogami, Quebec, Canada, assignors to Price Brothers & Company, Limited, Quebec, Quebec, Canada, a corporation of Canada
Application April 17, 1945, Serial No. 588,756
12 Claims. (Cl. 23—178)

1. The method of concentrating waste sulphite liquor with recovery of sulphur dioxide which comprises continuously withdrawing waste sulphite liquor from a reservoir containing waste sulphite liquor maintained at substantially the desired maximum concentration and continuously forcing the withdrawn waste sulphite liquor to flow to spaced electrodes between which is maintained a difference in electrical potential whereby



an electric current is caused to pass through the waste sulphite liquor flowing between and in contact with said electrodes thereby generating in the waste sulphite liquor the heat required for evaporative concentration, said heat being generated at a rate of less than 200 British thermal units per pound of liquor flowing between said electrodes, continuing the flow of the heated waste sulphite liquor from said electrodes and continuously separating from it the water vapor and gaseous sulphur dioxide formed by the electrically generated heat, then completing the circulation cycle by continuously returning the waste sulphite liquor remaining after the separation of water vapor and gaseous sulphur dioxide to the waste sulphite liquor contained in said reservoir, continuously bleeding off concentrated waste sulphite liquor from the circulation cycle and continuously adding dilute waste sulphite liquor to the circulation cycle and continuously withdrawing the separated water vapor and gaseous sulphur dioxide all in a manner effective to maintain the concentration of the waste sulphite liquor contained in said reservoir at substantially the desired maximum concentration.

2,453,776
ELECTRICAL CONDUCTANCE HEATER
Laurence R. Beath and Harold S. Hill, Kenogami, Quebec, Canada, assignors to Price Brothers & Company, Limited, Quebec, Quebec, Canada, a corporation of Quebec, Canada
Application May 14, 1947, Serial No. 747,920
6 Claims. (Cl. 219—40)

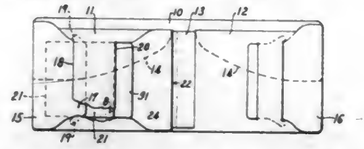


1. In an electrical conductance heater the combination comprising an elongated cylindrical pressure vessel mounted vertically having an inlet near the bottom and an exit near the top, a ceramic electrical insulating shell with open ends mounted coaxially within said pressure vessel so as to provide a space between the walls of said pressure vessel and said shell and so as to provide open communicating channels between said space and the open ends of said shell so that liquid entering said pressure vessel and flowing through said shell is free to enter and circulate through said space, grounded electrodes positioned adjacent to both of the open ends of said shell, a high tension electrode positioned within said shell and between said grounded electrodes, and an insulated electric conductor attached to said high tension electrode and extending through the upper end of said shell and thence through the casing of said pressure vessel to a terminal connection for high tension electric current.

2,453,777
IMPROVED CIGARETTE PACKAGE OPENER AND CIGARETTE EJECTOR
Leroy V. Bell, Wakefield, R. I.
Application September 19, 1945, Serial No. 617,278
1 Claim. (Cl. 206—41.2)

In a cigarette package, a comparatively thin rectangular-shape container including inner and outer wrappers and having a revenue stamp straddling one end, a pull tab positioned against the end of the package and extended under the revenue stamp, one end of said tab extending over the edge at one end of the package and downwardly against the outer surface of the end of the package, and an ejector comprising a vertically folded zig-zag strip carried by the opposite end of said tab and extended downwardly between cigarettes in the package and having an extended foot on the lower end that is positioned under cigarettes in the package, said ejector and foot adapted to raise cigarettes from the package as the ejector is drawn upwardly by the tab, said ejector being connected to the tab by a plurality of folded sections, and said foot at the lower end of the ejector having a plurality of steps lying in a common plane with said steps located alternately on each side of said ejector strip at right angles thereto and integral therewith and each step positioned under a different cigarette, two panels of said folded strip and an integral step forming an ejector portion, and all of said portions except one being separable from said ejector.

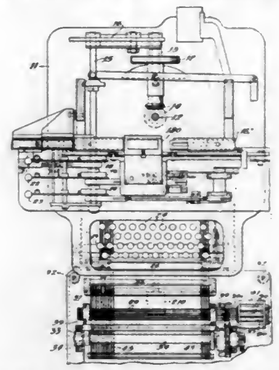
2,453,778
ELECTRICAL CONTACTING EQUIPMENT
Burtis W. Benbow, Benbow, Calif.
Application January 31, 1944, Serial No. 520,399
4 Claims. (Cl. 191—23)



1. In apparatus of the character described, an extended trolley wire, a sheath of insulating material embracing the trolley wire, strips extending along the upper face of the sheath and having portions adapted to interlock with the sheath, said strips being angle shaped to provide base wall portions extending substantially parallel with the upper face of the sheath, a traveling contacting device adapted to cooperate with the trolley wire to make electrical connection with the same, said device including a movable housing, trolley contacting means adapted to engage the trolley wire, and tracking means carried by the housing and adapted to track upon said base portions of said strips.

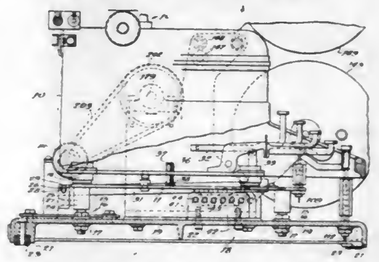
2,453,779
PREPARATION OF ALKYL HALIDES
Donald C. Bond, Northbrook, and Michael Savoy, Chicago, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application November 1, 1944, Serial No. 561,487
15 Claims. (Cl. 260—663)

1. The method of preparing alkyl halides comprising contacting a mixture of an olefin and hydrogen halide with a thorium salt at a temperature at which the olefin and hydrogen halide combine.



2,453,780
FLEXIBLE POCKET RECEPTACLE
Douglas J. Broughton, Springfield, Mass., assignor to Buxton, Incorporated, Springfield, Mass., a corporation of Massachusetts
Application August 1, 1946, Serial No. 687,757
1 Claim. (Cl. 150—38)

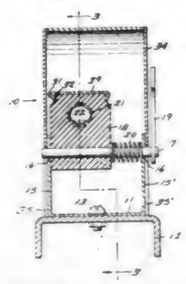
In a billfold having front and rear walls connected along their bottom and end edges to form a bill compartment, the end portions of the billfold being foldable one on the other about a transverse line of fold, the front wall including an end panel and an intermediate wall member forming a pocket, a carrier element slidably mounted in said pocket, said carrier element comprising a rear wall member having length and width dimensions substantially conforming to the interior dimensions of the pocket and a front wall member connected to the end of said rear wall member within the pocket, the portion of said front wall member adjacent its connected end being of the same width as the rear wall member, the free end portion of the front wall member being reduced in width to form shoulders at opposite points on the sides of the front wall member, a slit formed in the panel through which the reduced portion of the front wall member extends outwardly, the ends of the slit being engageable by said shoulders to limit the outward movement of the carrier element relative to the pocket, and a closure member extending from the free end of the rear wall member of the carrier element, said closure member having a width substantially equal to the width of the panel, the free end of the closure member being reduced in width and insertable in said slit when the carrier element is fully seated in the pocket to close the compartments formed between the wall members of the carrier element and the panel.



2,453,781
RECORD CONTROLLED OPERATING MECHANISM FOR EMBOSSING MACHINE KEYBOARDS
Clifton Chisholm, Forest Hills, N. Y., assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware
Application June 14, 1946, Serial No. 676,778
3 Claims. (Cl. 197—20)

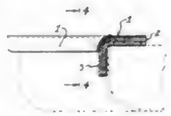
1. In a mechanism for automatically governing and operating a key controlled embossing machine, a mounting frame adapted to be rigidly associated with such an embossing machine, sensing means mounted on said frame affording a sensing station through which a control tape bearing coded data representing perforations may be passed, tape feed means mounted on said frame adjacent said sensing station and operable to impart step-by-step advancing movements to such a tape past said sensing station, a plurality of control levers pivoted on a common axis adjacent one end and individually spring urged from normal positions to control positions, a common restoring cam for all of said levers mounted for rotation on an axis parallel to the pivotal axis of said levers and operable through a one-revolution cycle to release said levers for setting movement to said control positions thereof and to then restore to normal position any lever that has so moved, a one-revolution clutch operable when engaged to drive said restoring cam through its cycle, means operatively connected to said one-revolution clutch so as to be driven concurrently with said restoring cam in its operating cycle to actuate said tape feed means, a plurality of permutation bars spring

urged toward normal positions and longitudinally shiftable to set positions disposed parallel to said axes and effective to selectively control setting movement of said levers, operating means controlled by said sensing means for shifting said bars selectively to set positions, and a plurality of control means adapted to be operatively associated with the keys of such an embossing machine and mounted on said frame for actuation selectively by the other ends of said levers upon movement of the related levers to said control positions thereof.



2,453,782
STRIP PERFORATING APPARATUS
Clifton Chisholm, Forest Hills, N. Y., assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware
Application June 14, 1946, Serial No. 676,779
11 Claims. (Cl. 164—112)

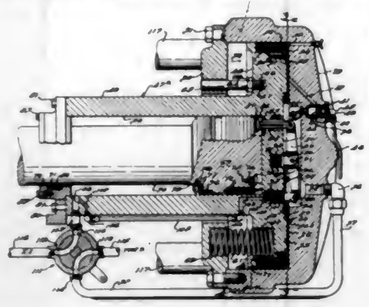
1. In a machine for forming perforations in a strip according to a predetermined code, the combination which comprises manual control elements, a series of code control means selectively operable by said manual elements in accordance with said predetermined code, a series of latches each adapted to be released by one of said code control means, an interposer associated with each of said latches adapted to be held normally by



said latch in an inoperative position, a punch associated with each of said interposers, punch operating means spaced from said punches, said interposers being adapted to be moved into operative position between said punch operating means and said punches upon release of said latches.

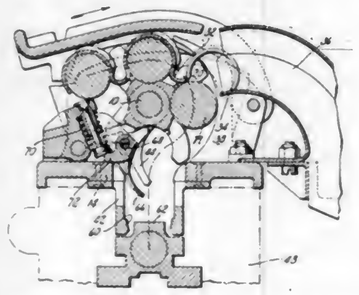
2,453,783
AUTOMATIC SHUTOFF FOR TRACTORS
Don H. Claypool, Mansfield, Ohio
Application October 7, 1947, Serial No. 778,477
3 Claims. (Cl. 180—82)

1. An automatic shut-off for tractors adapted to be connected to the tractor in the rear of the forward wheels thereof, comprising a base plate, supporting means on the base plate, a shaft journalled in the supporting means, a housing fixed to the shaft, a disconnecting means carried by said housing adapted to stop the engine of the tractor when the front wheels thereof raise from the ground, and means for setting the housing so that the disconnecting means will operate at predetermined levels.



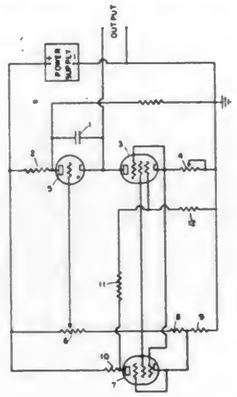
2,453,784
SANITARY COVER AND CUSHION FOR SHAMPOO BOARDS
Frank J. Conjurske, Sturgeon Bay, Wis.
Application November 10, 1945, Serial No. 627,835
1 Claim. (Cl. 4—159)

A neck protector and absorbent pad for shampoo boards, comprising a U-shaped fiber or paper collar adapted to be nested about the neck of the patron, a rectangular thick flat absorbent pad, the same being cut back to form a down-turned front wing with end ears at a right angle to the same, and means for attaching the ears to the removable collars.



2,453,785
HOLDING APPARATUS WITH PISTON THROUGH WHICH PRESSURE FLUID IS PASSED
Walter P. Cousino, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Continuation of application Serial No. 516,194, December 30, 1943. This application October 18, 1946, Serial No. 703,959
15 Claims. (Cl. 60—54.5)

10. A device for shifting a part to a certain position and for holding with force the part in the said certain position, said device comprising a housing, a piston mounted within the housing and having a through passage, means for supplying fluid under pressure to the housing and through the passage in the piston to act against the said part and moving the part to its certain position, a valve positioned at the passage in the piston, a pressure-responsive member mounted in the end of the piston, means connecting the valve and the pressure-responsive member for causing movement of the pressure-responsive member due to a predetermined elevated pressure of the fluid in

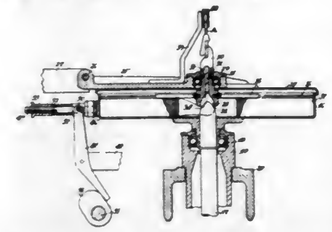


the housing due to arrival of the part at its certain position to close the valve and thereby to lock fluid between the piston and the part, means for thereafter causing a still greater pressure of the fluid to shift the piston for applying pressure to maintain the part in its predetermined position, and means for thereafter supplying fluid under pressure to the pressure-responsive member to move the pressure-responsive member and thereby open the valve at the passage in the piston for allowing fluid to escape through the passage in the piston.

2,453,786
FEED MECHANISM FOR RAPID-FIRE GUNS
Paul H. Dixon, Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application April 24, 1946, Serial No. 664,609
1 Claim. (Cl. 89—33)

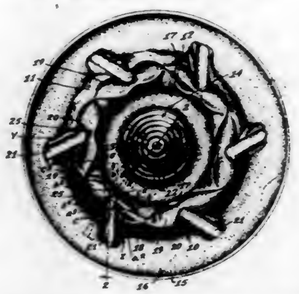
The combination, with a gun having a reciprocating breech bolt and a receiver into the top of which cartridges are fed downward, of motor driven means for feeding an ammunition belt to the top of the receiver, means for separating a cartridge from the belt, cartridge supporting ways in the receiver adjacent to the breech bolt, loading fingers beneath the belt feeding means for receiving the separated cartridge, means for actuating the fingers to force said cartridge down upon said ways, and a retaining finger for holding said cartridge down on the ways until it is removed therefrom by the breech bolt during counter-recoil.

2,453,787
SAW-TOOTH VOLTAGE GENERATOR
George W. Downs, Jr., Pasadena, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Application May 23, 1944, Serial No. 536,967
2 Claims. (Cl. 250—36)



1. A sawtooth voltage generator, comprising a first pentode tube having an anode, a cathode, and a control grid, a first resistor connected to said cathode, a power supply, a capacitor connected to be charged from said power supply through the tube and the resistor, a gaseous discharge device connected across the capacitor to discharge the same when a predetermined voltage is reached; a second pentode tube having an anode, a cathode, and a control grid, means including a second resistor connecting the anode of the second pentode to the positive side of the power supply, means connecting the cathode of the second pentode to the negative side of the power supply, means to apply to the control grid of the second pentode the potential variations at the high potential end of the first resistor, and means to apply to the control grid of the first pentode the potential variations at the low potential end of the second resistor.

2,453,788
POLYMERIZATION OF OLEFINIC COMPOUNDS
Leonard Fallows and Eric Vernon Mellers, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application September 21, 1944, Serial No. 555,206. In Great Britain September 7, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 7, 1963
8 Claims. (Cl. 260—83)



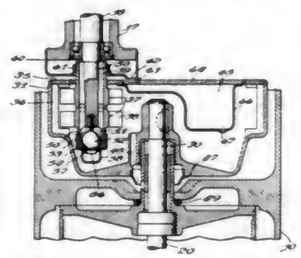
1. In a process for polymerizing in an aqueous medium a substance selected from the class consisting of esters and nitriles of acrylic and methacrylic acids to obtain a homo-polymer, the step of initiating the polymerization of the substance by means of potassium meta-bisulphite.

2,453,789
TWINEMAKING MACHINE
Harold Flater, deceased, late of Norrkoping, Sweden, by Nils Berglund, administrator, Djursholm, Sweden, and Ernst Teodor Waernhoff and Nils Gunnar Franson, Norrkoping, Sweden; said Harold Flater and said Ernst Teodor Waernhoff and Nils Gunnar Franson, assignors to International Harvester Company, a corporation of New Jersey
Original application June 15, 1946, Serial No. 677,020. Divided and this application December 9, 1947, Serial No. 790,644. In Sweden June 25, 1945
12 Claims. (Cl. 57—31)

1. A spinning disk comprising a rotatable receptacle adapted to rotatably support a spool of strip material, a spindle connected to rotate said receptacle, and a stationary cover hingedly connected to close said receptacle, said cover including a former rotatably carried thereon, said former being provided with a narrow annular bore in junction with an enlarged cup-shaped opening in communication with the interior of the receptacle.

2,453,790
ASH TRAY
Harold M. Foddy, Colrain, Mass.
Application June 22, 1942, Serial No. 447,892
4 Claims. (Cl. 131—240)

4. An ash tray which comprises a member having an annular elevated rim portion and a central dome portion with an annular ash receiving trough between the rim and dome, a portion extending outwardly from the rim portion and formed with an outwardly and downwardly inclined groove having sharply defined inner and outer edges, the surface of the rim between said edges being depressed, said outer edge including portions converging downwardly to the inner end of said groove, said inner edge including portions converging downwardly to a seat for the burning end portion of a cigarette, said seat being positioned at a lower elevation than the adjacent end of the groove, the inner end of the groove and said dome providing means for supporting a cig-



arette in bridging relation to one of said downwardly converging portions of said inner edge at one side of said seat, said bridged edge forming a guide to direct the burning end portion of the cigarette into said seat when released from the dome, one edge of said groove and the opposite downwardly inclined portion of the outer edge providing points of support forming a seat for the mouth end portion of the cigarette when the burning end portion is seated in said first seat, a line passing through the points forming the second seat making an angle less than a right angle with a line connecting the centers of the seats to impose a torque tending to twist the cigarette from the first seat when a major portion of the weight of the cigarette is imposed on the points forming the seat at the mouth end portion of the cigarette, the other of said downwardly converging portions of said inner edge adjacent the first seat forming a guide for directing the burning end portion of the cigarette upwardly to a position of rest on said inner edge on a line in the vertical plane of the axis of said groove.

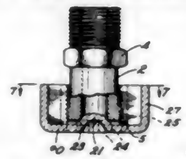
2,453,791

FLUID CLUTCH, GOVERNOR CONTROLLED

William H. Harstick, Richmond, Ind., assignor to International Harvester Company, a corporation of New Jersey

Application December 31, 1943, Serial No. 516,568
11 Claims. (Cl. 192—58)

1. A power transmitting means comprising in combination with a power furnishing means, a vaned fluid coupling member, a second fluid coupling member mounted for rotation, said member having a channel adapted to contain a body of liquid, vanes in said channel, said first-named fluid coupling member projecting into said second fluid coupling member with the vanes thereof closely spaced with respect to the vanes in the channel, a centrifugal fluid pumping device carried by one of said fluid coupling members, an inlet to said device disposed in the fluid in said second fluid coupling member, said pumping device being formed to develop a pressure proportional to the speed of the first-named fluid coupling member, a fluid container, means for delivering fluid from the pumping device to said container, and means for continually delivering liquid from the container to the fluid coupling member.



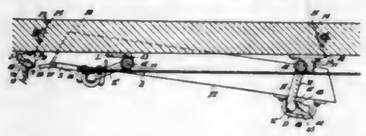
2,453,792

DRAIN COCK

George H. Hufferd, Shaker Heights, and Norbert C. Beerli, Mayfield Heights, Ohio, assignors to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio

Application May 15, 1944, Serial No. 535,610
2 Claims. (Cl. 137—34)

2. A closure for a threaded tube end comprising a drawn sheet-metal member having a bottom wall, a pair of arcuate walls integral with and projecting from the bottom wall, the interior surfaces of said arcuate walls facing each other and defining a substantially cylindrical surface, and connectors U-shaped in cross-section integral with the bottom wall and the adjacent side edges of said arcuate walls and projecting substantially radially therefrom, said connectors having the inner surfaces of their leg portions disposed relative to each other so that the adjacent side edges of said arcuate walls are disposed in close prox-



imity to each other, the interior surfaces of said arcuate walls having threads cut therein for engagement with the threaded end of said tube, said bottom wall having its central portion indented to engage and close the end of said tube when said member is screwed home, said bottom wall being formed with openings therethrough spaced radially from the indented portions and adapted to be brought into communication with said tube when said member is partially unscrewed.

2,453,793

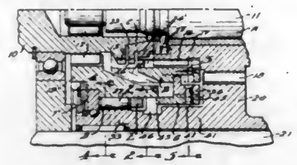
REFRIGERATOR CAR DOOR

John J. Hveem, Maywood, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware

Application September 3, 1943, Serial No. 501,057
2 Claims. (Cl. 20—23)

2. In a door construction for refrigerator cars having a wall member provided with a door opening, the combination with a sliding door movable laterally to close said opening; of a guide track on the car extending lengthwise of the same; a rotary crank member supporting the door at the leading end thereof, said crank member being slidably connected to said track; releasable latch means frictionally held in latching engagement by the weight of said door for holding said crank member against accidental rotation, when the door is disposed outwardly of the door opening parallel to said car wall; and means actuated by sliding closing movement of the door for forcibly swinging said crank member to release said latch means and actuate the crank member to move the door laterally into said door opening.

2,453,794



POWER TRANSMISSION

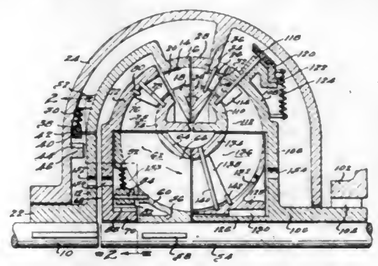
Teno Iavelli, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware

Original application March 14, 1945, Serial No. 582,671. Divided and this application September 13, 1946, Serial No. 696,703
6 Claims. (Cl. 74—333)

1. In a transmission, a driving shaft; a driving gear adapted to be driven by said driving shaft; a

driven gear coaxial with said driving shaft and driving gear; a set of clutch teeth drivingly connected with said driving gear; a second set of clutch teeth drivingly connected with said driven gear; a sleeve carrying one of said sets of teeth, said sleeve being shiftable from a first position to a second position thereof whereby to shift the teeth carried thereby from a position of disengagement with respect to the other of said sets of teeth into a position of interengagement with said other set of teeth thereby drivingly connecting said driving and driven gears in direct drive relationship; means for driving said driven gear at reduced speed from and with respect to said driving gear, said reduction driving means comprising a first countershaft gear meshed with said driving gear and a second countershaft gear coaxial with said first countershaft gear and meshed with said driven gear, and overrunning clutch means operably connecting said countershaft gears, said overrunning clutch means being so constructed and arranged as to permit said second countershaft gear to overrun said first countershaft gear when said driving gear is driving said driven gear in said direct drive relationship, said overrunning clutch means comprising a plurality of friction

driving elements and a cage therefor; means operating to rotatably bias said cage about the axis of said countershaft gears and in a direction for moving said friction elements into positions effecting one-way friction drive connection of said countershaft gears; a cage operating structure comprising a first portion thereof operably connected with said sleeve for effecting shift of said cage operating structure in the direction of the axis of said countershaft gears in response to the aforesaid shift of said sleeve from its said first position to its said second position and a second portion thereof formed with a cam face, said cage having a portion thereof formed with a cam face adapted for engagement by the aforesaid cam face, said cam faces being so constructed and arranged that, when said cage operating structure is shifted as aforesaid, said cage is rotatably operated relative to said cage operating structure in a direction opposite to that effected by said biasing means thereby moving said friction elements into positions for preventing establishment of said one-way friction drive connection between said countershaft gears.



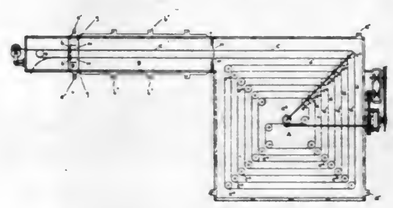
2,453,795

FLUID TORQUE CONVERTER, INCLUDING MULTIPLE ENERGIZING AND ENERGY ABSORBING ELEMENTS

Joseph Jandasek, Highland Park, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware

Application October 11, 1943, Serial No. 505,806
9 Claims. (Cl. 60—54)

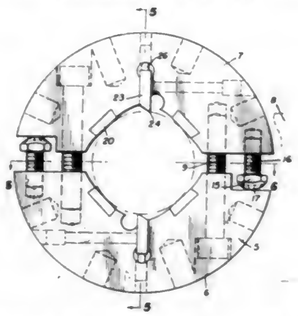
1. In a fluid transmission, a driving shaft, a primary impeller fixed to the driving shaft, a secondary impeller, one-way driving means for coupling the primary and secondary impellers, a driven shaft, a primary turbine fixed to the driven shaft, a secondary turbine, one-way driving means for coupling the primary and secondary turbines, a primary guide wheel associated with the driven shaft, a secondary guide wheel, one-way driving



means for coupling the primary and secondary guide wheels, a stationary member, and one-way driving means for coupling the primary guide wheel and said stationary member.

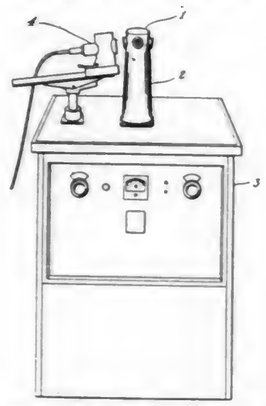
2,453,796

TEXTILE STEAMING OR AGEING MACHINE



Curt Jellinek, County of Glamorgan, Wales, now by judicial change of name Curtis Marcell Elliott

Application April 4, 1946, Serial No. 659,449
In Great Britain April 16, 1945
2 Claims. (Cl. 68—5)

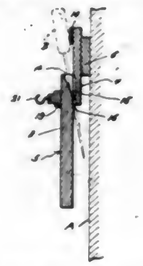


1. A steaming machine of the continuous type for textile fabrics comprising a main chamber in which the fabric is steamed, supports for said chamber to raise the level of its base, an antechamber through which the fabric passes into and out of the main chamber to prevent the escape of steam and assist in maintaining air free conditions in the main chamber, the base of the antechamber being inclined upwards from below the main chamber to level with the base thereof, an endless travelling means for carrying the fabric through the antechamber and the main chamber, suspension devices carried by said means from which the fabric is suspended, and a trackway in the antechamber and main chamber for supporting and guiding the endless travelling supporting means, the trackway in the main chamber being a "meander," i. e. a series of straight paths at right angles to one another gradually decreasing in length until the supporting means approaches the centre of the chamber when the direction is reversed and is continued outwardly in a second series of straight paths at right angles to one another gradually increasing in length, the second series being between the corresponding portions of the first series whereby the portion of the fabric travelling inwardly will not come into contact with or rub against the portion travelling outwardly provided the two series are suitably spaced apart.

2,453,797
CRANKSHAFT DRESSING TOOL
Marshal D. Johnson, Abilene, Tex., assignor of fifty per cent to Oran Elmore, Abilene, Tex.
Application January 14, 1947, Serial No. 721,913
3 Claims. (Cl. 82—4)

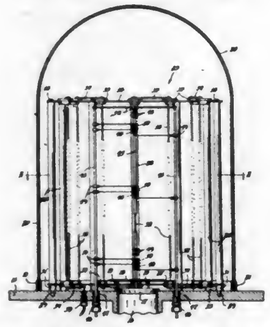
1. A rotary cutting and burnishing tool comprising a pair of complementary semi-circular sections, a cutting blade mounted in each section in diametrically opposed relation to each other, a burnishing insert located on each side of the cutting blades, the inserts of one section being diametrically opposed to the inserts of the other section and means within the confines of the periphery of the sections for clamping the semi-circular sections together and comprising bolts drawing the sections together, and stops threaded in each section parallel to an adjacent bolt and including micrometer heads abutting an opposite section.

2,453,798
X-RAY APPARATUS
Gerard Kloos, Mount Vernon, N. Y., assignor, by mesne assignments to Philips Laboratories, Inc., Irvington-on-Hudson, N. Y., a corporation of Delaware
Application June 2, 1944, Serial No. 538,515
3 Claims. (Cl. 250—89)



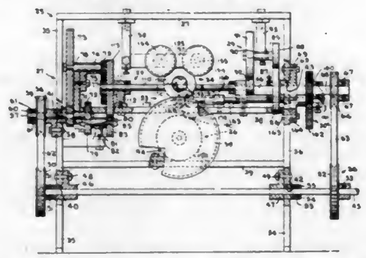
1. An X-ray apparatus comprising a vertically mounted housing open at the top end thereof, a tube, having a vertically disposed anode, insertable into said open end, a base on said tube adapted to rest on top of said housing and bearing the anode in fixed relation thereto, cooling conduits in said housing for carrying a cooling medium, cooling conduits in said base, electrical contact members comprising two spring members positioned in spaced relation within said housing, a tube envelope having a bell-shaped portion adapted to fit over said spring members, two electrical contact members on said bell-shaped tube portion insulated with respect to each other and adapted to engage said spring members upon insertion of said tube into said housing, apparatus for recording X-radiation in fixed position relative to said anode and guide members on said housing adapted to abut recessed portions of said tube base for precisely and reproducibly positioning said anode in said housing with respect to said recording apparatus without altering the relation of the recording apparatus to the housing and to assure positive alingment of said cooling conduits in said tube base and the housing and to assure electrical contact between said contact members on said tube and said spring members.

2,453,799
AIR GUN
Arthur F. Lovering, Northampton, Mass.
Application May 24, 1946, Serial No. 672,004
4 Claims. (Cl. 124—15)



1. In an air gun, a barrel, an air compression cylinder secured within the barrel adjacent the breech end thereof, a shooting tube within the barrel, the forward end of said tube being fixed to the forward end of the barrel, said tube extending from the forward end of the barrel to the air compression cylinder and opening thereto, a plunger reciprocably mounted within the air compression cylinder, a spring surrounding the shooting tube between the forward end of the barrel and the compression cylinder, means movable longitudinally of the fixed shooting tube and engaging the forward end of the spring, said means having portions extending rearwardly of the compression cylinder, means connecting said portions to the breech end of said plunger, means to retract the plunger against the action of said spring, a latch releasably holding said plunger in retracted position, and trigger means for releasing said latch.

2,453,800
KNIFE RACK
George Henry Lowell, Jr., South Portland, Maine
Application June 15, 1945, Serial No. 599,710
2 Claims. (Cl. 211—60)

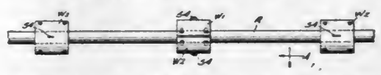


2. A kitchen appliance comprising a back panel, a front panel connected to the back panel and overlapping at its upper portion, the lower portion of the back panel, the upper inner portion of the front panel being beveled, the lower portion of the back panel opposed to the beveled portion being chamfered to allow for the disposition of cutlery blades between the opposed portions of the panels, the upper portion of the back panel being provided with a horizontal cleat against which cutlery handles can bear.

2,453,801
METHOD AND APPARATUS FOR COATING BY THERMAL EVAPORATION
Raymond P. Mattern, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application July 27, 1944, Serial No. 546,866
9 Claims. (Cl. 117—106)

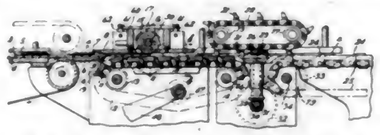
9. In a process for evaporatively coating a plurality of objects with uniform films of equal thickness comprising the steps of: mounting the objects to be coated cylindrically about a central axis in predetermined spaced relation; mounting, in predetermined spaced relation along the central axis, a plurality of evaporable pellets having such predetermined weights that evaporation of the pellets coats each of the objects with a uniform coating of predetermined equal thickness; evaporating the pellets to completion to deposit the substance on the objects; and rotating the pellets with respect to the objects to aid in obtaining the uniform coatings of predetermined equal thickness on the objects.

2,453,802
SPINNING MACHINE
Daniel W. Maxham, Hogansville, Ga.
Application September 6, 1945, Serial No. 614,642
10 Claims. (Cl. 57—36)



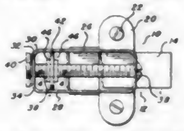
1. In a spinning machine, strand fibre twisting means, including a rotatable member having a central opening and spaced-apart twist pins projecting into said opening; placer means to project fibres from strand material into the paths of said twist pins and disposed closely adjacent said twister means; carrier means to convey a strand material to said placer means; plucking means to intermittently urge strand material to said carrier means, and means to steadily urge strand material to said plucking means.

2,453,803
PROPELLER BLADE
James T. McCormick, Topeka, Kans.
Application December 13, 1943, Serial No. 514,105
2 Claims. (Cl. 170—160)



1. In a propeller, a hub, sockets extending radially of said hub, blades having shanks rotatably carried by the sockets in said hub and mounting the blades for balanced variable pitch, a shoulder surrounding the shank of each blade within the socket receiving the same and provided with a cam surface extending about the shank, rollers in the sockets for acting upon the cam of the shank for the production of a turning movement, cooperating abutments exterior of the hub and blades for limiting the turning movement in either direction and stabilizers carried by said blades, each stabilizer consisting of a horn-shaped support carried by the companion blade, said support having a rounded enlarged end extending outwardly of one side of the blade and a small pointed end extending outwardly of the opposite side of the blade in diagonal relation thereto, and an airfoil carried by the small pointed end of said support in transverse spaced relation to the blade, while a weight is mounted in the rounded enlarged end of said support.

2,453,804
MOLD FOR CONCRETE WEIGHT FOR IRON PIPE LINES
George W. McDearmon, Baton Rouge, La.
Application June 25, 1946, Serial No. 679,216
4 Claims. (Cl. 25—118)



1. A mold for making articles in half sections to be joined together to form a unit, comprising a pallet, a hollow core rising from the center of said pallet, hollow partitions extending from opposite sides of said core, said core having perforations toward its upper and lower ends to establish communication between its interior and the interiors of said partitions, an inlet for a fluid heating medium opening into the lower end of said core, outlets for said heating medium in the upper ends of said partitions and the top end of said core, and body sections supported on said pallet at opposite sides of said core and said partitions.

2,453,805
GUM BREAKING MACHINE
Carl E. Melhorn, Springfield, Mass., assignor to Package Machinery Company, East Longmeadow, Mass., a corporation of Massachusetts
Application May 2, 1947, Serial No. 745,567
6 Claims. (Cl. 107—7)

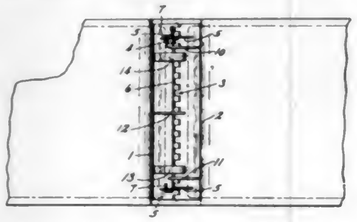
1. In a gum breaking machine for severing pieces of gum from slabs along score lines, extending from side to side of the slab, to form individual gum sticks; a channel along which the slabs are continuously moved, gum breaking mechanism positioned above the channel, a conveyor traveling continuously below the channel, said conveyor having portions moving flush with the floor of the channel and downwardly and rearwardly inclined portions intermediate said first portions, means actuating said breaker as an inclined portion of the conveyor passes beneath the leading unsevered gum stick in the slab to sever said stick and deposit it on said inclined portion of the conveyor, and a variable driving means, driving the conveyor at substantially the speed of the gum slab during the breaking operation and at a greater speed between breaking operations.

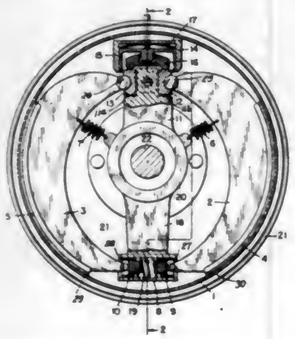
2,453,806
ADJUSTABLE WINDOW SHADE BRACKET
Wilbert Patterson Moore, Worland, Wyo.
Application September 7, 1945, Serial No. 614,980
1 Claim. (Cl. 248—271)

A device of the character described, comprising a cross shaped body having a vertically positioned portion and a horizontal positioned portion secured to the vertically positioned portion centrally thereof, inturned ends on said horizontally positioned portion to space said body portion from the window casing on which it is to be mounted, a screw housing, an offset downwardly extending tongue on said housing adapted to be inserted in the space intermediate of said horizontally positioned portion and said window casing on opposite ends of said vertically positioned portion, a screw member rotatably mounted in said housing longitudinally thereof, a windowshade bracket slidably mounted on said screw member for longitudinal movement thereon and screw nuts positioned on the screw member on opposite sides of the bracket to permit adjustment and retenture of said bracket on said screw member.

2,453,807
THREE-PRONG LOOSE-LEAF BINDER
Joseph A. Murray, Bethesda, Md., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts
Application March 15, 1945, Serial No. 582,863
2 Claims. (Cl. 129—17)

1. A prong type binder mechanism comprising pivoted angle plates carrying oppositely disposed prongs overlying substantially the entire back binder portion when in closed prong position, latch means to hold the plates in prong closed condition and release them for prong open condition for threading the paper sheets on and off the prongs, such mechanism being characterized by having two prongs extending from one plate and a single prong from the other plate to bind sheets of but three punched holes, and two cooperating supporting means extending from the





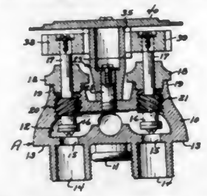


plate having the single prong and in position to support sheets from their bottom edges as they are threaded off the two prongs to the single prong side and back again, such supporting members being positioned when in prong closed position one near each of said two prongs and widely spaced from each other with the single prong arranged between them, such single prong and supporting members being mounted as overhanging projections from one only of said angle plates.

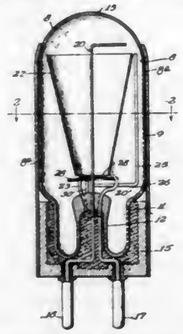
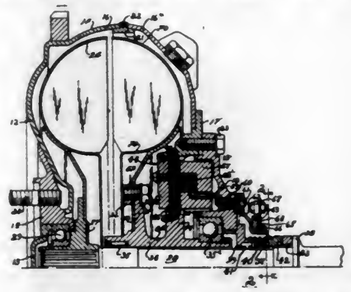
2,453,808
HYDRAULIC BRAKE
Nils O. Myklestad, Pasadena, Calif.
Application February 12, 1947, Serial No. 727,960
7 Claims. (Cl. 188—152)



1. In a brake for a rotating cylindrical drum; an arcuate shoe adapted to be moved into engagement with the inner surface of said drum; a separate mounting member for each end of the shoe, said mounting members providing for at least limited movement of said shoe in a direction generally parallel to a chord through the ends thereof; an actuating arrangement for moving the member at one end of the shoe in a direction generally normal to said chord to cause engagement of that end of the shoe with the drum with a desired actuating force; and means operative on the other mounting member for urging it generally radially inwardly with a force having a predetermined ratio to said actuating force.

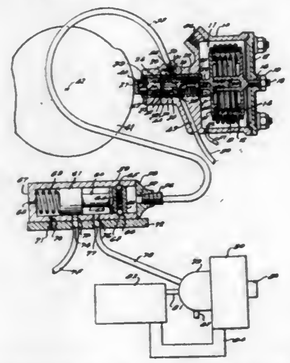
2,453,809
LIQUID MIXING VALVE
Keepers M. Newcomer, Pittsburgh, Pa.
Application May 23, 1947, Serial No. 750,035
5 Claims. (Cl. 277—18)

1. A mixing valve of the kind described, comprising a body having a liquid mixing cavity therein, valves controlling admission of several liquids to the cavity, a single discharge spout on the body and leading from said cavity, stems operating the valves, gears fixed to the stems for turning the same, an inwardly and outwardly slidable and reversely rotatable gear, intermediate of and meshing with the said gears, a stem threadably connected to said last mentioned gear, a link connected to said stem and means connected to said link which is manually operated to actuate the slidable and reversely rotatable gear.



2,453,810
PHOTOELECTRIC TUBE
Max Orlove, Chicago, Ill., assignor to Smith Industries, Chicago, Ill., a corporation of Illinois
Application May 2, 1945, Serial No. 591,560
7 Claims. (Cl. 250—165)

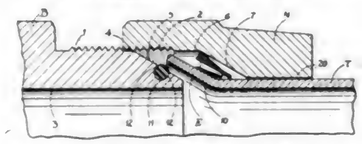
3. A photo-electric tube comprising: a sealed envelope provided with an end portion pervious to light; a cathode extending longitudinally in the envelope and provided with a photo-electric light-sensitive material on its inner periphery for receiving light from said light-pervious portion; and a combined anode and magnet in the envelope.



2,453,811
COMBINATION FLUID COUPLING AND FRICTION CLUTCH
Gordon R. Pennington, Bloomfield Hills, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application March 17, 1944, Serial No. 526,908
16 Claims. (Cl. 192—3.2)

1. In combination, a rotating member, a stationary member held in contact with the rotating member for transmission of electrical current between the members, a conductor connected at one end to the stationary member and having its other end curved, a fixed conducting part having a curved surface, and means including a securing element having a curved surface for connecting the conductor to the fixed conducting part by

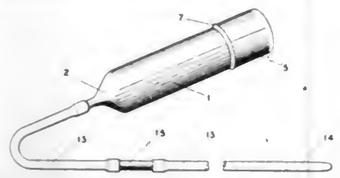
holding the curved end of the conductor between the curved surface of the fixed conducting part and the curved surface of the securing element, the curved surfaces and curved end permitting the necessary shifting of the conductor to accommodate axial movement of the stationary member.



2,453,812
ACTUATING VALVE WITH OPPOSED UNEQUAL AREAS
Hubert S. Phelan, Berkley, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application May 15, 1944, Serial No. 535,604
3 Claims. (Cl. 121—38)

1. In combination, a member having an intermediate reduced portion and opposed areas of different size at the reduced portion, means tending to make an increase to a certain magnitude of the force applied in one direction to the member move the member in the said one direction to a certain position, means for supplying fluid under pressure to the reduced portion of the member upon its arrival in the said certain position after movement in the said one direction for causing by action of the pressure fluid against the areas of different size the member to be shifted positively and suddenly in the said one direction from the said certain position and to be held from being shifted in the opposite direction to and beyond the said certain position until lowering of the force applied to the member to a value definitely lower than the said certain magnitude, an

actuator shiftable to produce a change between first and second conditions, and means connecting the actuator and the member so as to cause the pressure fluid reaching the reduced portion of the member upon its assumption of the said certain position or therebeyond in the said one direction to pass the reduced portion and to act against the actuator for producing the shift from the first condition to the second condition and to cause the pressure fluid to be blocked from reaching the actuator by the member upon return of the member in the opposite direction to the said certain position or therebeyond for producing a shift from the second condition to the first condition.



2,453,813
COUPLING
Warren V. Prince, Euclid, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application October 22, 1945, Serial No. 623,709
2 Claims. (Cl. 285—86)

1. A coupling for a tube having a substantially conically formed flared end comprising coupling members in threaded engagement having respectively parts with annular convex and concave substantially conical surfaces adapted to be juxtaposed to complementary surfaces of the flared end of the tube, the part with the convex surface having an annular groove facing and adapted to enter the flared end of the tube, a yieldable packing ring of substantially circular cross-section disposed in said groove having a greater idle diameter than the depth of said groove whereby to have a surface tending to stand above said convex surface, a conically formed resilient washer loosely fitting the exterior of the tube adjacent the flared end thereof and aligned therewith between the flared end of the tube and the said concave surface of one of said coupling members, said washer having circumferentially spaced resilient portions engaged by the flared tube end at certain zones and by the concave coupling member at zones circumferentially spaced therefrom so that the washer may be resiliently stressed between the flared end of the tube and said concave surface, the flared end of the tube having fluid sealing contact with said ring on its inwardly disposed face and having resilient supporting engagement with said washer on its opposite face when said members are screwed together, said washer not only resiliently pressing the flared end of the tube against said sealing ring but also inhibiting rotation between the tube and the member having contact with said washer.

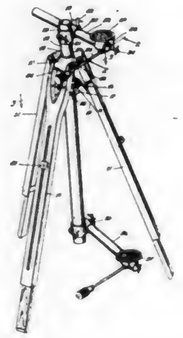
PEDIATRIC SYRINGE
Francis T. Roberts, Detroit, Mich.
Application July 12, 1947, Serial No. 760,591
1 Claim. (Cl. 128—227)

A pediatric syringe comprising: a tubular member open at one end and having a restricted opening at the other end; a cup-shaped closure member telescoping said tubular member at said open end for removably closing said open end, said closure member having an internal diameter from about 0.001 inch to about 0.003 inch greater than the external diameter of said tubular member; whereby the rate of air flow between the inner surface of the closure member and the external surface of the tubular member may be accurately regulated by varying the extent of telescoping

of the tubular member by the closure member, and when the tubular member is in a position such that the open end of said tubular member is above the restricted end thereof the flow of liquid within the tubular member out of the restricted opening may be closely and accurately regulated by axial movement of said closure member on said tubular member.

2,453,815
SELF-SYNCHRONOUS SYSTEM FOR REPRODUCING MOTION OR POSITION
Emmett P. Rodemann, Jamaica, N. Y., assignor to Bendix Aviation Corporation, Brooklyn, N. Y., a corporation of Delaware
Application February 9, 1945, Serial No. 577,092
10 Claims. (Cl. 318—30)



1. In a position reproducing apparatus of the character in which signals proportional in magnitude to the angular departure of a rotatable output member from synchronism with respect to a rotatable input member are generated by rotatable electrical devices which are drivingly interconnected to each other and to a multiphase power motor, a source of fixed phase current and an amplifier having a variable voltage output for energizing two phases of said power motor; switch means for automatically connecting the input side of said amplifier to the electrical circuits of one or the other of said rotatable devices, depending upon the degree of angular departure of said output member from the angular position of said input member; means for energizing said amplifier; means for normally maintaining one phase of said power motor disconnected from said source of fixed phase current; and control means, automatically operable after lapse of a predetermined length of time of energization of the plate and filament circuit of said amplifier, to connect said one phase of said power motor to said source of fixed phase current.

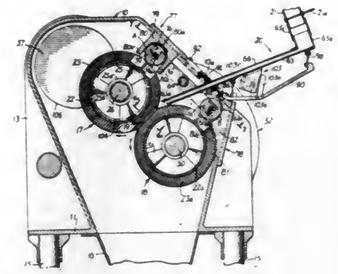
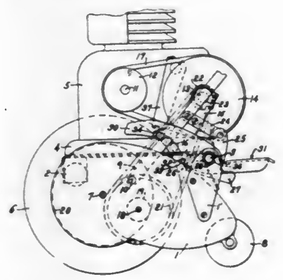
RUST PREVENTIVE SLUSHING COMPOUND FOR CARTRIDGE CLIPS
Hans Schindler, Evanston, and Paul T. Anderson, Park Ridge, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application July 10, 1944, Serial No. 544,328
4 Claims. (Cl. 106—14)

1. A slushing oil composition consisting of from 15–30% by weight of lead-wool grease soap having a neutralization number of about 3, from 30–50% by weight of mineral oil having a viscosity at 100° F. of from 60 to 150 seconds Saybolt, from 1–3% by weight of a higher alcohol ester of an alkali metal sulfo-succinic acid and the balance a low-boiling hydrocarbon liquid having a flash point of at least 100° F.



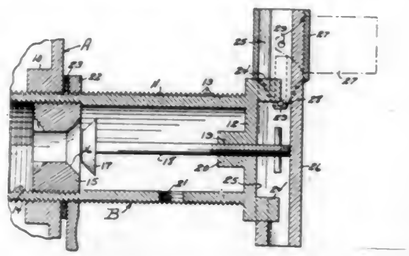
2,453,817
TRIPOD
George Shalkhauser, El Paso, Tex.
Application September 12, 1946, Serial No. 696,440
2 Claims. (Cl. 248—183)

1. A tripod including a main supporting member having an opening therein, a plurality of legs secured to said member for supporting the same, a vertical member adjustably positioned in said opening and adapted to extend above and below said supporting member, a crosshead adapted to be secured to said vertical member at various positions above and below said supporting member, a horizontal crossarm adjustably supported on said crosshead, and mounting means adjustably supported on said crossarm, said mounting means being adapted for independent swivel movement about the longitudinal axis of said crossarm and being also adapted to turn bodily with the crossarm about said longitudinal axis.



2,453,818
METHOD AND APPARATUS FOR DESTROYING INSECT LIFE
Franklin S. Smith, North Haven, Conn.
Application October 27, 1943, Serial No. 507,772
13 Claims. (Cl. 21—2)

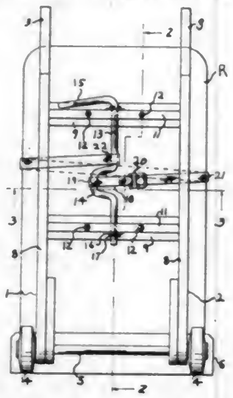
1. In apparatus for effecting the destruction of all insect life in a flowable product composed of individual solid parts, the combination of, a pair of treating rollers covered with a resilient material, said rollers having their peripheries in engagement so that the resilient material at the nip between the rollers is partially compressed to form a pressure area for the treatment of said product at the nip of said rollers, means to feed an even stream of said product to said nip, means for rotating said rollers at a substantial rate of speed so that as said product passes therebe-



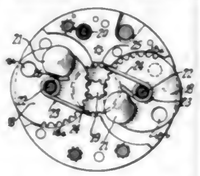
tween every individual particle of insect life in said product is crushed in said pressure area, the pressure in said area however being of a value insufficient to crush any substantial part of said product, and means for dissipating heat generated by said rollers.

2,453,819
POWER LAWN MOWER AND CONTROL MECHANISM THEREFOR
Wilfred I. Smith, Chicopee Falls, Mass., assignor to Savage Arms Corporation, Utica, N. Y., a corporation of Delaware
Application December 20, 1946, Serial No. 717,457
11 Claims. (Cl. 180—19)

1. Control mechanism for the belt transmission of power driven lawn movers and the like comprising in combination, a wheel supported main frame, a guiding handle pivotally connected to said frame for free swinging movement between up and down positions, said frame carrying thereon a motor and its drive shaft and also carrying a shaft for being driven thereby, a releasable driving connection between said motor shaft and driven shaft, means to shift said connection to operative condition for driving and to inoperative conditon for non-driving, a foot pedal operable through said shifting means to shift said driving connection into its operative condition, said shifting means being operable by said guiding handle to shift said driving connection to its inoperative condition.



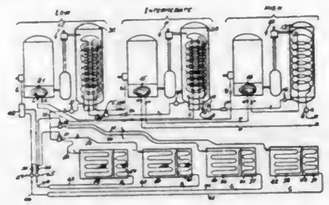
2,453,820
INCASED DRAIN PLUG
Roy S. Stephenson, San Francisco, Calif.
Application November 5, 1945, Serial No. 626,668
1 Claim. (Cl. 222—522)



In combination, a container having a threaded opening and a faucet therefor, said faucet comprising an externally threaded tubular member adjustably mounted in said threaded opening whereby the member can be screwed into and out of said container, a flanged head closing one end of said tubular member, a valve seat in the opposite end of said tubular member, a valve adapted to seat on said valve seat, a valve stem attached to said valve and threadedly engaging said head and extending there-beyond, a cross member secured to said valve stem for manually turning said valve stem to control the flow of contents from said container into said tube, a drain-hole in the wall of said tube for draining off the contents therein, a pair of diametrically positioned wedge-shaped keys on said flanged head, a tubular turning handle having a wedge-shaped keyway detachably receiving said keys and having a first and a second pair of aligned apertures, said pairs of apertures being longitudinally spaced on said tubular turning handle, a tubular latching member slidably mounted on said tubular turning handle, extensions integrally formed with said tubular latching member, aligned spring-pressed pivot pins slidably mounted in said extensions and adapted to be selectively engaged in either of said pairs of aligned apertures for selectively positioning said tubular latching member in either of one of two positions relative to said tubular turning handle whereby when said pair of pivot pins is positioned in said first pair of apertures, said tubular latching member is telescoped upon said tubular turning handle locking the same to said flanged head and when said pair of aligned pivot pins is positioned in said second pair of apertures said tubular latching member is extended beyond said tubular turning handle for pivotal movement to the same, forming a crank portion therefor, and a lock nut on said externally-threaded tubular member and adapted to be screwed thereon into engagement with the container to lock said tubular member against rotation relative to the container.

2,453,821
STRAP TIGHTENER
Laverne B. Stevens, Jackson, Miss.
Application November 21, 1946, Serial No. 711,309
1 Claim. (Cl. 280—179)

A quick-detachable fastening means including a rotary crank-bar having supporting bearings, an end crank-handle, and a crank portion disposed in a plane at a slightly different plane from the crank handle, the combination therewith of a strap anchored at one end to the crank and equipped with a buckle at its other end, and a second wrap-around strap anchored in off-set position to the bolt with its free end for engagement with the buckle.



2,453,822
TIME FUSE
Richard H. Whitehead, New Haven, Conn., assignor, by mesne assignments, to the United States of America
Application October 21, 1939, Serial No. 300,551
3 Claims. (Cl. 102—84)
